Hood Rubber Company, Watertown, Mass. "Hood Tires." (For Advertising Purposes for Motor-Vehicle Tires.) No. 5,615; May 31; v. 286; p. 1058.

Kaiser & Co., New York, N. Y. "Every One A Winner." (For Advertising Purposes for Hosiery.) No. 5,616; May 31; v. 286; p. 1058.

Kelly, George, Columbus, Ohio. "His Master's Choice." (For Advertising Purposes for Cigars.) No. 5,617; May 31; v. 286; p. 1058.

Oslason, John, Fall River, Mass. "What the World Rests On." (For Advertising Purposes for Mattresses, Pillows, Bed-Springs.) No. 5,600; May 24; v. 286; p. 861.

Palmolive Company, The, Milwaukee, Wis. "Making a Beauty Treatment." (For Advertising Purposes for Palmolive Soap.) No. 5,594; May 3; v. 286; p. 198.

Robel and Bryant, Inc., Chicago, Ill. "Ridewell Tires." (For Advertising Purposes for Automobile-Tires.) No. 5,601; May 24; v. 286; p. 861.

Stephens, A. B., Chicago, Ill. "Star Tailors." (For Advertising Purposes for Men's Tailored Suits.) No. 5,602; May 24; v. 286; p. 861.

Vic Manufacturing Co., New York, N. Y. "Vic—The Master Blade. Try It In Your Razor." (For Advertising Purposes for Safety-Razor Blades.) No. 5,603; May 24; v. 286; p. 861.

Western Grocery Co., Marshalltown, Iowa. "Chocolate Cream." (For Coffee.) No. 5,618; May 31; v. 286; p. 1058.

DISCLAIMERS.

Krug, William H., Fond du Lac, Wis.; disclaimer filed by patentee. Means for securing anti-skid chains to vehicle-wheels. No. 1,330,876; disclaimer filed May 16, 1921; v. 286; p. 646.

Willis, Fred V., Oswego, Ill.; disclaimer filed by patentee. Liquid-elevating apparatus. No. 1,345,725; disclaimer filed Apr. 25, 1921; v. 286; p. 1.

Wilson, Campbell L., La Grange, Ill.; disclaimer filed by assignee, Automatic Electric Company. Telephone system. No. 1,267,743; disclaimer filed Apr. 18, 1921; v. 286; p. 1.

Wood, William H., Cleveland, Ohio; disclaimer filed by patentee. Lamp. No. 1,235,275; disclaimer filed Apr. 30, 1921; v. 286; p. 205.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED DURING THE MONTH OF MAY, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abdominal supporter. J. L. Holt. No. 1,379,101; May 24; v. 286; p. 701.
Accordions, Shutter for. S. Rabuazzo. No. 1,377,093; May 3; v. 286; p. 136.
Accounting-machines, Total-taking means for. W. A. Lasker. No. 1,376,555; May 3; v. 286; p. 33.
Accumulator, Electric. G. Marconi. No. 1,377,722; May 10; v. 286; p. 312.
Acetylene-generator. E. Luder. No. 1,377,595; May 10; v. 286; p. 288.
Acid Aralkyl ester of 2-phenylquinolin-4-carboxylic. A. Gams and O. Kaiser. No. 1,378,343; May 17; v. 286; p. 484.
Acid colors, Precipitating. A. Lendle. No. 1,378,418; May 17; v. 286; p. 498.
Acid, Manufacture of hydrobromic. E. Theimer. No. 1,379,731; May 31; v. 286; p. 895.
Acid-phosphate apparatus. R. E. Forbis. No. 1,376,612; May 3; v. 286; p. 44.
Acid, Production of maleic. J. M. Weiss and C. R. Downs. No. 1,377,534; May 10; v. 286; p. 276.
Adding-machines, Paper-feed alarm for. T. P. Martin, Jr. No. 1,378,887; May 24; v. 286; p. 661.
Adding-machines, Tape for. C. Saunders. No. 1,380,081; May 31; v. 286; p. 961.
Address device. A. T. Poehlmann. No. 1,376,900; May 3; v. 286; p. 99.
Adhesive. J. H. Thickens. No. 1,377,739; May 10; v. 286; p. 315.
Adhesives, Manufacture of. J. D. Malcolmson. No. 1,379,639; May 31; v. 286; p. 878.
Adjustable garment-hanger. T. Kaufer. No. 1,377,836; May 10; v. 286; p. 336.
Adjustable garment-hanger. T. Kaufer. No. 1,377,837; May 10; v. 286; p. 336.
Advertising device. R. T. Bell. No. 1,379,329; May 24; v. 286; p. 745.
Advertising device. I. H. Garson. No. 1,378,538; May 17; v. 286; p. 521.
Advertising device. P. E. Goldmann. No. 1,379,861; May 31; v. 286; p. 919.
Aeronautical clinometer. S. J. Sanford. No. 1,377,442; May 10; v. 286; p. 260.
Aeroplane. F. W. Braunschweig. No. 1,379,390; May 24; v. 286; p. 757.
Aeroplane. R. G. Ecob. No. 1,377,414; May 10; v. 286; p. 255.
Aeroplane. A. A. Kellogg. No. 1,377,490; May 10; v. 286; p. 269.
Aeroplane. J. E. Pearson. No. 1,378,895; May 24; v. 286; p. 663.
Aeroplane. J. P. Sellmer. No. 1,376,785; May 3; v. 286; p. 76.
Aeroplane level or position indicator. H. E. Watkins. No. 1,378,744; May 17; v. 286; p. 562.
Aeroplane-propeller. E. T. Gove. No. 1,380,057; May 31; v. 286; p. 956.
Aeroplane-propellers, Gear box and drive for. G. Hrib. No. 1,377,483; May 10; v. 286; p. 268.
Aeroplane-propellers, Reproducing-machine for making. J. F. Keller. No. 1,379,267; May 24; v. 286; p. 733.
Aeroplane shock-absorber. J. T. Hughes. No. 1,378,234; May 17; v. 286; p. 463.
Aeroplane-wings and the like, Foldable. M. Winckelmann. No. 1,377,538; May 10; v. 286; p. 277.
Aeroplanes, Aerofoil for. A. A. Holle. No. 1,379,921; May 31; v. 286; p. 930.
Aeroplanes, Steering and braking device for. J. T. Hughes. No. 1,378,233; May 17; v. 286; p. 463.
Agates and similar stones, Machine for grooving. O. C. Reeves. No. 1,379,044; May 24; v. 286; p. 691.
Agitating device. W. J. May. No. 1,376,561; May 3; v. 286; p. 34.
Agricultural implements, Truck for. E. E. Towle. No. 1,376,591; May 3; v. 286; p. 40.
Air-bag and wrapping same. R. S. Burdette. No. 1,379,598; May 24; v. 286; p. 795.
Air-brake. H. Pieper. No. 1,376,573; May 3; v. 286; p. 37.
Air-brake device, Safety. F. B. McDaniel. No. 1,379,459; May 24; v. 286; p. 769.
Air-brake switch. F. Bechoff and M. M. Samuels. No. 1,378,395; May 17; v. 286; p. 494.
Air-brake system. D. R. McBain. No. 1,378,365; May 17; v. 286; p. 488.
Air-compressor, Rotary. J. O. Carrey. No. 1,379,248; May 24; v. 286; p. 729.
Air-concentrator. J. Closs. No. 1,377,807; May 10; v. 286; p. 330.
Air-draft motor. G. Berry. No. 1,380,036; May 31; v. 286; p. 962.
Air, Electric device for treating. E. R. Case. No. 1,378,095; May 17; v. 286; p. 437.
Air-humidifier. A. W. Lissauer. No. 1,377,594; May 10; v. 286; p. 288.
Air jolt-machines, Automatic cut-off for. E. S. Carman and E. F. Oyster. No. 1,379,799; May 31; v. 286; p. 907.
Air, Method and means for treating. E. R. Case. No. 1,378,095; May 17; v. 286; p. 437.
Air or gas, Heat-recuperator for. O. Piette. No. 1,378,130; May 17; v. 286; p. 444.
Air, Purifying. H. P. Scott and W. G. Bond. No. 1,379,221; May 24; v. 286; p. 724.
Air-separator. T. J. Sturtevant. No. 1,378,060; May 17; v. 286; p. 431.
Air-separator. T. J. Sturtevant. No. 1,379,730; May 31; v. 286; p. 894.
Air-washing device. C. L. Worrall. No. 1,377,381; May 10; v. 286; p. 248.
Aircraft. G. D. Bruner No. 1,379,522; May 24; v. 286; p. 781.
Aircraft. C. H. Caspar. No. 1,376,675; May 3; v. 286; p. 55.
Aircraft. I. C. Little and E. E. Crook. No. 1,377,421; May 10; v. 286; p. 256.
Aircraft. W. B. Stout. No. 1,377,858; May 10; v. 286; p. 340.
Aircraft and mediums for fixing same, Gas-stopping lining for use in. V. C. Richmond. No. 1,378,804; May 17; v. 286; p. 573.
Aircraft and submarine howitzer, Anti-. H. W. Thomas. No. 1,377,292; May 10; v. 286; p. 230.
Aircraft, Automatic stabilizing or controlling means for. G. Aveline. No. 1,379,895; May 31; v. 286; p. 925.
Aircraft, Control of the ailerons and elevators of. H. Bolas. No. 1,376,740; May 3; v. 286; p. 68.
Aircraft, Landing carriage or frame for. E. B. Killen. No. 1,379,576; May 24; v. 286; p. 791.
Aircraft, Landing-gear and shock-absorber for. G. Ajello. No. 1,376,912; May 3; v. 286; p. 102.
Aircraft, Method of and apparatus for delivering torpedo attacks from. A. J. Stone. No. 1,379,788; May 31; v. 286; p. 905.
Airplane safety appliance. H. Julian. No. 1,379,264; May 24; v. 286; p. 732.
Airship, Dirigible. A. K. Mattullath. No. 1,376,629; May 3; v. 286; p. 47.
Airships, Mooring for. R. A. Frazer and L. F. G. Simmons. No. 1,378,341; May 3; v. 286; p. 484.
Alarm: *See*—
Burglar-alarm.
Burglar and fire alarm.
Heat-alarm.
Speed-alarm.
Alcohol and potassium compounds, Obtaining. M. C. Whitaker. No. 1,376,662; May 3; v. 286; p. 53.
Alloy. F. E. Carter. No. 1,378,996; May 24; v. 286; p. 682.
Alloy. F. Milliken. No. 1,377,089; May 3; v. 286; p. 135.
Alloy. C. D. Stovall. No. 1,376,656; May 3; v. 286; p. 52.
Alloy and making same, Manganese-magnesium. W. R. Veasey. No. 1,377,374; May 10; v. 286; p. 247.
Alloy, Manufacture of molybdenum-tungsten. F. G. Keyes. No. 1,377,982; May 10; v. 286; p. 364.
Aluminates, Preparation of pure alkalines. P. Miguel. No. 1,376,563; May 3; v. 286; p. 35.
Aluminum oxid, Reducing. L. Burgess. No. 1,379,523; May 24; v. 286; p. 782.

Amalgam-mixer for dentists. L. R. Haight. No. 1,377,680; May 10; v. 286; p. 304.
Ammonia, Oxidation of. J. R. Partington. No. 1,378,271; May 17; v. 286; p. 471.
Ammonia, Recovery of. J. H. MacMahon. No. 1,378,593; May 17; v. 286; p. 532.
Ammonia-still. A. Roberts. No. 1,379,939; May 31; v. 286; p. 934.
Ammonium sulfate, Neutralizing and drying commercial. S. E. Linder and R. Lessing. No. 1,377,493; May 10; v. 286; p. 270.
Amplifier. J. W. Milnor. No. 1,378,712; May 17; v. 286; p. 555.
Amusement apparatus. J. A. Healy. No. 1,379,185; May 24; v. 286; p. 717.
Amusement apparatus. M. Unger. No. 1,378,635; May 17; v. 286; p. 540.
Amusement device. C. Johnson. No. 1,376,886; May 3; v. 286; p. 97.
Amusement device. R. S. Lindamood. No. 1,379,454; May 24; v. 286; p. 768.
Amusement device. J. Popper. No. 1,377,221; May 10; v. 286; p. 216.
Anchor-drill bolt. J. H. Phillips. No. 1,379,209; May 24; v. 286; p. 722.
Anchor, Guy-. A. Bearse. No. 1,376,854; May 3; v. 286; p. 90.
Anchor, Rail-. F. W. Cooper and H Steadworthy. No. 1,379,531; May 24; v. 286; p. 783.
Anchor-shell drill. J. H. Phillips. No. 1,379,210; May 24; v. 286; p. 722.
Anchoring aeroplane, navigating and supply stations at any depth of the ocean. E. R. Armstrong. No. 1,378,394; May 17; v. 286; p. 494.
Anchoring device. K. O. Wetzel. No. 1,379,065; May 24; v. 286; p. 694.
Animal-trap. A. W. Hoare. No. 1,376,695; May 3; v. 286; p. 59.
Animal-trap. E. E. Kohl. No. 1,376,772; May 3; v. 286; p. 74.
Animal-trap. W. Laburda. No. 1,380,108; May 31; v. 286; p. 966.
Animal-trap. W. F. Lange. No. 1,376,554; May 3; v. 286; p. 33.
Animal-trap for catching rats, mice, &c. A. M. Worcester. No. 1,379,326; May 24; v. 286; p. 745.
Annealing-box. H. T. McBratney. No. 1,376,448; May 3; v. 286; p. 14.
Annealing metal sheets, Method of and apparatus for. F. C. Frary. No. 1,377,574; May 10; v. 286; p. 284.
Annotator. A. B. Church and J. P. Warren. No. 1,377,749; May 10; v. 286; p. 318.
Antifreeze head-gate. N. Peterson. No. 1,377,921; May 10; v. 286; p. 252.
Antiskid device. G. Staples. No. 1,379,059; May 24; v. 286; p. 693.
Antislipping device. G. Kabaclj and A. Bartus. No. 1,378,962; May 24; v. 286; p. 675.
Arc striking and extinguishing apparatus. E. A. Sperry. No. 1,379,881; May 31; v. 286; p. 923.
Arch construction, Crowned-. J. G. Thomas. No. 1,376,482; May 3; v. 286; p. 20.
Arch-support. A. E. Block. No. 1,378,398; May 17; v. 286; p. 494.
Arithmetic, Educational appliance for. J. Keckeis. No. 1,378,241; May 17; v. 286; p. 465.
Armrest. W. J. McPartland. No. 1,378,704; May 17; v. 286; p. 554.
Article-holder. H. E. Robinson and D. L. Ordway. No. 1,378,979; May 24; v. 286; p. 678.
Article, Wrapped. J. G. Jones. No. 1,377,156; May 3; v. 286; p. 148.
Ash-pan. J. S. Cameron. No. 1,377,463; May 10; v. 286; p. 264.
Asphalt, Method and apparatus for handling. M. P. Wall. No. 1,378,637; May 17; v. 286; p. 540.
Asphalt-smoothing iron, Automatic. A. E. Hauck. No. 1,378,675; May 17; v. 286; p. 548.
Attaching-bracket. W. G. Pancoast and W. J. Grotenhuis. No. 1,379,778; May 31; v. 286; p. 902.
Auto-jack and power mechanism. R. S. Swope. No. 1,378,632; May 17; v. 286; p. 540.
Auto-radiator heater. G. H. Fritzsche. No. 1 377,621; May 10; v. 286; p. 293.
Autographic register. M. C. Stern. No. 1,378,628; May 17; v. 286; p. 539.
Autogubernator. S. T. Walkup. No. 1,378,740; May 17; v. 286; p. 561.
Autosignaling device. H. A. Wright and C. W. Kennedy. No. 1,379,503; May 24; v. 286; p. 778.
Automobile-body construction. W. C. Cunningham. No. 1,377,167; May 3; v. 286; p. 150.
Automobile-body construction, Convertible. C. D. Williams. No. 1,377,165; May 3; v. 286; p. 149.
Automobile-body construction, Convertible. C. D. Williams. No. 1,377,166; May 3; v. 286; p. 150.
Automobile-boot. A. Chapman. No. 1,378,766; May 17; v. 286; p. 566.
Automobile-bumper. J. Drumb. No. 1,377,814; May 10; v. 286; p. 331.
Automobile-bumper. J. Drumb. No. 1,377,815; May 10; v. 286; p. 331.
Automobile-bumper. J. Drumb. No. 1,377,816; May 10; v. 286; p. 332.
Automobile-bumper. O. H. Goetz. No. 1,379,097; May 24; v. 286; p. 700.
Automobile-bumper. R. T. Newton. No. 1,379,414; May 24; v. 286; p. 76.
Automobile-bumper. R. T. Newton. No. 1,380,239; May 31; v. 286; p. 990.
Automobile-bumper. J. W. Simmons. No. 1,378,906; May 24; v. 286; p. 665.
Automobile-bumper. F. G. Whittington. No. 1,379,148; May 24; v. 286; p. 711.
Automobile-engine. J. Whitcomb and G. C. J. Gray. No. 1,380,088; May 31; v. 286; p. 962.
Automobile-engine stop. F. L. Cantrell. No. 1,377,002; May 3; v. 286; p. 119.
Automobile-fender. A. Cecka. No. 1,378,322; May 17; v. 286; p. 480.
Automobile-fender. C. C. Jensen and G. H. Irwin. No. 1,379,822; May 31; v. 286; p. 911.
Automobile keyless lock. J. A. Edgerton and H. F. Calkins. No. 1,378,335; May 17; v. 286; p. 482.
Automobile-light. J. F. McGrother and J. S. Deen. No. 1,376,822; May 3; v. 286; p. 84.
Automobile-lock. J. W. Barwick. No. 1,378,757; May 17; v. 286; p. 564.
Automobile-lock. H. D. Ellers. No. 1,377,819; May 10; v. 286; p. 332.
Automobile-lock. W. F. Jenkins. No. 1,376,885; May 3; v. 286; p. 97.
Automobile-lock. J. H. Price. No. 1,377,157; May 3; v. 286; p. 148.
Automobile-lock. G. F. Smith. No. 1,377,100; May 3; v. 286; p. 137.
Automobile-lock. J. K. Strosnider. No. 1,377,224; May 10; v. 286; p. 217.
Automobile-lock, Combination. A. H. Buckley. No. 1,377,307; May 10; v. 286; p. 234.
Automobile-locking means. H. P. Taylor. No. 1,377,291; May 10; v. 286; p. 230.
Automobile-marking device. L. I. Hartmeyer. No. 1,377,345; May 10; v. 286; p. 242.
Automobile-plate and holder. J. Billings. No. 1,379,438; May 24; v. 286; p. 765.
Automobile-pull-out mechanism. C. G. Halvorson. No. 1,380,205; May 31; v. 286; p. 984.
Automobile safety-crank. O. S. Strickland and G. W. Wood. No. 1,379,320; May 24; v. 286; p. 743.
Automobile-seat. J. H. McCollough, Jr. No. 1,379,270; May 24; v. 286; p. 733.
Automobile service, Dispensing apparatus for. J. H. Hecker. No. 1,379,562; May 24; v. 286; p. 789.
Automobile-signal. M. M. Dyer. No. 1,378,372; May 17; v. 286; p. 189.
Automobile signal device. G. F. Krebs. No. 1,378,036; May 17; v. 286; p. 426.
Automobile signal-switch. A. C. Hulbert. No. 1,379,985; May 31; v. 286; p. 942.

Cap. L. Wallace. No. 1,379,142; May 24; v. 286; p. 710.
Cap, Catsup-bottle. C. Hammer. No. 1,376,761; May 3; v. 286; p. 72.
Cap-exploder. A. F. Lent. No. 1,377,894; May 10; v. 286; p. 347.
Cap-remover. F. Metzler. No. 1,376,562; May 3; v. 286; p. 35.
Caps, hats, or other headgear, Guard attachment for. G. B. Knight. No. 1,376,816; May 3; v. 286; p. 83.
Car-axle-driven dynamo. C. H. Quinn. No. 1,376,901; May 3; v. 286; p. 100.
Car-bolster arrangement, Railway-. J. A. Lamont. No. 1,377,699; May 10; v. 286; p. 308.
Car-brake-controlling means. C. E. Rochambeau. No. 1,377,628; May 10; v. 286; p. 294.
Car, Cane-. H. T. Anderson. No. 1,380,176; May 31; v. 286; p. 979.
Car, Concrete railway-. A. C. Griewank. No. 1,378,374; May 17; v. 286; p. 490.
Car construction, Freight-. S. P. Alquist and A. S. Barrows. No. 1,379,952; May 31; v. 286; p. 936.
Car-control device, Safety. C. C. Farmer. No. 1,378,404; May 17; v. 286; p. 496.
Car-coupling. M. L. Eckhart. No. 1,378,098; May 17; v. 286; p. 438.
Car coupling, Mine-. I. Martin. No. 1,380,301; May 31; v. 286; p. 1002.
Car-coupling release. G. C. Stroup. No. 1,380,122; May 31; v. 286; p. 969.
Car device, Safety. C. C. Farmer. No. 1,378,406; May 17; v. 286; p. 496.
Car-door. F. Jager. No. 1,376,697; May 3; v. 286; p. 59.
Car-door. S. H. Lovett. No. 1,378,475; May 17; v. 286; p. 509.
Car-door. S. T. Walkup. No. 1,379,583; May 24; v. 286; p. 792.
Car door, Freight-. L. W. Manheim. No. 1,380,229; May 31; v. 286; p. 988.
Car-door-operating mechanism. A. Christianson. No. 1,378,216; May 17; v. 286; p. 460.
Car-door safety-signal. A. K. Winter. No. 1,376,849; May 3; v. 286; p. 89.
Car enunciator, Street-. E. A. Kean and B. L. Nicholson. No. 1,378,465; May 17; v. 286; p. 507.
Car fender, Motor-. M. A. Robinson. No. 1,378,423; May 17; v. 286; p. 499.
Car, Freight-. N. Fender. No. 1,377,122; May 3; v. 286; p. 142.
Car-handling apparatus, Grain-. T. D. Budd. No. 1,378,089; May 17; v. 286; p. 436.
Car, Hopper-. W. P. Murphy. No. 1,377,783; May 10; v. 286; p. 325.
Car-record book, Industrial. J. R. Buchanan. No. 1,378,654; May 17; v. 286; p. 544.
Car, Refrigerator-. W. J. Bohan. No. 1,376,794; May 3; v. 286; p. 78.
Car-reinforcement and door-hinge. L. G. Miller. No. 1,377,716; May 10; v. 286; p. 311.
Car-replacer. W. H. McGinley. No. 1,378,180; May 17; v. 286; p. 453.
Car-replacing apparatus. A. Racine. No. 1,378,132; May 17; v. 286; p. 445.
Car-roof. T. N. Russell. No. 1,378,057; May 17; v. 286; p. 430.
Car-roof structure, Railway-. V. E. Sisson. No. 1,376,469; May 3; v. 286; p. 17.
Car-sign exhibitor. H. A. Mayberry. No. 1,380,001; May 31; v. 286; p. 945.
Car signal, Street-. J. C. Hopkins. No. 1,378,790; May 17; v. 286; p. 570.
Car-stop. J. U. Duffy. No. 1,379,398; May 24; v. 286; p. 758.
Car-stop. G. N. Simpson and R. W. Williams. No. 1,378,568; May 17; v. 286; p. 527.
Car tag-holder, Mine-. K. F. Begley. No. 1,379,514; May 24; v. 286; p. 780.
Car-underframe. D. S. Barrows. No. 1,378,645; May 17; v. 286; p. 542.
Car wall construction, Railway-. C. D. Bonsall. No. 1,379,386; May 24; v. 286; p. 756.
Car-wheel. E. G. Mitchell. No. 1,379,121; May 24; v. 286; p. 706.
Car-wheel or similar body. L. F. Dieter. No. 1,377,617; May 10; v. 286; p. 292.
Car-wheel or similar body, Dished. L. F. Dieter. No. 1,377,618; May 10; v. 286; p. 292.
Cars and the like, Hinge for closed bodies of motor-. A. E. Cole. No. 1,377,058; May 3; v. 286; p. 129.
Cars, Axle transmission for railway-. E. G. Smith. No. 1,379,055; May 24; v. 286; p. 692.
Cars, Crib attachment for motor-. H. Taylor. No. 1,377,607; May 10; v. 286; p. 290.
Cars, Direction-indicator for motor-. H. H. Gray. No. 1,379,863; May 31; v. 286; p. 919.
Cars, Hand-brake for railway-. W. A. Geiger. No. 1,378,852; May 24; v. 286; p. 655.
Cars, Hand-brake for railway box-. J. F. O'Conner. No. 1,378,975; May 24; v. 286; p. 678.
Cars, Means for supporting automobiles in freight-. J. C. Miller. No. 1,379,773; May 31; v. 286; p. 902.
Carbon dioxid, Conversion of carbon monoxid into. J. C. Clancy. No. 1,376,514; May 3; v. 286; p. 25.
Carbon, Electrolytic process for the treatment of. A. R. Bullock. No. 1,378,834; May 24; v. 286; p. 651.
Carboy-package. C. W. Riegel. No. 1,380,020; May 31; v. 286; p. 949.
Carburation, System of. J. W. Swan. No. 1,377,606; May 10; v. 286; p. 290.
Carbureter. C. F. Johnson. No. 1,378,867; May 24; v. 286; p. 657.
Carbureter. T. W. King. No. 1,379,346; May 24; v. 286; p. 748.
Carbureter. F. E. La Febr, E. Hitchcock, and H. V. Leahy. No. 1,376,707; May 3; v. 286; p. 61.
Carbureter. F. D. Maltby. No. 1,379,772; May 31; v. 286; p. 902.
Carbureter. H. C. Pusey. No. 1,378,055; May 17; v. 286; p. 430.
Carbureter. F. J. Richards. No. 1,379,127; May 24; v. 286; p. 707.
Carbureter. E. M. White. No. 1,377,535; May 10; v. 286; p. 276.
Carbureter, Engine-speed-regulating. C. L. Rayfield. No. 1,379,042; May 24; v. 286; p. 691.
Carbureter float mechanism. R. M. Anderson. No. 1,380,032; May 31; v. 286; p. 951.
Carbureter for internal-combustion engines. G. F. Trotter. No. 1,377,529; May 10; v. 286; p. 276.
Carbureter heater. E. D. Hiscock. No. 1,378,789; May 17; v. 286; p. 570.
Carbureter-intakes, Self-cleaning filter for. R. L. Eddy. No. 1,377,191; May 10; v. 286; p. 211.
Carbureters, Automatic air-valve for. C. E. Osborne. No. 1,379,474; May 24; v. 286; p. 772.
Card, Advertising-. J. P. Buckley. No. 1,379,392; May 24; v. 286; p. 757.
Card, Display-. C. F. Farnham. No. 1,380,198; May 31; v. 286; p. 982.
Card-holder. A. B. Marshel. No. 1,376,716; May 3; v. 286; p. 63.
Card holder, Identification-. W. F. Luick. No. 1,378,179; May 17; v. 286; p. 453.

Card-mount for articles of merchandise. W. H. Meyer. No. 1,378,262; May 17; v. 286; p. 469.
Card-tabulator printer, Electrical non-stop. H. D. Penney and J. E. Davidson. No. 1,376,572; May 3; v. 286; p. 86.
Cardboard boxes or cartons, Clip for strengthening. W. A. Pike. No. 1,376,636; May 3; v. 286; p. 48.
Carding-machine. E. H. Rooney. No. 1,380,022; May 31; v. 286; p. 950.
Carline. R. C. Munro. No. 1,378,051; May 17; v. 286; p. 429.
Carousel, Conversely-turning. J. C. Turner. No. 1,377,641; May 10; v. 286; p. 297.
Carrier: *See*—
Luggage-carrier. Tire-carrier.
Milk-bottle carrier.
Cart cover, Ash-. S. Rochlis. No. 1,379,695; May 31; v. 286; p. 888.
Carton, Dispensing and displaying. R. H. Fitz Gerald. No. 1,378,533; May 17; v. 286; p. 520.
Carton, Dispensing and displaying. R. H. Fitz Gerald. No. 1,378,534; May 17; v. 286; p. 521.
Cartons, Machine for lining. D. M. Bernotow. No. 1,378,581; May 17; v. 286; p. 529.
Cartons, Machine for making. G. C. Ekström, B. A. E. Johnson, and G. Orström. No. 1,379,254; May 24; v. 286; p. 730.
Cartons, Machine for setting up and folding. D. M. Bernotow. No. 1,378,580; May 17; v. 286; p. 529.
Cartoning-machine. E. D. Anderson. No. 1,376,499; May 3; v. 286; p. 23.
Cartridge-clip. W. D. Ashworth. No. 1,379,075; May 24; v. 286; p. 696.
Cartridge-explosive. E. S. McKinlay. No. 1,379,637; May 31; v. 286; p. 877.
Cartridge for small-arms, machine-guns and the like. H. Greener. No. 1,376,530; May 3; v. 286; p. 28.

Door, Roof-. P. Hogstrom. No. 1,380,207; May 31; v. 286; p. 984.
Doors, Catch for screen-. L. M. Pratt. No. 1,379,040; May 24; v. 286; p. 690.
Doors, Lock for automobile-. P. F. Augenbraun. No. 1,379,508; May 24; v. 286; p. 779.
Doors of box-cars, Combination lock and controller for side. F. H. Ward. No. 1,379,495; May 24; v. 286; p. 776.
Doors, Safety-catch for car-. A. H. MacMinn and W. H. Graham. No. 1,379,997; May 31; v. 286; p. 944.
Doors with door-openers, Trackage for ceiling type of. E. Lovejoy. No. 1,378,123; May 17; v. 286; p. 443.
Doubling and spinning, Spindle for. J. and F. Krainik. No. 1,379,634; May 31; v. 286; p. 877.
Draft appliance. J. Aveline. No. 1,378,437; May 17; v. 286; p. 502.
Draft device. V. M. Haas. No. 1,377,475; May 10; v. 286; p. 266.
Draft eliminator, Side-. H. C. Abern and F. J. Balvier. No. 1,379,074; May 24; v. 286; p. 696.
Draft-gear, Friction. R. J. Cook. No. 1,379,967; May 31; v. 286; p. 939.
Draft-gear, Friction. H. F. Woernley. No. 1,378,393; May 17; v. 286; p. 493.
Draft-rigging. B. P. Straw. No. 1,376,480; **May 3**; v. 286; p. 19.
Draft-yoke. R. J. Cook. No. 1,377,004; **May 3**; v. 286; p. 119.
Drag, Land-. C. A. Matheny. No. 1,379,033; May 24; v. 286; p. 689.
Drains in furnace-bottoms, Apparatus for and method of cutting. J. C. Griggs. No. 1,376,935; **May 3**; v. 286; p. 106.
Draw-bar-mounting machine. H. W. Wienke. No. 1,379,926; May 24; v. 286; p. 669.
Drawer-locking device. B. M. Hamlin. No. 1,379,977; May 31; v. 286; p. 941.
Drawer-locking device. F. A. Marcinek. No. 1,379,999; May 31; v. 286; p. 945.
Drawing instrument. H. L. Read. No. 1,379,124; **May 24**; v. 286; p. 706.
Drawing sheet-glass. H. G. Slingluff. No. 1,376,975; **May 3**; v. 286; p. 114.
Drawknife. E. Smith. No. 1,376,651; **May 3**; v. 286; p. 51.
Dredge, Caisson-. H. C. Glick. No. 1,380,203; May 31; v. 286; p. 983.
Dredges, Clay-disintegrating machine for sluice-box. W. Telford and R. J. McLean. No. 1,377,034; **May 3**; v. 286; p. 125.
Dress-fasteners, Device for feeding the wire in machines for production. K. G. Blomberg and B. A. Pettersson. No. 1,376,668; **May 3**; v. 286; p. 54.
Dress-form, Adjustable and collapsible. A. D. Bailey. No. 1,376,502; **May 3**; v. 286; p. 23.
Drier: *See*—
Clothes-drier.
Drier. W. M. Brownell. No. 1,378,808; May 17; v. 286; p. 574.
Drier. W. M. Schwartz. No. 1,377,793; May 10; v. 286; p. 327.
Drier. W. J. Warrington. No. 1,377,644; May 10; v. 286; p. 297.
Drier, cooler, and similar device. G. H. Fraser. No. 1,378,407; May 17; v. 286; p. 496.
Drying apparatus. H. B. Lowden. No. 1,377,896; May 10; v. 286; p. 347.
Drill: *See*—
Anchor-shell drill. Pneumatic drill.
Drill and under-reamer. J. C. Stokes. No. 1,379,483; May 24; v. 286; p. 774.
Drill-boxings, Supporting-chain for. J. H. Wenzlick. No. 1,377,296; May 10; v. 286; p. 231.
Drill-column. R. P. Saffold. No. 1,380,255; May 31; v. 286; p. 993.
Drill feed mechanism, Unitary regulating and controlling means for. H. I. Stage. No. 1,378,491; May 17; v. 286; p. 512.
Drill-steels, Finning-out machine for. W. A. Smith. No. 1,379,225; May 24; v. 286; p. 725.
Drill-stem coupling. W. J. Harkness. No. 1,379,980; May 31; v. 286; p. 941.
Drills, Making. J. J. Kunzer. No. 1,379,994; May 31; v. 286; p. 944.
Drills, Making. J. J. Kunzer. No. 1,379,995; May 31; v. 286; p. 944.
Drills, Making. C. P. Wineman. No. 1,379,070; May 24; v. 286; p. 695.
Drills, Safety device for. H. V. Johnson. No. 1,377,487; May 10; v. 286; p. 269.
Drilling apparatus. W. B. Reed and W. Hepler. No. 1,378,056; May 17; v. 286; p. 430.
Drilling-machine. R. R. Sanderson. No. 1,377,280; May 10; v. 286; p. 228.

Drilling machine, Automatic. E. J. Kingsbury. No. 1,379,765; May 31; v. 286; p. 900.

Drilling machinery, Electric driving means for. H. W. Schatz. No. 1,379,782; May 31; v. 286; p. 904.

Drinking-cup, Sanitary. M. B. Baird and G. A. Walls. No. 1,378,310; May 17; v. 286; p. 478.

Driver, Pile-. C. W. Miller. No. 1,380,072. May 31; v. 286; p. 959.

Driving or power transmission belt. F. W. Radell. No. 1,378,379; May 17; v. 286; p. 490.

Drop-light adjuster. J. Freeberg. No. 1,379,093; May 24; v. 286; p. 700.

Dry cell. W. Balderston. No. 1,380,034; May 31; v. 286; p. 952.

Drying-machine. B. A. Parkes. No. 1,379,932; May 31; v. 286; p. 932.

Drum, Collapsible. A. D. Converse. No. 1,377,003; May 3; v. 286; p. 119.

Dual-wheel remover. W. A. Chipps. No. 1,378,582; May 17; v. 286; p. 529.

Duplex eyelet-machine. F. L. Harmon. No. 1,379,687; May 31; v. 286; p. 886.

Duplicating-machines and the like, Spindle for. A. Isaacs. No. 1,377,584; May 10; v. 286; p. 286.

Dust-bag. R. A. Norton. No. 1,378,607; May 17; v. 286; p. 535.

Dust-separator, Pneumatic. L. Lindsay and E. M. Davids. No. 1,380,322; May 31; v. 286; p. 1006.

Dustpans, End-shield for automobile-. F. W. Armstrong. No. 1,377,795; May 10; v. 286; p. 327.

Dye, Disazo. T. M. Susemihl. No. 1,378,388; May 17; v. 286; p. 492.

Dye goods and making same, Two-tone double-piece. H. Noll. No. 1,376,569; May 3; v. 286; p. 36.

Dyeing, Apparatus for. C. H. Robbins. No. 1,378,618; May 17; v. 286; p. 537.

Dyeing cellulose acetate. R. Clavel. No. 1,378,443; May 17; v. 286; p. 503.

Dyestuffs, Solvent for. H. A. Folsom. No. 1,379,175; May 24; v. 286; p. 715.

Dynamo-electric machine, Self-regulating. W. Holt. No. 1,377,074; May 3; v. 286; p. 133.

Dynamo-field regulator. H. L. Tanner. No. 1,377,229; May 10; v. 286; p. 218.

Easel, Display-. M. E. Baver. No. 1,379,612; May 31; v. 286; p. 873.

Easel, Enlarging-. L. C. Byck. No. 1,377,394; May 10; v. 286; p. 251.

Eaves-trough-forming machine. M. L. Hunker. No. 1,377,252; May 10; v. 286; p. 223.

Eaves-troughs, Producing. M. L. Hunker. No. 1,377,251; May 10; v. 286; p. 223.

Educational and amusement device, Child's. G. L. E. Klingbeil No. 1,378,874; May 24; v. 286; p. 659.

Educational block. C. A. McLain and E. M. Bothne. No. 1,377,261; May 10; v. 286; p. 224.

Egg-boiler. C. C. Lamb. No. 1,377,983; May 10; v. 286; p. 364.

Egg-boiler. C. C. Lamb. No. 1,377,984; May 10; v. 286; p. 364.

Egg-packing. M. Koppelman. No. 1,378,469; May 17; v. 286; p. 508.

Egg-packing. M. Koppelman. No. 1,378,685; May 17; v. 286; p. 550.

Eggs, Apparatus for handling. C. J. Williamson. No. 1,379,234; May 24; v. 286; p. 727.

Electric accumulators, Liquid-tight joint for preventing leakage between the terminal rods and covers of. A. Dinin. No. 1,379,854; May 31; v. 286; p. 918.

Electric conduits, Pipe-cap for. J. C. Phelps. No. 1,378,195; May 17; v. 286; p. 456.

Electric display. R. F. Stoddard. No. 1,378,495; May 17; v. 286; p. 513.

Electric door-lock. G. Deeg. No. 1,377,061; May 3; v. 286; p. 130.

Electric engine. J. A. Manns. No. 1,377,087; May 3; v. 286; p. 135.

Electric furnace and operating same. F. T. Snyder. No. 1,379,942; May 31; v. 286; p. 934.

Electric-furnace control. A. L. Wilkes. No. 1,377,951; May 10; v. 286; p. 358.

Electric heater. C. A. Clark and F. W. Blair. No. 1,378,324; May 17; v. 286; p. 480.

Electric heater. E. N. Lightfoot. No. 1,378,247; May 17; v. 286; p. 466.

Electric heater. E. Verstraete. No. 1,376,485; May 3; v. 286; p. 20.

Electric heater. E. Walder. No. 1,377,037; May 3; v. 286; p. 125.

Electric heating apparatus. F. P. Kobert. No. 1,378,684; May 17; v. 286; p. 550.

Electric irons, Automatic control for. C. B. Yoder. No. 1,378,082; May 17; v. 286; p. 435.

Electric irons, Safety attachment for. R. E. Campbell. No. 1,376,513; May 3; v. 286; p. 25.

Electric-light fixtures, Canopy for. G. W. Hoar. No. 1,380,147; May 31; v. 286; p. 973.

Electric machine and system of control therefor, Dynamo. R. E. Hellmund. No. 1,379,406; May 24; v. 286; p. 759.

Electric machine and system of control therefor, Dynamo-. R. E. Hellmund and L. M. Perkins. No. 1,379,405; May 24; v. 286; p. 759.

Electric machines, Controlling and regulating apparatus for alternating-current dynamo-. F. W. Meyer. No. 1,376,453; May 3; v. 286; p. 14.

Electric machines, Controlling and regulating apparatus for dynamo-. F. W. Meyer. No. 1,376,452; May 3; v. 286; p. 14.

Electric machines, Winding for dynamo-. R. E. Hellmund. No. 1,376,433; May 3; v. 286; p. 11.

Electric motor. C. W. Durnford. No. 1,377,325; May 10; v. 286; p. 237.

Electric regulator. W. E. Moore. No. 1,378,971; May 24; v. 286; p. 677.

Electric safety-lock. O. H. Stolberg. No. 1,378,200; May 17; v. 286; p. 457.

Electric snap-switch. D. Hjorth. No. 1,379,819; May 31; v. 286; p. 911.

Electric spotlight. J. P. Nikonow. (Reissue.) No. 15,102; May 10; v. 286; p. 367.

Electric switch. C. T. Hentschel. No. 1,368,454; May 17; v. 286; p. 505.

Electric switch. L. Kellner. No. 1,376,701; May 3; v. 286; p. 60.

Electric switch. L. Kellner. No. 1,377,778; May 10; v. 286; p. 324.

Electric switch. C. C. Stirling. No. 1,377,639; May 10; v. 286; p. 297.

Electric-switch lock. E. J. and C. J. Maple. No. 1,379,640; May 31; v. 286; p. 881.

Electric switch, Motor-driven quick-action. F. Sauter. No. 1,378,283; May 17; v. 286; p. 473.

Electric switch, Pressure-controlled. A. B. Cobb. No. 1,377,317; May 10; v. 286; p. 236.

Electric switch, Thermally-controlled. R. L. Fearn, Jr. No. 1,380,049; May 31; v. 286; p. 955.

Electric vehicles, Battery-ventilating means for. C. A. Ward. No. 1,377,235; May 10; v. 286; p. 210.

Electrical apparatus, Incased. I. H. Sciater. No. 1,379,481; May 24; v. 286; p. 773.

Electrical conductors, Swivel connection for. C. O. Allen. No. 1,379,795; May 31; v. 286; p. 906.

Electrical connection. E. A. Hawthorne. No. 1,378,952; May 24; v. 286; p. 674.

Electrical connections, Method and means for making. H. C. Hubbell. No. 1,378,461; May 17; v. 286; p. 506.

Electrical-connector device. R. B. Benjamin and A. V. Boetter. No. 1,379,244; May 24; v. 286; p. 728.

Electrical-current pulses, Production of. F. Cutting and B. Washington. No. 1,377,059; May 3; v. 286; p. 130.

Electrical-fitting connection. J. A. McKay. No. 1,378,477; May 17; v. 286; p. 510.

Electrical heating apparatus. M. R. Malhomme. No. 1,378,256; May 17; v. 286; p. 468.

Electrical switch. B. D. Horton. No. 1,376,813; May 8; v. 286; p. 82.

Electrical switch. B. D. Horton. No. 1,378,232; May 17; v. 286; p. 463.

Electrical system. E. A. Hanff. No. 1,379,686; May 31; v. 286; p. 886.

Electrical system. E. W. Pragst. No. 1,378,557; May 17; v. 286; p. 525.

Electrical transformer. C. H. Thordarson. No. 1,378,151; May 17; v. 286; p. 448.

Electrically-heated appliance. L. French. No 1,378,850; May 24; v. 286; p. 654.

Electrically-operated float-governed liquid control. J. A. Du Laney. No. 1,376,519; May 3; v. 286; p. 26.

Electrodes, Process and apparatus for making. W. G. Michel. No. 1,378,599; May 17; v. 286; p. 533.

Electrolytic cell. H. W. Matheson. No. 1,379,466; May 24; v. 286; p. 770.

Electrolytic cell. H. W. Matheson and F. T. Kaelin. No. 1,379,467; May 24; v. 286; p. 770.

Electrolytic cell. J. M. Williams. No. 1,376,495; May 3; v. 286; p. 22.

Electrolytic destruction, Protection against. F. von Wurstemberger. No. 1,379,582; May 24; v. 286; p. 792.

Electromagnetic device. W. O. Beck. No. 1,379,242; May 24; v. 286; p. 728.

Electromagnetic-wave navigational arrangement. J. Erskine-Murray and J. Robinson. No. 1,379,541; May 24; v. 286; p. 785.

Elevator: *See*—
Bucket elevator. Portable elevator.

Elevator hatch-doors, Device for operating freight-. J. H. W. Fogal and C. L. Fulghum. No. 1,378,017; May 17; v. 286; p. 422.

Elevator-locking device. A. F. Froussard. No. 1,376,687; May 3; v. 286; p. 57.

Elevators, Safety-door and door attachment for. G. J. Meyer. No. 1,377,213; May 10; v. 286; p. 215.

Embossing-die. E. E. Novotny. No. 1,377,507; May 10; v. 286; p. 272.

Embroidery-knife. L. Herzog. No. 1,379,920; May 31; v. 286; p. 930.

Embroidery-machine, Automatic. O. Fahrni. No. 1,378,668; May 17; v. 286; p. 547.

Embroidery-machines, Machine for perforating jacquard-cards for. O. Fahrni. No. 1,379,807; May 31; v. 286; p. 909.

End clip. C. A. Cook. No. 1,379,966; May 31; v. 286; p. 939.

Energy variations, Method and means for translating. R. E. Hall. No. 1,378,345; May 17; v. 286; p. 484.

Engine: *See*—
Automobile-engine. Gas-engine.
Beating-engine. Internal-combustion engine.
Combustion-engine. Motorcycle-engine.
Electric engine. Piston-engine.
Explosive-engine. Rotary engine.
Four-cycle internal-combustion engine. Steam-turbine engine.

Engine. E. R. Burtnett. No. 1,377,462; May 10; v. 286; p. 264.

Engine. A. J. Culp. No. 1,376,516; May 3; v. 286; p. 26.

Engine. E. Hilton. No. 1,377,581; May 10; v. 286; p. 285.

Engine. S. L. G. Knox. No. 1,378,875; May 24; v. 286; p. 659.

Engine, Combustion-. J. Good. No. 1,377,990; May 10; v. 286; p. 365.

Engine crank-cases, Device for indicating the level of oil in. A. T. Le Vesconte. No. 1,379,350; May 24; v. 286; p. 749.

Engine-indicator. L. E. Hunt. No. 1,376,883; May 3; v. 286; p. 96.

Engine muffler, Internal-combustion-. H. Gibson. No. 1,377,472; May 10; v. 286; p. 266.

Engine or pump, Rotary. C. H. Varley. No. 1,378,065; May 17; v. 286; p. 432.

Engine-support. E. P. du Pont. No. 1,376,520; May 3; v. 286; p. 27.

Engines, Air-washer for internal-combustion. P. S. Tice. No. 1,379,062; May 24; v. 286; p. 694.

Engines, Attachment for. O. P. Taylor. No. 1,377,608; May 10; v. 286; p. 290.

Engines, Attachment for internal-combustion. A. J. Abel. No. 1,380,173; May 31; v. 286; p. 978.

Engines, Attachment to beating-. J. A. De Cew. No. 1,377,616; May 10; v. 286; p. 292.

Engines, Battery ignition for internal-combustion. G. Honold. No. 1,377,482; May 10; v. 286; p. 268.

Engines by means of acetylene, Apparatus for operating internal-combustion. J. Sieber. No. 1,376,786; May 3; v. 286; p. 76.

Engines, Combined manifold and rotary distributing-valve for internal-combustion. J. S. Taylor. No. 1,378,431; May 17; v. 286; p. 501.

Engines, Combined primer and automatic auxiliary air-valve for internal-combustion. P. H. Grimm, F. L. Cocks, and O. C. Duryea. No. 1,378,449; May 17; v. 286; p. 504.

Engines, compressors, &c., Process and machine for making crank-shafts for. L. I. Yeomans. No. 1,378,642; May 17; v. 286; p. 541.

Engines, Controlling mechanism for internal-combustion. R. Hildebrand. No. 1,376,619; May 3; v. 286; p. 45.

Engines, Current-distributer for internal-combustion. H. D. Waterhouse. No. 1,379,584; May 24; v. 286; p. 792.

Engines, Cylinder-head for internal-combustion. R. Hildebrand. No. 1,376,620; May 3; v. 286; p. 46.

Engines, Cylinder-head for internal-combustion. R. Hildebrand. No. 1,376,621; May 3; v. 286; p. 46.

Engines, Device for starting internal-combustion. S. L. Price. No. 1,379,361; May 24; v. 286; p. 751.

Engines, Device for truing crank-shafts of. H. G. Kuper. No. 1,378,799; May 17; v. 286; p. 572.

Engines, Governor for gas-. E. W. Baxter. No. 1,376,503; May 3; v. 286; p. 24.

Engines, Ignition-magneto for internal-combustion. H. Andreino. No. 1,379,953; May 31; v. 286; p. 936.

Engines, Ignition mechanism for combustion-. J. Jessen. No. 1,377,688; May 10; v. 286; p. 306.

Engines, Intake-manifold for internal-combustion. A. Bachle. No. 1,379,327; May 24; v. 286; p. 745.

Engines, Manifold-lock for internal-combustion. W. F. Awe. No. 1,377,168; May 3; v. 286; p. 150.

Engines, Means for supplying liquid fuel to the cylinders of internal-combustion. H. Kent-Norris. No. 1,378,176; May 17; v. 286; p. 453.

Engines, Method of and means for governing explosive-. J. S. Jennings, Jr. No. 1,379,186; May 24; v. 286; p. 717.

Engines, Method of operating internal-combustion. J. Good. No. 1,377,989; May 10; v. 286; p. 365.

Engines, Piston for internal-combustion. H. R. Ricardo. No. 1,377,438; May 10; v. 286; p. 259.

Engines, Starting mechanism for internal-combustion. G. J. Spohrer. No. 1,376,838; May 3; v. 286; p. 87.

Engines, Timer for internal-combustion. C. H. Bakemeyer. No. 1,378,833; May 24; v. 286; p. 651.

Engines, Trouble-finder for internal-combustion. G. P. Castro. No. 1,378,937; May 24; v. 286; p. 671.

Engines, Valve-gear and control mechanism for. O. F. Carlson. No. 1,380,092; May 31; v. 286; p. 963.

Engines, Valve mechanism for internal-combustion. H. J. Carmody. No. 1,378,093; May 17; v. 286; p. 437.

Engines, Valve-operating system for combustion-. O. Werner. No. 1,377,297; May 10; v. 286; p. 231.

Engines, Valve-spring lifter for internal-combustion. G. T. Wroughton. No. 1,380,328; May 31; v. 286; p. 1007.

Engraving instrument, Portable electric. W. E. Stenning. No. 1,379,841; May 31; v. 286; p. 915.

Envelop-opener. A. R. Clear. No. 1,377,805; May 10; v. 286; p. 329.

Envelops, Delivery and return slip for. A. R. Schoreck. No. 1,378,903; May 24; v. 286; p. 664.

Eraser and pencil holder. D. Bailey. No. 1,379,608; May 31; v. 286; p. 872.

Erasing and polishing device. O. K. Isensee. No. 1,379,922; May 31; v. 286; p. 930.

Escutcheon, Adjustable. P. Mueller. No. 1,377,597; May 10; v. 286; p. 289.

Evaporating apparatus. C. F. Purinton. No. 1,376,578; May 3; v. 286; p. 38.

Excavating-machine. J. Sommer. No. 1,376,837; May 3; v. 286; p. 87.

Excavating and grading machine. E. R. Barnes. No. 1,379,845; May 31; v. 286; p. 916.

Excavator, Drag-line. A. S. Robinson. No. 1,377,278; May 10; v. 286; p. 228.

Expansion-bit. G. P. Butler. No. 1,379,332; May 24; v. 286; p. 746.

Explosive-engine. W. G. Johnston. No. 1,376,700; May 3; v. 286; p. 60.

Extension-table. C. H. Gunn. No. 1,378,375; May 17; v. 286; p. 490.

Extractor: *See*—
Bottle-cap extractor. Rug-extractor.
Cream-extractor.

Extractor. T. S. Patterson. No. 1,378,608; May 17; v. 286; p. 535.

Eye, Artificial. B. C. V. Bourdeaux. No. 1,379,741; May 31; v. 286; p. 896.

Eyeglasses, Placquet for. H. Newbold. No. 1,380,005; May 31; v. 286; p. 946.

Eyelets, Means for setting. F. L. Harmon. No. 1,379,688; May 31; v. 286; p. 887.

Fabric articles, Machine for folding. M. Kelley. No. 1,376,942; May 3; v. 286; p. 107.

Fabric, Making embossed. R. E. Shiner. No. 1,379,703; May 31; v. 286; p. 889.

Fabric, Pile. F. Ott. No. 1,379,931; May 31; v. 286; p. 932.

Fabric-smoothing machine. R. McClenathen and J. Noall. No. 1,377,212; May 10; v. 286; p. 214.

Fabrics, Apparatus for stretching. J. Thornber. No. 1,376,736; May 3; v. 286; p. 67.

Fabrics, Method and machine for printing pile. A. F. McCollum. No. 1,377,083; May 3; v. 286; p. 134.

Fabrics to predetermined lengths, Machine for cutting. F. Kaschewski. No. 1,377,777; May 10; v. 286; p. 324.

Fan, Centrifugal. A. H. Candee. No. 1,378,008; May 17; v. 286; p. 420.

Fans, Manufacturer of. P. H. Withington. No. 1,377,300; May 10; v. 286; p. 232.

Fastener. L. Arkin. No. 1,380,177; May 31; v. 286; p. 979.

Fastener, Ball-and-socket. L. S. Harvey. No. 1,376,765; May 3; v. 286; p. 72.

Fasteners or buttons, Stud for spring-pressure. V. Marendowski. No. 1,380,000; May 31; v. 286; p. 945.

Fastening device. A. F. F. Gilson. No. 1,378,946; May 24; v. 286; p. 672.

Fastening device. M. J. Keevers. No. 1,377,253; May 10; v. 286; p. 223.

Fastening mechanism. J. S. Wentworth. No. 1,377,295; May 10; v. 286; p. 231.

Faucet. G. W. Cooke. No. 1,378,218; May 17; v. 286; p. 460.

Faucet. R. E. Haines. No. 1,378,339; May 17; v. 286; p. 522.

Favor. J. H. Woolhiser. No. 1,377,741; May 10; v. 286; p. 316.

Feed and stop mechanism, Carriage. J. H. Mansfield. No. 1,376,714; May 3; v. 286; p. 63.

Feed lubricating systems, Terminal check-valve for force-. W. J. Schlacks. No. 1,376,833; May 3; v. 286; p. 86.

Feeder, Poultry-. W. F. Easter. No. 1,376,685; May 3; v. 286; p. 57.

Feeding mechanism, Blank-. H. de Escobales. No. 1,377,810; May 10; v. 286; p. 330.

Felted material and making same. A. C. Denning. No. 1,377,007; May 3; v. 286; p. 120.

Fence-clamp. J. B. Woodson. No. 1,377,540; May 10; v. 286; p. 277.

Fence machine, Wire-. J. A. Holmquist. No. 1,378,955; May 24; v. 286; p. 674.

Fence machine, Wire-. J. A. Holmquist. No. 1,378,958; May 24; v. 286; p. 675.

Fence machines, Crimping-drum for wire-. J. A. Holmquist. No. 1,378,957; May 24; v. 286; p. 674.

Fence machines, Take-up reel for wire-. J. A. Holmquist. No. 1,378,956; May 24; v. 286; p. 674.

Fence, Wire. W. H. Sommer. No. 1,378,489; May 17; v. 286; p. 512.

Fencepost, Removable. R. R. Hage. No. 1,378,948; May 24; v. 286; p. 673.

Fender: *See*—
Automobile-fender. Roller-fender.
Car-fender. Rolling fender.

Fender, brace, and bumper, Combination. W. H. Thomas. No. 1,379,946; May 31; v. 286; p. 935.

Ferrosilicon, Producing. J. T. Jones. No. 1,379,022; May 24; v. 286; p. 687.

Fertilizer or manure distributer. L. A. Button. No. 1,377,664; May 10; v. 286; p. 302.

Fertilizer, Preparing a. P. Schmidt. No. 1,378,284; May 17; v. 286; p. 473.

Fiber, Preparing graphitized vulcanized. E. G. Acheson, Jr. No. 1,379,155; May 24; v. 286; p. 712.

- Street-indicator.
- Tank-filler and contents-indicator.

Indicator. C. M. Deming. No. 1,377,006; May 3; v. 286; p. 119.

Indicator. B. F. McGlothlen. No. 1,380,227; May 31; v. 286; p. 988.

Induction-machines, Method and apparatus for operating. R. E. Hellmund. No. 1,376,434; May 3; v. 286; p. 11.

Induction-machines, System of control for. R. E. Hellmund. No. 1,376,432; May 3; v. 286; p. 11.

Information-displaying device. W. C. Cutler. No. 1,380,290; May 31; v. 286; p. 1000.

Ingot-mold. O. A. Fogarty. No. 1,377,962; May 10; v. 286; p. 360.

Ingot-mold and making same. R. G. Coates. No. 1,376,403; May 3; v. 286; p. 5.

Ingot-mold, Reinforced. R. G. Coates. No. 1,376,402; May 3; v. 286; p. 5.

Ink-bottle. M. L. Kayser. No. 1,377,588; May 10; v. 286; p. 287.

Inking mechanism. A. H. Pitney. No. 1,377,853; May 10; v. 286; p. 339.

Inking mechanism. A. D. Saborsky. No. 1,377,142; May 3; v. 286; p. 145.

Inking mechanism. J. J. Walser and H. Fankboner. No. 1,376,983; May 3; v. 286; p. 115.

Inking-reel. A. J. Weid. No. 1,377,532; May 10; v. 286; p. 276.

Insect-catcher. B. R. Jolly. No. 1,377,201; May 10; v. 286; p. 212.

Insect-trap. J. E. Maziarz. No. 1,378,048; May 17; v. 286; p. 428.

Insecticide-holder. H. G. Irwin. No. 1,377,077; May 3; v. 286; p. 133.

Inserting machine, Fastener-forming mechanism for fastener-. G. A. and S. A. Dobyns. No. 1,377,759; May 10; v. 286; p. 320.

Inside pipe-cutter. T. J. Fonda. No. 1,379,515; May 24; v. 286; p. 785.

Insole-lip turner. F. C. Fix. No. 1,380,098; May 31; v. 286; p. 964.

Insulated stem and joint, Combined. P. F. Connolly. No. 1,377,318; May 10; v. 286; p. 236.

Insulating end post. E. F. Schermerhorn and William P. Thompson. No. 1,376,647; May 3; v. 286; p. 50.

Insulating material. J. J. Wangenstein and H. Fegraeus. No. 1,379,143; May 24; v. 286; p. 710.

Insulator-bracket. W. B. Simpson. No. 1,378,140; May 17; v. 286; p. 446.

Insulator, Electrical. K. von Kando. No. 1,376,486; May 3; v. 286; p. 21.

Intermittent-vacuum massage-machine. G. A. Ward. No. 1,378,922; May 24; v. 286; p. 668.

Internal-combustion engine. D. V. Bourcau. No. 1,377,661; May 10; v. 286; p. 301.

Internal-combustion engine. H. J. Carmody. No. 1,378,092; May 17; v. 286; p. 437.

Internal-combustion engine. E. Drevet. No. 1,378,333; May 17; v. 826; p. 482.

Internal-combustion engine. W. J. Dunn. No. 1,377,877; May 10; v. 286; p. 343.

Internal-combustion engine. W. H. Knowles. No. 1,379,348; May 24; v. 286; p. 749.

Internal-combustion engine. J. O. W. Lavalee. No. 1,377,356; May 10; v. 286; p. 244.

Internal-combustion engine. C. de Lukacsevics. No. 1,377,897; May 10; v. 286; p. 348.

Internal-combustion engine. C. de Lukacsevics. No. 1,377,898; May 10; v. 286; p. 348.

Internal-combustion engine. C. de Lukacsevics and E. Loffler. No. 1,377,899; May 10; v. 286; p. 248.

Internal-combustion engine. J. B. MacDonald. No. 1,378,254; May 17; v. 286; p. 467.

Internal-combustion engine. M. Mallory. No. 1,379,115; May 24; v. 286; p. 704.

Internal-combustion engine. L. L. Melton. No. 1,378,250; May 17; v. 286; p. 468.

Internal-combustion engine. L. L. Melton. No. 1,378,260; May 17; v. 286; p. 468.

Internal-combustion engine. J. F. Murphy. No. 1,377,139; May 3; v. 286; p. 144.

Internal-combustion engine. P. W. Murphy. No. 1,379,775; May 31; v. 286; p. 902.

Internal-combustion engine. E. E. Penter. No. 1,377,789; May 10; v. 286; p. 326.

Internal-combustion engine. W. B. S. Whaley. No. 1,378,072; May 17; v. 286; p. 433.

Internal-combustion engine, Rotary. J. H. Bair. No. 1,377,383; May 10; v. 286; p. 249.

Invalid-chair. G. D. Goodwin. No. 1,380,056; May 31; v. 286; p. 956.

Iron: *See*—
- Asphalt-smoothing iron.
- Electric iron.
- Electric sadiron.

Iron. Rolling. C. Rötzel. No. 1,380,254; May 31; v. 286; p. 993.

Ironing-board. A. Mintz. No. 1,380,234; May 31; v. 286; p. 989.

Ironing implement. H. A. Rapelye. No. 1,379,721; May 31; v. 286; p. 893.

Irrigating-ditches, Gate for. W. Freudenberg. No. 1,378,342; May 17; v. 286; p. 483.

Jack: *See*—
- High-speed lifting-jack.
- Lifting-jack.
- Pump-jack.
- Railway-joint expansion-jack.

Jack. G. F. Dillon. No. 1,377,147; May 3; v. 286; p. 146.

Jack. H. T. Gibbard. No. 1,379,011; May 42; v. 286; p. 885.

Jack. H. T. Gibbard. No. 1,379,012; May 24; v. 286; p. 685.

Jack-gear. P. L. Billingsley. No. 1,376,507; May 3; v. 286; p. 24.

Jacquard devices, Strap connection for. H. Siesholtz. No. 1,378,567; May 17; v. 286; p. 527.

Jar-closure. T. L. Taliaferro. No. 1,378,295; May 17; v. 286; p. 475.

Jar-closure, Band. C. Hammer. No. 1,376,760; May 3; v. 286; p. 72.

Jar-cover remover. V. A. Boker. No. 1,376,395; May 3; v. 286; p. 4.

Jar or can opener, Adjustable. D. L. Murphy. No. 1,380,236; May 31; v. 286; p. 989.

Jar or container, Non-spillable battery. H. Dean. No. 1,376,923; May 3; v. 286; p. 104.

Jewel-mount. H. Silverman. No. 1,376,974; May 3; v. 286; p. 113.

Jewelry-clasp. B. Bloom. No. 1,377,552; May 10; v. 286; p. 280.

Joint: *See*—
- Corner-joint.
- Hydraulic pipe-joint.
- Pipe-joint.
- Power-transmitting joint.
- Rail-joint.
- Tubular joint.
- Universal joint.

Journal-bearing support. F. S. Barks. No. 1,377,545; May 10; v. 286; p. 279.

Journal-box. J. P. Kelly. No. 1,380,214; May 31; v. 286; p. 985.

Journal-box. H. C. Saltiel. No. 1,380,256; May 31; v. 286; p. 993.

Journal-boxes, Roller-bearing cage for railway. G. W. Dallimore. No. 1,377,670; May 10; v. 286; p. 303.

Journal-lubricator, Automatic. J. J. Hennessy. No. 1,378,452; May 17; v. 286; p. 504.

Juice, Concentrating grape-. E. Monti. No. 1,379,470; May 24; v. 286; p. 771.

Keeper. A. Block. No. 1,377,458; May 10; v. 286; p. 263.

Kerosene-burner. C. A. Hill. No. 1,377,072; May 3; v. 286; p. 132.

Kettle. J. C. Hollands. No. 1,377,684; May 10; v. 286; p. 305.

Knife, Button-. J. M. McCray. No. 1,380,226; May 31; v. 286; p. 988.

Knife director and guide-gage. E. J. Miller. No. 1,378,551; May 17; v. 286; p. 524.

Knitting machine for making antiraveling courses, Stocking-. G. P. Bosworth. No. 1,377,460; May 10; v. 286; p. 263.

Knitting machine, Stocking-. G. P. Bosworth. No. 1,377,459; May 10; v. 286; p. 263.

Knitting-machine web-turning device. L. N. D. Williams. No. 1,377,239; May 10; v. 286; p. 220.

Knitting-machines, Cutter for. H. Paulman. No. 1,379,720; May 31; v. 286; p. 893.

Knitting-needles and the like, Removable protecting-cap for. J. Mossman. No. 1,376,964; May 3; v. 286; p. 112.

Knuckle for car-couplings, Emergency-. J. P. Carney. No. 1,379,960; May 31; v. 286; p. 938.

Label-holder. E. Ohnstrand. No. 1,376,725; May 3; v. 286; p. 65.

Label-printing machine. J. M. Reis and B. Friedman. No. 1,379,599; May 24; v. 286; p. 795.

Labeling-machine. C. H. Wild. No. 1,379,376; May 24; v. 286; p. 754.

Lacing-stud-setting machine with automatic stop. A. R. Havener. No. 1,379,303; May 24; v. 286; p. 740.

Ladder. A. A. Sorg. No. 1,377,977; May 10; v. 286; p. 363.

Ladder attachment. A. P. O'Connor. No. 1,376,777; May 3; v. 286; p. 75.

Ladder, Car-. F. Jager. No. 1,376,696; May 3; v. 286; p. 59.

Ladder-foot extension. O. A. Alm. No. 1,377,543; May 10; v. 286; p. 278.

Ladder, Step-. F. F. Hedden. No. 1,377,579; May 10; v. 286; p. 285.

Ladders, Safety-shoe for. H. W. Fies. No. 1,379,808; May 31; v. 286; p. 909.

Ladle-heating by high-frequency currents. E. F. Northrup. No. 1,378,188; May 17; v. 286; p. 455.

Lake or pond. J. B. Kirby. No. 1,376,889; May 3; v. 286; p. 97.

Lamp. H. A. Douglas. No. 1,377,412; May 10; v. 286; p. 254.

Lamp. C. E. Godley. No. 1,377,197; May 10; v. 286; p. 211.

Lamp. E. A. Hawthorne. No. 1,380,100; May 31; v. 286; p. 964.

Lamp. R. Osborn. No. 1,379,279; May 24; v. 286; p. 735.

Lamp, Acetylene-. M. Stein. No. 1,376,654; May 3; v. 286; p. 52.

Lamp, Battery hand-. C. Hambuechen. No. 1,377,477; May 10; v. 286; p. 267.

Lamp-bracket. E. A. Hawthorne. No. 1,379,761; May 31; v. 286; p. 900.

Lamp construction. S. F. Arbuckle. No. 1,376,599; May 3; v. 286; p. 42.

Lamp-fixture. C. J. Henschel. No. 1,377,480; May 10; v. 286; p. 267.

Lamp-holder and reflector, Combined. J. J. Johnson. No. 1,376,941; May 3; v. 286; p. 107.

Lamp, Magneto pocket-. G. M. Beaudot. No. 1,380,180; May 31; v. 286; p. 979.

Lamp mounting, Vehicle-. C. H. Wolfe. No. 1,376,988; May 3; v. 286; p. 116.

Lamp, Portable electric. W. A. Harvey. No. 1,380,143; May 31; v. 286; p. 972.

Lamp, Portable electric. F. M. Rosenfeld. No. 1,379,697; May 31; v. 286; p. 888.

Lamp, Signal-. W. F. McMahon. No. 1,380,155; May 31; v. 286; p. 975.

Lamp socket, Electric-. H. F. Hitner. No. 1,380,063; May 31; v. 286; p. 958.

Lamp-socket. C. J. Klein. No. 1,378,467; May 17; v. 286; p. 507.

Lamps, Adjustably-hinged tilting reflector for. S. F. Arbuckle. No. 1,376,993; May 3; v. 286; p. 117.

Lamps, Protective device for incandescent. C. A. B. Halvorson, Jr. No. 1,379,560; May 24; v. 286; p. 788.

Lantern, Electric. L. D. Brainerd. No. 1,380,091; May 31; v. 286; p. 963.

Lantern-slide. J. F. Confal. No. 1,376,677; May 3; v. 286; p. 55.

Last. G. Clausing. No. 1,378,998; May 24; v. 286; p. 682.
Last, Expansible shoe-. C. Schevitz. No. 1,379,478; May 24; v. 286; p. 772.
Lasts, Machine for shaping uppers to. B. Jorgensen. No. 1,379,923; May 31; v. 286; p. 930.
Lasts, Machine for shaping uppers to. B. Jorgensen. No. 1,379,924; May 31; v. 286; p. 931.
Latch. F. E. Davis. No. 1,379,537; May 24; v. 286; p. 784.
Latch. A. Gagnon. No. 1,376,755; May 3; v. 286; p. 71.
Latch, Door-. T. L. Church. No. 1,378,583; May 17; v. 286; p. 52.
Latch for cabinet-closures. L. Ribeiro. No. 1,377,437; May 10; v. 286; p. 259.
Latch for handbags, Lift-. B. J. Richardson and C. S. Barber. No. 1,377,276; May 10; v. 286; p. 227.
Lathe. W. T. Carnea. No. 1,379,393; May 24; v. 286; p. 757.
Lathe, Staff-. R. G. Moore. No. 1,379,645; May 31; v. 286; p. 879.
Lathes, Multiple-jaw-setting attachment for steady-rests for. W. S. and W. E. McConnell. No. 1,378,253; May 17; v. 286; p. 467.
Lavatories, Sanitary basin for. C. H. Windsor. No. 1,379,152; May 24; v. 286; p. 711.
Lavatory and water-heater, Combined. J. S. Nicholl. No. 1,378,185; May 17; v. 286; p. 454.
Lawn-sprinkler. J. J. Donegan. No. 1,377,409; May 10; v. 286; p. 254.
Lawn-swing. G. H. Bugenhagen. No. 1,378,004; May 17; v. 286; p. 420.
Lawn-swing. W. N. Jay. No. 1,376,698; May 3; v. 286; p. 60.
Lead oxid, Process and apparatus for the production of. H. S. Reed and H. L. Publow. No. 1,376,581; May 3; v. 286; p. 38.
Leaf metal, Paper material coated with. F. Tschelke. No. 1,376,737; May 3; v. 286; p. 67.
Leather, Coloring and finishing the surface of grain-. W. H. Meade and S. H. Friestedt. No. 1,376,961; May 3; v. 286; p. 111.
Leather-cutting machine. C. A. Sawyer, Jr. No. 1,379,420; May 24; v. 286; p. 762.
Leather-making. P. Brant and H. T. Wilson. No. 1,378,213; May 17; v. 286; p. 459.
Leather-working machine. L. O. Ramsdell. No. 1,377,434; May 10; v. 286; p. 258.
Leg, Artificial. C. B. Winn. No. 1,379,293; May 24; v. 286; p. 738.
Lens and making same, Bifocal. L. W. Bugbee. No. 1,376,673; May 3; v. 286; p. 55.

Mercury, Oxidizing. H. W. Matheson. No. 1,379,465; May 24; v. 286; p. 770.
Metal-coating composition. T. J. Ethridge. No. 1,379,542; May 24; v. 286; p. 785.
Metal-extrusion apparatus. H. C. Root. No. 1,377,094; May 3; v. 286; p. 136.
Metal, Fastening non-metallic elements to. C. F. Dieckmann. No. 1,377,671; May 10; v. 286; p. 303.
Metal, Machine for automatically edging, perforating, and cutting off strips of. C. A. Eligh. No. 1,379,005; May 24; v. 286; p. 683.
Metal, Obtaining a continuous flow of SO_2 from white. W. H. Howard. No. 1,377,013; May 3; v. 286; p. 121.
Metal-sheet-pack-separating device. D. L. Maineri. No. 1,378,886; May 24; v. 286; p. 661.
Metal wheel. E. Fulda. No. 1,378,020; May 17; v. 286; p. 422.
Metal wheel. M. Lachman. No. 1,378,039; May 17; v. 296; p. 426.
Metal wheel. L. S. Lachman. No. 1,378,876; May 24; v. 286; p. 659.
Metal wheel. M. Lachman. No. 1,378,877; May 24; v. 286; p. 659.
Metal wheel. L. S. Lachman. No. 1,380,217; May 31; v. 286; p. 986.
Metal wheel. M. Lachman. No 1,380,218; May 31; v. 286; p. 986.
Metal wheel. M. Lachman. No. 1,380,219; May 31; v. 286; p. 986.
Metal-working, Determining temperatures in. O. C. Gilbert. No. 1,379,909; May 31; v. 286; p. 927.
Metal-working machinery, Raising and lowering means in. A. E. Robinson and H. W. Schatz. No. 1,380,021; May 31; v. 286; p. 949.
Metals, Coating ferrous. C. Baskerville. No. 1,378,439; May 17; v. 286; p. 502.
Metals, Machine for casting. C. P. West. No. 1,376,661; May 3; v. 286; p. 53.
Metals, Producing carbonates of the alkaline-earth. J. H. MacMahon. No. 1,378,595; May 17; v. 286; p. 532.
Metallic baths, Preparing ferric articles for. J. H. Maddy. No. 1,379,998; May 31; v. 286; p. 945.
Metallic boxes, Machine for covering. A. A. Thomas. No. 1,377,231; May 10; v. 286; p. 218.
Metallic boxes, Machine for covering. A. A. Thomas. No. 1,377,232; May 10; v. 286; p. 219.
Metallic constituents from a mixture thereof, Recovering. G. W. Mullen. No. 1,377,217; May 10; v. 286; p. 216.
Metallic members together, Securing. O. B. Moorhead. No. 1,379,036; May 24; v. 286; p. 689.
Metallic sheets or foils, Production of thin. T. A. Edison. No. 1,379,089; May 24; v. 286; p. 699.
Metallurgical furnace. F. C. Curtis. No. 1,376,680; May 3; v. 286; p. 56.
Metallurgical process. J. T. Jones. No. 1,379,023; May 24; v. 286; p. 687.
Methane, Making wood alcohol from. E. H. Riesenfeld. No. 1,379,362; May 24; v. 286; p. 751.
Meter: *See*—
Gas-meter. Water-meter.
Photographic exposure-meter.
Meter. F. Lambert. No. 1,377,985; May 10; v. 286; p. 364.
Microphone. R. H. Manson. No. 1,378,708; May 17; v. 286; p. 555.
Milk, Apparatus for the treatment of. J. M. Manley. No. 1,380,230; May 31; v. 286; p. 988.
Milk-bottle carrier. C. B. Samuels. No. 1,377,931; May 10; v. 286; p. 354.
Milk-can. H. G. Hansen. No. 1,377,341; May 10; v. 286; p. 241.
Milking-machine. J. C. Beem. No. 1,377,546; May 10; v. 286; p. 279.
Milking-machine. J. C. Beem. No. 1,377,547; May 10; v. 286; p. 279.
Milking-machine. R. A. Casarotti. No. 1,379,800; May 31; v. 286; p. 907.
Milking-machine, Portable. A. Ekern and R. A. Tanner. No. 1,377,244; May 10; v. 286; p. 221.
Milking-machines, Teat-cup for. B. A. Knowles. No. 1,378,683; May 17; v. 286; p. 550.
Milling-machine. R. L. Hibbard. No. 1,378,865; May 24; v. 286; p. 657.
Milling-machine, Universal duplex. F. M. Davis. No. 1,376,861; May 3; v. 286; p. 92.
Milling-machines, Gear-cutting attachment for. M. Fodge. No. 1,377,330; May 10; v. 286; p. 238.
Milling-machines, Master-pulsator for. M. Leitch. No. 1,378,881; May 24; v. 286; p. 660.
Mine-hoists, Gravity-car control for. D. F. Lepley. No. 1,379,870; May 31; v. 286; p. 921.
Mine-skip. D. F. Lepley. No. 1,379,869; May 31; v. 286; p. 920.
Mining and loading machine. N. D. Levin. No. 1,378,360; May 17; v. 286; p. 487.
Mining and loading mechanism. N. D. Levin. No. 1,378,361; May 17; v. 286; p. 487.
Mining apparatus. N. D. Levin. No. 1,377,842; May 10; v. 286; p. 337.
Mining apparatus. N. D. Levin. No. 1,378,359; May 17; v. 286; p. 486.
Mining apparatus. N. D. Levin. No. 1,378,362; May 17; v. 286; p. 487.
Mining-machine. M. P. Holmes. No. 1,377,132; May 3; v. 286; p. 143.
Mining-machine. M. P. Holmes. No. 1,378,813; May 17; v. 286; p. 574.
Mirror and cabinet, Combined shaving-. C. Lichtenberg. No. 1,380,222; May 31; v. 286; p. 987.
Mirror, Shaving-. T. S. Knap. No. 1,379,991; May 31; v. 286; p. 943.
Mirror, Vehicle-. W. Knapp. No. 1,377,355; May 10; v. 286; p. 244.
Mitten, Three-finger. E. T. Baskin. No. 1,378,758; May 17; v. 286; p. 564.
Mittens, gloves, &c., Clamping-bracelet for. E. L. Whittaker. No. 1,377,648; May 10; v. 286; p. 298.
Mixer: *See*—
Gas-mixer.
Mixing-machine. E. S. La Croix. No. 1,379,707; May 31; v. 286; p. 890.
Molasses-gate lock. H. G. Voight. No. 1,377,531; May 10; v. 286; p. 276.
Mold: *See*—
Cement-block mold. Ingot-mold.
Concrete-mold. Tire-mold.
Mold-making machines, Control means for. C. G. Shaffer and G. Trefs. No. 1,379,421; May 24; v. 286; p. 762.
Molds for dentists' use, Forming-. G. E. Terrànova. No. 1,378,064; May 17; v. 286; p. 432.
Molds, Machine for making stereotype-. C. N. Smith. No. 1,379,317; May 24; v. 286; p. 743.
Molds or dies, molding or shaping parts in. M. H. Reymond. No. 1,380,250; May 31; v. 286; p. 992.
Molded articles, Production of. T. A. Edison. No. 1,377,192; May 10; v. 286; p. 211.
Molded articles, Production of. T. A. Edison. No. 1,377,193; May 10; v. 286; p. 211.
Molding. H. R. Duckwall. No. 1,378,664; May 17; v. 286; p. 546.
Molding-flask. G. W. Cannon. No. 1,376,602; May 3; v. 286; p. 42.
Molding-machine. W. J. Baird. No. 1,379,328; May 24; v. 286; p. 745.
Money-receptacle. C. W. Kirkpatrick. No. 1,378,682; May 17; v. 286; p. 550.
Money-value indicator. H. Rohwer. No. 1,376,832; May 3; v. 286; p. 86.

Ore materials from each other, Process of and apparatus for separating. R. S. Towne and F. B. Flinn. No. 1,378,920; May 24; v. 286; p. 668.
Ore, Reducing iron from the. J. F. Jones. No. 1,379,024; May 24; v. 286; p. 687.
Ores, Apparatus for treating. G. H. Clevenger. No. 1,379,083; May 24; v. 286; p. 698.
Ores, preparatory to smelting, Treating. J. W. Hegeler. No. 1,378,411; May 17; v. 286; p. 497.
Ores, Treating. R. L. Lloyd. No. 1,378,699; May 17; v. 286; p. 553.
Ores, Treatment of iron. F. A. Eustis. No. 1,377,822; May 10; v. 286; p. 333.
Organ-pipe. C. S. Losh. No. 1,376,891; May 3; v. 286; p. 98.
Organs, Key-coupler for. H. T. Depue. No. 1,376,682; May 3; v. 286; p. 56.
Outage-gage. E. J. Flynn. No. 1,378,536; May 17; v. 286; p. 521.
Oven, Electrically-heated bake-. J. C. Woodson. No. 1,378,080; May 17; v. 286; p. 435.
Oven, Horizontal coking-. O. Piette. No. 1,378,129; May 17; v. 286; p. 444.
Oven, Rotatable. F. J. Kuhlemeier and F. Meyer. No. 1,377,592; May 10; v. 286; p. 287.
Oven-wall construction. F. C. Haller. No. 1,378,346; May 17; v. 286; p. 484.
Ovens, Turntable-rack for. O. L. Partonnar. No. 1,380,078; May 31; v. 286; p. 960.
Overhead-carrier system. E. T. Bennington. No. 1,379,614; May 31; v. 286; p. 873.
Overhead tramway-switch. C. T. Judd. No. 1,377,134; May 3; v. 286; p. 143.
Overload-switch. M. H. Shoenberg. No. 1,378,730; May 17; v. 286; p. 559.
Oxidation of orthocresol, Catalytic. J. M. Weiss and C. R. Downs. No. 1,380,277; May 31; v. 286; p. 998.
Oxids, &c., without contamination, Method and apparatus for melting. E. F. Northrup. No. 1,378,189; May 17; v. 286; p. 455.

Oysters, Culling-table for. M. G. Jones. No. 1,377,689; May 10; v. 286; p. 306.
Ozone-fume-removing apparatus. W. E. Gest. No. 1,378,104; May 17; v. 286; p. 439.
Ozonizer. M. J. Napier. No 1,379,776; May 31; v. 286; p. 902.
Package-tie. G. C. Snyder. No. 1,376,472; May 3; v. 286; p. 18.
Packet, Glass-treating. A. L. Clapp. No. 1,376,743; May 3; v. 286; p. 68.
Packing-ring. E. R. Norman. No. 1,378,894; May 24; v. 286; p. 662.
Pad: *See*—
Bed-pad. Truss-pad.
Knee-pad. Vulcanizing-pad.
Pad-holding means, Adjustable. F. J. Kristofek. No. 1,376,945; May 3; v. 286; p. 108.
Pad-supporting stand. G. W. Smith. No. 1,379,132; May 24; v. 286; p. 708.
Padlock. S. R. Fraim. No. 1,380,053; May 31; v. 286; p. 956.
Padlock, Permutation-. E. E. Quaintance. No. 1,376,639; May 3; v. 286; p. 49.
Padlocks, Shackle for. G. M. Miller. No. 1,379,120; May 24; v. 286; p. 705.
Page-marginer, Bottom and top. J. P. Beland. No. 1,376,996; May 3; v. 286; p. 117.
Pail attachment, Milk-. H. Blair. No. 1,377,111; May 3; v. 286; p. 139.
Paint vehicle and making same. G. Witty. No. 1,379,235; May 24; v. 286; p. 727.
Paintings, Reproduction of oil-. H. P. G. Steedman. No. 1,376,652; May 3; v. 286; p. 51.
Paintings, Reproducing oil-. H. P. G. Steedman. No. 1,376,653; May 3; v. 286; p. 51.
Pan: *See*—
Ash-pan.
Panel-clamp. W. A. Swartz. No. 1,379,882; May 31; v. 286; p. 923.
Paper-clip. C. C. Collette. No. 1,378,525; May 17; v. 286; p. 519.
Paper-clip. H. H. Febrey. No. 1,376,753; May 3; v. 286; p. 70.
Paper-dispenser. W. N. Friend. No. 1,379,756; May 31; v. 286; p. 899.
Paper dispenser, Sheet-. H. P. Dickerson. No. 1,377,565; May 10; v. 286; p. 282.
Paper drinking-cups, Cabinet for. W. E. Swift. No. 1,379,228; May 24; v. 286; p. 726.
Paper-fastener. F. J. Kline. No. 1,378,242; May 17; v. 286; p. 465.
Paper-feeding machine. C. S. Hanau. No. 1,376,875; May 3; v. 286; p. 95.
Paper-feeding mechanism. C. F. Pflanze. No. 1,378,194; May 17; v. 286; p. 456.
Paper-gripping device. S. Becker. No. 1,378,648; May 17; v. 286; p. 543.
Paper-holder. T. F. Zwilling. No. 1,378,753; May 17; v. 286; p. 563.
Paper, Impression-. S. E. Schuer. No. 1,377,368; May 10; v. 286; p. 246.
Paper pack, Interfolded. C. E. Swick. No. 1,378,063; May 17; v. 286; p. 432.
Paper-packages, Suspension device for. P. D. Parsons. No. 1,379,719; May 31; v. 286; p. 892.
Paper, Negotiable. C. D. Graton. No. 1,378,673; May 17; v. 286; p. 548.
Paper rolls, Means for making toilet-. P. D. Parsons. No. 1,379,718; May 31; v. 286; p. 892.
Paper sheet, Blasting. G. S. Clark. No. 1,376,676; May 3; v. 286; p. 55.
Paper-tape-magazine holders, Advertising device for. R. H. Biggs. No. 1,377,180; May 10; v. 286; p. 208.
Paper-tape-magazine holders, Advertising device for. R. H. Biggs. No. 1,377,181; May 10; v. 286; p. 208.
Parachute and pack, Aviator's. A. C. Scott. No. 1,378,382; May 17; v. 286; p. 491.
Parachutes, Landing attachment for. F. Smith. No. 1,378,198; May 17; v. 286; p. 457.
Paste-receptacle. W. F. Ellis. No. 1,377,567; May 10; v. 286; p. 283.
Pasteurizer. K. K. Wright. No. 1,377,742; May 10; v. 286; p. 316.
Pastry-forming device. D. B. Levy. No. 1,376,711; May 3; v. 286; p. 62.
Pastry-making machine. J. B. Meltz. No. 1,379,643; May 31; v. 286; p. 878.
Pastry-making machines, Stop mechanism for. F. A. Bruckman. No. 1,379,080; May 24; v. 286; p. 697.
Pastry-shaping device. I. Israel. No. 1,379,987; May 31; v. 286; p. 943.
Pattern: *See*—
Smocking-pattern.
Pattern-drawing machine. W. C. Norcross. No. 1,378,186; May 17; v. 286; p. 454.

Plaster-board, Process and means for making. J. Schumacher. No. 1,379,940; May 31; v. 286; p. 934.
Plastic articles, Method of and apparatus for molding. E. E. Novotny. No. 1,377,517; May 10; v. 286; p. 274.
Plastic composition. E. L. Sharpneck. No. 1,379,052; May 24; v. 286; p. 692.
Plastic composition. E. L. Sharpneck. No. 1,379,053; May 24; v. 286; p. 692.
Plastic composition and producing same. G. M. Formby. No. 1,376,523; May 3; v. 286; p. 27.
Plastic composition. Flexible. A. L. Clapp. No. 1,379,590; May 24; v. 286; p. 794.
Plastic material, Method of and means for forming articles of. J. H. Morgan. No. 1,376,564; May 3; v. 286; p. 35.
Plastics, Metal bead for. W. M. Goldsmith. No. 1,379,862; May 31; v. 286; p. 919.
Plate disk wheel. W. E. Williams. No. 1,378,301; May 17; v. 286; p. 476.
Plate, Storage-battery. B. Ford. No. 1,376,929; May 3; v. 286; p. 105.
Plates and the like during washing up and rinsing, Apparatus for holding. C. H. V. Abrahamsén. No. 1,379,379; May 24; v. 286; p. 755.
Plating-bath. H. H. Hanson and A. C. Walker. No. 1,380,142; May 31; v. 286; p. 972.
Pliers. K. Shaner. No. 1,379,315; May 24; v. 286; p. 742.
Plow. R. J. Altgelt. No. 1,377,047; May 3; v. 286; p. 127.
Plow. R. J. Altgelt. No. 1,377,048; May 3; v. 286; p. 128.
Plow. R. J. Altgelt. No. 1,377,050; May 3; v. 286; p. 128.
Plow, Engine gang-. W. L. Paul. No. 1,377,025; May 3; v. 286; p. 123.
Plow, Gang-. J. B. Bartholomew. No. 1,379,673; May 31; v. 286; p. 884.
Plow, Gang-. C. G. Strandlund. No. 1,376,787; May 3; v. 286; p. 77.
Plow, Rotary. H. J. Bennett. No. 1,377,549; May 10; v. 286; p. 279.
Plow, Snow-. W. L. Ward. No. 1,378,502; May 17; v. 286; p. 519.
Plow, Tractor. W. W. Cameron. No. 1,377,057; May 3; v. 286; p. 129.
Plow, Tractor-. J. C. Dittbrenner. No. 1,378,842; May 24; v. 286; p. 653.
Plow, Tractor-. O. L. Plettner and W. H. Lowe. No. 1,378,196; May 17; v. 286; p. 456.
Plow, Tractor-drawn. A. D. Gallagher. No. 1,376,756; May 3; v. 286; p. 71.
Plow, Wheeled. R. J. Altgelt. No. 1,377,049; May 3; v. 286; p. 128.
Plows, Adjusting means for. A. D. Gallagher. No. 1,377,064; May 3; v. 286; p. 131.
Plug, Fusible. B. P. Terrell. No. 1,376,481; May 3; v. 286; p. 20.
Plugs and manufacture thereof, Contact-pin for connecting-. O. Stalhane and O. O. Kring. No. 1,376,735; May 3; v. 286; p. 67.
Plumb-level, Combination. J. H. Osborn. No. 1,380,243; May 31; v. 286; p. 991.
Plumber's ferret. C. W. Sheatley. No. 1,377,933; May 10; v. 286; p. 346.
Plunger, Shifter-fork. M. C. Frins. No. 1,378,222; May 17; v. 286; p. 461.
Pneumatic casing, Combination. J. Velcio. No. 1,377,375; May 10; v. 286; p. 247.
Pneumatic drill. C. Jackson. No. 1,376,545; May 3; v. 286; p. 31.
Pneumatic motor. J. F. Buhr. No. 1,377,745; May 10; v. 286; p. 716.
Pocket-flap. C. M. McCormick. No. 1,376,821; May 3; v. 286; p. 84.
Poke, Animal-. F. Whigham. No. 1,377,299; May 10; v. 286; p. 232.
Poles, Plastic base for. M. F. Hoyle. No. 1,378,351; May 17; v. 286; p. 485.
Polishing-machine. C. A. Wickstrom. No. 1,376,663; May 3; v. 286; p. 53.
Polyphase alternators, Means for eliminating harmonies in. C. L. Fortescue. No. 1,376,425; May 3; v. 286; p. 9.
Polyphase distributing system. C. L. Fortescue. No. 1,376,419; May 3; v. 286; p. 8.
Polyphase distributing system. C. L. Fortescue. No. 1,376,422; May 3; v. 286; p. 9.
Polyphase systems, Balancing means for. C. L. Fortescue. No. 1,376,417; May 3; v. 286; p. 8.
Porch-swing and crib, Combination. R. Barbour. No. 1,379,956; May 31; v. 286; p. 937.
Porous material and forming same, Indurated. O. C. Winestock. No. 1,377,241; May 10; v. 286; p. 220.
Portable elevator. E. N. Hescock and E. F. Smith. No. 1,376,540; May 3; v. 286; p. 30.

Portage device. G. More. No. 1,380,073; May 31; v. 286; p. 959.

Post: *See*—
Insulating end post. Removable fencepost.

Post, Combination wood and cement. W. B. McDonald. No. 1,379,029; May 24; v. 286; p. 688.

Pot: *See*—
Glue-pot. Pitch-pot.

Pots or vessels, Fastening device for lids of. G. H. Downes. No. 1,376,801; May 3; v. 286; p. 80.

Potash-bearing brines, Recovery of potash from. G. Hecker. No. 1,378,410; May 17; v. 286; p. 497.

Potash, Making. J. Endler. No. 1,380,195; May 31; v. 286; p. 982.

Potassium, Recovering useful substances from minerals and rocks containing. O. Ravner. No. 1,377,601; May 10; v. 286; p. 289.

Potato-peeling machine. B. A. Sharp. No. 1,380,259; May 31; v. 286; p. 994.

Potatoes, Dehydrating. A. E. Allen. No. 1,377,172; May 10; v. 286; p. 207.

Potatoes for seed, Device for cutting eyes out of large. R. J. Manderfield. No. 1,378,258; May 17; v. 286; p. 468.

Pottery, Machinery for the molding of. A. S. W. Odelberg. No. 1,377,785; May 10; v. 286; p. 326.

Powder-container. J. D. Boyle. No. 1,377,113; May 3; v. 286; p. 140.

Powder, Making propellent. R. G. Woodbridge, Jr. No. 1,379,073; May 24; v. 286; p. 696.

Powder-puff. G. and A. S. Mosheim. No. 1,379,201; May 24; v. 286; p. 721.

Power attachment. A. C. Lindholm. No. 1,376,952; May 3; v. 286; p. 109.

Power device, Rotary. E. H. Gollings. No. 1,378,855; May 24; v. 286; p. 655.

Power device, Rotary. E. H. Gollings. No. 1,378,856; May 24; v. 286; p. 655.

Power from tides and waves, Method and apparatus for deriving mechanical. J. C. P. Pool. No. 1,377,163; May 3; v. 286; p. 149.

Power mechanism, Electric. M. H. Spielman. No. 1,380,162; May 31; v. 286; p. 976.

Power mechanism for operating ground-breaking devices. E. E. Towle. No. 1,378,432; May 17; v. 286; p. 501.

Power transmission. R. A. Workman. No. 1,378,751; May 17; v. 286; p. 563.

Power transmission and regenerative braking, Electrical system of. C. J. Axtell. No. 1,378,511; May 17; v. 286; p. 516.

Power-transmission device. R. F. Crawford. No. 1,379,534; May 24; v. 286; p. 784.

Power-transmission device. O. A. Wiberg. No. 1,379,498; May 24; v. 286; p. 776.

Power transmission, Variable-speed. C. A. Slocum. No. 1,378,570; May 17; v. 286; p. 527.

Power-transmitting device. A. D. McPherson. No. 1,379,031; May 24; v. 286; p. 688.

Power-transmitting joint. C. H. Jacobsen and C. Breer. No. 1,378,118; May 17; v. 286; p. 442.

Power-transmitting means. M. H. Benson. No. 1,379,846; May 31; v. 286; p. 916.

Precipitator. W. E. Wine. No. 1,377,996; May 10; v. 286; p. 366.

Pumps, Antisander for piston-. J. H. Hart. No. 1,379,302; May 24; v. 286; p. 739.

Pumps, Power attachment for automobile hand-. C. C. Mohney. No. 1,376,718; May 3; v. 286; p. 64.

Pumps, Self-lubricating piston for air-. J. H. Bradneck. No. 1,376,857; May 3; v. 286; p. 91.

Pumps, Sucker-rod attachment to prevent sanding up of well-. R. L. Burns and F. F. Winger. No. 1,379,165; May 24; v. 286; p. 713.

Pumping apparatus. W. E. Janney, H. E. Fiscel, and J. L. Miller. No. 1,377,776; May 10; v. 286; p. 324.

Pumping system. H. E. La Bour. No. 1,377,256; May 10; v. 286; p. 223.

Pumping system, Automatic. G. M. Eaton. No. 1,376,411; May 3; v. 286; p. 6.

Punch. S. Boisseau. No. 1,377,055; May 3; v. 286; p. 129.

Punch. W. A. Whitney. No. 1,376,492; May 3; v. 286; p. 22.

Punching machine, Horseshoe-. J. Brock. No. 1,377,799; May 10; v. 286; p. 328.

Purse. H. J. Hegwer. No. 1,379,817; May 31; v. 286; p. 911.

Puzzle. J. V. Wells. No. 1,377,039; May 3; v. 286; p. 126.

Puzzle of the movies. W. D. McGuire, Jr. No. 1,379,871; May 31; v. 286; p. 921.

Pyrometry, Optical. F. E. Bash. No. 1,376,666; May 3; v. 286; p. 54.

Quilting-frame. W. F. Gage. No. 1,380,202; May 31; v. 286; p. 983.

Quoit. T. H. Tabor. No. 1,379,883; May 31; v. 286; p. 923.

Rack: *See*—
Canning-rack. Tire-rack.
Display-rack. Towel-rack.
Spool-rack.

Rack. M. A. and O. Yates. No. 1,378,161; May 17; v. 286; p. 450.

Radiant-energy signaling system. T. W. Case. No. 1,379,166; May 24; v. 286; p. 714.

Radiator. M. Gal. No. 1,378,103; May 17; v. 286; p. 430.

Radiator. R. L. Hawkins. No. 1,379,015; May 24; v. 286; p. 686.

Radiator. J. A. Hromadko. No. 1,376,882; May 3; v. 286; p. 96.

Radiator. M. King. No. 1,376,943; May 3; v. 286; p. 107.

Radiator. A. Nebel. No. 1,377,912; May 10; v. 286; p. 350.

Radiator-cap. C. C. Himes. No. 1,379,626; May 31; v. 286; p. 875.

Radiator construction. G. Horvath. No. 1,377,965; May 10; v. 286; p. 360.

Radiator-core. R. E. Benner. No. 1,380,132; May 31; v. 286; p. 970.

Radiator-cover. E. R. Mertens. No. 1,379,412; May 24; v. 286; p. 760.

Radiator, Electric-heated thermosiphon-. G. Monte. No. 1,378,552; May 17; v. 286; p. 524.

Radiator-leaks, Composition for stopping. M. G. Ray. No. 1,377,275; May 10; v. 286; p. 227.

Radiator-tubes, Method and machine for making. C. A. Eligh. No. 1,379,006; May 24; v. 286; p. 684.

Radiator-tubing. O. Bark. No. 1,377,385; May 10; v. 286; p. 249.

Radiators, Air-controlling device for automobile-. G. G. Marshall. No. 1,379,308; May 24; v. 286; p. 741.

Radiators, Locking-cap for automobile-. E. E. Mack. No. 1,376,560; May 3; v. 286; p. 34.

Radiators, Making cellular elements for. D. M. Livingston. No. 1,377,494; May 10; v. 286; p. 270.

Radiators, Shutter construction for motor-vehicle. L. A. Menges and W. W. Simpson. No. 1,379,644; May 31; v. 286; p. 879.

Radio apparatus, Shielding. L. A. Hazeltine. No. 1,379,184; May 24; v. 286; p. 717.

Radio-receiving antenna. S. C. Hooper and G. H. Clark. No. 1,379,262; May 24; v. 286; p. 732.

Radio-receiving system. A. M. Curtis. No. 1,376,679; May 3; v. 286; p. 56.

Radiotelegraphy, Cut-in system of. P. Ware. No. 1,379,144; May 24; v. 286; p. 710.

Rail. H. O. Conger and C. W. McCue. No. 1,378,767; May 17; v. 286; p. 566.

Rail-anchor. L. J. Berkeley. No. 1,379,383; May 24; v. 286; p. 755.

Rail-anchor. L. J. Berkeley. No. 1,379,384; May 24; v. 286; p. 756.

Rail-anchor. H. G. Gilmor. No. 1,376,526; May 3; v. 286; p. 28.

Rail-anchor. H. G. Warr. No. 1,376,490; May 3; v. 286; p. 21.

Rail-bond. J. R. Brown. No. 1,376,396; May 3; v. 286; p. 4.

Rail-bond. J. A. Frauenheim and H. Etheridge. No. 1,377,246; May 10; v. 286; p. 222.

Rail brace-plate, Adjustable-guard-. B. T. Gibbs, Jr. No. 1,376,525; May 3; v. 286; p. 28.

Rail-chair, Anticreeping. S. Wrubel. No. 1,380,284; May 31; v. 286; p. 999.

Rail chair and antispreading device, Combined. W. J. Thebault. No. 1,379,661; May 31; v. 286; p. 882.

Rail crossing, Continuous-. J. M. and W. Rihn. No. 1,378,277; May 17; v. 286; p. 472.

Rail-fastener. A. N. Menser. No. 1,378,366; May 17; v. 286; p. 488.

Rail-joint. F. O. Canella. No. 1,378,009; May 17; v. 286; p. 421.

Rail-joint. J. C. Peppers. No. 1,377,272; May 10; v. 286; p. 226.

Rail-securing device. F. G. Milliken. No. 1,377,424; May 10; v. 286; p. 256.

Rail system. D. Short. No. 1,379,580; May 24; v. 286; p. 792.

Railway-brakes, Automatic slack-adjuster for. K. A. Beckman. No. 1,377,386; May 10; v. 286; p. 249.

Railway-cars of the dumping type, Reinforced door for. G. G. Gilpin. No. 1,380,055; May 31; v. 286; p. 956.

Railway cross-tie. J. W. Hulbert. No. 1,376,769; May 3; v. 286; p. 73.

Railway-joint expansion-jack. J. E. McNeil. No. 1,378,479; May 17; v. 286; p. 510.

Railway, Monorail. A. P. Lee. No. 1,376,444; May 3; v. 286; p. 13.

Railway-rail wearing-plate and connection. E. G. Wallinder. No. 1,376,488; May 3; v. 286; p. 21.

Railway-rails to sleepers, Means for securing. M. E. Rees. No. 1,377,928; May 10; v. 286; p. 354.

Railway side-frame and journal-box connection. H. E. Doerr. No. 1,376,684; May 3; v. 286; p. 57.

Railway signaling. R. A. McCann. No. 1,377,211; May 10; v. 286; p. 214.

Railway-spreader. R. E. Bressler. No. 1,376,510; May 3; v. 286; p. 25.

Railway-switch, Double-slip. J. C. Mock. No. 1,377,216; May 10; v. 286; p. 215.

Railway-switch-operating device. J. Bakovich. No. 1,377,452; May 10; v. 286; p. 262.

Railway terminal station. J. J. Coughlin. No. 1,376,407; May 3; v. 286; p. 6.

Railway-tie. H. Jones. No. 1,376,549; May 3; v. 286; p. 32.

Railway-tie. J. A. Silver. No. 1,378,383; May 17; v. 286; p. 491.

Railway-tie and rail-fastener, Combination. A. N. Trumpower, Sr. No. 1,377,942; May 10; v. 286; p. 357.

Railway-track construction. J. Juroka. No. 1,377,489; May 10; v. 286; p. 269.

Railway-traffic-controlling apparatus. L. V. Lewis. No. 1,377,137; May 3; v. 286; p. 144.

Railway water-column. E. E. Johnson. No. 1,378,236; May 17; v. 286; p. 464.
Railways, Automatic stop mechanism for. R. C. Albury and L. T. Hayman. No. 1,380,174; May 31; v. 286; p. 978.
Railways, Control-circuits for operating block-signaling devices, &c., upon. J. A. Miller. No. 1,379,592; May 24; v. 286; p. 794.
Railways, Signal device for miniature electric. R. N. Miller. No. 1,378,421; May 17; v. 286; p. 499.
Range. E. L. Baker. No. 1,379,954; May 31; v. 286; p. 937.
Range-boiler stand. D. D. Wessels. No. 1,378,299; May 17; v. 286; p. 476.
Range, Combined gas and coal. F. V. Knauss. No. 1,380,151; May 31; v. 286; p. 974.
Range, Combined gaseous and solid fuel. H. H. Sanford. No. 1,377,731; May 10; v. 286; p. 314.
Range heating element, Electric-. F. F. Forshee. No. 1,376,415; May 3; v. 286; p. 7.
Ranges, Filtering-flue for gas-. M. E. Koehler. No. 1,377,694; May 10; v. 286; p. 307.
Ranges, Safety device for gas-. W. J. Wodraska. No. 1,376,909; May 3; v. 286; p. 101.
Rasp, Rotary. W. P. West and J. H. Smith. No. 1,379,146; May 24; v. 286; p. 710.
Rat, mouse, and insect trap. L. Haege. No. 1,379,685; May 31; v. 286; p. 886.
Rattler. B. Nevin. No. 1,380,303; May 31; v. 286; p. 1002.
Razor-blade box or container. W. H. Williams. No. 1,377,379; May 10; v. 286; p. 248.
Razor-blade holder, Finger-grasping. J. A. Williamson. No. 1,378,079; May 17; v. 286; p. 474.
Razor, Safety-. C. E. A. Gronbech. No. 1,376,759; May 3; v. 286; p. 71.
Reamer. R. J. Emory. No. 1,378,339; May 17; v. 286; p. 483.
Reamer and cutter. C. J. Wood. No. 1,376,790; May 3; v. 286; p. 77.
Reamer-head, Adjustable. A. A. Martell. No. 1,376,450; May 3; v. 286; p. 14.
Reamers, Support for expanding. G. L. Wood. No. 1,378,989; May 24; v. 286; p. 680.
Receptacle, Change-. W. A. Heap. No. 1,378,173; May 17; v. 286; p. 452.
Receptacle, Conveying-. C. J. Weston. No. 1,378,574; May 17; v. 286; p. 528.
Receptacle, Foldable. F. M. Steuterman. No. 1,377,638; May 10; v. 286; p. 296.
Receptacle, Milk-bottle. E. E. Ball. No. 1,379,509; May 24; v. 286; p. 779.
Receptacle, Self-closing bundle-. C. E. Cardwell. No. 1,377,114; May 3; v. 286; p. 140.
Receptacle support, Mail-. E. McDill. No. 1,377,084; May 3; v. 286; p. 134.
Receptacles, Portable tool for securing binding material to. C. E. Wise. No. 1,376,597; May 3; v. 286; p. 41.
Receptacles, Tapping device for. F. Kirby. No. 1,379,632; May 31; v. 286; p. 876.
Rechargeable electric battery. H. R. Dam. No. 1,377,060; May 3; v. 286; p. 130.
Reclining-chair. G. L. Starks. No. 1,377,605; May 10; v. 286; p. 290.
Recoil mechanism. S. P. Johnson. No. 1,379,989; May 31; v. 286; p. 943.
Record-sorter, Sectional. E. P. Waterhouse. No. 1,379,790; May 31; v. 286; p. 905.
Recording and signal device, Watchman's double. W. J. Tidd. No. 1,378,152; May 17; v. 286; p. 448.
Recording-key. A. D. Hargan. No. 1,378,950; May 24; v. 286; p. 673.
Recording-lock. J. W. Brice. No 1,.378,652; May 17; v. 286; p. 544.
Recording-strip, Apparatus for recording various phenomena by the movement of the. F. Gueugnon. No. 1,379,916; May 31; v. 286; p. 929.
Records, Device for measuring graphic. W. Hess, Jr. No. 1,376,768; May 3; v. 286; p. 73.
Rectifiers, Apparatus for measuring the vacuum in large. B. B. Schäfer. No. 1,377,282; May 10; v. 286; p. 228.

Road-surfacing machine. J. W. Lee. No. 1,378,880; May 24; v. 286; p. 660.
Road-vehicle signal. O. Lehmann. No. 1,379,996; May 31; v. 286; p. 944.
Roads, Machine for making macadamized. C. J. Åberg. No. 1,377,302; May 10; v. 286; p. 232.
Roadway. R. Greene. No. 1,379,813; May 31; v. 286; p. 910.
Roaster. F. J. Kuhlemeier and R. J. Quelle. No. 1,377,591; May 10; v. 286; p. 287.
Robe-rail. D. O. Henderson. No. 1,377,682; May 10; v. 286; p. 305.
Rock-crusher roll. W. G. Stevenson. No. 1,377,370; May 10; v. 286; p. 246.
Rock-drilling machine. E. E. Peterson. No. 1,379,283; May 24; v. 286; p. 736.
Rocket. W. W. Case. No. 1,376,797; May 3; v. 286; p. 79.
Rocking-chair. J. A. Olbon. No. 1,380,241; May 31; v. 286; p. 990.
Rocking-chair. A. H. Prest. No. 1,377,600; May 10; v. 286; p. 289.
Rocking-horse, Child's skid. C. W. Magnat, Jr. No. 1,377,423; May 10; v. 286; p. 256.
Rod: *See*—
Fishing-rod.
Rod-clamp, Adjustable. G. F. Newton. No. 1,378,267; May 17; v. 286; p. 470.
Rod-coupling. F. W. Krogh. No. 1,377,418; May 10; v. 286; p. 255.
Rod socket or coupling. J. A. Day. No. 1,379,903; May 31; v. 286; p. 926.
Rods, Making connecting-. H. B. Layman. No. 1,378,690; May 17; v. 286; p. 551.
Roll-support. L. Flick. No. 1,379,588; May 24; v. 286; p. 793.
Roller: *See*—
Shade-roller.
Roller copying-machine. E. Lichtenstein. No. 1,378,697; May 17; v. 286; p. 553.
Roller-fender. W. F. Clayton. No. 1,377,115; May 3; v. 286; p. 140.
Rollers, Manufacturing printers'. S. Kutner. No. 1,379,109; May 24; v. 286; p. 703.
Rolling fender. J. H. Wright. No. 1,376,910; May 3; v. 286; p. 101.
Rolling or bending machine. C. M. Yoder. No. 1,376,497; May 3; v. 286; p. 22.
Rolls, Reclaiming broken. T. B. Golden. No. 1,379,975; May 31; v. 286; p. 941.
Röntgen-ray and like apparatus. G. G. Campion. No. 1,378,007; May 17; v. 286; p. 420.
Roofing, Bordering for. F. M. Traphagan. No. 1,377,610; May 10; v. 286; p. 291.
Roofing, Cleat for sheet-metal. C. B. Edwards. No. 1,376,751; May 3; v. 286; p. 70.
Roofing-slabs, Making. A. S. Speer. No. 1,379,727; May 31; v. 286; p. 894.
Rope-winding apparatus. N. D. Levin. No. 1,378,357; May 17; v. 286; p. 486.
Rotary engine. F. L. L. Bylger. No. 1,376,397; May 3; v. 286; p. 4.
Rotary engine. F. L. Horspool. No. 1,379,028; May 24; v. 286; p. 688.
Rotary engine. A. B. Johnson. No. 1,378,415; May 17; v. 286; p. 498.
Rotary engine. O. E. Peterson. No. 1,378,897; May 24; v. 286; p. 663.
Rotary engine. H. H. Shoemaker. No. 1,379,653; May 31; v. 286; p. 880.
Rotary engine. G. H. Stearns. No. 1,378,430; May 17; v. 286; p. 501.
Rotary-machine driving mechanism. A. B. Boyer. No. 1,378,088; May 17; v. 286; p. 436.
Rubber and similar material, Machine for treating. D. R. Bowen and C. F. Schnuck. No. 1,379,616; May 31; v. 286; p. 873.
Rubber articles, Forming hollow. F. A. Cigol. No. 1,378,523; May 17; v. 286; p. 518.
Rubber ball and manufacturing same, Non-pneumatic. K. Fukuda. (Reissue.) No. 15,108; May 24; v. 286; p. 796.
Rubber compound and preparing the same, Halogenated. C. W. Bedford and W. J. Kelly. No. 1,377,152; May 3; v. 286; p. 147.
Rubber-compounding mixture. G. J. Chertoff. No. 1,379,743; May 31; v. 286; p. 897.
Rubber-like material and resulting product, Making-. J. C. Wichmann. No. 1,379,149; May 24; v. 286; p. 711.
Rubber-like material, Making. J. C. Wichmann. No. 1,379,150; May 24; v. 286; p. 711.
Rug-extractor. A. P. Maize. No. 1,377,169; May 3; v. 286; p. 150.
Rule, Slide-. E. Böhnke. No. 1,378,993; May 24; v. 286; p. 681.
Ruler T-square. S. C. McKeown. No. 1,376,559; May 3; v. 286; p. 34.
Running-board brace. R. O. Dutcher and G. Hope. No. 1,380,046; May 31; v. 286; p. 954.
Sadiron. H. Peterson. No. 1,377,971; May 10; v. 286; p. 362.
Sadiron, Electric. L. B. Lincoln. No. 1,378,589; May 17; v. 286; p. 531.
Safes, Permutation-lock for. E. E. Quaintance. No. 1,376,638; May 3; v. 286; p. 49.
Safety deposit-box and lock construction. P. M. Wege. No. 1,377,449; May 10; v. 286; p. 261.
Safety key-ring hook. J. J. Pavlik, Jr. No. 1,377,724; May 10; v. 286; p. 312.
Salt of aluminum and potassium, Double. N. M. La Porte. No. 1,377,081; May 3; v. 286; p. 134.
Salts, Apparatus for the electrolysis of solutions of metal. J. K. Langhard. No. 1,379,453; May 24; v. 286; p. 768.
Sample-taking device. W. G. Christian. No. 1,379,170; May 24; v. 286; p. 714.
Samples, Means for retailing goods by. H. Dlugach. No. 1,377,813; May 10; v. 286; p. 331.
Samples, Shopping-card for use in retailing goods by. H. Dlugach. No. 1,377,812; May 10; v. 286; p. 331.
Sand-bath. T. Lidberg. No. 1,378,474; May 17; v. 286; p. 509.
Sand-blast machine. E. A. Rich, Jr. No. 1,377,993; May 10; v. 286; p. 365.
Sand-excluder. J. J. Perry. No. 1,379,477; May 24; v. 286; p. 772.
Sanitary stool-seat cover. J. P. Young. No. 1,377,541; May 10; v. 286; p. 278.
Sash attachment. E. W. Pendergraft. No. 1,378,718; May 17; v. 286; p. 557.
Sash-fastener. J. F. Brodowski. No. 1,379,959; May 31; v. 286; p. 938.
Sash-fastener. P. H. Johnson and P. A. Kosecki. No. 1,379,823; May 31; v. 286; p. 912.
Sash-holder. F. E. Domscheit. No. 1,377,619; May 10; v. 287; p. 293.
Sash, Window-. H. P. Homers. No. 1,379,304; May 24; v. 286; p. 740.
Sashes, Attachment for window-. H. P. Porter. No. 1,376,637; May 3; v. 286; p. 49.
Saw-blades, Apparatus for refinishing or retouching the teeth of. R. W. Pittman. No. 1,378,611; May 17; v. 286; p. 536.
Saw-filing machine. W. Diegel. No. 1,379,252; May 24; v. 286; p. 730.
Saw-filing machine. W. B. Penny. No. 1,376,634; May 3; v. 286; p. 48.
Saw for felling trees, cutting logs, and sawing wood, Portable motor-. K. R. J. Lagus. No. 1,378,963; May 24; v. 286; p. 675.
Saw-guard. H. A. Cooper. No. 1,379,802; May 31; v. 286; p. 908.
Saw-set. C. Bodmer. No. 1,378,650; May 17; v. 286; p. 543.
Saw-setting apparatus. J. T. Francis. No. 1,377,826; May 10; v. 286; p. 334.
Saw-tooth gage. C. O. Hawksley and W. J. Baumann. No. 1,378,409; May 17; v. 286; p. 497.
Sawing and boring device. G. H. Drabenstott. No. 1,377,961; May 10; v. 286; p. 360.
Sawing machine, Barrel-stave-. R. P. Gerlach. No. 1,379,682; May 31; v. 286; p. 885.
Scaffold. A. P. Dixson. No. 1,376,924; May 3; v. 286; p. 104.
Scaffold, Folding. J. D. Rupp. No. 1,377,095; May 3; v. 286; p. 136.
Scale. A. Sonander. No. 1,379,726; May 31; v. 286; p. 894.
Scale-beams, Safety-latch for recording. E. McGarvey. No. 1,378,966; May 24; v. 286; p. 676.
Scale, Combined computing and counting. C. E. Riedel. No. 1,379,215; May 24; v. 286; p. 723.
Scale, Weighing-. H. S. Bergen. No. 1,378,087; May 17; v. 286; p. 436.
Scale, Weighing-. H. O. Hem. No. 1,378,110; May 17; v. 286; p. 440.
Scales, Approach for track-. L. R. Rosebrook. No. 1,378,425; May 17; v. 286; p. 499.
Scoop-board for wagon-bodies. L. H. Meyerpeter. No. 1,380,233; May 31; v. 286; p. 989.
Scraper. J. M. Conley. No. 1,377,561; May 10; v. 286; p. 282.
Scraper. G. J. Huneryager. No. 1,377,484; May 10; v. 286; p. 268.
Scraper, charger, and tamper, Combination. T. J. Avery. No. 1,379,435; May 24; v. 286; p. 764.
Scraper, Drag-. W. E. Hale. No. 1,377,830; May 10; v. 286; p. 334.
Scraping apparatus. J. Rolli. No. 1,376,643; May 3; v. 286; p. 50.
Screen: *See*—
Door and window screen. Photographer's head-screen.
Fly-escape screen. Visual weather-screen.
Screen and storm-sash, Combination. W. R. Stermer. No. 1,379,227; May 24; v. 286; p. 725.
Screening device. H. H. Childers. No. 1,380,289; May 31; v. 286; p. 1000.
Screw swivels, Locking device for temper-. I. A. Shank. No. 1,377,287; May 10; v. 286; p. 229.
Screw-threads, Inspecting and gaging. J. Hartness. No. 1,377,068; May 3; v. 286; p. 131.
Screw-threads, Mechanism for gaging. J. Hartness. No. 1,377,069; May 3; v. 286; p. 132.

Screw-wrench. C. F. Mueller. No. 1,376,721; May 3; v. 286; p. 64.
Screwdriver. C. S. Andrews. No. 1,377,958; May 10; v. 286; p. 359.
Screwdriver, Magentic. W. J. and E. J. Hood. No. 1,378,032; May 17; v. 286; p. 425.
Screwdrivers, Handle attachment for. P. Reinhalter. No. 1,379,125; May 24; v. 286; p. 706.
Scrubbing-brush clamp-handle. F. Deutsch. No. 1,376,862; May 3; v. 286; p. 92.
Seal, Barrel-. H. W. Koch. No. 1,379,827; May 31; v. 286; p. 912.
Sealer, Electric envelop-. J. Rohdiek. No. 1,378,721; May 17; v. 286; p. 557.
Sealing-machine, Automatic. C. G. Mortimer. No. 1,378,889; May 24; v. 286; p. 662.
Sealing mechanism. W. M. Brooks. No. 1,380,038; May 31; v. 286; p. 952.
Seaming apparatus. J. W. Brown and W. Hess. No. 1,377,305; May 10; v. 286; p. 233.
Searchlight for motor-vehicles. B. Carlisle. No. 1,380,313; May 31; v. 286; p. 1004.

Target-throwing machines, Motor-drive for. C. H. Napier. No. 1,376,825; May 3; v. 286; p. 84.
Tatting-hook. M. C. Mouser. No. 1,379,930; May 31; v. 286; p. 932.
Teapot, coffee-pot, and like vessel. R. C. Johnson. No. 1,380,066; May 31; v. 286; p. 958.
Teeth and dental matrix for use therein, Filling. D. E. Taylor. No. 1,379,489; May 24; v. 286; p. 775.
Teeth, Gage for selecting artificial. W. C. Dalbey. No. 1,378,527; May 17; v. 286; p. 519.
Teeth, Gage for selecting artificial. J. A. Wavrin. No. 1,378,745; May 17; v. 286; p. 562.
Teeth, Making backing-plates for artificial. A. H. Gunther. No. 1,377,474; May 10; v. 286; p. 266.
Teeth, Preparation for the. W. Congreve. No. 1,379,744; May 31; v. 286; p. 897.
Teeth, Specimen set-up for artificial. M. M. House. No. 1,379,689; May 31; v. 286; p. 887.
Telegraph register receiving apparatus. N. B. Cregier. No. 1,378,011; May 17; v. 286; p. 421.
Telegraph system. J. H. Bell. No. 1,379,243; May 24; v. 286; p. 728.
Telegraph systems. P. M. Rainey and A. D. Dowd. No. 1,378,978; May 24; v. 286; p. 678.
Telegraphy, Underwater wave. W. Hahnemann. No. 1,377,129; May 26; v. 286; p. 143.
Telephone attachment. T. J. Farmer. No. 1,378,774; May 17; v. 286; p. 567.
Telephone-exchange system. H. P. Clausen. No. 1,378,938; May 24; v. 286; p. 671.
Telephone instrument. F. J. Reichmann and J. Press. No. 1,379,287; May 24; v. 286; p. 737.
Telephone switching apparatus. J. L. McQuarrie. No. 1,376,893; May 3; v. 286; p. 98.
Telephone system. C. C. Bradbury. No. 1,377,555; May 10; v. 286; p. 280.
Telephone system. E. Curnutt. No. 1,378,585; May 17; v. 286; p. 530.
Telephone system, Automatic. W. A. Chapin. No. 1,380,039; May 31; v. 286; p. 953.
Telephone system, Automatic. J. H. Homrighous. No. 1,378,231; May 17; v. 286; p. 463.
Telephone system, Automatic. W. D. Willis. No. 1,376,848; May 3; v. 286; p. 89.
Telephone system, Machine-switching. C. L. Goodrum. No. 1,378,947; May 24; v. 286; p. 673.
Telephone system, Measured-service. E. Jacobsen. No. 1,376,814; May 3; v. 286; p. 82.
Telephone system, Measured-service. J. Wicks. No. 1,379,008; May 24; v. 286; p. 695.
Telephone system, Semi-automatic. A. J. Seymour. No. 1,377,225; May 10; v. 286; p. 217.
Telephone system, Semi-automatic. G. A. Yanochowski and H. E. Hershey. No. 1,379,017; May 24; v. 286; p. 686.
Telephone toll-circuits. O. M. Arnold and J. F. Toomey. No. 1,376,391; May 3; v. 286; p. 3.
Telephone-transmitters, Sound-concentrator for. E. E. Taylor. No. 1,377,940; May 10; v. 286; p. 356.
Telephones, Receiver-hook switch for portable. J. T. Gray. No. 1,379,557; May 24; v. 286; p. 788.
Telephonic transmitters, Amplifier for. H. T. Dale. No. 1,378,940; May 24; v. 286; p. 671.
Temperature-controlling device. H. E. Churchill. No. 1,377,750; May 10; v. 286; p. 318.
Temperature-indicator for transformers. A. T. Childs. No. 1,379,526; May 24; v. 286; p. 782.
Temperature-producing mechanism and controlling means therefor. A. B. Frenier. No. 1,379,008; May 24; v. 286; p. 684.
Temperature-regulator. J. J. Danylchuk. No. 1,380,291; May 31; v. 286; p. 1000.
Temperature-regulator. G. S. Witham, Jr. No. 1,378,927; May 24; v. 286; p. 669.
Temperature uses, Apparatus for high. F. A. Fahrenwald. No. 1,378,941; May 24; v. 286; p. 672.
Templet. H. Jost. No. 1,379,630; May 31; v. 286; p. 876.
Templet. G. J. Nies. No. 1,380,240; May 31; v. 286; p. 990.
Tension-equalizing and shock-absorbing device. F. E. Turner. No. 1,380,125; May 31; v. 286; p. 969.
Tensiometer. P. Riba. No. 1,380,251; May 31; v. 286; p. 992.
Tent. J. D. Pennewell. No. 1,377,788; May 10; v. 286; p. 326.
Terminal, Battery-. A. H. Haefele. No. 1,377,126; May 3; v. 286; p. 142.
Terminal connection. H. W. Jones. No. 1,376,627; May 3; v. 286; p. 47.
Terminal, Electrode-. A. H. Haefele. No. 1,377,127; May 26; v. 286; p. 142.
Terminal, Electrode-. A. H. Haefele. No. 1,377,128; May 3; v. 286; p. 143.
Terminal for electrical purposes. E. B. Stone. No. 1,378,201; May 17; v. 286; p. 457.
Test-scale table. T. M. Borglum. No. 1,376,997; May 3; v. 286; p. 117.
Testing device. S. Stevens. No. 1,376,655; May 3; v. 286; p. 52.
Testing device for ignition systems. H. F. Maguire. No. 1,380,228; May 31; v. 286; p. 988.
Testing the hardness of materials, Tool for. F. C. Fairholme, W. H. Hatfield, and G. Stanfield. No. 1,376,413; May 3; v. 286; p. 7.
Textile and like printing machines. C. Roberts. No. 1,378,278; May 17; v. 286; p. 472.
Textile fibers and fabrics, Treatment of. C. Bennert. No. 1,379,381; May 24; v. 286; p. 755.
Textile-finishing drum. J. Luniepp. No. 1,377,900; May 10; v. 286; p. 348.
Textile-machine. H. Stephanson. No. 1,378,912; May 24; v. 286; p. 666.
Textile-machines, Metallic heddle mechanism for. E. T. Hathaway and C. M. Mars. No. 1,379,099; May 24; v. 286; p. 791.
Textile-treating baths, Apparatus for preparing. T. Wickersham. No. 1,380,282; May 31; v. 286; p. 998.
Textile-winders, Belt-drive for. E. P. Searing. No. 1,376,465; May 3; v. 286; p. 17.
Therapeutic apparatus. R. X. Tuttle. No. 1,376,593; May 3; v. 286; p. 41.
Thermoresponsive instrument. A. E. Stacey, Jr. No. 1,377,735; May 10; v. 286; p. 315.
Thermos-bottle attachment. C. H. Wilson and C. G. Lee. No. 1,380,128; May 31; v. 286; p. 969.
Thermostatic switch. G. H. Whittingham. No. 1,380,168; May 31; v. 286; p. 977.
Thermostats, Eccentric adjustment for. G. A. Robertshaw. No. 1,376,462; May 3; v. 286; p. 16.
Thimble attachment. L. O. Oljerholm. No. 1,379,777; May 31; v. 286; p. 903.
Thread-cutting tools, Attachment for grinding. J. Szatmary. No. 1,379,370; May 24; v. 286; p. 753.
Thread holder and cutter, Combined. T. T. Seal. No. 1,377,284; May 10; v. 286; p. 229.
Threads and fabrics, Waterproofing and strengthening. L. G. R. Auzenat. No. 1,377,110; May 3; v. 286; p. 139.
Threading machine, Bolt-. S. B. Clay. No. 1,377,146; May 3; v. 286; p. 146.
Threshing-machine. G. P. Luedke. No. 1,379,112; May 24; v. 286; p. 704.
Thumb-brake for fishing-reels. C. T. Pflueger. No. 1,379,692; May 31; v. 286; p. 887.
Ticket delivering, checking, and registering machine. A. Marsh. No. 1,378,419; May 17; v. 286; p. 498.

Ticket-holder. F. H. Hammerle. No. 1,377,576; May 10; v. 286; p. 284.
Tie: *See*—
Concrete tie.
Package-tie.
Railway cross-tie.
Railway-tie.
Tie. J. C. Moell. No. 1,380,235; May 31; v. 286; p. 989.
Tie-fastener. W. T. Merriman. No. 1,379,034; May 24; v. 286; p. 689.
Tie-plate. F. Quist. No. 1,377,524; May 10; v. 286; p. 275.
Tie-straightener. C. L. Cole. No. 1,379,801; May 31; v. 286; p. 908.
Tile, Antislipping. H. K. Dodge. No. 1,377,960; May 10; v. 286; p. 360.
Tile, Antislipping vitrified. M. F. Beecher. No. 1,377,957; May 10; v. 286; p. 359.
Tile-forming machine. H. P. Domine. No. 1,377,188; May 10; v. 286; p. 210.
Tiles and pasting same to paper, Method and apparatus for spacing. B. L. Benson. No. 1,379,160; May 24; v. 286; p. 712.
Time-calculating machine. E. M. Smith. No. 1,377,856; May 10; v. 286; p. 339.
Timed or intermittent operating device. A. S. Greenwood. No. 1,376,531; May 3; v. 286; p. 29.
Timepieces, Main-wheel unit for. E. H. Horn. No. 1,378,866; May 24; v. 286; p. 657.
Timer. E. T. Curtiss. No. 1,380,316; May 31; v. 286; p. 1005.
Timer. E. S. Rush. (Reissue.) No. 15,107; May 17; v. 286; p. 578.
Timing mechanism. O. Z. Brewer. No. 1,378,318; May 17; v. 286; p. 479.
Tins, Apparatus for opening air-tight. F. F. Coaker. No. 1,376,515; May 3; v. 286; p. 26.
Tinsel, Machine for Making. R. B. Benjamin and J. M. Curiess. No. 1,377,548; May 10; v. 286; p. 279.
Tire. T. Mori. No. 1,377,782; May 10; v. 286; p. 325.
Tire. T. J. Reed. No. 1,379,043; May 24; v. 286; p. 691.
Tire, Automobile-. W. J. Davis and J. Hammell. No. 1,378,331; May 17; v. 286; p. 482.
Tire-boot. M. C. Seymour. No. 1,377,098; May 3; v. 286; p. 137.
Tire-carrier. E. R. Draver. No. 1,379,297; May 24; v. 286; p. 738.
Tire-cases, Machine and method for introducing tubes into. N. D. Chellis. No. 1,379,169; May 24; v. 286; p. 714.
Tire-casing-inspecting apparatus. E. Ramsdell. No. 1,376,579; May 3; v. 286; p. 38.
Tire-casing-repair tool. H. J. Otto. No. 1,380,008; May 31; v. 286; p. 947.
Tire-casings, Apparatus for curing. F. J. Gostlin. No. 1,378,172; May 17; v. 286; p. 452.
Tire-casings, Applying lubricant to. W. F. Ray. No. 1,377,729; May 10; v. 286; p. 314.
Tire-chain. R. J. Kleineck. No. 1,380,215; May 31; v. 286; p. 986.
Tire-chain, Antiskid. A. L. Johnston, Jr. No. 1,378,821; May 17; v. 286; p. 576.
Tire-chain-applying device. A. S. Noonan. No. 1,378,606; May 17; v. 286; p. 535.
Tire construction. W. F. Beasley. No. 1,378,313; May 17; v. 286; p. 478.
Tire-core. W. A. Black. No. 1,378,315; May 17; v. 286; p. 479.
Tire core, Pneumatic-. F. Paulsen. No. 1,379,834; May 31; v. 286; p. 914.
Tire, Cushioned. H. C. Babel. No. 1,378,832; May 24; v. 286; p. 651.
Tire, Demountable spring-. L. Compe. No. 1,378,246; May 17; v. 286; p. 466.
Tire, Elastic. K. Fukuda. No. 1,377,011; May 3; v. 286; p. 120.
Tire, Emergency-. W. F. Aichele. No. 1,377,170; May 10; v. 286; p. 207.
Tire-filling composition. J. A. Schmidtke. No. 1,376,973; May 3; v. 286; p. 113.
Tire-gage, Automatic. E. R. Hooker and E. C. Rausrud. No. 1,377,582; May 10; v. 286; p. 285.
Tire holder and rear bumper for automobiles, Combined spare-. W. P. Hammond. No. 1,376,807; May 3; v. 286; p. 81.
Tire holder, Automobile-. H. M. Bognes. No. 1,376,739; May 3; v. 286; p. 68.
Tire-inflating pump. T. M. Davies. No. 1,377,563; May 10; v. 286; p. 282.
Tire-mold. C. P. Mundale. No. 1,379,203; May 24; v. 286; p. 721.
Tire-mold. C. L. Walton. No. 1,380,085; May 31; v. 286; p. 961.
Tire-nut-turning device. C. O. Poole. No. 1,377,028; May 3; v. 286; p. 124.
Tire, Pneumatic. J. Guagliardo. No. 1,379,915; May 31; v. 286; p. 929.
Tire, Pneumatic. H. S. Williams. No. 1,379,887; May 31; v. 286; p. 924.
Tire-protector. R. Netter. No. 1,378,605; May 17; v. 286; p. 534.
Tire pumps, Pneumatic. J. C. Gilbert. No. 1,379,096; May 24; v. 286; p. 700.
Tire-rack. R. S. Freeman. No. 1,378,778; May 17; v. 286; p. 568.
Tire-rack. R. I. Short. No. 1,377,733; May 10; v. 286; p. 314
Tire, Resilient. L. and J. Hanan. No. 1,379,979; May 31; v. 286; p. 941.
Tire rim, Demountable. L. D. Allen. No. 1,377,173; May 10; v. 286; p. 207.
Tire-rim tool. S. W. Neidner. No. 1,376,723; May 3; v. 286; p. 65.
Tire-spreader. A. Marks. No. 1,379,354; May 24; v. 286; p. 750.
Tire-tool. N. Lewsen. No. 1,378,696; May 17; v. 286; p. 552.
Tire tool, Automobile-. F. J. Harbert. No. 1,378,787; May 17; v. 286; p. 570.
Tire-tread. F. G. Schenuit. No. 1,377,283; May 10; v. 286; p. 229.
Tires, Tread for. G. W. Taylor. No. 1,378,148; May 17; v. 286; p. 448.
Tire-tube container. W. Schuldt. No. 1,378,905; May 24; v. 286; p. 665.
Tire-valve and pressure-indicator, Combined. J. Many. No. 1,377,596; May 10; v. 286; p. 288.
Tire, Vehicle-. C. S. Preston. No. 1,377,627; May 10; v. 286; p. 294.
Tires and mold therefor, Air-tube for pneumatic. T. B. McLeroth. No. 1,379,929; May 31; v. 286; p. 932.
Tires, Apparatus for vulcanizing vehicle-. L. Jacobson. No. 1,377,133; May 3; v. 286; p. 143.
Tires, Gripping attachment for. P. J. Donohue. No. 1,380,137; May 31; v. 286; p. 971.
Tires, Inner liner for. A. L. Sewell. No. 1,379,314; May 24; v. 286; p. 742.
Tires, Pad for attaching valves to. A. T. Pickens. No. 1,376,970; May 3; v. 286; p. 113.
Tires, Pressure-gage for pneumatic. M. C. Schweinert and H. P. Kraft. No. 1,379,220; May 24; v. 286; p. 724.
Tires, Rim for mounting. H. B. Hardy. No. 1,377,343; May 10; v. 286; p. 241.
Tires, Tire-valve for truck-. L. O. Gibson. No. 1,376,868; May 3; v. 286; p. 93.
Toaster. C. Wilson. No. 1,377,043; May 3; v. 286; p. 127.
Tobacco-tablet. F. Schwartz. No. 1,376,586; May 3; v. 286; p. 39.
Toilet apparatus, Sanitary. C. W. Fisher. No. 1,376,926; May 3; v. 286; p. 104.
Tool. E. Anheuser. No. 1,379,737; May 31; v. 286; p. 896.
Tool. A. J. Hager. No. 1,377,829; May 10; v. 286; p. 334.
Tool. F. H. Hilliard. No. 1,377,348; May 10; v. 286; p. 242.
Tool-carrier feed. J. H. Mansfield. No. 1,376,715; May 3; v. 286; p. 63.
Tool, Combination-. H. B. Keiper. No. 1,377,202; May 10; v. 286; p. 213.
Tool, Combination-. J. W. Pearson. No. 1,377,920; May 10; v. 286; p. 352.
Tool-handle. L. S. Hood. No. 1,376,811; May 3; v. 286; p. 82.
Tool-holder. J. J. Dolan, Sr. No. 1,379,539; May 24; v. 286; p. 785.
Tool-holder. O. Gustafson. No. 1,380,317; May 31; v. 286; p. 1005.
Tool-holder, Adjustable. J. H. Smith. No. 1,378,290; May 17; v. 286; p. 474.
Tool-holder, Adjustable offset. C. L. Hollingsworth. No. 1,379,866; May 31; v. 286; p. 920.
Tool-holder, Self-centering. W. W. Baker and F. W. Franklin. No. 1,376,791; May 3; v. 286; p. 77.
Tool, Inside-cutting. J. R. Aulenback. No. 1,377,109; May 3; v. 286; p. 139.
Tool, Sectional. F. C. Williams. No. 1,380,090; May 31; v. 286; p. 962.
Tool, Turn-up. C. W. Morris. No. 1,379,277; May 24; v. 286; p. 735.
Tools in boring-bars, Means for securing. A. R. Swanson. No. 1,378,062; May 17; v. 286; p. 431.
Tooth, All-porcelain. H. S. Lowry. No. 1,377,358; May 10; v. 286; p. 244.
Tooth, Artificial. F. H. Russell. No. 1,376,644; May 3; v. 286; p. 50.
Tooth, Artificial. F. H. Russell. No. 1,376,645; May 3; v. 286; p. 50.
Tooth cutter-head and making same, Inserted-. W. B. Huther. No. 1,376,438; May 3; v. 286; p. 12.
Toothbrush. L. E. Evslin. No. 1,378,530; May 17; v. 286; p. 520.
Toothbrush. E. Glass. No. 1,378,781; May 17; v. 286; p. 569.
Toothbrush. W. L. Webster. No. 1,378,157; May 17; v. 286; p. 449.
Toothbrush-container. E. M. Peters and P. Vilardo. No. 1,380,246; May 31; v. 286; p. 991.
Toothpick-machine. E. Greenwood. No. 1,376,616; May 3; v. 286; p. 45.
Torch. J. G. Pettis. No. 1,376,828; May 3; v. 286; p. 85.
Torch. G. R. Ward. No. 1,376,489; May 3; v. 286; p. 21.
Torch, Controllable. C. Coen. No. 1,377,875; May 10; v. 286; p. 343.
Torch, Cutting-. W. C. Bucknam. No. 1,377,001; May 3; v. 286; p. 118.
Torch, Oil-burning. C. B. Jahnke. No. 1,377,687; May 10; v. 286; p. 305.
Torch, Painter's blow-. W. Gretsinger. No. 1,380,140; May 31; v. 286; p. 972.

Torpedo, Signaling-. W. T. McCullough. (Reissue.) No. 15,101; May 10; v. 286; p. 367.
Torpedoes, Driving and governing means for. E. A. Sperry. No. 1,378,291; May 17; v. 286; p. 474.
Torpedoes, Ignition system for. B. A. Fiske. No. 1,379,972; May 31; v. 286; p. 940.
Torpedoes, Position-revealing system for. J. H. Hammond, Jr. No. 1,376,762; May 3; v. 286; p. 72.
Torsional equalizer. H. G. Lord. No. 1,380,225; May 31; v. 286; p. 987.
Toupee and wig retainer. J. C. Tapscott. No. 1,378,147; May 17; v. 286; p. 448.
Towel-holder. J. N. Borroughs. No. 1,379,848; May 31; v. 286; p. 916.
Towel-rack. E. T. Brigham. No. 1,378,214; May 17; v. 286; p. 459.
Tower, Air-saturating. H. Nielsen and F. D. Marshall. No. 1,378,717; May 17; v. 286; p. 557.
Towing device. M. M. Goldman. No. 1,378,225; May 17; v. 286; p. 462.
Toy. W. Bleesing, C. F. Howard, and S. A. Pexton. No. 1,379,740; May 31; v. 286; p. 896.
Toy. H. Cederblad. No. 1,378,765; May 17; v. 286; p. 565.
Toy. K. Edison. No. 1,376,749; May 3; v. 286; p. 70.
Toy. A. L. Girard. No. 1,378,022; May 17; v. 286; p. 423.
Toy. E. M. Story. No. 1,379,944; May 31; v. 286; p. 934.
Toy aerial swing. C. J. Kern. No. 1,379,575; May 24; v. 286; p. 791.
Toy aeroplane. W. E. Appleby. No. 1,377,867; May 10; v. 286; p. 341.
Toy, Educational. P. S. H. Newell. No. 1,378,893; May 24; v. 286; p. 662.
Toy, Flying. G. B. Petty. No. 1,378,193; May 17; v. 286; p. 456.
Toy furniture set. G. Niebel. No. 1,379,648; May 31; v. 286; p. 879.
Toy gun. R. Fuller. No. 1,376,867; May 3; v. 286; p. 93.
Toy horsemobile. R. A. Hunarian. No. 1,377,888; May 10; v. 286; p. 346.
Toy machine-gun. S. C. Reppe. No. 1,379,126; May 24; v. 286; p. 707.
Toy, Mechanical. J. Boe. No. 1,377,054; May 3; v. 286; p. 129.
Toy, Mechanical. G. Hazelton. No. 1,376,766; May 3; v. 286; p. 72.
Toy, Mechanical. C. E. Jensen. No. 1,379,103; May 24; v. 286; p. 702.
Toy pistol. J. H. Hood. No. 1,376,544; May 3; v. 286; p. 31.
Toy-railway-train stop. H. C. Ives. No. 1,379,988; May 31; v. 286; p. 943.
Toy roundabout. A. Svec. No. 1,379,486; May 24; v. 286; p. 774.
Toy rowboat. P. A. Peterson. No. 1,376,827; May 3; v. 286; p. 85.
Toy vehicle. F. Hachmann. No. 1,378,023; May 17; v. 286; p. 423.
Toy vehicles. A. A. Webster. No. 1,378,434; May 17; v. 286; p. 501.
Toy, Wheeled. H. G. Norwood. No. 1,376,570; May 3; v. 286; p. 26.
Toy Wind-wheel. H. Schlirf. No. 1,380,325; May 31; v. 286; p. 1006.
Toy woodpecker. L. E. Bowser. No. 1,379,521; May 24; v. 286; p. 781.
Track scraper or cleaner. F. N. Root. No. 1,379,363; May 24; v. 286; p. 752.
Track-switch. G. B. Gomia. No. 1,380,099; May 31; v. 286; p. 964.
Traction mechanism. J. M. Worth. No. 1,376,851; May 3; v. 286; p. 90.
Traction-tread. E. Erik. No. 1,379,336; May 24; v. 286; p. 747.
Traction-wheel. V. A. Boker. No. 1,376,394; May 3; v. 286; p. 3.
Traction-wheel. L. H. Noah. No. 1,376,896; May 3; v. 286; p. 99.
Traction-wheel. E. J. Solomon. No. 1,377,289; May 10; v. 286; p. 230.
Tractor. W. L. Barthelemy. No. 1,378,002; May 17; v. 286; p. 419.
Tractor. J. M. Kroyer. No. 1,379,107; May 24; v. 286; p. 703.
Tractor. J. J. Martin. No. 1,379,464; May 24; v. 286; p. 770.
Tractor. C. W. Myers. No. 1,378,892; May 24; v. 286; p. 662.
Tractor attachment. F. L. Warden. No. 1,378,743; May 17; v. 286; p. 561.
Tractor-controlling mechanism. F. Virgens. No. 1,377,448; May 10; v. 286; p. 261.
Traction device. H. G. Anderson. No. 1,378,083; May 17; v. 286; p. 435.
Tractor, Draft appliance for. W. E. Law. No. 1,377,839; May 10; v. 286; p. 336.
Tractor driving-gear. N. W. Hartman. No. 1,378,228; May 17; v. 286; p. 462.
Tractor, Four-wheel-drive. F. A. Mattson. No. 1,377,497; May 10; v. 286; p. 271.
Tractor-guide. A. J. Edgar. No. 1,376,412; May 3; v. 286; p. 7.
Tractor-hitch. H. Ferguson. No. 1,379,399; May 24; v. 286; p. 758.
Tractor-hitch. A. E. Johnson. No. 1,378,793; May 17; v. 286; p. 571.
Tractor-hitch. J. K. Miller. No. 1,379,874; May 31; v. 286; p. 921.
Tractor, Motor-. J. Coney. No. 1,379,901; May 31; v. 286; p. 926.
Tractor safety device. T. A. Milutin. No. 1,377,362; May 10; v. 286; p. 245.
Tractor-wheels, Lug-shield for. A. C. Aikin. No. 1,377,794; May 10; v. 286; p. 327.
Tractor with propulsive levers, Motor-. N. Mauger. No. 1,376,717; May 3; v. 286; p. 33.
Tractors, Automatic clutch throw-out for. E. M. Heylman. No. 1,378,954; May 24; v. 286; p. 674.
Tractors, Body construction for. W. C. Matteson. No. 1,379,710; May 31; v. 286; p. 891.
Tractors, Cultivator attachment for. O. K. Brown. No. 1,378,994; May 24; v. 286; p. 681.
Tractors, Draft appliance for. F. H. Gerdeman. No. 1,379,759; May 31; v. 286; p. 901.
Tractors, Drawbar for. J. J. Bukolt. No. 1,378,005; May 17; v. 286; p. 420.
Tractors, Guiding mechanism for. H. O. Hendrickson. No. 1,379,762; May 31; v. 286; p. 900.
Tractors, Mechanism for steering. F. W. Larkworthy. No. 1,378,121; May 17; v. 286; p. 442.
Tractors, Plow-lifting mechanism for. D. Militello. No. 1,376,894; May 3; v. 286; p. 98.
Traffic-signal. C. M. Camba. No. 1,376,398; May 3; v. 286; p. 4.
Trailer, Convertible. A. P. Lee. No. 1,376,443; May 3; v. 286; p. 13.
Train-control device, Automatic. W. V. Turner. No. 1,378,389; May 17; v. 286; p. 493.
Train-stop, Automatic. E. E. Adams and E. C. Bennett. No. 1,377,955; May 10; v. 286; p. 359.
Train-stop, Automatic. S. Lafleur. No. 1,378,800; May 17; v. 286; p. 572.
Transfer mechanism. G. White. No. 1,378,503; May 17; v. 286; p. 514.
Transformer, Hydraulic. R. Johanson. No. 1,377,585; May 10; v. 286; p. 286.
Transmission-band. J. Henry. No. 1,378,862; May 24; v. 286; p. 656.
Transmission-band. H. F. Hons, Jr. No. 1,378,459; May 17; v. 286; p. 506.
Transmission-band. W. C. Newbold and G. E. Lentz. No. 1,379,647; May 31; v. 286; p. 879.
Transmission, Electrically-controlled. M. Taigman. No. 1,378,146; May 17; v. 286; p. 447.
Transmission mechanism. C. B. Kurtz. No. 1,378,470; May 17; v. 286; p. 508.
Transmission mechanism. W. I. Wheeler. No. 1,377,377; May 10; v. 286; p. 247.
Transmission mechanism, Hydraulic. B. G. Newton. No. 1,378,184; May 17; v. 286; p. 454.
Transmission mechanism, Variable-speed. W. K. Thomas. No. 1,378,634; May 17; v. 286; p. 540.
Transmission, Variable-speed. D. E. Lewellen. No. 1,377,593; May 10; v. 286; p. 288.
Transmitter. F. C. Breckenridge. No. 1,377,144; May 3; v. 286; p. 146.
Transplanting-receptacle. L. Well. No. 1,380,327; May 31; v. 286; p. 1007.
Trap: *See*—
Animal-trap. Rat, mouse, and insect trap.
Flytrap. Stairway-trap.
Oil strainer and sediment trap. Tub and sink trap.
Trap. C. J. Roy. No. 1,377,441; May 10; v. 286; p. 260.
Trash-receptacle and advetrising medium, Combined. G. J. Richardson. No. 1,380,252; May 31; v. 286; p. 992.
Tray, Safety-match. A. A. Tubbs. No. 1,379,424; May 24; v. 286; p. 763.
Tread-wheel. W. C. Starr. No. 1,377,447; May 10; v. 286; p. 261.
Tree or plant support. E. Hanner. No. 1,377,832; May 10; v. 286; p. 335.
Tree-prop. L. M. Fleckner. No. 1,376,686; May 3; v. 286; p. 57.
Trench-weapon. S. M. Kass. No. 1,376,888; May 3; v. 286; p. 97.
Trenching apparatus. T. F. Moore. No. 1,378,970; May 24; v. 286; p. 677.
Trenching-machine. J. C. French. No. 1,377,339; May 10; v. 286; p. 239.
Trial spectacle-frame. C. F. Wall and F. Harker. No. 1,380,166; May 31; v. 286; p. 977.
Trimmer: *See*—
Selvage-trimmer.
Trimming mechanism. G. H. Hulett. No. 1,377,686; May 10; v. 286; p. 305.
Triplane. J. L. Shankand. No. 1,377,973; May 10; v. 286; p. 362.
Trolley. G. B. Nussbaum. No. 1,378,554; May 17; v. 286; p. 524.
Trolley-controlling device. F. H. Burnham. No. 1,376,918; May 3; v. 286; p. 103.
Trolley device. A. J. A. Wahlberg. No. 1,379,705; May 31; v. 286; p. 890.
Trolley-frame. K. S. Howard. No. 1,376,881; May 3; v. 286; p. 96.

Trolley-harp and head therefor. C. T. Gillenwater and J. L. Pedigo. No. 1,376,688; May 3; v. 286; p. 57.
Trolley-pole head. G. T. Bell. No. 1,378,991; May 24; v. 286; p. 681.
Trolley-pole head. H. F. Norman. No. 1,379,037; May 24; v. 286; p. 689.
Trolley-retriever. I. L. Carpenter. No. 1,380,314; May 31; v. 286; p. 1004.
Trolley-switches, Mounting for. H. E. Ballard. No. 1,377,653; May 10; v. 286; p. 299.
Trolley-wheel. W. B. Cullen. No. 1,376,408; May 3; v. 286; p. 6.
Trolley-wheel guard. J. A. Murray and R. S. Buchanan. No. 1,376,722; May 3; v. 286; p. 64.
Trolley-wires, Splicing-ear for overhead. R. Rose and N. F. Cimaglia. No. 1,377,972; May 10; v. 286; p. 362.
Trolley-wires, Suspension for. G. W. Bower. No. 1,378,519; May 17; v. 286; p. 518.

Turbine, Elastic-fluid. O. Junggren. No. 1,378,464; May 17; v. 286; p. 507.
Turbine, Elastic-fluid. C. Steenstrup. No. 1,378,493; May 17; v. 286; p. 513.
Turbine, Elastic-fluid. O. A. Wiberg. No. 1,378,506; May 17; v. 286; p. 515.
Turbine, Steam-. C. W. Dake. No. 1,377,755; May 10; v. 286; p. 319.
Turbine, Steam-. H. L. Guy. No. 1,379,258; May 24; v. 286; p. 731.
Turbine system, Geared-. C. A. Parsons, S. S. Cook, and L. M. Douglas. No. 1,377,850; May 10; v. 286; p. 338.
Turbine system, Geared-. C. A. Parsons, S. S. Cook, and L. M. Douglas. No. 1,377,851; May 10; v. 286; p. 338.
Tweezers. E. H. Metcalf. No. 1,380,232; May 31; v. 286; p. 989.
Twine-cutter. A. N. Gregory. No. 1,379,864; May 31; v. 286; p. 919.
Twine-holder. L. Wright. No. 1,378,752; May 17; v. 286; p. 563.
Twisting-machine. C. P. Wineman. No. 1,379,071; May 24; v. 286; p. 695.
Type-wheel. F. A. Putnam and C. F. Robbins. No. 1,376,830; May 3; v. 286; p. 85.
Typewriters, Card-positioning attachment for. W. P. De Saussure, Jr. No. 1,376,683; May 3; v. 286; p. 56.
Typewriters, Ribbon-spool for. H. A. Foothorap. No. 1,378,672; May 17; v. 286; p. 548.
Typewriting and calculating machine. O. O. Martin. No. 1,378,047; May 17; v. 286; p. 428.
Typewriting-machine. T. M. Copeland. No. 1,376,922; May 3; v. 286; p. 103.
Typewriting-machine. J. B. Holden. No. 1,376,879; May 3; v. 286; p. 95.
Typewriting-machine. G. A. Selb. No. 1,378,486; May 17; v. 286; p. 511.
Typewriting-machine. J. A. B. Smith. No. 1,377,446; May 10; v. 286; p. 261.
Typewriting-machine. J. A. B. Smith. No. 1,378,627; May 17; v. 286; p. 539.
Typewriting-machines, Calculating attachment for. F. J. Tillman. No. 1,379,322; May 24; v. 286; p. 744.
Typewriting-machines, Ribbon-spool holder for. J. B. Holden. No. 1,379,408; May 24; v. 286; p. 760.
Typewritten matter, Apparatus for duplicating. H. K. Lorentzen. No. 1,378,883; May 24; v. 286; p. 660.
Typographic composing-machine. E. M. Low. No. 1,378,045; May 17; v. 286; p. 428.
Typographic machine. M. C. Indahl. No. 1,378,413; May 17; v. 286; p. 497.
Typographical composing and casting machines, Means for composing tabular matter in. H. Ellis. No. 1,377,820; May 10; v. 286; p. 332.
Umbrella, Foldable. A. S. Johnson. No. 1,378,354; May 17; v. 286; p. 485.
Umbrella-handle. R. Kamenetzky. No. 1,380,213; May 31; v. 286; p. 985.
Undergarment. C. A. Campbell. No. 1,376,674; May 3; v. 286; p. 55.

Universal joint. W. J. Behn. No. 1,376,504; May 3; v. 286; p. 24.
Universal joint. R. Chilton. No. 1,379,962; May 31; v. 286; p. 938.
Universal joint. R. Chilton. No. 1,379,964; May 31; v. 286; p. 939.
Universal joint. H. H. Hood. No. 1,376,437; May 3; v. 286; p. 12.
Universal joint. C. E. Swenson. No. 1,380,270; May 31; v. 286; p. 996.
Universal joint. W. H. Thelmer. No. 1,376,840; May 3; v. 286; p. 88.
Universal joint. W. H. Thiemer. No. 1,378,985; May 24; v. 286; p. 680.
Universal joint. W. H. Thiemer. No. 1,378,986; May 24; v. 286; p. 680.
Universal joints, Method and apparatus for testing. R. Chilton. No. 1,379,961; May 31; v. 286; p. 938.
Urinal. T. Ohara. No. 1,379,206; May 24; v. 286; p. 721.
Urinary apparatus. E. C. Rogers. No. 1,379,289; May 24; v. 286; p. 737.
Utensil, Camping. W. J. Feldkamp. No. 1,378,846; May 24; v. 286; p. 654.
Vacuum-cleaner attachment. G. Qualman. No. 1,376,971; May 3; v. 286; p. 113.
Vacuum-cleaner switch-operating mechanism. M. H. Spielman. No. 1,380,163; May 31; v. 286; p. 976.
Vacuum feed apparatus. F. V. Risinger. No. 1,377,277; May 10; v. 286; p. 227.
Vacuum-valve detector. R. A. Weagant. No. 1,379,706; May 31; v. 286; p. 890.
Vacuum-valve detector. R. A. Weagant. No. 1,380,206; May 31; v. 286; p. 984.
Valve. W. B. Brassington. No. 1,379,388; May 24; v. 286; p. 756.
Valve. W. B. Brassington. No. 1,379,389; May 24; v. 286; p. 756.
Valve. W. R. H. Capewell. No. 1,380,307; May 31; v. 286; p. 1003.
Valve. J. J. Clifford. No. 1,378,217; May 17; v. 286; p. 460.
Valve. E. J. Crawford. No. 1,376,745; May 3; v. 286; p. 69.
Valve. L. and I. Jones. No. 1,379,025; May 24; v. 286; p. 687.
Valve. H. P. Kraft and M. C. Schweinert. No. 1,377,590; May 10; v. 286; p. 287.
Valve. H. Slater. No. 1,378,141; May 17; v. 286; p. 446.
Valve. J. H. Summers and E. S. Kirk. No. 1,379,136; May 24; v. 286; p. 709.
Valve. F. H. Willis. No. 1,377,240; May 10; v. 286; p. 220.
Valve-actuating device, Automatic choke-. S. E. Merrill. 1,379,274; May 24; v. 286; p. 734.
Valve-actuating mechanism. R. O. Hendrickson. No. 1,378,111; May 17; v. 286; p. 440.
Valve, Air-. O. R. Sacket. No. 1,378,426; May 17; v. 286; p. 500.
Valve, Automatic pressure-regulating. W. B. S. Whaley. No. 1,377,647; May 10; v. 286; p. 298.
Valve-box. L. Van Gilder. No. 1,377,105; May 3; v. 286; p. 138.
Valve-cleaner. J. E. Donnelly. No. 1,378,586; May 17; v. 286; p. 530.
Valve-cutter and valve-seat reamer, Combined. W. E. Fehr. No. 1,377,470; May 10; v. 286; p. 265.
Valve, Cylindrical or sleeve. H. Berckenhoff. No. 1,377,798; May 10; v. 286; p. 328.
Valve, Drifting-. J. H. Hanlon. No. 1,378,786; May 17; v. 286; p. 569.
Valve-fitting. W. Grikscheit. No. 1,376,534; May 3; v. 286; p. 29.
Valve, Float-. W. Combellick. No. 1,379,529; May 24; v. 286; p. 783.
Valve, Flushing-. E. G. Watrous. No. 1,379,231; May 24; v. 286; p. 726.
Valve for closet-tanks, Ball-. F. E. Grosvold. No. 1,377,883; May 10; v. 286; p. 345.
Valve for fuel-tanks, Locking-. A. C. Black and J. D. Clark. No. 1,376,389; May 10; v. 286; p. 250.
Valve for gasolene-dispensing apparatus of filling stations, Outlet-. C. H. Hughes. No. 1,377,835; May 10; v. 286; p. 338.
Valve for steam and water systems. O. W. Smith. No. 1,379,840; May 31; v. 286; p. 915.
Valve-grinding tool. J. J. Rischard. No. 1,377,440; May 10; v. 286; p. 260.
Valve mechanism, Reversing-. J. F. Rogers. No. 1,379,696; May 31; v. 286; p. 888.
Valve, Multiple tire-. J. A. Overlander. No. 1,376,968; May 3; v. 286; p. 112.
Valve of pumps. F. W. Brackett. No. 1,378,760; May 17; v. 286; p. 565.
Valve operating and locking mechanism. S. L. Kneass. No. 1,379,927; May 31; v. 286; p. 931.
Valve, Overhead. W. H. and P. M. Payne. No. 1,377,523; May 10; v. 286; p. 274.
Valve, Plate-. G. G. Tuttle. No. 1,376,484; May 3; v. 286; p. 20.
Valve, Pressure-reducing. J. H. Derby. No. 1,379,904; May 31; v. 286; p. 926.
Valve, Pressure-reducing. C. C. Hansen. No. 1,378,026; May 17; v. 286; p. 424.
Valve, Pump-. M. Wagner. No. 1,379,492; May 24; v. 286; p. 775.
Valve-remover. U. E. G. Johnson. No. 1,378,463; May 17; v. 286; p. 507.
Valve, Safety-. G. H. Clark. No. 1,380,094; May 31; v. 286; p. 963.
Valve, Safety-. F. Fraccascia and J. Ercolani. No. 1,379,092; May 24; v. 286; p. 699.
Valve, Safety-. C. Granby. No. 1,377,199; May 10; v. 286; p. 212.
Valve, Safety-. S. J. Mozur. No. 1,376,565; May 3; v. 286; p. 35.
Valve-seat, Removable. D. T. Gray. No. 1,376,427; May 3; v. 286; p. 10.
Valve-spring compressor and valve-grinding tool. J. E. O'Sullivan. No. 1,379,310; May 24; v. 286; p. 741.
Valve-stems, Cap for. H. Brenner. No. 1,379,676; May 31; v. 286; p. 884.
Valve, tap, &c. J. H. Hay. No. 1,378,030; May 17; v. 286; p. 425.
Valve, Thermostatic. S. Lippert. No. 1,376,818; May 3; v. 286; p. 83.
Valve-timing device. B. R. Van Valkenburg. No. 1,378,154; May 17; v. 286; p. 449.
Valves, Lock for. C. S. Cates and W. Peters. No. 1,377,668; May 10; v. 286; p. 302.
Valves, Push-rod connection for automobile-engine. R. L. Hughens. No. 1,379,343; May 24; v. 286; p. 748.
Vaporizer. J. F. and P. R. Friend. No. 1,378,780; May 17; v. 286; p. 568.
Vaporizer, Portable electric. H. Nagel. No. 1,378,266; May 17; v. 286; p. 470.
Variometer. J. S. E. Townsend. No. 1,376,592; May 3; v. 286; p. 41.
Vault, Burial-. L. Gates. No. 1,376,615; May 3; v. 286; p. 45.
Vault construction. E. H. Strauss. No. 1,376,839; May 3; v. 286; p. 87.
Vault-cover. E. Burger. No. 1,377,802; May 10; v. 286; p. 329.
Vegetable-cutting machine. J. Hartman. No. 1,378,451; May 17; v. 286; p. 504.
Vegetable-grader. A. H. Parks. No. 1,379,715; May 31; v. 286; p. 892.
Vehicle. J. P. Coughlin. No. 1,379,745; May 31; v. 286; p. 897.
Vehicle. B. W. Howard. No. 1,379,567; May 24; v. 286; p. 789.
Vehicle-bodies, Hinge for. H. Teisselre. No. 1,378,149; May 17; v. 286; p. 448.
Vehicle-body. P. W. Pomeroy. No. 1,376,460; May 3; v. 286; p. 16.
Vehicle-body. L. R. Snapp. No. 1,380,083; May 31; v. 286; p. 961.
Vehicle-body, Convertible. T. J. Kehoe. No. 1,379,825; May 31; v. 286; p. 912.
Vehicle-body, Convertible. C. D. Williams. No. 1,377,164; May 3; v. 286; p. 149.
Vehicle-cab. A. Sauter. No. 1,378,726; May 17; v. 286; p. 558.
Vehicle, Camping-. F. Bain. No. 1,378,512; May 17; v. 286; p. 516.
Vehicle chassis, Motor-. C. A. Ward. No. 1,377,234; May 10; v. 286; p. 219.
Vehicle, Child's. J. Kucinski. No. 1,379,993; May 31; v. 286; p. 944.
Vehicle, Child's convertible. L. Johns. No. 1,379,305; May 24; v. 286; p. 740.
Vehicle direction-signal. G. W. Markos. No. 1,379,117; May 24; v. 286; p. 705.
Vehicle, Endless-track. E. Schneider. No. 1,376,648; May 3; v. 286; p. 51.
Vehicles, Extricating device for motor-. J. E. Coggon. No. 1,379,585; May 24; v. 286; p. 793.
Vehicle front-wheel driving mechanism. M. P. Winther. No. 1,379,792; May 31; v. 286; p. 906.
Vehicle, Hoisting and dumping. E. Albrecht and W. H. Schussler. No. 1,377,611; May 10; v. 286; p. 291.
Vehicle-hounds, Adjustable tongue attachment for. E. N. Childs. No. 1,377,314; May 10; v. 286; p. 235.
Vehicle-lifting means. A. D. Lightner and E. Holmes. No. 1,376,445; May 3; v. 286; p. 13.
Vehicle, Motor-. S. I. Fekete and S. G. Baits. No. 1,380,097; May 31; v. 286; p. 964.
Vehicle, Motor-. M. Tibbetts. No. 1,377,861; May 10; v. 286; p. 340.
Vehicle, Motor-. M. A. Whelan. No. 1,377,237; May 10; v. 286; p. 219.
Vehicle, Occupant-propelled sliding. C. Dahl. No. 1,377,402; May 10; v. 286; p. 252.
Vehicle, Refuse-collection. A. Fernández. No. 1,379,007; May 24; v. 286; p. 684.
Vehicle-seat. G. V. Barnes. No. 1,379,076; May 24; v. 286; p. 696.
Vehicle, Self-laying-track. W. Turnbull. No. 1,379,323; May 24; v. 286; p. 744.
Vehicle-signal. V. R. Barnes. No. 1,378,312; May 17; v. 286; p. 478.
Vehicle-signal. C. H. Osman. No. 1,379,475; May 24; v. 286; p. 772.
Vehicle-signal. J. Popowich. No. 1,379,211; May 24; v. 286; p. 722.
Vehicle signaling-crane. R. L. Johnson. No. 1,377,488; May 10; v. 286; p. 269.
Vehicle signaling device. N. J. Klohn. No. 1,377,691; May 10; v. 286; p. 306.

Vehicle-spring. J. E. Simmons. No. 1,379,223; May 24; v. 286; p. 724.
Vehicle-spring. L. I. Thompson. No. 1,379,321; May 24; v. 286; p. 743.
Vehicle spring, Motor-. W. M. Petty. No. 1,377,430; May 10; v. 286; p. 258.
Vehicle-spring-retaining means. E. F. Burgess. No. 1,379,798; May 31; v. 286; p. 907.
Vehicle-top. C. R. Allen. No. 1,379,893; May 31; v. 286; p. 925.
Vehicle-top attachment. D. C. Watt and F. A. Grearson. No. 1,376,491; May 3; v. 286; p. 21.
Vehicle, Tractor. E. Schneider. No. 1,376,649; May 3; v. 286; p. 51.
Vehicle, Tractor or other automotive. E. E. Chandler. No. 1,376,921; May 3; v. 286; p. 103.
Vehicle-wheel. L. D. Brown. No. 1,378,399; May 17; v. 286; p. 495.
Vehicle-wheel. J. A. Carter. No. 1,379,441; May 24; v. 286; p. 765.
Vehicle-wheel. E. C. Gaspard. No. 1,380,138; May 31; v. 286; p. 971.
Vehicle-wheel. M. J. O'Connor. No. 1,378,823; May 17; v. 286; p. 576.
Vehicle-wheel. J. C. Willmon. No. 1,378,303; May 17; v. 286; p. 476.
Vehicle-wheel with demountable rim. J. C. Manternach. No. 1,379,032; May 24; v. 286; p. 689.
Vehicle-wheels, Antiskid attachment for. S. G. Silberman. No. 1,378,289; May 17; v. 286; p. 474.
Vehicle, Wheeled. C. W. Sponsel. No. 1,380,119; May 31; v. 286; p. 968.
Vehicles, Antisplash-guard for motor-. L. E. Vasseur and M. Tchoubritch. No. 1,377,035; May 3; v. 286; p. 125.
Vehicles, Brake for motor-. M. Walter. No. 1,377,863; May 10; v. 286; p. 341.
Vehicles, Canoe-trailer for motor-. D. B. Woodruff. No. 1,376,496; May 3; v. 286; p. 22.
Vehicles, Direction-signal for motor-. J. Pfeifer. No. 1,379,835; May 31; v. 286; p. 914.
Vehicles, Disk wheel for. R. C. Hoffman. No. 1,376,938; May 3; v. 286; p. 107.
Vehicles, Draft attachment for motor-. L. W. Worsham. No. 1,378,575; May 17; v. 286; p. 528.
Vehicles, Draft means for. S. C. Hartsock. No. 1,379,982; May 31; v. 286; p. 942.
Vehicles, Draft-rigging for motor-. E. F. Townsend. No. 1,377,609; May 10; v. 286; p. 291.
Vehicles, Drive for self-propelled. M. Walter. No. 1,377,864; May 10; v. 286; p. 341.
Vehicles, End-gate for. W. Sanderson. No. 1,376,733; May 3; v. 286; p. 66.
Vehicles, Exhaust-whistle for motor-. E. L. Cruise. No. 1,378,840; May 24; v. 286; p. 652.
Vehicles, Hoisting mechanism for dumping-. W. Sanderson. No. 1,376,732; May 3; v. 286; p. 66.
Vehicles, Horse-shading attachment for. V. O. Hinton. No. 1,378,031; May 17; v. 286; p. 425.
Vehicles, Lighting system of. D. Macdonald. No. 1,378,885; May 24; v. 286; p. 661.
Vehicles, Locking device for motor-. R. E. Harris. No. 1,376,876; May 3; v. 286; p. 95.
Vehicles, Means for storing. P. B. Cole. No. 1,378,168; May 17; v. 286; p. 451.
Vehicles, Means of suspension of. G. J. Rackham. No. 1,379,836; May 31; v. 286; p. 914.
Vehicles, Pump for motor-. S. A. Strickland. No. 1,376,903; May 3; v. 286; p. 100.
Vehicles, Pushing device for motor-. F. Carlson. No. 1,378,321; May 17; v. 286; p. 480.
Vehicles, Seat construction for. C. W. McKinley. No. 1,379,771; May 31; v. 286; p. 901.
Vehicles, Shock-absorber for. J. W. Blackledge. No. 1,377,613; May 10; v. 286; p. 291.
Vehicles, Shock-absorber for. H. E. Thompson. No. 1,377,104; May 3; v. 286; p. 138.
Vehicles, Speed-controlling device for. G. Horvath. No. 1,377,964; May 10; v. 286; p. 300.
Vehicles, Spring-controller for. N. R. Krause. No. 1,379,992; May 31; v. 286; p. 944.
Vehicles, Spring-shackle for motor-. S. I. Fekete. No. 1,376,803; May 3; v. 286; p. 80.
Vehicles, Spring suspension of motor road-. L. E. Cowey. No. 1,377,980; May 10; v. 286; p. 363.
Vehicles, Theft-preventing means for. M. J. Szameit. No. 1,379,293; May 24; v. 286; p. 737.
Vehicles, Tire-carrier for motor-. P. and A. L. Forschler. No. 1,379,591; May 24; v. 286; p. 794.
Vehicles, Top for. F. K. Lewis. No. 1,379,635; May 31; v. 286; p. 877.
Vehicles, Travel-recorder for. H. Sattler. No. 1,377,281; May 10; v. 286; p. 228.
Vehicles, Turntable for. J. Barwicki. No. 1,379,239; May 24; v. 286; p. 727.
Vehicles used as trailers, Steering-gear for. A. Arato. No. 1,378,436; May 17; v. 286; p. 502.
Velocipede. G. Ajouz. No. 1,379,604; May 31; v. 286; p. 871.
Velocipede. C. E. Hornig. No. 1,377,886; May 10; v. 286; p. 345.
Vending-machine. G. W. Miller. No. 1,377,781; May 10; v. 286; p. 325.
Vending machines, Coin-operated mechanism for gasolene-. A. J. Ludwig. No. 1,378,590; May 17; v. 286; p. 531.
Ventilator. J. McGeorge. No. 1,378,476; May 17; v. 286; p. 509.
Vessel-propelling mechanism. J. Worcester. No. 1,380,283; May 31; v. 286; p. 999.
Vessel superstructure. A. McDougall. No. 1,380,110; May 31; v. 286; p. 966.
Vessels, Article and method for hermetically sealing packing. G. W. Luhrmann. No. 1,379,113; May 24; v. 286; p. 704.
Vessels, Attachment for discharging contents from. M. Hefferman. No. 1,380,062; May 31; v. 286; p. 957.
Vessels, Rigging for sailing. C. Julien. No. 1,379,573; May 24; v. 286; p. 796.
Vibration-absorbing mounting. P. W. Bridgman. No. 1,377,556; May 10; v. 286; p. 281.
Vibration-motor. G. Ramsey. No. 1,379,212; May 24; v. 286; p. 722.
Vibrations, Method of and apparatus for detecting under-water. J. W. Horton. No. 1,378,960; May 24; v. 286; p. 675.
Viol. A. F. Groebl. No. 1,377,067; May 3; v. 286; p. 131.
Violin-bridge. H. F. Fisher. No. 1,377,570; May 10; v. 286; p. 283.
Violins, &c., Shoulder-pad for. H. F. Fisher. No. 1,377,571; May 10; v. 286; p. 283.
Viscous substances, Pumping of. H. T. Newbigin. No. 1,377,914; May 10; v. 286; p. 351.
Vise. F. E. Bergstedt. No 1,379,882; May 24; v. 286; p. 755.
Vise. M. S. Cumner. No. 1,379,747; May 31; v. 286; p. 897.
Visual weather-screen. S. A. de Normanville. No. 1,379,750; May 31; v. 286; p. 898.
Vulcanized joint. J. O. Langguth. No. 1,378,040; May 17; v. 286; p. 427.
Vulcanizer. E. D. Hostler, I. J. Hamiel, and C. H. Mather. No. 1,379,447; May 24; v. 286; p. 767.
Vulcanizing air-bag. O. W. Dolph. No. 1,379,397; May 24; v. 286; p. 758.
Vulcanizing apparatus. I. K. Rystedt. No. 1,376,463; May 3; v. 286; p. 16.
Vulcanizing-pad. F. A. Brown. No. 1,379,391; May 24; v. 286; p. 757.
Wagon. F. H. Ward. No. 1,377,949; May 10; v. 286; p. 358.
Wagon, Juvenile. M. E. Griswold. No. 1,376,873; May 3; v. 286; p. 94.
Wall, Building-. L. Dargento. No. 1,379,251; May 24; v. 286; p. 730.
Wall, Concrete. G. H. Forrester. No. 1,379,754; May 31; v. 286; p. 898.
Wall construction. G. R. De Forrest. No. 1,377,062; May 3; v. 286; p. 120.
Wall construction. F. M. Sawyer. No. 1,378,139; May 17; v. 286; p. 446.
Wall-socket. E. G. Liebold. No. 1,376,712; May 3; v. 286; p. 62.
Wall structure and structural blocks for making same. E. L. Benton. No. 1,377,550; May 10; v. 286; p. 280.
Warmer, Electric. J. W. Tufts and C. L. Peters. No. 1,376,842; May 3; v. 286; p. 88.
Warp stop device. G. H. Wilson. No. 1,377,045; May 3; v. 286; p. 127.
Warping-machine. G. A. Cluff. No. 1,377,751; May 10; v. 286; p. 318.
Warping-machines, Attachment for. W. J. Maloney. No. 1,378,257; May 17; v. 286; p. 468.
Washboard. C. L. Hines. No. 1,377,885; May 10; v. 286; p. 345.
Washboards, Adjustable rest for. J. A. Howard, Sr. No. 1,377,076; May 3; v. 286; p. 133.

Engraved, embossed greeting-cards, pamphlets, wedding invitations, &c. Nu-Way Printing & Engraving Shop. No. 142,074; May 3; v. 286; p. 189.
Envelops, Collection-. T. D. Oakley. No. 142,679; May 17; v. 286; p. 631.
Essences for the production of perfumes. Ungerer & Co. No. 142,158; May 3; v. 286; p. 191.
Extract, Vanilla. Semrad Chemical Co. No. 142,757; May 17; v. 286; p. 633.
Extracts and flavors, Fruit and vegetable. Okay Extract Company. No. 143,122; May 24; v. 286; p. 849.
Eyeglasses and spectacles and parts thereof. American Optical Company. No. 141,840; May 3; v. 286; p. 179.
Fabrics and piece goods of wool, cotton, linen, and silk, Textile. F. A. Patrick & Co. No. 142,221; May 3; v. 286; p. 192.
Fabrics in the piece, Pile. Salt's Textile Manufacturing Company. No. 142,742; May 17; v. 286; p. 633.
Fancy articles and sachets, Outfit for making. Porter Chemical Company. No. 142,096; May 3; v. 286; p. 189.
Fancy goods and notions. Waldes & Co. No. 142,165; May 3; v. 286; p. 191.
Fastenings. J. P. Eustis Manufacturing Company. No. 142,867; May 17; v. 286; p. 638.
Fasts, locks, and parts thereof, fasteners, &c. Yale & Towne Mfg. Co. No. 142,850; May 17; v. 286; p. 636.
Feed. J. M. Wilson. No. 142,844; May 17; v. 286; p. 636.
Feed for horses, mules, &c. J. M. Wilson. Nos. 142,351–2; May 10; v. 286; p. 406.
Feed-hoppers. M. R. Jacobus. No. 142,880; May 17; v. 286; p. 639.
Feed, Mixed. West Side Hay & Grain Co. No. 142,833; May 17; v. 286; p. 636.
Feed, Stock. Barrett, Denton & Lynn Co. No. 141,859; May 3; v. 286; p. 182.
Feed, Stock. MacX Feed Milling Co. No. 142,524; May 17; v. 286; p. 626.
Feed, Stock. Miller-McConnel Grain Co. No. 143,400; May 31; v. 286; p. 1051.
Felts and piece goods of wool or part wool. Edward H. Best & Co. No. 141,869; May 3; v. 286; p. 182.
Felts and wool, &c., piece goods, Woven. Edward H. Best & Co. No. 143,286; May 31; v. 286; p. 1047.
Fertilizer. A. J. Averell. No. 142,437; May 17; v. 286; p. 624.
Fertilizer. Chas. H. Lilly Co. No. 142,010; May 3; v. 286; p. 187.
Fertilizers. Coe Mortimer Co. No. 143,098; May 24; v. 286; p. 849.
Fertilizers. J. R. Guthrie. No. 142,547; May 17; v. 286; p. 627.
Fertilizers. V. H. Lanier. No. 142,288; May 10; v. 286; p. 404.
Fertilizers. J. G. Lipman. No. 142,013; May 3; v. 286; p. 187.
Fertilizers. South Metropolitan Gas Company. No. 142,142; May 3; v. 286; p. 191.
Fiber-boards sold in sheets. Agasote Millboard Co. No. 143,272; May 31; v. 286; p. 1047.
Files and rasps, holders and handles therefor. Nicholson File Company. No. 142,640; May 17; v. 286; p. 630.
Files, cuticle-knives, &c., Nail-. Fiberloid Corporation. No. 143,334; May 31; v. 286; p. 1049.
Filing-cases, lockers, and shelving, Metal. Berger Manufacturing Company. No. 142,450; May 17; v. 286; p. 624.
Filtering apparatus and filter-cylinders. Berkefeld Filter Company. No. 142,451; May 17; v. 286; p. 624.
Filters, coolers, refrigerating apparatus, &c., House-. Societe Des Moteurs Gnome et Rhone. No. 142,772; May 17; v. 286; p. 634.
Filters, Liquid-. The Refinite Company. No. 142,723; May 17; v. 286; p. 632.
Fire-bricks and paving-blocks. Geo. S. Good Fire Brick Co. No. 142,870; May 17; v. 286; p. 639.
Fire-bricks and tile for metallurgical furnaces. Crescent Refractories Company. Nos. 142,362–5; May 10; v. 286; pp. 407–8.
Fire-extinguishers. Safety Fire Extinguisher Co. No. 142,896; May 17; v. 286; p. 641.
Fire-extinguishers, Hand. Allen Corporation. No. 142,851; May 17; v. 286; p. 637.
Fire-extinguishing material. Wapakoneta Manufacturing Company. No. 143,215; May 24; v. 286; p. 852.
Firearms, ammunition, and pyrotechnic supplies. Winchester Repeating Arms Company. No. 142,353; May 10; v. 286; p. 406.
Fireless stoves. Durham Manufacturing Company. No. 142,511; May 17; v. 286; p. 626.
Fish and shrimp, Cured, salt, and canned. J. S. Twombly. No. 142,801; May 17; v. 286; p. 635.
Flannels, Cotton. Carson, Pirie, Scott & Co. No. 143,299; May 31; v. 286; p. 1047.
Flavoring extracts, pie fillings, spices, egg-whip. Haug & Co. No. 143,247; May 24; v. 286; p. 856.
Flies or bugs for fly-fishing, Artificial. C. J. McCarthy. No. 142,595; May 17; v. 286; p. 629.
Floor-coverings and rug-borders, Felt-base. Bird & Son. No. 143,288; May 31; v. 286; p. 1047.
Flour and cornmeal, Wheat-. Bay City Milling Company. No. 143,284; May 31; v. 286; p. 1047.
Flour and cornmeal, Wheat-. Earle-McGavock Milling Company. No. 143,324; May 31; v. 286; p. 1048.
Flour, Cake. Hoosier Milling Co. No. 143,047; May 24; v. 286; p. 847.
Flour, Cake-. Levering Coffee Company. No. 143,388; May 31; v. 286; p. 1050.
Flour, Corn-. Warner Moore & Co. No. 143,403; May 31, v. 238; p. 1051.
Flour, Self-rising. Midland Flour Milling Company. Nos. 142,303–5; May 10; v. 286; p. 405.
Flour, Self-rising wheat-. Charleston Milling Company. No. 142,488; May 17; v. 286; p. 625.
Flour, Self-rising wheat-. Nashville Roller Mills. No. 142,061; May 3; v. 286; p. 188.
Flour, Self-rising wheat-. Southern Illinois Milling & Elevator Co. No. 143,477; May 31; v. 286; p. 1053.
Flour, Wheat-. Amendt Milling Company. No. 142,915; May 24; v. 286; p. 843.
Flour, Wheat-. American Hominy Company. No. 142,916; May 24; v. 286; p. 843.
Flour, Wheat-. H. J. Arnold. No. 141,846; May 3; v. 286; p. 181.
Flour, Wheat-. Bech Van Sicien & Co. No. 143,169; May 24; v. 286; p. 851.
Flour, Wheat-. Bennett Milling Co. No. 142,238; May 10; v. 286; p. 403.
Flour, Wheat-. Cisneros & Co. No. 142,249; May 10; v. 286; p. 403.
Flour, Wheat-. Cisneros & Co. Inc. Nos. 142,961–4; May 24; v. 286; p. 844.
Flour, Wheat-. Earle-McGavock Milling Company. No. 142,599; May 17; v. 286; p. 629.
Flour, Wheat-. Earle-McGavock Milling Company. No. 142,993; May 24; v. 286; p. 845.
Flour, Wheat-. C. Fleker & Co. No. 142,526; May 17; v. 286; p. 626.
Flour, Wheat-. Ford Flour Company. No. 143,005; May 24; v. 286; p. 846.
Flour, Wheat-. George Urban Milling Company. No. 143,501; May 31; v. 286; p. 1054.
Flour, Wheat-. Gladney Milling Company. Nos. 143,017–20; May 24; v. 286; p. 846.
Flour, Wheat-. Holland O'Neal Milling Co. No. 143,045; May 24; v. 286; p. 847.
Flour, Wheat-. Ismert-Hincke Milling Company. No. 142,585; May 17; v. 286; p. 628.
Flour, Wheat-. Larabee Flour Mills Corporation. No. 142,003; May 3; v. 286; p. 186.
Flour, Wheat-. Larabee Flour Mills Corporation. No. 142,215; May 3; v. 286; p. 192.
Flour, Wheat-. Lindsborg Milling & Elevator Co. No. 142,882; May 17; v. 286; p. 640.
Flour, Wheat-. W. H. Manu. No. 143,395; May 31; v. 286; p. 1050.
Flour, Wheat-. Middle States Milling Company. No. 142,302; May 10; v. 286; p. 405.
Flour, Wheat-. Middle States Milling Company. No. 143,399; May 31; v. 286; p. 1051.
Flour, Wheat-. Miesenhelder Bros. No. 142,041; May 3; v. 286; p. 188.
Flour, Wheat-. Moreland-Jones Company. No. 142,624; May 17; v. 286; p. 629.
Flour, Wheat-. Pillsbury Flour Mills Company. No. 143,430; May 31; v. 286; p. 1052.
Flour, Wheat-. R. C. Poage Milling Co. No. 142,094; May 3; v. 286; p. 189.
Flour, Wheat-. Red Star Milling Company. No. 142,101; May 3; v. 286; p. 189.
Flour, Wheat-. Red Star Milling Company. No. 142,322; May 10; v. 286; p. 405.
Flour, Wheat-. Round Hill Milling Company. No. 142,736; May 17; v. 286; p. 633.
Flour, Wheat-. Standard Tilton Milling Co. No. 142,776; May 17; v. 286; p. 634.
Flour, Wheat-. Theopold-Rein Co. No. 143,195; May 24; v. 286; p. 852.
Flour, Wheat-. Trenton Milling Company. No. 143,200; May 24; v. 286; p. 852.
Flour, Wheat-. Wenatchee Milling Co. No. 142,904; May 17; v. 286; p. 642.
Flour, Wheat-. Willis Norton & Co. No. 142,310; May 10; v. 286; p. 405.
Flours, cornmeal, and chicken feed. Ismert-Hincke Milling Company. No. 141,981; May 3; v. 286; p. 186.
Fly-books and snelled-fish-hook books. L. D. Chapman. No. 142,675; May 17; v. 286; p. 631.

Fly papers, traps, and catchers of all kinds. National Fly Catcher Company. No. 142,633; May 17; v. 286; p. 630.

"Hood Tires." (For Advertising Purposes for Motor-Vehicle Tires.) Hood Rubber Company. No. 5,615; May 31; v. 286; p. 1058.

"Making a Beauty Treatment." (For Advertising Purposes for Palmolive Soap.) The Palmolive Company. No. 5,594; May 3; v. 286; p. 198.

"Ridewell Tires." (For Advertising Purposes for Automobile-Tires.) Robel and Bryant. No. 5,601; May 24; v. 286; p. 861.

"Sentry-Uniform Slide Easy Hair Curlers." (For Advertising Purposes for Hair-Curlers.) J. Goldsmith, Jr. No. 5,606; May 31; v. 286; p. 1058.

"Star Tailors." (For Advertising Purposes for Men's Tailored Suits.) A. B. Stephens. No. 5,602; May 24; v. 286; p. 861.

"The Grown-Ups." (For Advertising Purposes for a Dessert Preparation.) The Genesee Pure Food Company. No. 5,598; May 24; v. 286; p. 861.

"The Haynes Special Speedster." (For Advertising Purposes for Automobiles.) Haynes Automobile Co. No. 5,608; May 31; v. 286; p. 1058.

"The New Series Haynes Tourister." (For Advertising Purposes for Automobiles.) Haynes Automobile Co. No. 5,609; May 31; v. 286; p. 1058.

"The Sentry-Uniform Hair Bow Fasteners." (For Advertising Purposes for Hair-Bow Fasteners.) J. Goldsmith, Jr. No. 5,607; May 31; v. 286; p. 1058.

"Truth in Advertising." For Advertising Purposes for Automobiles.) Haynes Automobile Company, The. No. 5,610; May 31; v. 286; p. 1058.

"Vic—The Master Blade. Try it in Your Razor." (For Advertising Purposes for Safety-Razor Blades.) Vic Manufacturing Co. No. 5,603; May 24; v. 286; p. 861.

"Vogue 'End-O-Spire.'" (For Advertising Purposes for a Toilet Preparation Which Prevents Perspiration.) American Druggists Syndicate. No. 5,591; May 3; v. 286; p. 198.

"What The World Rests On." (For Advertising Purposes for Mattresses, Pillows, Bed-Springs.) J. Osiason. No. 5,600; May 24; v. 286; p. 861.

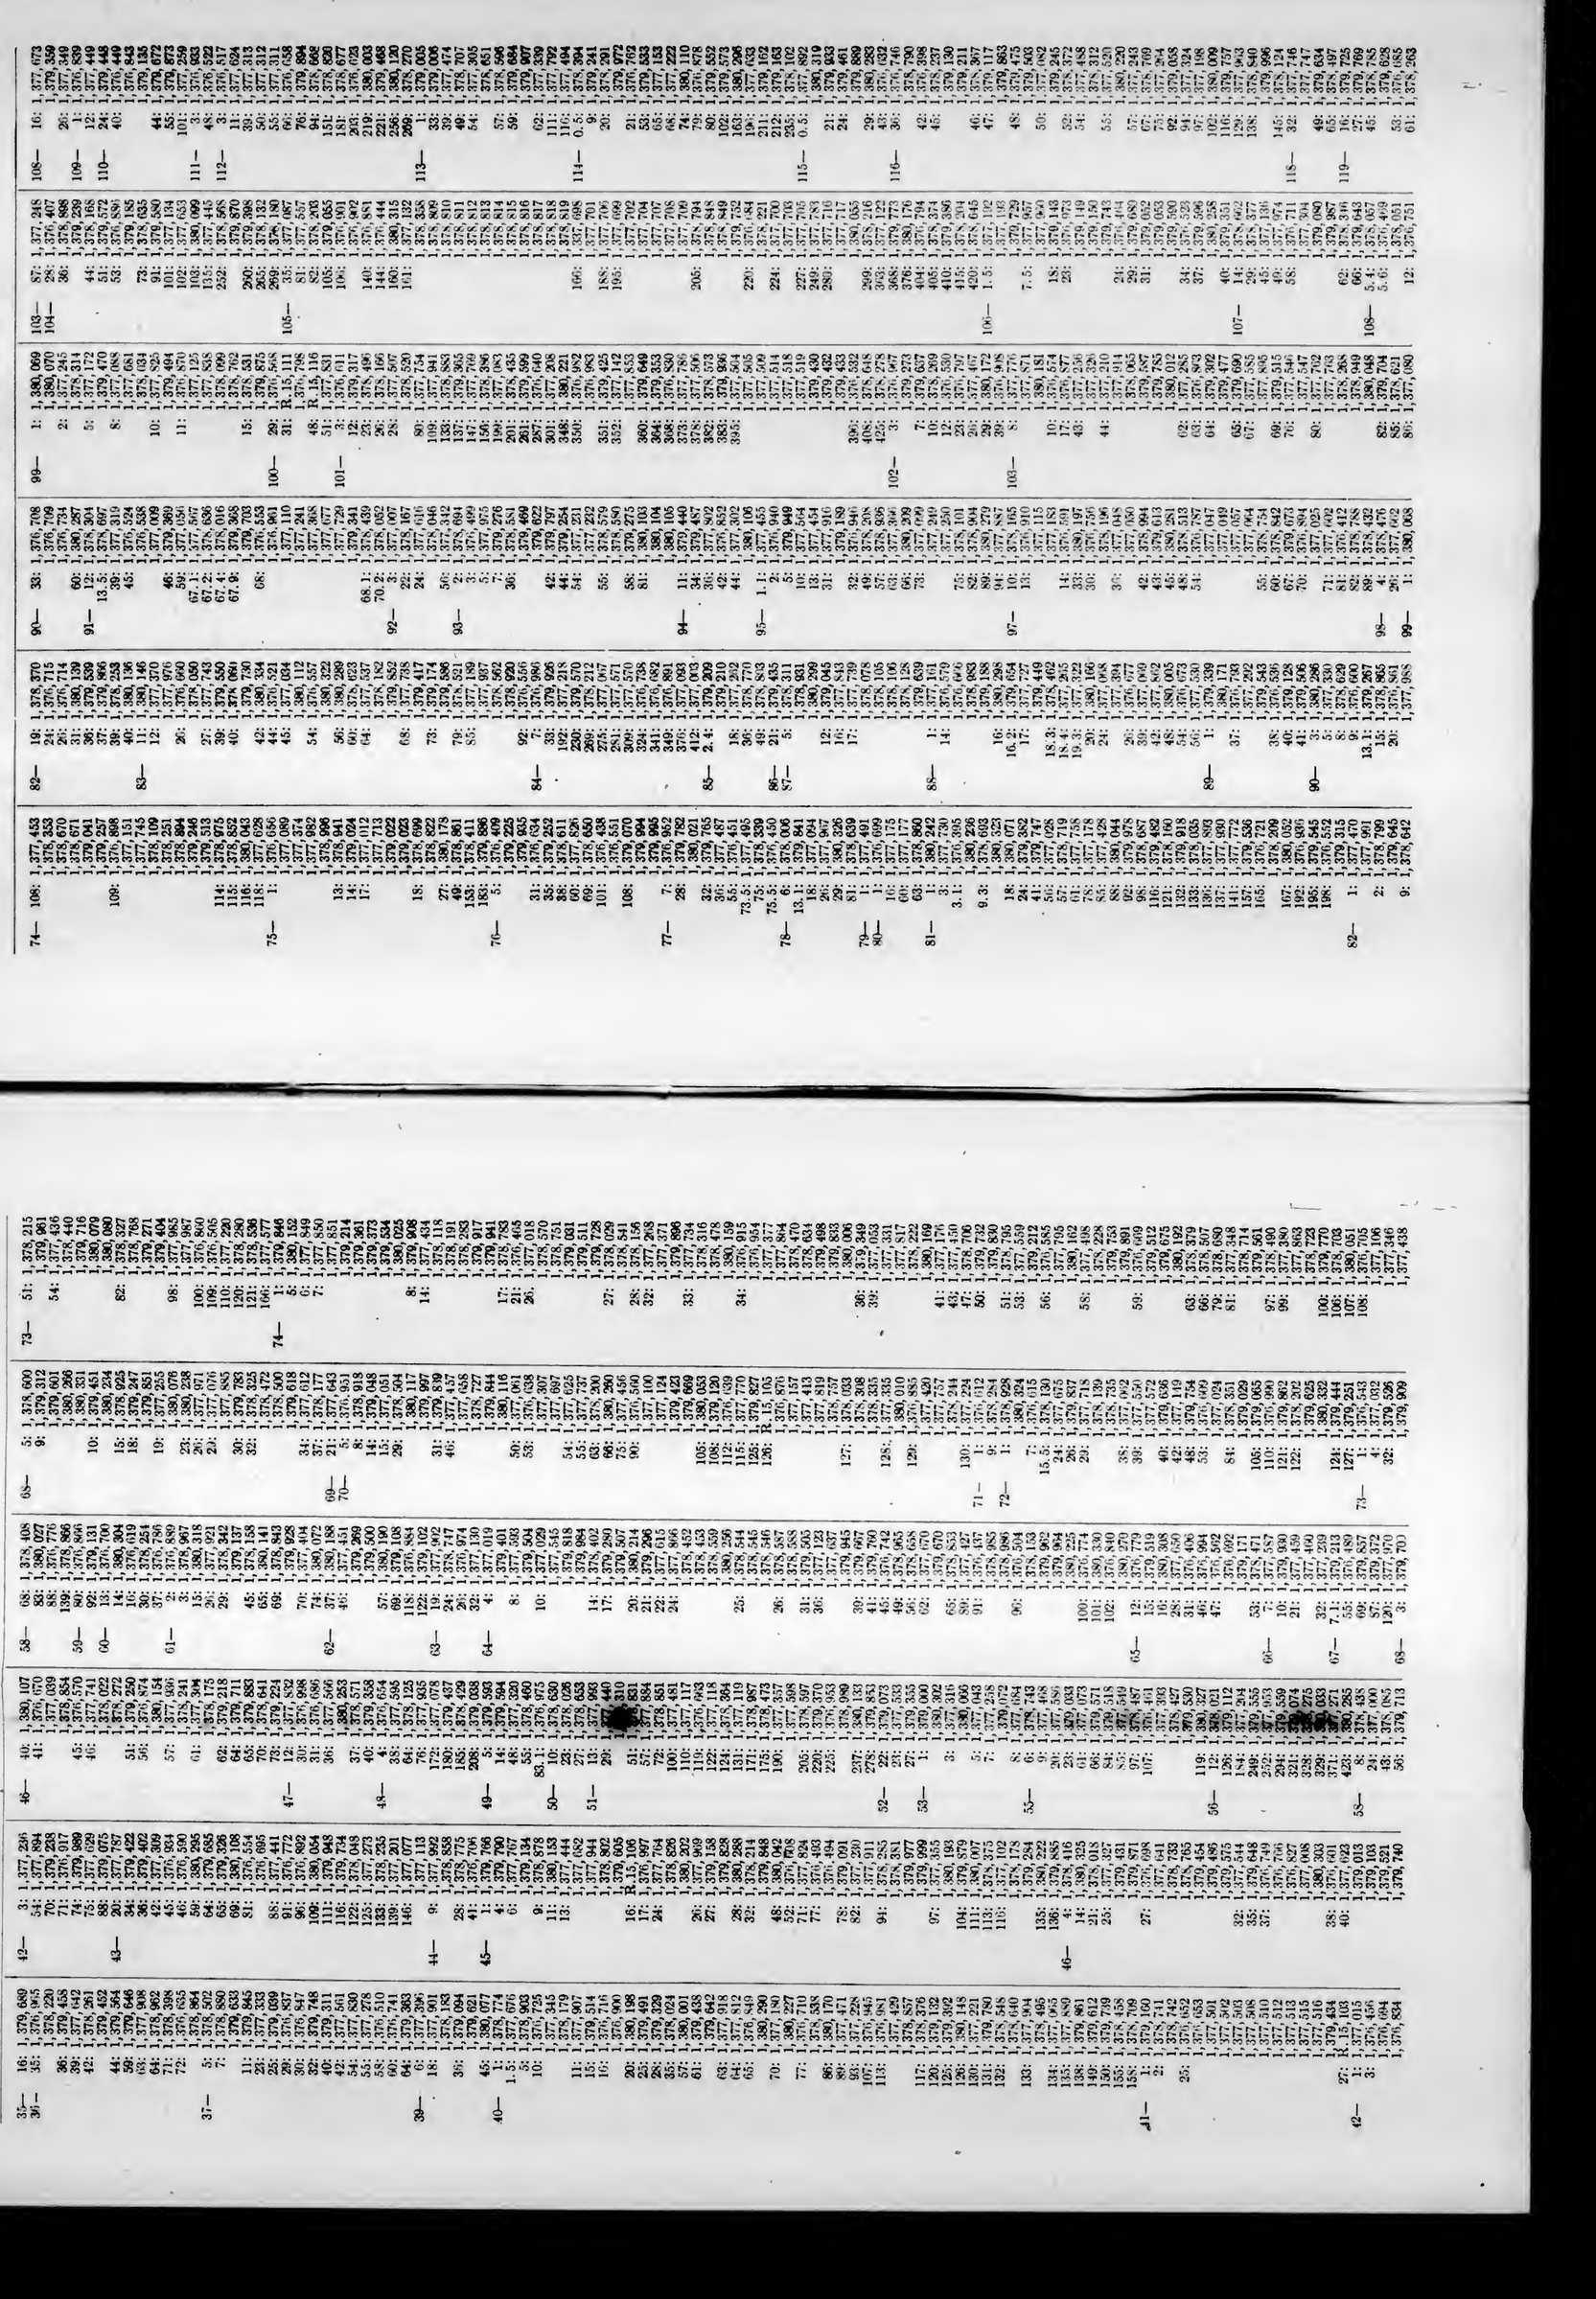
"Your Favorite Tire." (For Advertising Purposes for Tires.) Amalgamated Tire Stores Corporation. No. 5,596; May 24; v. 286; p. 861.

DISCLAIMERS.

Anti-skid chains to vehicle-wheels. Means for securing. W. H. Krug. No. 1,330,876; date of patent Feb. 7, 1920; disclaimer filed May 16, 1921; v. 286; p. 646.

Lamp. W. H. Wood. No. 1,235,275; date of patent July 31, 1917; disclaimer filed Apr. 30, 1921; v. 286; p. 205.

Liquid-elevating apparatus. F. V. Willis. No. 1,345,725; date of patent July 6, 1920; disclaimer filed Apr. 25, 1921; v. 286; p. 1.



Telephone system. W. L. Campbell. No. 1,267,743; date of patent May 28, 1918; disclaimer filed Apr. 18, 1921; v. 286; p. 1.

CLASSIFICATION OF PATENTS

MAY, 1921.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 3: 1,378,390
15: 1,378,488
20: 1,377,295

	Page.
Concurrent decisions of tribunals of the Patent Office, appeal from, conclusions reached not being wrong, decisions will be approved, * Dunham *v.* Dyson and Erickson. Dyson *v.* Erickson and Dunham	406
* Wasserfallen *v.* Strifler	408
Appeal from, court unable to declare error, decisions will be affirmed, * Anglada *v.* Moyer, Carroll, and Bryant. Bryant *v.* Carroll, Anglada and Moyer	594
* Valerius and Larsen *v.* Pfouts	594
Costs, writ of certiorari taxed against appellee where parts of record presented have no bearing on issue, * Solomon *v.* Rousso. Same *v.* Same	196
Diligence, invention complicated, actively experimenting less than eight months before filing application, not unreasonable, * Dunham *v.* Dyson and Erickson. Dyson *v.* Erickson and Dunham	406
Interference, evidence showing senior applicant derived invention from junior, neither senior applicant nor assignee can charge junior with laches, * Browning *v.* Johnson	785
Not suspended after testimony taken to investigate public use, * Hayes *v.* Davison	593
Priority of invention, award, * Smith *v.* Warnock. Warnock *v.* Smith	196
Lack of diligence not found, * Cadman *v.* Hudson	407
Reduction to practice, date of test determines, * Smith *v.* Warnock. Warnock *v.* Smith	195
Proof of manufacture sufficient to establish, * Solomon *v.* Rousso. Same *v.* Same	196
Trade-marks, goods of the same descriptive properties, grape-juice not the same as beer, * John Sexton and Company *v.* Schoenhofen Company. Same *v.* Same	593
Right of extension of mark from alcoholic to non-alcoholic beverages protected in view of eighteenth amendment to Constitution, * John Sexton and Company *v.* Schoenhofen Company. Same *v.* Same	593
Right of extension of marks to similar goods, applies only to the specific and not to a similar mark, * Berghoff Brewing Ass'n *v.* Popel-Giller Co., Inc	405
The word "Beechnut," for cereal breakfast foods, refused registration, because part of name of opposer, * Beechnut Cereal Company *v.* Beech-Nut Packing Company	407
"Bergo" and "Burgmeister" not conflicting, * Berghoff Brewing Ass'n *v.* Popel-Giller Co., Inc	405
"Edelweiss," used on root-beer compound, cannot be made basis for establishing prior use on the beverage, * John Sexton and Company *v.* Schoenhofen Company. Same *v.* Same	593
"Efficiency," for hot-water bottles, refused registration as a descriptive term, * *In re* Reid Bros	408
Use not established by use of word in conversation or written order, must be by affixing mark to goods, * Berghoff Brewing Ass'n *v.* Popel-Giller Co., Inc	405

DIGEST

OF THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

JUNE, 1921.

[Decisions of the Court of Appeals of the District of Columbia are indicated by a star (*).]

ACQUISITION.
See Trade-Marks, 1.

ASSIGNEES.
See Interference, 4.

CERTIORARI.
See Costs.

CLAIMS.
See Priority of Invention.

CLASS OF MERCHANDISE.
See Trade-Marks, 1.

CONCEPTION OF INVENTION.
See Interference, 1, 3.

CONCURRENT DECISIONS OF TRIBUNALS OF THE PATENT OFFICE.
See Interference, 1.

1. PRIORITY—QUESTION OF FACT.
Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed. [* Wasserfallen v. Strifler, 408.

2. SAME—SAME.
Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed.
[* Angiada v. Moyer, Carroll, and Bryant. Bryant v. Carroll, Angiada, and Moyer, 594.

3. SAME—SAME.
Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed.
[* Valerius and Larsen v. Pfouts, 594.

CONFUSION OF THE PUBLIC.
See Trade-Marks, 3.

COSTS.

UNNECESSARY PARTS OF RECORD CARRIED UP FOR REVIEW.
Where the parts of a record sent to the court of appeals by the Patent Office in an interference proceeding in response to a writ of certiorari sued out by appellee have no bearing on the issues presented, all costs on the writ will be taxed against appellee.
[* Solomon v. Rousso. Same v. Same, 196.

COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.
See Costs.

DECISIONS OF THE COMMISSIONER OF PATENTS.
See Concurrent Decisions of Tribunals of the Patent Office.

DELAY IN FILING APPLICATIONS.
See Diligence, 1.

DESCRIPTIVE TERMS.
See Trade-Marks, 5.

DILIGENCE.
See Interference, 4.

1. ACTIVELY EXPERIMENTING.
An inventor of a complicated switch for an automatic telephone system was reasonably diligent when he was actively experimenting for less than eight months before filing.
[* Dunham v. Dyson and Erickson. Dyson v. Erickson and Dunham, 406.

2. PRIORITY.
Where the junior party, Hudson, made drawings of the autotruck-trailer in issue prior to July, 1916, and work was done on the invention by checking over these drawings during August, and on September 29, 1916, a trailer was ordered to be constructed and was promptly built in accordance with the drawings, he cannot be charged with lack of diligence.
[* Cadman v. Hudson, 407.

DRAWINGS.
See Diligence, 2.

ERRORS.
See Concurrent Decisions of Tribunals of the Patent Office.

ESTOPPEL.
See Interference, 4.

EVIDENCE.
See Interference, 1, 3, 4; Priority of Invention.

EXAMINERS-IN-CHIEF.
See Interference, 1.

EXPERIMENTS.
See Diligence, 1.

FIRST AND ORIGINAL INVENTOR.
See Interference, 3, 4.

FORMER DECISIONS CITED.
See Trade-Marks, 6.

GOODS OF THE SAME DESCRIPTIVE PROPERTIES.
See Trade-Marks, 3, 6.

INTERFERENCE.
See Costs.

1. CONCURRING DECISIONS OF OFFICE TRIBUNALS.
Where the Examiner of Interferences and the First Assistant Commissioner found that an applicant had failed to establish conception of the invention in issue prior to his filing date, while the Examiners-in-Chief found an earlier conception date, but in a later companion interference the Examiners-in-Chief held, on evidence substantially, if not exactly, the same, that such applicant had failed to establish conception prior to his filing date and refused on rehearing to recede from this position, it is concluded that the three tribunals are in accord upon the point that applicant is limited to the filing date for conception.
[* Dunham v. Dyson and Erickson. Dyson v. Erickson and Dunham, 406.

2. NOT SUSPENDED TO INVESTIGATE PUBLIC USE.
The sole purpose of an interference being to determine the question of priority, it will not be suspended after testimony has been taken for the purpose of considering public use or intervening rights.
[* Hayes v. Davison, 593.

3. EVIDENCE HELD TO SHOW SENIOR APPLICANT DERIVED INVENTION FROM JUNIOR.
Evidence that the junior applicant conceived the invention long prior to the date claimed by the senior applicant and that he exhibited it to a patent solicitor, who showed it to the senior applicant, and other circumstances *Held* to show that the senior applicant derived his invention from the junior applicant and was not an original inventor.
[* Browning v. Johnson, 785.

4. NEITHER APPLICANT NOR ASSIGNEE CAN CHARGE PARTY FROM WHOM THEY DERIVED THE INVENTION WITH LACHES.
Where the evidence in interference proceedings showed that the senior applicant was not an original inventor, but that he derived the invention from the junior applicant, neither the senior applicant nor his assignee can charge the junior applicant with lack of diligence or laches or estoppel by public use. [* Id.

INTERVENING RIGHTS.
See Interference, 2.

LACHES.
See Interference, 4.

MACHINE.
See Reduction to Practice, 1.

OPPOSITION TO REGISTRATION OF TRADE-MARKS.
See Trade-Marks, 4.

PRIORITY OF INVENTION.
See Concurrent Decisions of Tribunals of the Patent Office; Diligence, 2; Interference; Reduction to Practice, 1.

EVIDENCE.
Evidence considered and priority of invention awarded to Warnock on counts 1 and 2 and to Smith on count 3.
[* Smith v. Warnock. Warnock v. Smith, 196.

PROOF.
See Reduction to Practice, 2.

PUBLIC USE.
See Interference, 2, 4.

RECORD OF CASE.
See Costs.

REDUCTION TO PRACTICE.

1. DATE OF TEST CONTROLLING.
It is the date of the actual test of a machine which determines the date of actual reduction to practice. Therefore, although an inventor may have completed his machine prior to a reduction to practice by his rival, where he did not also subject it to successful test before such reduction to practice he is not entitled to prevail.
[* Smith v. Warnock. Warnock v. Smith, 195.

2. TOWEL-RACK—SIMPLE DEVICE.
Proof of the manufacture of a towel-rack *Held* sufficient to establish actual reduction to practice.
[* Solomon v. Rousso. Same v. Same, 196.

REGISTRATION OF TRADE-MARKS.
See Trade-Marks.

RIGHT TO EXTEND TRADE-MARKS.
See Trade-Marks, 7, 8.

SIMILARITY OF TRADE-MARKS.
See Trade-Marks, 2, 3.

TEST.
See Reduction to Practice, 1.

TESTIMONY.
See Interference, 2.

TRADE-MARK USE.
See Trade-Marks 1, 3, 7, 8.

TRADE-MARKS.

1. ACQUISITION—AFFIXING MARKS TO GOODS.
"It is settled law in this court that a trade-mark is not acquired by the invention or discovery of a word or symbol, or by advertisement. It only becomes a trade-mark by attaching or affixing it to certain articles of merchandise." Therefore the mere use of "Burg" as an abbreviation for the word "Burgmeister" in conversation or in written orders for goods is not sufficient to establish a trade-mark use.
[* Berghoff Brewing Ass'n v. Popel-Giller Co., Inc., 405.

2. CONFLICT—"BERGO" AND "BURGMEISTER."
There is no conflict between the marks "Bergo" and "Burgmeister." [* Id.

3. EXTENSION OF MARKS TO SIMILAR GOODS.
The owner of a mark may extend its use to goods of the same descriptive properties; but the right of extension applies only to the specific mark and not to a similar mark. The extension of the mark "Burg Brau" on beer to "Burg" on non-alcoholic beverages would not come within the rule, since the marks are radically different; nor would the use of the mark "Burg Brau" for lager-beer or its extension to non-alcoholic cereal beverages produce confusion with the word "Bergo" on non-alcoholic cereal beverages. [* Id.

4. "BEECHNUT"—PART OF NAME OF OPPOSER—NOT REGISTRABLE.
The word "Beechnut" as a trade-mark for cereal breakfast foods denied registration on the ground that it is a substantial part of the name of opposer—the Beech-Nut Packing Company—which was organized long prior to applicant's entry into the field.
[*Beechnut Cereal Company *v.* Beech-Nut Packing Company, 407.

5. DESCRIPTIVE MARKS—"EFFICIENCY."
A mark for hot-water bottles consisting of a shield bearing the word "Efficiency" in ordinary block type is descriptive. [* *In re* Reid Bros., 408.

6. DESCRIPTIVE PROPERTIES OF GOODS—GRAPE-JUICE AND BEER.
Grape-juice and beer are not goods of the same descriptive properties. (*Schoenhofen Brewing Co. v. John Sexton & Co.*, C. D., 1914, 152; 2000 O. G., 1117; 41 App. D. C., 510.)
[* John Sexton and Company *v.* Schoenhofen Company. Same *v.* Same, 593.

7. RIGHT TO EXTEND TO BEVERAGE.
Use of the mark "Edelweiss" on a compound from which root-beer is made cannot be used as a basis for establishing prior use on the beverage. [* Id.

8. EXTENSION OF MARK FROM ALCOHOLIC TO NON-ALCOHOLIC BEVERAGES.
The user of a trade-mark on beer should be protected in the extension of its use to other cereal beverages, particularly in view of the eighteenth amendment to the Constitution, which has compelled transition to the production of non-alcoholic beverages. [* Id.

NOLAN ACT.

Reciprocity of French Laws.

(ORDER No. 2,664.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 9, 1921.

Notice is hereby given that the laws of France are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its citizens.

THOMAS E. ROBERTSON,
Commissioner.

Reciprocity of Swiss Laws.

(ORDER No. 2,665.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 9, 1921.

Notice is hereby given that the laws of Switzerland are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its citizens, subject to a limitation of the term under section 2 of the act as construed in *ex parte Hackett*, (285 O. G., 795.)

THOMAS E. ROBERTSON,
Commissioner.

Reciprocity of Australian Laws.

(ORDER No. 2,666.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 9, 1921.

Evidence has been submitted which satisfactorily establishes the fact that under Australian laws and regulations citizens of the United States are granted extensions of time as to priority rights and as to fulfilling other obligations upon a showing that the applicant or patentee was prevented from doing the required act or filing the required document by reason of circumstances arising from the state of war. In view thereof extensions of time under sections 1 and 2 of the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) will be granted to citizens of Australia when it is shown that applicant was prevented from filing an application or from paying a fee or taking a required action with respect to an application for patent by reason of circumstances arising from the state of war. This order is subject to modification in accordance with any further showing which may be made satisfactorily establishing an extension of the privileges now accorded by Australian laws, regulations, or practice in favor of citizens of the United States.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,293,033.—*James Cernohouz*, Chicago, Ill. PHOTOGRAPHIC-FILM CAMERA. Patent dated February 4, 1919. Disclaimer filed June 6, 1921, by the assignee, *Burke & James Inc.*

Enters this disclaimer:

"To that part of the claim in said patent which is in the following words, to wit:

"1. In a film-spool camera including a housing having a posterior opening and a removable cover for same, a pair of opposed pivot members disposed within the casing and adapted to engage opposite ends of a film-spool, and a manually operable member disposed within the camera housing and operable only upon opening the cover for the said posterior opening operatively associated with said pivot-members for simultaneously moving the same in opposite directions."

Access to Pending Applications.

No person except the applicant, the assignee whose assignment is of record, or the attorney of record will be permitted to have access to the file of any application, except as provided for under the interference rules, unless written authority from the applicant, assignee, or attorney, identifying the application to be inspected, is filed in the case to become a part of the record thereof, or upon the written order of the Commissioner, which will also become a part of the record of the case.

4700

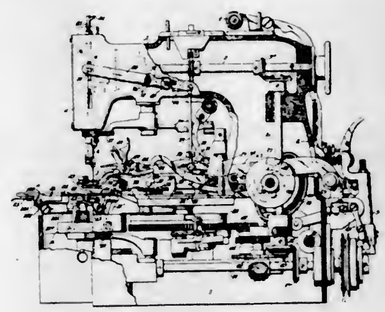
PATENTS

GRANTED JUNE 7, 1921.

1,380,337. CHANGE-SPEED-GEAR-OPERATING MEANS FOR MOTOR-VEHICLES. WILLIAM H. ADSIT, Batavia, N. Y., assignor of one-half to Daniel W. Tomlinson, Jr., Batavia, N. Y. Filed Jan. 29, 1919. Serial No. 273,838. 22 Claims. (Cl. 74—58.)

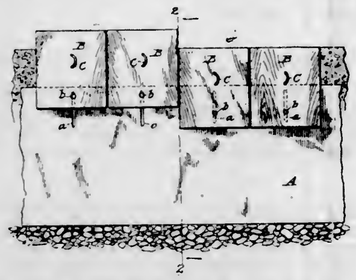


1. The combination with a transmission gearing, of a plurality of gear-shifting members, a companion actuating dog for each of said members normally out of actuating connection with said members, a selector adapted to be moved for selecting for operation one or another of said dogs, means for moving said dogs to a position for connection with said members and then for actuating a selected member after a dog is connected therewith, and means for operating said selector to place the selected dog into actuating connection with the companion gear-shifting member.

1,380,338. STEERING-COLUMN FOR AUTOMOTIVE APPARATUS. NICHOLAS W. AKIMOFF, Wynnewood, Pa., assignor to Vibration Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 19, 1920. Serial No. 418,036. 9 Claims. (Cl. 74—39.)

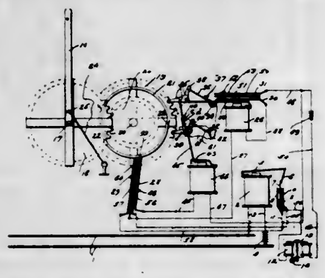
1. In a steering column for automotive apparatus having a steering post, the means for minimizing transmitted vibration comprising a member bearing against the steering post at the point where the antinode of the fundamental mode of vibration of the steering post occurs.

1,380,339. BUTTONHOLE CUTTING AND STITCHING MACHINE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 20, 1920. Serial No. 367,297. 23 Claims. (Cl. 112—68.)



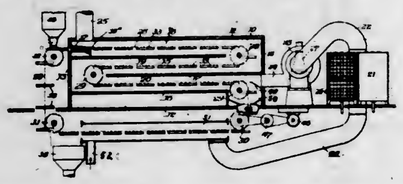
1. A buttonhole sewing machine having, in combination, stitch-forming mechanism including an upper depth-stitch needle and a lower curved slit-stitch needle, a work-holder, feeding mechanism for relatively moving the stitch-forming mechanism and work-holder to sew around a buttonhole, buttonhole cutting mechanism comprising a die-element having an elongated aperture and a punch-element adapted to enter said die-element to remove a strip of material extending from end to end of the buttonhole, and means for starting the stitch-forming mechanism after the buttonhole has been cut.

1,380,340. BUTTONHOLE-CUTTING MECHANISM. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 30, 1920. Serial No. 377,850. 11 Claims. (Cl. 112—68.)



1. Buttonhole cutting mechanism for sewing machines comprising, a pivoted carrier-lever, a punch-element carried by said lever and having the form of a thin blade curved edgewise concentrically with the pivot of said lever, and a hollow die-element adapted to be entered by said punch-element in removing a narrow strip of material to form the buttonhole slit.

1,380,341. JOINT FOR CONCRETE PAVEMENTS. WALTER L. ASHMORE, Macon, Ga. Filed Oct. 16, 1920. Serial No. 417,282. 10 Claims. (Cl. 94—18.)

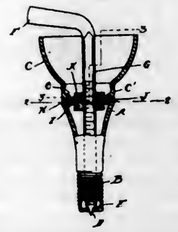


1. A joint for roadways and street pavements comprising a thin, comparatively long and wide supporting member adapted to be set on one edge upon a sub base, and a series of comparatively small compressible blocks mounted on and extending above the upper edge of said supporting member, said blocks being slidable vertically to adapt them to be raised and depressed when arranged in a vertical plane.

1,380,342. AUTOMATIC CROSSING-GATE. JOSEPH B. ATKINS, South Bend, Ind. Filed Jan. 30, 1918. Serial No. 214,508. 12 Claims. (Cl. 246—128.)

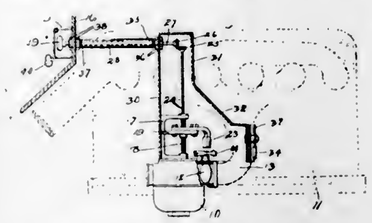
12. A gate closing mechanism comprising a gate, means for operating said gate and moving the same to a closed position in a step by step movement, electrical controlled means for actuating said last mentioned means, from a distant point, means engaging said gate for automatically swinging the same to an open position when released, and a secondary electrically operated means actuated from a distant point and coöperating with said step by step closing means for rendering said closing means inactive and permitting said gate to automatically swing to an open position.

1,380,343. DRIER. FRITZ BALZER, Chicago, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Jan. 25, 1918. Serial No. 213,793. 3 Claims. (Cl. 34—12.)



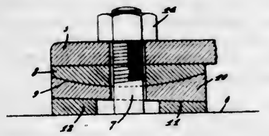
1. In a drier, the combination of a heated compartment having a plurality of horizontally disposed passageways therein, a cold air supply means, a conveyer for carrying materials to be dried movable through said passageways in said heated compartment for drying purposes and movable through said cold air supply means whereby the dried material may be cooled and the air thus heated supplied to the heated compartment.

1,380,344. POCKET-LIGHT. PRESTON R. BASSETT, Brooklyn, N. Y. Filed Oct. 9, 1919. Serial No. 329,437. 4 Claims. (Cl. 240—1.)



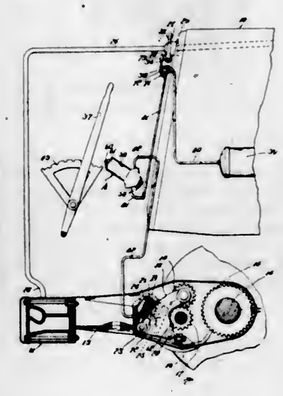
4. In a device of the character described the combination of a plano convex lens, a thin disk of self-luminous material on the plane surface thereof, a glass cemented on the plane surface over the self luminous material and a reflecting coating on the said glass.

1,380,345. PRIMING-CUP. CHARLES W. BECK, Detroit, Mich. Filed Dec. 29, 1917. Serial No. 209,395. 12 Claims. (Cl. 123—187.5.)



1. A priming cup comprising a main body portion, the interior walls of said portion being polygonal in shape, a valve seat, a valve, a threaded stem for adjusting said valve with reference to its seat, and an insert member inserted within the polygonal walls of said main body portion and having an opening through which the threaded stem extends, the engagement between the insert and the valve stem being arranged to permit the valve to automatically center upon its seat.

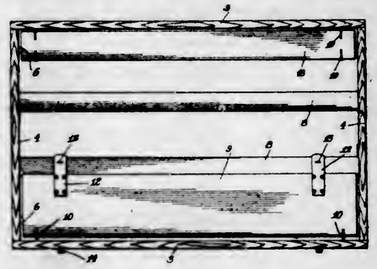
1,380,346. CARBURETER-LOCK. ROLAND P. BERNARDINI, Cranston, R. I. Filed June 17, 1920. Serial No. 389,616. 3 Claims. (Cl. 251—6.)



1. In a device of the character described, the combination with a carbureter having a shut-off valve to the intake manifold provided with an operating lever, of a screw-operated stop-member adapted to be moved to engage and lock said lever in closed position, and an inclosing casing adapted to be locked about said lever-locking mechanism.

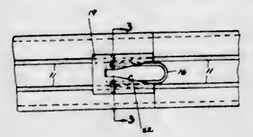
1,380,347. DISTANCING DEVICE. GEORGE FRED BLUME, Philadelphia, Pa. Filed Jan. 13, 1921. Serial No. 436,967. 2 Claims. (Cl. 248—30.)

1. In combination with a foundation and engine base, a distancing device including a pair of plates, one of said plates having a concaved surface, the other plate having a convex surface positioned within the concaved surface, one of said plates having an inclined lower surface, a wedge member coöperating with the inclined surface for moving the plates vertically, and means for securing the plates and wedge against movement.



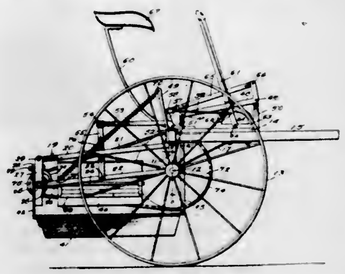
1,380,348. CONTROLLING MECHANISM FOR BOOSTER-MOTORS. RAY M. BROWN, Yonkers, N. Y., assignor to Howard L. Ingersoll, White Plains, N. Y. Filed Oct. 15, 1920. Serial No. 417,122. 22 Claims. (Cl. 105—48.)

22. The combination with a locomotive having a reverse lever and a throttle valve lever, of a booster motor for aiding the main driving means of the locomotive in starting the same and propelling it at low speed, a valve for controlling the supply of steam to the booster motor, a revoluble shaft for operating said valve provided with an operating lever arranged with respect to the main throttle lever of the locomotive so that the booster valve can be opened only when the main throttle of the locomotive is open, a fluid pressure actuated device for entraining the booster motor with the locomotive, a supply of pressure fluid, a pipe leading therefrom to the entraining device, two valves arranged in said pipe, one of which is adapted to be opened when the reverse lever is moved to an extreme forward position, and means for connecting the other of said valves to the lever which opens the booster steam valve so that the entrainment of the booster takes place just in advance of the supply of the same with steam.



1,380,349. COLLAPSIBLE CRATE. FRANK P. BUSH, FRANCIS G. SERR, and HOWARD L. POWELL, New York, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 1, 1919. Serial No. 335,018. 3 Claims. (Cl. 217—15.)

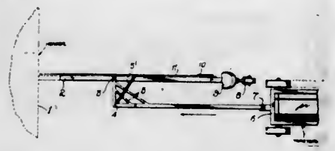
1. In a collapsible crate, open at the ends, the combination of skeleton top and bottom frames, having vertically arranged side members with longitudinal top and bottom members respectively, adjacent the upper and lower portions of the same, respectively, and vertically arranged end members, extending beneath and above said longitudinal members of the top and bottom frames respectively, a rigid side member pivotally linked to a



side member of the bottom frame, securing devices for securing the upper edge of said side member to the top frame when the crate is in open position, and an opposite side member comprising means pivoted to both the top and bottom frames and adapted to swing inwardly of the crate when the latter is collapsed.

1,380,350. VEHICLE-WHEEL RIM. FREDERICK H. CAMPBELL, Chicago, Ill., assignor of one-fourth to Clifton R. Hunn, Chicago, Ill. Filed May 8, 1920. Serial No. 379,749. 7 Claims. (Cl. 301—30.)

1. A vehicle wheel rim comprising a sectional annular member mountable on a vehicle wheel; a tongue provided on the end of one section adapted for engagement in a recess formed in the adjacent end of a coöperating section; and a resilient member provided with lugs for securing said tongue in said engagement, substantially as described.



1,380,351. BOLL-WEEVIL-EXTERMINATING DEVICE. JOHN M. CAPE, San Marcos, Tex. Filed June 10, 1920. Serial No. 388,001. 7 Claims. (Cl. 43—142.)

6. In a machine for destroying insects or the like, a frame-work, wheels supporting the frame-work, a vertically adjustable transverse frame, vertically swinging supporting means pivotally connected with the transverse frame and frame-work and serving to raise and lower the

transverse frame without turning the same upon its longitudinal axis, means to move the vertically swinging supporting means, rotatable beaters carried by the transverse frame, means to drive the beaters, a pan beneath the beaters having its rear end connected with the transverse frame, and separate means arranged upon the frame-work and connected with the forward end of the pan to support and vertically adjust it.

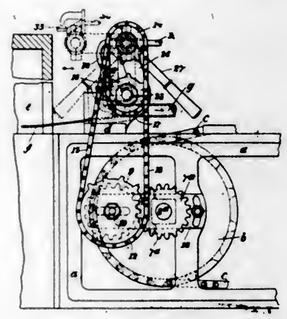
1,380,352. HEADER-PUSHER FOR TRACTORS. STEENER JOHN CARLSON, White Butte, S. D. Filed Dec. 9, 1919. Serial No. 343,684. 4 Claims. (Cl. 213—67.)

1. The combination with a harvesting machine having a rearwardly extending beam and guiding means for the same, of an L-shaped hitch, pivotally secured to the beam adjacent the machine, and means to attach a tractor to the rear of the hitch.

1,380,353. METHOD FOR TREATING STORAGE-BATTERY SEPARATORS. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 26, 1918. Serial No. 251,425. 4 Claims. (Cl. 204—29.)

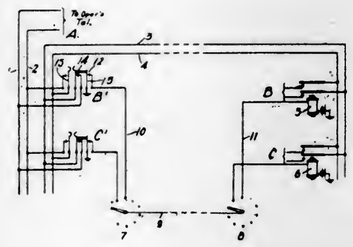
1. The method of preparing separators for storage or shipment which consists of treating finished separators in sulfuric acid.

1,380,354. STORAGE-BATTERY SEPARATOR. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 312,073. 3 Claims. (Cl. 204—29.)



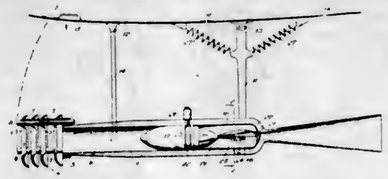
1. The method of preparing storage battery separators which consists in treating wood by a process of fermentation.

1,380,355. IMPLEMENT OR DEVICE FOR KILLING OR DISABLING INSECTS, FLIES, OR THE LIKE. ARTHUR W. CASH, Decatur, Ill., assignor to United States Wire Mat Company, Decatur, Ill., a Corporation of Illinois. Filed Dec. 3, 1917. Serial No. 205,086. 2 Claims. (Cl. 43—137.)



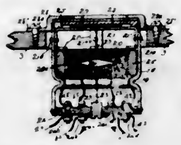
1. A device of the character described, including in combination a body portion, and a handle, said body portion being composed of flexible netting of substantially rectangular shape, having its side and top edges bound with a soft, flexible material and having its lower corner portions folded along lines converging to a point and slightly overlapping, said handle member being in the form of a looped wire to provide the gripping portion and having its end portions free and positioned between the body portion and the folded corner portions, the end portions of the handle extending along lines on which the lower corner portions are folded and then bent and extended to substantially the intermediate part of the body portion, and securing means for connecting the upper edges of the folded corner portions to the body portion so as to hold these edges against the body portion and to hold the free end portions of the handle member therein, said securing means passing through the binding and the body portion and a strip of flexible material positioned on the side of the body opposite the binding in which the ends of the securing means are clenched.

1,380,356. APPARATUS FOR THE MANUFACTURE OF WELDED TUBES. DOUGLAS WHIMSTER CHISHOLM, Woodhead, Garnkirk, Scotland. Filed Apr. 25, 1919. Serial No. 292,727. 15 Claims. (Cl. 205—3.)



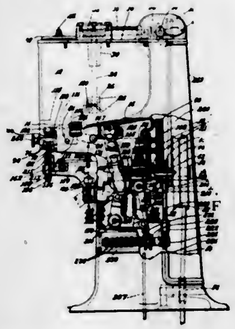
1. Apparatus for manufacturing butt welded tubes from heated metal strips having, in combination, a bell through which the heated strip is drawn and having a gap therein, a rotary member operating in said gap and co-acting with the belt to weld the tube, means for directing gas into the bell through said gap and upon the strip, and means for drawing the strip through the bell.

1,380,357. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,663. 3 Claims. (Cl. 179—51.)



1. In a telephone system, a plurality of operators' positions, means at one of said positions for determining the selection of any one of the other positions, means operated to select the position determined by the first named means, synchronized means connecting the first and second named means for controlling the operation of the latter, and a common talking circuit completed by the operation of the second named means for interconnecting the first named position with said other position.

1,380,358. NON-RECOIL GUN. CHARLES J. COOKE, Washington, D. C. Filed Mar. 24, 1920. Serial No. 368,438. 7 Claims. (Cl. 89—40.)

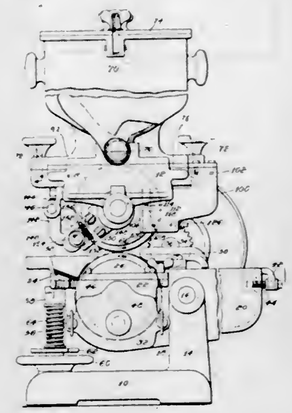


1. A non-recoil gun comprising in combination a gun body and a rearwardly diverging deflector in direct communication with the interior of said gun body.

1,380,359. FUEL-INDICATOR. LEONARD COOPER, Syracuse, N. Y., assignor of one-fourth to Theodore O. Hickok and one-fourth to Frank T. Miller, Syracuse, N. Y. Filed Apr. 16, 1920. Serial No. 374,446. 1 Claim. (Cl. 177—351.)

An indicator of the class described, including a hollow casing provided with an inturned annular rib, an annular coil supported by said rib, a dial mounted concentrically with and above said coil, said dial having a number of depending lugs which bear upon and hold the coil in place, a pointer pivotally mounted for sweeping said dial, a spindle supporting said pointer disposed concentrically with and in said coil and said dial, and an armature carried by said spindle and operated step-by-step by electric currents passing through different segments of said coil.

1,380,360. COATING-MACHINE. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 23, 1918. Serial No. 259,319. 57 Claims. (Cl. 91—49.)



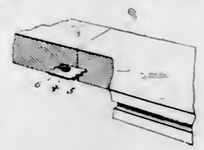
6. In a machine of the class described, a yieldable carrier, a work-supporting member rotatable upon the carrier and having a yieldable section, and an applying member coöperating with the work-supporting member.

26. In a machine of the class described, a frame, a tank for fluid integral therewith, a member situated beneath the tank for applying the fluid to the work, and a support for the member separable from the frame.

42. In a machine of the class described, means for applying fluid to the work and advancing said work in coöperation with the applying means, and means for indicating the extent of the work coated with the fluid.

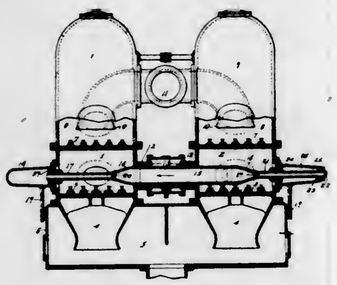
55. In a machine of the class described, a fluid-applying roll, an arm pivoted adjacent thereto, a support upon the arm opposite the roll, and a cleaning roll rotatable on the support for contact with the applying surface.

1,380,361. COATING APPARATUS. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 8, 1918. Serial No. 261,684. 37 Claims. (Cl. 91—49.)



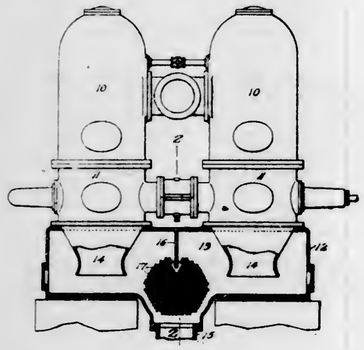
1. In a coating apparatus, an upper applying member, a receptacle pivoted between its extremities to move toward and from the upper applying member, and an applying member journaled in the receptacle beneath the upper applying member.

8. In a coating apparatus, an applying member, a receptacle arranged to supply fluid thereto, and an auxiliary receptacle contacting with the applying member.



37. In a coating apparatus, a rotatable applying member for a coating substance, said member tending to produce strings of the coating substance, and a string-receiving member rotatable above the plane of the work in contact with and in the same direction as the applying member.

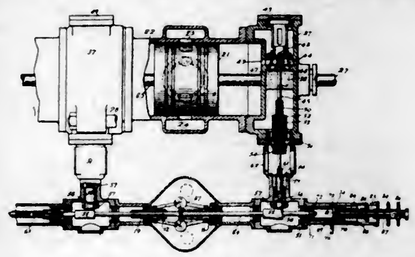
1,380,362. FASTENING MEANS FOR FLOORING AND THE LIKE. ROBERT M. CUNNINGHAM, Louisville, Ky. Filed Mar. 26, 1920. Serial No. 369,003. 2 Claims. (Cl. 85—11.)



1. As a new article of manufacture, a fastener adapted to form a locking joint between abutting boards, comprising a plate-like member having teeth formed upon each of two of its oppositely disposed edges, and a stop tongue struck up out of the body at a point substantially midway between the toothed edges.

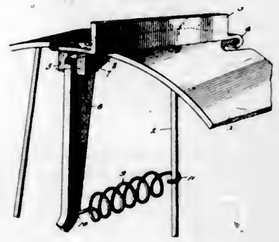
1,380,363. PUMP-PLUNGER. DAVID A. DECROW, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 3, 1918. Serial No. 226,506. 5 Claims. (Cl. 103—63.)

1. A liquid pump having a cylinder, a hollow plunger closed to the cylinder, and a connection between the interior of the plunger and the outside of the cylinder whereby any leakage into the plunger is displaced therefrom by the reciprocation of the plunger.



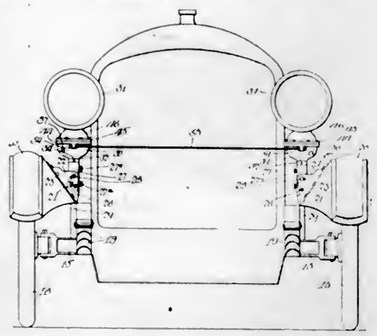
1,380,364. PUMP. DAVID A. DECROW, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 3, 1918. Serial No. 226,507. 2 Claims. (Cl. 103—79.)

1. The combination with a pump and its suction chamber, of means for forming an air chamber in the suction chamber, and a condenser in said suction chamber with its condensing surface located in the path of the water flowing through said suction chamber.



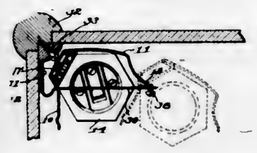
1,380,365. STEAM PUMPING-ENGINE. DAVID A. DECROW, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 3, 1918. Serial No. 226,509. 10 Claims. (Cl. 121—125.)

1. In a combined engine and pump, a valve gear for controlling the steam supply of the engine, a centrifugal speed governor and valve control mechanism for varying the point of cut off, a connection between the centrifugal speed governor and valve control mechanism permitting the valve control mechanism to move independently of the speed governor, and a pressure governor controlled by the pressure of the fluid being pumped, connected to the valve control mechanism to vary the point of cut off independ-



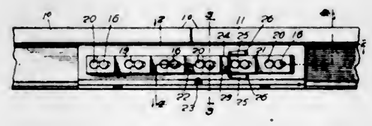
ently of the speed governor, and operable without lost motion regardless of the position of the valve control mechanism under movement by the speed governor.

1,380,366. TRACTOR-CLEAT. EDMURN L. DEMOREST, Columbus, Ohio, assignor to James Ellwood Jones, Switchback, W. Va. Filed Sept. 6, 1918. Serial No. 252,828. 5 Claims. (Cl. 301—44.)



1. In a tractor wheel, a detachable cleat comprising a member capable of extending transversely across the rim of a wheel, said member having one end thereof terminated to grip one edge of the rim, a bell crank lever pivoted to the opposite end of said member in a position so that one arm of said lever will engage the inner surface of the rim, and spring means engaging the other arm of said lever and coöperative with said wheel to frictionally maintain said lever in cleat holding engagement with said rim.

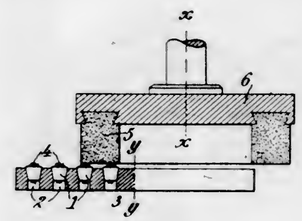
1,380,367. DIRIGIBLE LIGHTING MECHANISM. OLIVER D. EASTMAN and WALTER M. GREGG, Muskegon, Mich. Filed Nov. 13, 1919. Serial No. 337,814. 15 Claims. (Cl. 240—62.)



1. A device of the character described, including in combination, a pivoted finger, a longitudinally shiftable rod located transversely with respect to the finger, a bracket transversely disposed on and rigidly fixed to said rod, a vertically disposed post rotatably mounted on said bracket, means carried by the bracket to limit the rotary movement of said post, a coupling adjustably mounted on the post, and a trip lever horizontally secured to the coupling and having at one of its ends an extension extended at a right angle therefrom for loose contact with said finger.

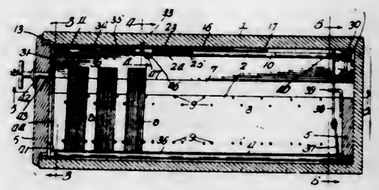
1,380,368. SHOWCASE-REFLECTOR. LEONARD ERIKSON, Malden, Mass. Filed June 5, 1920. Serial No. 388,768. 5 Claims. (Cl. 240—6.)

1. The combination with a trough-shaped show-case reflector of a lamp socket of insulating material, a conduit for electrical conductors arranged between said reflector and socket, a saddle in said conduit, said saddle having its top portion spaced away from the base of said conduit, means for clamping said socket, saddle and conduit together, and means for securing said conduit to said reflector.



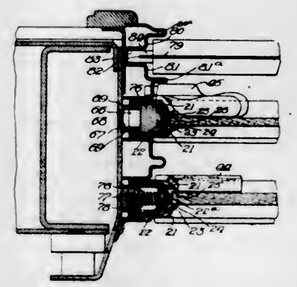
1,380,369. RAIL-JOINT. EDGAR CLARK FIELDS, Lyons, Ind. Filed Mar. 19, 1921. Serial No. 453,694. 1 Claim. (Cl. 238—252.)

The combination with proximate rail ends provided with spaced perforations, of a fish plate provided with outstanding lugs positioned and proportioned to be inserted through the perforations, a second fish plate provided with perforations properly spaced to pass over the lugs, a wedging member, means providing wedging action between the wedging member and the lugs as the wedge moves longitudinally, a lug carried by the wedging member, and an abutment carried by the fish plate so positioned relative to each other as to facilitate the insertion of a lever therebetween to exert stress upon the wedging member.



1,380,370. METHOD OF AND MEANS FOR MANUFACTURING CONICAL ROLLERS OF EXACT DIMENSIONS. BENGT WIKTOR FJELLMAN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed July 27, 1916. Serial No. 111,589. 9 Claims. (Cl. 51—278.)

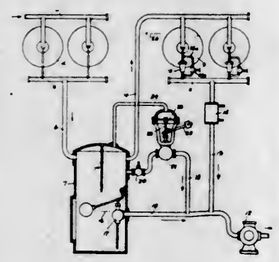
1. The method of manufacturing conical rollers which consists in forming the rollers to be operated upon of a uniform angularity, then positioning the rollers by means of their conical surfaces with their axes parallel and their conical apices in a common plane, then simultaneously grinding the larger ends of a plurality of said rollers with a rotary grinder having a grinding surface



parallel to the apical plane of said rollers, thereby producing faces on the bases of the rollers of uniform distance from their apices.

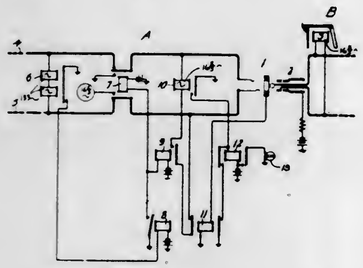
1,380,371. CARD-SPREADING DEVICE. PAUL E. FLEMING, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 442,915. 16 Claims. (Cl. 45—2.)

9. The combination with a file cabinet having a drawer therein adapted to contain file cards, one behind the other and substantially upright, of a shoe in said cabinet above said cards, means operable from the exterior of said cabinet for bringing said shoe down against the cards, means actuated through said first mentioned means for moving said shoe while in contact with the cards backward over the same to spread them by bending their upper edges backward, in succession, and means for raising said shoe out of contact with the cards after the spreading operation and to return the shoe to its starting position above the cards.



1,380,372. SASH CONSTRUCTION. GEORGE H. FORSYTH, Chicago, Ill. Filed Sept. 13, 1915. Serial No. 50,328. 9 Claims. (Cl. 189—76.)

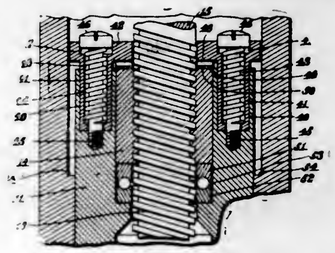
1. In sash construction, the combination of a metal sash formed to provide a permanent retaining bead, a resilient glass support, and a pocket at that side of the support op-



posite the permanent bead, and a removable glazing bead seated in the pocket and having a self-adjustable bearing relation to the glass to accommodate panes of varying thickness.

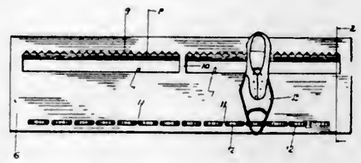
1,380,373. DRIER-HEATING SYSTEM. WILLIAM B. FULTON, Middletown, Ohio. Filed Oct. 1, 1919. Serial No. 327,783. 12 Claims. (Cl. 34—48.)

8. A drier system comprising primary and secondary groups of driers, means for supplying steam to said secondary group, means for withdrawing steam, air and water of condensation from said secondary group, means for separating the water from said steam and air, means for conducting the separated steam and air to said primary group of driers, a common suction device for exhausting said primary group of driers and for withdrawing water from said separating means and means for connecting said suction device with the steam space in said separating means when the pressure in said primary group of driers falls to a predetermined value.



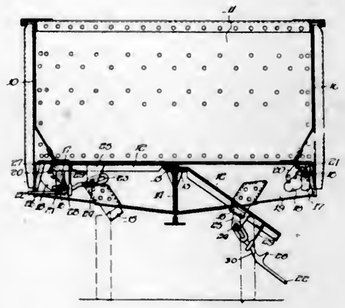
1,380,374. SIGNALING SYSTEM. FRED G. GARDNER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,766. 5 Claims. (Cl. 179—41.)

3. In a signaling system a line circuit, a source of current, means responsive thereto, a signaling device controlled thereby, and means associated with the line circuit and responsive to signaling current received thereover for simultaneously localizing a section of such line circuit and associating the source of current and the signal control means with such localized section.



1,380,375. STOP MECHANISM FOR LIFTING-JACKS. FRANK L. GORMLEY, Brookline, Mass. Filed Jan. 20, 1921. Serial No. 438,540. 10 Claims. (Cl. 254—103.)

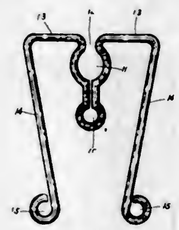
1. In a lifting jack, a standard; a nut therein normally locked from rotation; a revoluble screw therein; a sleeve surrounding the standard and movable endwise with said screw; and means actuated by the movement of said



sleeve for unlocking said nut and permitting its free rotation with said screw.

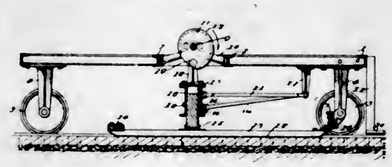
1,380,376. SHOE-RACK. FRANK L. HARDCASTLE, Chicago, Ill. Filed Feb. 9, 1920. Serial No. 357,140. 4 Claims. (Cl. 211—14.)

3. A device of the class described comprising a plate member, having an elongated slot therein; a reinforcing rib interrupting said slot; interrupted lips integral with said plate member and bent up from said slot; and adjustable loop-forming means laced in said plate adjacent one edge thereof, substantially as described.



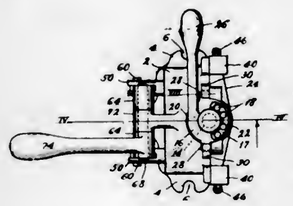
1,380,377. DOOR-OPERATING MECHANISM. HARRY S. HART, Chicago, Ill., assignor to National Dump Car Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 26, 1919. Serial No. 326,555. 7 Claims. (Cl. 105—306.)

1. In a general service car having a plurality of doors, means for directly lifting said doors to closed position individually, and a shaft carrying projecting means for engaging said doors for holding the latter in closed position.



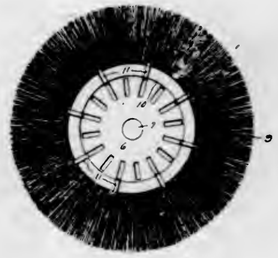
1,380,378. CLOTHESLINE-FIXTURE. HOMER A. HAZLETT, St. Paul, Minn. Filed Dec. 17, 1919. Serial No. 345,462. 3 Claims. (Cl. 24—131.)

1. A device of the class described consisting of a single resilient rod bent to form a central screw hole and a knot retainer, said rod forming substantially parallel branches between said screw hole and knot retainer, the ends of



the rod being formed with loops and means for attaching said loops to a suitable support.

1,380,379. ROAD-BUILDING MACHINE. JOSEPH W. HELTZEL, Warren, Ohio. Filed Mar. 11, 1920. Serial No. 364,958. 5 Claims. (Cl. 94—48.)



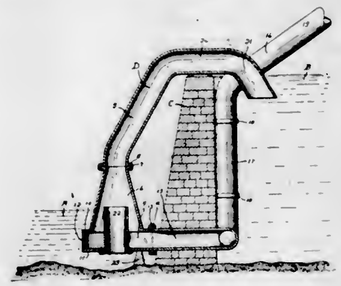
1. A machine of the character specified comprising a wheel supported frame, a tamping member hinged to the front of the frame and adapted to slide upon the pavement as the frame moves over the roadway, a ram for striking said tamping member transversely of the length thereof and approximately at the center, and means for lifting the ram and permitting it to fall upon the tamping member, said tamping member comprising a series of longitudinally extending plates arranged alongside each other and spaced apart slightly from each other and rigidly connected at their rear ends, said plates being hinged at their forward ends to the plate and being reinforced on their under faces.

1,380,380. BABBITTING-JIG. WILBUR J. HEMPY, Kansas City, Mo., assignor to Hempy-Cooper Manufacturing Company, a Corporation of Missouri. Filed Dec. 19, 1919. Serial No. 346,008. 7 Claims. (Cl. 22—123.)

1. In a device of the character described, a frame, a die associated with said frame to project into an article to be babbitted, and spring-actuated clamping means to engage both ends of said article to hold the same in proper position to be babbitted.

1,380,381. ROTARY BRUSH. RAYMOND C. HEROLD, Cleveland, Ohio. Filed Aug. 20, 1920. Serial No. 404,873. 2 Claims. (Cl. 15—37.)

1. A rotary brush comprising a plate having slots around the outer edge thereof, brush material inserted through said slots, rings placed against opposite sides of said material, and tongues struck up from the plate and folded over upon the rings.



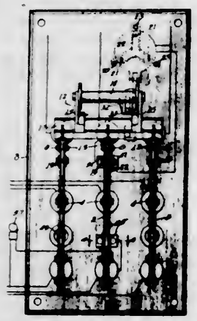
1,380,382. GRINDING COMPOUND. HAROLD S. HOLMES, Worcester, Mass. Filed Sept. 27, 1920. Serial No. 413,073. 4 Claims. (Cl. 51—280.)

1. An abrasive compound comprising a finely divided abrasive material, water, starch, glycerin, calcium chlorid, and a preservative.

1,380,383. PROCESS FOR THE RECOVERY OF POTASSIUM SALTS FROM SOLUTIONS CONTAINING THE SAME AS WELL AS OTHER SALTS. JOHN W. HORNSEY, Summit, N. J. Filed June 21, 1918. Serial No. 241,230. 4 Claims. (Cl. 23—22.)

1. The process of recovering potassium salts from solutions containing them and contaminating salts, which comprises evaporating the solution under pressure at a temperature above the boiling point of the solution at atmospheric pressure until a large part of the contaminating salts are thrown out of solution, separating the residual solution from the contaminating salts so deposited, and cooling the residual solution to precipitate the potassium salts.

1,380,384. HYDRAULIC FISHWAY. EDWARD SCOTT HOWARD, Yreka, Calif. Filed June 25, 1920. Serial No. 391,651. 10 Claims. (Cl. 61—21.)

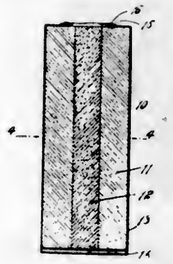


1. A fish way comprising a fish conveyer pipe having communication with the stream and a body of water formed by an obstruction in the stream, means for directing a column of water up through the conveyer pipe under pressure.

1,380,385. AUTOMOBILE-TURNTABLE. RICHARD B. ISEMAN, Clarion, Pa. Filed Oct. 15, 1920. Serial No. 417,074. 6 Claims. (Cl. 104—44.)

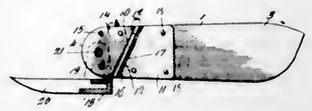
1. A traveling automobile turn table comprising a base provided with mobility wheels and having a vertical circular aperture, a turret located above said base and having a circular depending flange passing through the aperture in said base, rollers located between said base and said turret, other rollers carried by said flange and coacting with said base, and automobile carriers supported by said turret.

1,380,386. LOW-VOLTAGE RELEASE-SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers' Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1918. Serial No. 248,971. 22 Claims. (Cl. 200—106.)



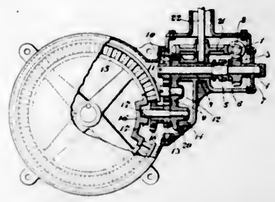
1. In combination with an electric switch having a switch blade member pivotally mounted upon a stationary terminal member and a coöperating stationary terminal member, latching mechanism for holding the blade into engagement with the coöperating stationary terminal member, said latching mechanism comprising a lever arm having a hook at the outer end thereof for coöperating with a shoulder on the blade member, and a second lever arm for resetting first said lever arm.

1,380,387. BOLT AND NUT LOCK. JOHN C. JOHNSON, Syracuse, N. Y. Filed June 28, 1920. Serial No. 392,237. 5 Claims. (Cl. 85—1.)



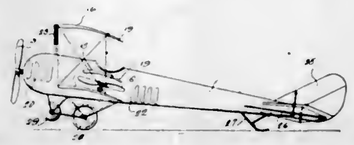
5. A bolt-and nut clamping device comprising a bolt having a head and a shank, an externally threaded sleeve slidable endwise of and upon the shank of the bolt and having an independent rotary adjustment thereon, means for limiting the rotary adjustment of the sleeve, additional means for holding the sleeve against endwise movement when adjusted rotarily in one direction to the limit of its adjustment, means for holding the sleeve against rotary adjustment in the opposite direction, and an internally threaded nut section screwing upon the sleeve.

1,380,388. STICK OF SHAVING-SOAP. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Company, Brooklyn, N. Y., a Corporation of New York. Filed May 22, 1919. Serial No. 298,875. 4 Claims. (Cl. 87—23.)



1. A stick of shaving soap incorporating therewith a longitudinal core of oleaginous substance other than soap adapted to combine with the soap in producing an efficient lather for softening the beard and protecting the skin against being irritated or unpleasantly affected by the action of the razor during the shaving process, said oleaginous core extending longitudinally of the shaving stick and confined and protected throughout its length by the soap composition of the stick to protect it from contact with the hand in use.

1,380,389. DIVIDER-BOARD. JOHN H. KILE, Bain, Minn. Filed Apr. 16, 1920. Serial No. 374,315. 4 Claims. (Cl. 56—314.)

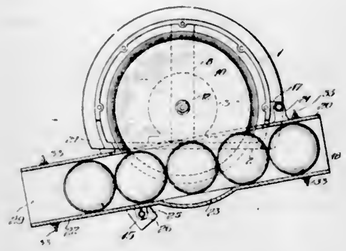


1. A dividing board formed of two sections having adjacent ends upwardly and rearwardly inclined and a hinge connection at said ends, whereby one of the sections may swing inwardly and upwardly to one side of the other.

1,380,390. GEARING. JULIUS H. KINTZELE, St. Louis, Mo., assignor, by mesne assignments, to Central Manufacturing Company, a Corporation of Delaware. Filed Sept. 26, 1918. Serial No. 255,798. 4 Claims. (Cl. 74—50.)

1. Gearing of the character described comprising a gear wheel, a support, a shaft journaled for rotation in said support at right-angles to the axis of the gear wheel, means for rotating said shaft, a pinion attached to said shaft, an arm having one end pivoted on said support and arranged to swing on its pivot from one position to another, a support against which the opposite end of said arm slides in its movements, means limiting swinging movement of said arm, a pinion supported by said arm meshing with the pinion on said shaft, a shaft supported by said arm, a pinion on said last-named shaft driven by said second-named pinion, and an additional pinion on said last-named shaft driven by said last-named pinion meshing with said gear wheel.

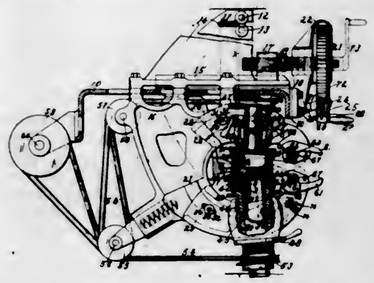
1,380,391. AIRPLANE. GEORGE A. KEHL, St. Paul, Minn. Filed July 25, 1918. Serial No. 246,715. 3 Claims. (Cl. 244—15.)



1. In an airplane the combination of a fuselage; a tractor propeller carried by said fuselage; a plurality of main aerofoils associated with said fuselage; an auxiliary aerofoil of less total surface area than said main aerofoils, carried by said fuselage intermediate said main aerofoils; a helicopter propeller associated with said auxiliary aerofoil and adapted to exert a vertical thrust thereon; and independent motors adapted to rotate each of said propellers.

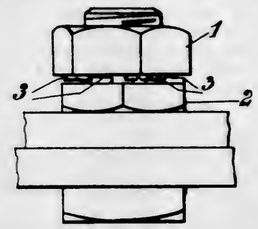
1,380,392. PRODUCING NITRATING LIQUOR. ISIDOR KITSEE, Philadelphia, Pa. Filed Feb. 7, 1919. Serial No. 275,549. 5 Claims. (Cl. 23—1.)

5. The method of producing a liquor for the purpose of nitrating a cellulose which consists in generating in the required nitric acid, sulfuric acid in required quantities so that both acids produce the necessary nitrating solution.



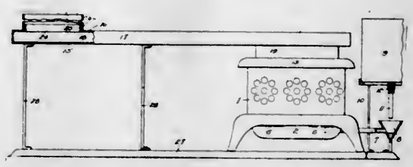
1,380,393. SLICING-MACHINE. WALTER CHANDLER KNAPP, Rochester, N. Y., assignor to Liberty Bread Slicer Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 11, 1919. Serial No. 323,166. 6 Claims. (Cl. 146—11.)

1. In a slicing machine, the combination of a support, a knife revolubly mounted therein, a chute having a slotted wall mounted on said support and adjustable to and from the knife, and means for securing the chute in adjusted positions.



1,380,394. GRINDING-MACHINE FOR BELT-KNIVES. LLOYD G. KNOWLES, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 22, 1919. Serial No. 319,154. 16 Claims. (Cl. 69—16.)

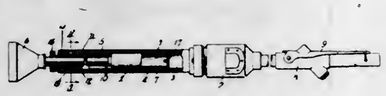
3. In a machine of the character described, in combination, a belt knife, rolls for feeding work to one stretch of the knife, flat-faced grinders for operating upon the other stretch of the knife, and means for simultaneously



adjusting the feed rolls and the grinders relatively to those portions of the knife with which they coöperate.

1,380,395. LOCK-NUT. LOUIS L. KORACH, Chicago, Ill. Filed Aug. 23, 1919. Serial No. 319,452. 3 Claims. (Cl. 181—21.)

1. A lock nut comprising in its construction a plurality of nut-sections normally spaced apart and each having a screw-threaded axial opening adapted to receive and engage a screw-threaded bolt, and a plurality of threaded frangible connecting posts integral with and located between and normally connecting said nut sections, said posts being spaced apart and adapted to be broken into two sections forming opposed locking teeth between and in frictional abutting engagement with the opposed nut sections by the turning of one of said nut-sections with respect to and into locking engagement with the other nut-section.

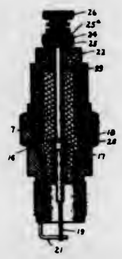


1,380,396. STOVE. CHARLES F. KULP, Wellston, Mo. Filed Jan. 2, 1918. Serial No. 209,913. 2 Claims. (Cl. 126—45.)

1. In combination, an oil stove having the fuel container provided with a plurality of air inlet passages arranged just above the fuel level, a collar arranged concentric with the burner of the stove, a utensil supporting housing having both ends closed and provided in its top plate with a utensil opening over the burner of the stove and provided with a flue opening at the extreme end of the housing, a collar depending from one end of the housing for telescopic connection with the collar of the stove for supporting one end of the housing upon the stove, the

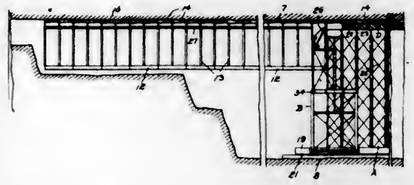
bottom plate of said housing being provided with a multiplicity of concentrically arranged draft openings adjacent the upper end of the depending collar of the housing partly surrounding the collar and disposed in a substantial plane with the top of the burner within the collar, a support for the opposite end of the housing and a draft pipe extending upwardly from the flue opening of the housing.

1,380,397. COMBINED PISTON AND PLUNGER-ROD. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Original application filed July 30, 1919, Serial No. 314,374. Divided and this application filed June 28, 1920. Serial No. 392,179. 7 Claims. (Cl. 74—108.)



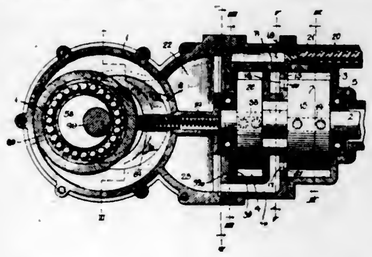
1. In a pneumatic tool, the combination of a barrel having a stuffing box in the outer end thereof, and a reciprocable piston rod in said barrel and extending beyond the outer end of said barrel through said stuffing box, said rod being provided with a plurality of longitudinally extending, concave flutes, and said stuffing box being provided with means for engaging said flutes to hold the rod against rotation.

1,380,398. MOLD MIXTURE. VICTOR LOUGHEED, San Francisco, Calif., assignor to Enterprize Foundry Company, San Francisco, Calif., a Corporation of California. Filed Aug. 18, 1919. Serial No. 318,208. 3 Claims. (Cl. 22—188.)



1. A mold material composed of calcium sulfate and kieselguhr, with the volume of kieselguhr in excess of that of calcium sulfate.

1,380,399. SPARK-PLUG. JOHN A. LUTHER, Schenectady, N. Y. Filed July 25, 1919. Serial No. 313,342. 10 Claims. (Cl. 123—169.)

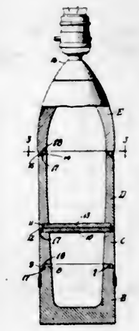


1. In a spark plug, the combination of a shell adapted to be attached to a support and provided with an internal shoulder, a stationary insulator mounted within the shell and having an enlarged portion which is seated on the shoulder, a shock absorbing compression spring which surrounds the insulator and forms the means for holding it on its seat against cylinder pressure, an abutment for the outer end of the spring, a stationary electrode which passes through the insulator and is adapted to be connected to a source of current, and a second electrode coöperating with the first and permanently separated therefrom by an air gap.

1,380,400. METHOD OF AND APPARATUS FOR TUNNEL-WORK. CHARLES D. MCARTHUR, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Aug. 8, 1918. Serial No. 248,839. 12 Claims. (Cl. 61—42.)

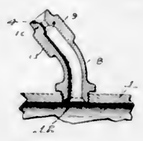
1. In tunnel lining apparatus, the combination of a series of mold form sections and a series of roof-supports disposed in advance of said sections, lagging on said supports, said sections and supports disposed in succession longitudinally of the tunnel, and means for carrying forward rear sections and supports for positioning in advance of their respective series, the rear section designed to replace the removed rear support with reference to the lagging on said support, and bulkheads adapted to support the lagging from said mold form sections where they replace roof supports.

1,380,401. DRIVING MECHANISM. JAMES W. MCQUEEN, Detroit, Mich. Filed Feb. 1, 1915. Serial No. 5,342. 14 Claims. (Cl. 60—53.)



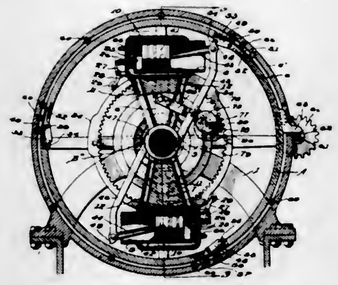
1. A driving mechanism comprising a power shaft, pumps of different capacity connected thereto, a pair of driven shafts, a fluid operated motor connected to each driven shaft directly, means controlling the flow and return of driving fluid from the pumps to the motors for driving the motors in either direction of rotation in relation to the pump movement, said controlling means being operative to selectively control the activity of the pumps relative to the fluid flow, and means rendered active by said control means for retaining the contents of an inactive pump within the pump chamber.

1,380,402. TABLE OR DESK NOVELTY. ANGUS S. MACDONALD, Great Neck Station, N. Y., assignor to The Snead & Co. Iron Works, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 6, 1919. Serial No. 281,005. 1 Claim. (Cl. 65—53.)



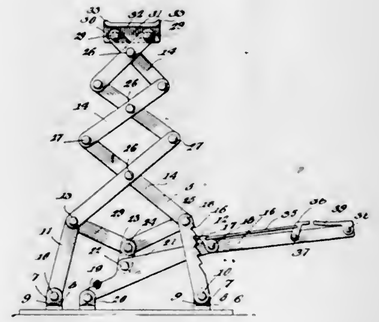
A novelty of the character described consisting of an artillery shell cut transversely into four sections, the adjacent ends of each of which are rabbeted to provide interfitting rims, said rims being provided with means adapted to interlock on relative rotation of the sections, a fixture on the top section, a plate fitted into the lower end of the second section of less thickness than the depth of the rim on said section, and a plate fitted into the upper end of the third section of a thickness greater than the depth of the rim of said section, the projecting portion of

said second plate being adapted to be slidingly fitted into the lower end of the second section; whereby when all



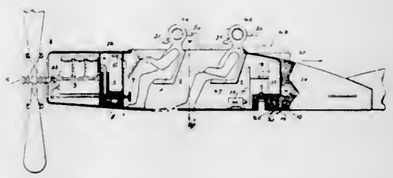
sections are assembled the shell constitutes a stand, and when disassembled, the top section constitutes a stand and the remaining sections, receptacles having bottoms.

1,380,403. NOZZLE. GEORGE E. MARCH, Muskegon, Mich. Filed Apr. 23, 1920. Serial No. 375,963. 3 Claims. (Cl. 299—107.)



1. A nozzle comprising a rigid portion adjacent its outer end and a portion intermediate its end, integral with said rigid portion, said intermediate portion being adapted to be bent into maintained axially-changed forms.

1,380,404. ROTARY INTERNAL-COMBUSTION ENGINE. RUFUS E. MILLER, Pocono Pines, Pa. Filed Apr. 10, 1919. Serial No. 288,997. 25 Claims. (Cl. 123—43.)

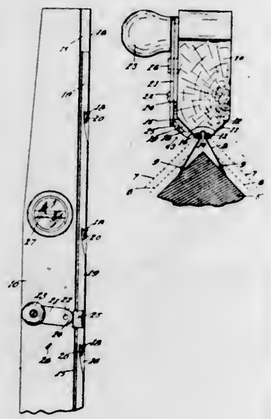


1. In a rotary engine, the combination, of a power shaft, cylinders connected to said power shaft for rotation therewith, pistons supported from the power shaft for relative movement with respect to the cylinder, and stationary means for holding the piston from backward motion.

1,380,405. AUTOMOBILE-JACK. BERT MULVANE, Cleveland, Ohio. Filed Feb. 18, 1920. Serial No. 359,724. 5 Claims. (Cl. 254—122.)

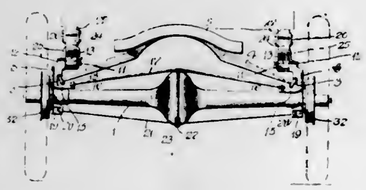
1. A jack comprising a base plate, a plurality of pairs of superposed crossed levers pivotally connected at the points of intersection, means pivotally connecting the meeting terminals of the pairs of levers together, the pairs of levers being gradually decreased in length toward the upper end of the jack, a head carried by the outer terminals of the uppermost pair of levers, an operating lever pivotally connected to the base plate, and means pivotally connecting the operating lever intermediate its ends to the lowermost pair of levers.

1,380,406. HIGH-ALTITUDE FLYING-MACHINE. SAMUEL D. MOTT, Passaic, N. J., assignor of one-half to Arthur B. Sullivan, Allendale, N. J. Filed Sept. 12, 1919. Serial No. 323,824. 20 Claims. (Cl. 244—30.)



1. A high altitude aircraft having a sealed compartment combined with an injector or blower supplying air to the same from the surrounding atmosphere, a motor therefor operating independently of the speed of the aircraft engine, and means for automatically changing the speed of the motor as the altitude changes.

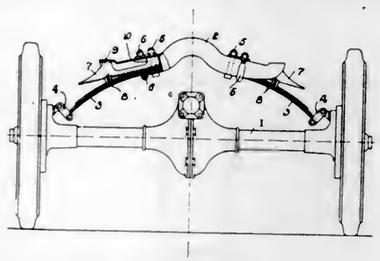
1,380,407. BUILDER'S TOOL. PER O. NELSON, Minneapolis, Minn. Filed Nov. 18, 1920. Serial No. 425,012. 6 Claims. (Cl. 33—180.



1. A device of the class described, consisting of a main body member, the same having two diverging faces at one edge thereof, a longitudinal strip fixed on one of

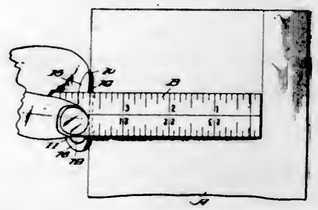
said faces, a clamping strip positioned on the other face and having one of its edges in parallel coacting relation

to the adjacent edge of the first mentioned strip, and means for clamping said adjacent strip edges toward each other.



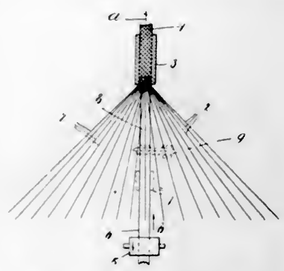
1,380,408. SPRING SUSPENSION. NELS L. OLSON, Detroit, Mich. Filed Apr. 14, 1916. Serial No. 90,996. 9 Claims. (Cl. 180—88.)

1. In an automobile having a rear axle provided with end flange members and a rear spring with suspending shackles, spring supporting members adapted to be secured astride the axle to the flange members and provided with shackle supports to which the shackles are secured, spring perch brackets on the supports, perches on the brackets, an auxiliary body and springs secured to the perches and shackled to the body.



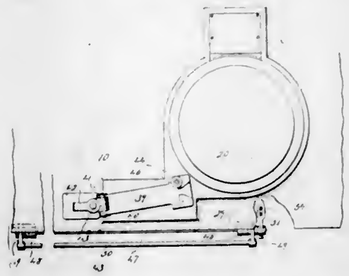
1,380,409. AUTOMATIC TENSION-REGULATOR FOR VEHICLE-SPRINGS. NELS L. OLSON, Highland Park, Mich. Filed Apr. 19, 1919. Serial No. 291,229. 2 Claims. (Cl. 267—48.)

2. The combination with a rear axle housing, and a channel load carrying member above said housing, of cantaliver springs having the inner ends thereof in said channel load carrying member, and the outer ends thereof connected to said rear axle housing, fastening means for the inner ends of said springs, and shoe members having the inner ends thereof interposed between the inner ends of said springs and said load carrying member and the outer ends thereof extending at an angle to said springs and adapted to contact therewith and decrease the flexure length of said springs, said shoe members having the



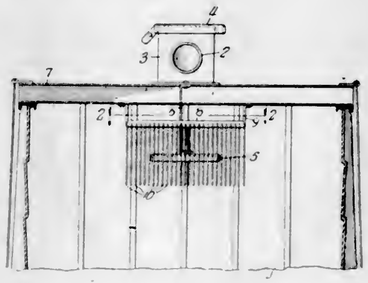
inner ends theerof channel shaped and held by the fastening means at the inner ends of said springs.

1,380,410. FINGER FENCE AND PROTECTOR. WILLIAM H. PARRY, Fayetteville, N. C. Filed Nov. 13, 1919. Serial No. 337,900. 3 Claims. (Cl. 2—104.)



1. A finger guard and fence comprising a body part having a bearing surface adapted to engage the edge of a piece of work along which the finger is to be drawn for protecting the finger and provided with an outstanding portion adapted to overlap the work to support the guard and finger.

1,380,411. METHOD OF MAKING LACES. ANKER PETERSEN, Winthrop, Mass., assignor, by mesne assignments, to The American Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 25, 1919. Serial No. 319,788. 5 Claims. (Cl. 18—59.)

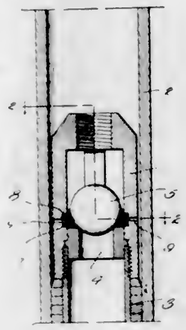


1. The art of making tipped laces comprising forming a fabric, inserting therein at predetermined intervals blanks of sheet material for tips, and subsequently completing the laces by consolidating the sheet material and the surrounding fabric by compression whereby to coil said material upon itself and embed the fabric therein and severing the lace from the length of fabric.

1,380,412. STOP DEVICE FOR WIRE-DRAWING OR SIMILAR MACHINES. WILLIAM D. PIERSON, Waterbury, Conn., assignor to the Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 1, 1919. Serial No. 341,687. 8 Claims. (Cl. 205—16.)

7. In a machine of the character described, the combination with the block; of means for rotating the same, a rock member extending along one side of the machine, and an operative connection between said rock member and the means for rotating the block.

1,380,413. BAFFLE-CURTAIN FOR ASH-TANKS. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed July 28, 1920. Serial No. 399,639. 5 Claims. (Cl. 302—59.)



5. The combination with an ash tank, of a pipe opening into said tank for discharging ash into the same, a splash plate supported in said tank below the discharge end of said pipe and in position to have the ash discharged thereon, an open frame supported in said tank above and surrounding said plate and spaced outward therefrom, and a plurality of rods, laterally spaced apart and having their upper ends hooked into holes in said frame from the outside thereof and hanging below said plate and against which the ash strikes after splashing from said plate.

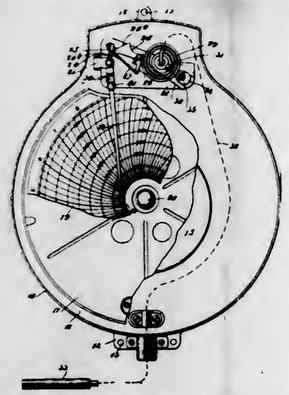
1,380,414. PROCESS OF SECURING CERTAIN DERIVATIVES OF TERPENES. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1918. Serial No. 229,925. 2 Claims. (Cl. 23—24.)

1. The herein described process which consists in digesting a mixture of spirits of turpentine and hydrated oxalic acid at a temperature of or above 140° C.; and then separating the acid from the resulting product.

1,380,415. CHECK-VALVE. JAMES K. PUTNAM, Tulsa, Okla. Filed Apr. 10, 1919. Serial No. 289,048. 1 Claim. (Cl. 251—167.)

In a check valve, a cage for reception in a liquid or fluid container, said cage having an annular internal valve seat and an annular internal channel having a side flush with said seat, a check valve for contact with the inner portion of said seat, and an elastic ring resting on said seat and held in said channel, said cage having a port into said channel permitting the pressure or weight of the trapped fluid or liquid to contract said elastic ring around said check valve.

1,380,416. BELT-BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed May 29, 1920. Serial No. 385,182. Renewed Mar. 31, 1921. Serial No. 457,425. 2 Claims. (Cl. 24—191.)

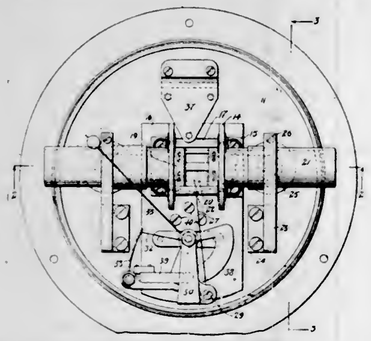


1. A belt buckle comprising a face plate, longitudinal side flanges projecting rearwardly from said face plate, a pivoted clamp device comprising a base portion having journal lugs journaled in the walls of said side flanges adjacent to one end of said face plate and spaced rearwardly from the back of the latter, a loop member projecting outwardly from the outer edge of said base portion, and a jaw body integrally formed with said base portion to spring from the outer edge of the latter intermediate the side arms of said loop member, said jaw body being curved upwardly and rearwardly to provide a free biting edge spaced intermediate the back of said face plate and the inner face of said base portion.

1,380,417. RECORDER. ALFRED ROESCH, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 28, 1920. Serial No. 406,740. 10 Claims. (Cl. 234—11.)

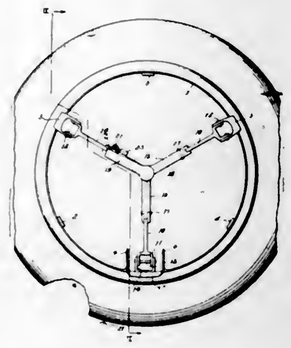
1. A recorder comprising a casing, a movable chart therein, a pen arm movably mounted in said casing in operative relation to said chart, a device in said casing sensitive to temperature changes and a cam mounted upon

said sensitive device and partaking bodily of the movements thereof, said cam having an active surface adapted



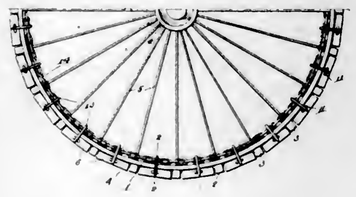
to cause a movement of said pen arm relatively to said chart.

1,380,418. GARMENT-GAGE. HANS WALTERS ROSVALL, Seattle, Wash. Filed Apr. 26, 1919. Serial No. 292,802. 2 Claims. (Cl. 33—15.)



1. In an article of the class described, the combination of an inner garment, composed of sections, elastic material which joins the edges of the sections in spaced relation with respect to each other, lines of spikes marking the center line of the said spacing, an outer garment of less elasticity than the first mentioned garment adapted to fit snugly over the inner garment and thus cause the spikes to perforate any pattern paper which may be inserted between the two garments.

1,380,419. ELECTRIC MEASURING INSTRUMENT. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Aug. 5, 1916. Serial No. 113,281. 7 Claims. (Cl. 171—308.)

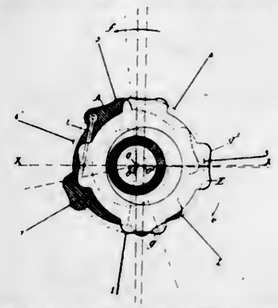


1. In an electric measuring instrument, a pair of parallel electrically conductive rings, a plurality of thin conductor strips with their ends attached to the respective rings, a cylindrical heat absorbing body within the space inclosed by said strips, and an index controlled by the change of length of one of said conductors.

1,380,420. TIRE-CARRIER. STEFAN RYMOWICZ, Kenosha, Wis. Filed July 22, 1920. Serial No. 398,145. 11 Claims. (Cl. 224—29.)

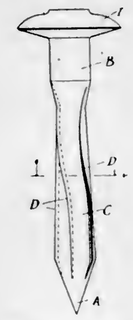
5. A tire carrier comprising a supporting band, supporting arms carried thereby, some of said arms being movable relative to said band, and means arranged axially of said band and rotatable concentrically therewith and coöperating with said movable arms to hold the same rigidly positioned.

1,380,421. PROTECTIVE DEVICE FOR TRACTOR-WHEELS. EDWARD SCHMID, Columbus, Ohio. Filed Nov. 17, 1919. Serial No. 338,584. 5 Claims. (Cl. 301—43.)



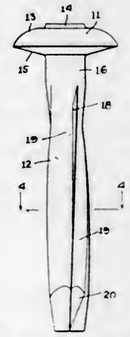
5. A tread forming structure for vehicle wheels, comprising a plurality of removable plate members arranged to be seated upon the rim of a wheel and between the rigid cleats of the latter, said plate members embodying substantially U shaped metallic strips, filler blocks of a different material from said strips positioned in the latter, bolt members passing through said strips and arranged to retain said filler blocks in their applied positions, and securing chains coöperatively connected with said bolts.

1,380,422. INTERNAL-COMBUSTION ENGINE. EMILE JOSEPH AUGUSTIN SCHULTZ, Paris, France. Filed Sept. 24, 1918. Serial No. 255,514. 5 Claims. (Cl. 123—44.)



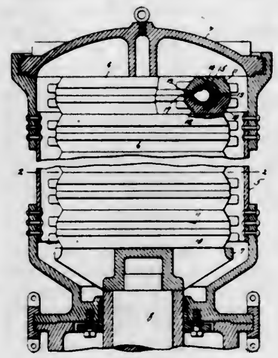
1. Distributing mechanism for rotary cylinder internal combustion engines having an odd number of cylinders, and valve tappets, the ends of which are normally equidistant from the axis of rotation, which mechanism comprises a single admission cam, a single exhaust cam, said cams having rounded bosses for displacing the respective valve tappets, each cam being eccentric in relation to the axis

of the engine, and differential driving means for rotating said cams at a speed such that the relative speed between



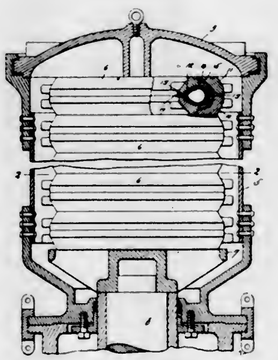
the cams and the engine is that requisite for determining admission and exhaust at the proper periods, the rounded bosses displacing the tappets by a sliding engagement.

1,380,423. SPIKE. MARCEL K. SESSLER, New York, N. Y., assignor to American Spike Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1919. Serial No. 281,014. 13 Claims. (Cl. 85—20.)



1. A spike having a convexly curved face and a spiral fin, one side of the fin being rounded transversely and the other side of the fin forming an obtuse angular channel with said convexly curved face.

1,380,424. SPIKE. MARCEL K. SESSLER, New York, N. Y., assignor to American Spike Company Incorporated, New York, N. Y., a Corporation of New York. Filed July 23, 1919. Serial No. 312,793. 13 Claims. (Cl. 85—20.)



1. A spike comprising a head and a body, said body being formed to leave four outstanding spiral fins each having a convex lower face and a relatively flat upper face which meets the convex face of the next fin at approximately right angles, said flat face having an increasing radial depth as the tip is approached and terminating in four chisel faces arranged radially about the axis of said spike.

1,380,425. MOLD FOR VULCANIZING PNEUMATIC TIRES. WILLIAM SEWARD, Baltimore, Md. Filed Sept. 22, 1919. Serial No. 325,504. 5 Claims. (Cl. 18—17.)

1. A tire-casing vulcanizing apparatus, comprising a vulcanizing chamber which is fluid-tight to hold a gaseous fluid-pressure and steam, a mold in said chamber, and means for conducting gaseous fluid pressure and steam from said chamber into the casing for inflating the same in the mold.

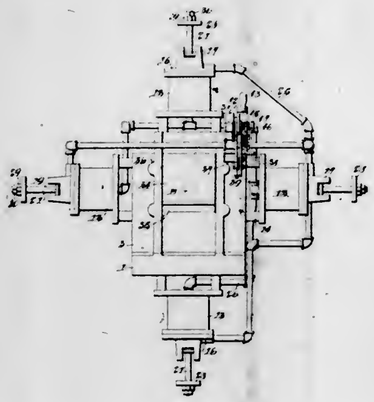
1,380,426. PROCESS FOR VULCANIZING PNEUMATIC TIRES. WILLIAM SEWARD, Baltimore, Md. Filed Sept. 22, 1919. Serial No. 325,505. 4 Claims. (Cl. 18—53.)

1. The process of vulcanizing a tire casing in a mold located in a vulcanizing chamber, consisting in supplying a gaseous fluid pressure and steam to the interior of the

chamber, and permitting such fluid pressure and steam to enter the interior of the tire casing for distending the same in the mold.

1,380,427. MANUFACTURE OF A FOOD PREPARATION FROM FRESH BLOOD. FRIEDRICH SGALITZER, Vienna, Austria. Filed June 22, 1920. Serial No. 390,968. 2 Claims. (Cl. 99—5.)

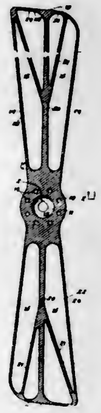
1. A manufacture of an easily digestible, durable and soluble preparation from blood, from which the fibrin has been caused to separate to prevent coagulation, wherein the blood corpuscles are at first disrupted, then dried in a vacuum on surfaces heated to a temperature above the coagulating temperatures of the albumens, the degree of vacuum being such that the liquid is evaporated at about 30° C. while the substance being dried is not heated above 40° C.



1,380,428. WATERPROOFING COMPOSITION AND PROCESS OF MAKING SAME. TAKEJIRO SHIBATA and EIICHIRO OE, Kita-Ku, Osaka, Japan. Filed May 6, 1918. Serial No. 232,684. 7 Claims. (Cl. 134—11.)

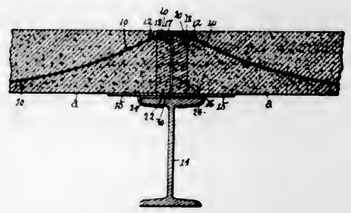
1. A waterproofing composition the sole active agents in which consist of the reaction products of acetate of aluminum and saponified vegetable oil.

1,380,429. METHOD OF TREATING WOOD. SYDNEY SMITH, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Aug. 2, 1919. Serial No. 315,035. 5 Claims. (Cl. 99—12.)



1. In the art of treating wood, the process of increasing its strength and raising its critical point, which consists in applying to the wood a chemical agent and thereafter subjecting it to a gradual rise in temperature extending over a prolonged period.

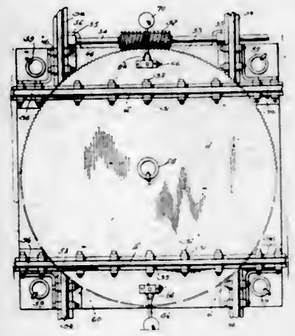
1,380,430. DEVICE FOR REMOVING FLAWS FROM STEEL BILLETS WHILE HOT. JOHN L. SMITH, Hamilton, Ontario, Canada. Filed Jan. 16, 1920. Serial No. 351,863. 11 Claims. (Cl. 29—81.)



1. In a device for removing flaws from billets as they are being rolled, a support, billet scrapers, fluid actuated piston devices for moving the scrapers into and out of operative position and a device for limiting the movement of the piston in a direction to advance the scraper, said device comprising a rod carried by the piston and an adjustable stop device on the rod.

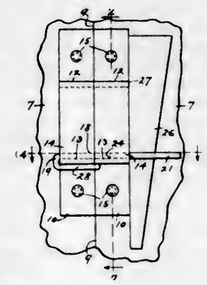
1,380,431. PROPELLER. WILLIAM W. SMITH, Buffalo, N. Y., assignor of one-half to William C. Kidder, Buffalo, N. Y. Filed Mar. 22, 1920. Serial No. 367,643. 2 Claims. (Cl. 170—159.)

1. A propeller having hollow blades reinforced by longitudinal stiffening ribs, and lateral stiffening ribs extending outwardly from said longitudinal stiffening ribs and at an oblique angle relatively thereto.



1,380,432. BUILDING CONSTRUCTION. PEREZ M. STEWART, New York, N. Y., assignor to Gertrude F. Stewart, New York, N. Y. Filed Mar. 12, 1918. Serial No. 222,031. 12 Claims. (Cl. 72—71.)

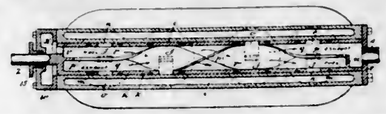
6. In a building construction, in combination, a plurality of slabs provided with metal reinforcements and spaced apart, a metal support located below said slabs and provided with a flange, and a metal device coöperating with said metal support and having a member of substantial width extended upwardly above said metal support into the space between the adjacent ends of the slabs resting on said flange.



1,380,433. RAILROAD-CROSSING. WILLIAM G. STOCKHAM, Piqua, Ohio. Filed July 3, 1920. Serial No. 393,850. 6 Claims. (Cl. 246—378.)

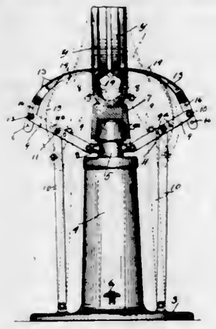
1. A rail crossing comprising a base having an upstanding annular side wall, a table mounted upon said base, said upstanding side wall of the base and the adjacent portion of said table being formed with a raceway, anti-friction

devices arranged in said raceway, and rail sections mounted upon said table.



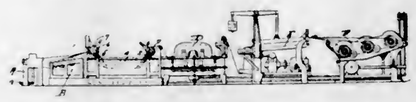
1,380,434. FASTENING MEANS FOR MOLDS. GEORGE R. STRAN, Cleveland, Ohio. Filed Jan. 23, 1920. Serial No. 353,427. 2 Claims. (Cl. 25—131.)

1. The combination, with two adjoining portions of a mold-forming casing, said casing-portions being arranged edge to edge and alined at their meeting edges, and two brackets rigid with the different aforesaid casing-portions respectively and arranged externally of the casing and adjacent the joint formed between said casing-portions, each bracket having a laterally and outwardly offset portion which is contoured as required to form an abutment-member spaced from and facing the casing-portion supporting the bracket, of a bar which is interposed widthwise between the abutment-member of each bracket and said casing-portions and extends across the inner side of said abutment-member and has a jaw overlapping an outer edge of one bracket and also has a portion projecting beyond an outer edge of the other bracket, said bar having a slot which extends longitudinally of and inwardly from said projecting portion and has an outer end wall, and a wedge engaging said slot and interposed widthwise between said wall and the adjacent bracket, the aforesaid jaw having an arm overlapping the outer sides of the offset portions of the brackets.



1,380,435. MOTOR-VALVE. LOUIS STREBEL, New York, N. Y. Filed Feb. 16, 1917. Serial No. 149,142. 1 Claim. (Cl. 123—59.)

An explosive motor comprising a series of cylinders each having a port controlling the intake and exhaust, a tubular rotary valve having inlet and exhaust to coöperate with the cylinder ports, a fuel compartment having an inner and outer wall located adjacent the inlet, the outer wall being made to support the axis of the valve, a circular inlet disposed in the other wall for admitting a combustible

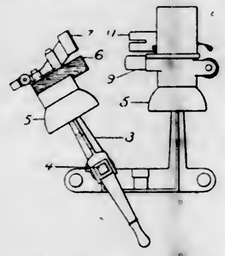


into the valve, and a cover having an exhaust outlet fixed opposite to the compartment.

1,380,436. TIRE-SPREADER. OLAF SUNDBY, East Ellsworth, Wis., assignor to Sundby & Harris, East Ellsworth, Wis., a Copartnership composed of Olaf Sundby and George Harris. Filed Feb. 5, 1921. Serial No. 442,869. 7 Claims. (Cl. 154—9.)

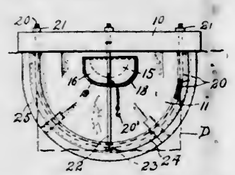
1. A device for opening tire casings comprising a vertically movable member supporting a platen, on which latter the tire casing is adapted to rest, a pair of levers pivotally connected to said vertical member at their outer ends, grapple arms pivoted to the outer ends of said levers, and fulcrum links pivotally anchored at their lower ends and at their upper ends pivotally connected to the intermediate portions of said levers.

1,380,437. MACHINE FOR TREATING METAL STRIPS. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., assignor to Sundh Engineering and Machine Company, Philadelphia, Pa. a Corporation of Pennsylvania. Original application filed Dec. 20, 1917, Serial No. 208,070. Divided and this application filed Mar. 3, 1920. Serial No. 362,899. 13 Claims. (Cl. 266—7.)



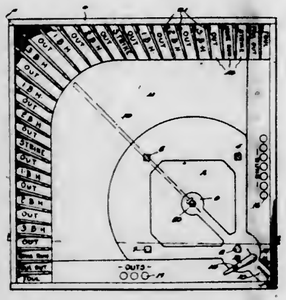
2. In mechanism of the class described, strip pickling means, independently operable rollers for guiding a plurality of strips passing simultaneously through the pickling means, rollers for guiding each strip as it leaves the pickling means, the first rollers mentioned being disposed so as to cause each strip to pass through the pickling means more than once, and means for wiping each strip as it passes from the pickling means, the rollers last mentioned being so arranged that the pickle removed by the wipers will be returned to the pickling means.

1,380,438. ELECTRIC-CIRCUIT-BREAKING SWITCH. JOSEPH S. THOMPSON, Mill Valley, Calif. Filed Sept. 29, 1920. Serial No. 413,557. 2 Claims. (Cl. 200—106.)



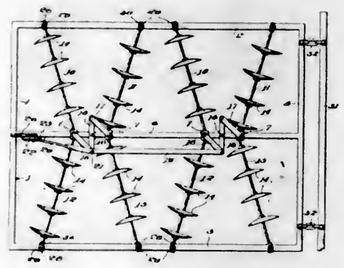
1. In an electric switch, a plunger engaging face and a switch blade on a rocker insulator, and a contact clip, a spring actuated plunger, a releasing latch and actuating

series coil on a fixed insulator, the rocker insulator plunger face capable of being operated to force back the plunger into a latched position and the plunger capable of



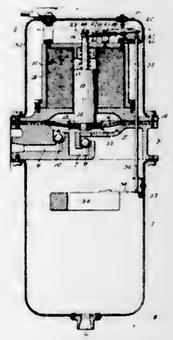
forcing away the rocker insulator plunger face, and with it the switch blade upon the release, through a predetermined flow of current through the series coil, of the plunger releasing latch.

1,380,439. CANVAS DAM. PAUL E. THOMPSON, Worland, Wyo. Filed July 11, 1919. Serial No. 310,141. 4 Claims. (Cl. 61—29.)



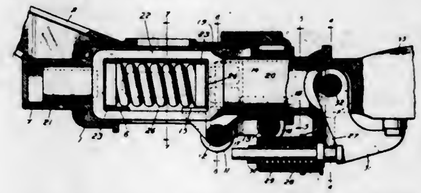
1. A dam for irrigating ditches comprising a bridge bar having a U-shaped frame depending therefrom and a strip of fabric looped about the frame, a fabric sheet to which the edges of the strip are stitched, the sheet extending beyond the frame continuously of it below the bar and constituting a sealing apron flexible at all points.

1,380,440. BASEBALL GAME-BOARD. MANUEL P. TOSSO, Jr., New Orleans, La. Filed Dec. 3, 1919. Serial No. 342,064. 1 Claim. (Cl. 46—61.)



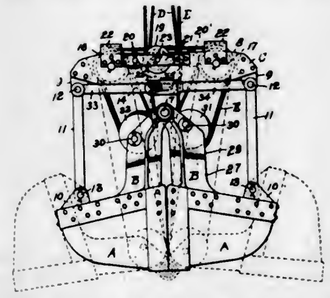
A game apparatus comprising a board having a representation of a base ball field on its upper surface, said surface being beveled around the outer edges of the base ball field, a retaining wall around the board, vertical partitions secured on the beveled portion of the surface of the board on lines converging toward the home plate of the base ball field, the outer ends of the partitions abutting the retaining wall, a bat pivotally mounted on the board adjacent the home plate, a fixed partition in rear of the bat on a line parallel with the line connecting the pitcher's box and the home plate, a ball to be placed in the pitcher's box, and a cue to propel the ball from the pitcher's box toward the home plate and the bat.

1,380,441. HARROW. ALTON A. TRUMAN, Howard, S. D. Filed Apr. 14, 1919. Serial No. 289,913. 2 Claims. (Cl. 55—83.)



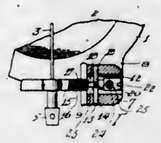
1. In a harrow, the combination, of a rigid frame comprising side rails, and a longitudinally extending center brace, a casting slidably carried by said brace, a pair of shafts disposed in angled relation to each other and to the line of travel of the frame, universal joints connecting the inner ends of said shafts to said casting, bearings pivotally carried by the side rails of said frame, the outer ends of said shafts extending slidably through said bearings, means for shifting said castings longitudinally upon said center brace, pulverizing disks upon said shafts, a second casting slidably carried by said center rail, a second pair of shafts disposed at oblique angles to each other and having their inner ends pivotally connected to said second slidable casting, means pivotally and slidably connecting the outer ends of said last-named shafts to said side rails, pulverizing disks mounted upon said second-named shaft, the pulverizing disk upon one shaft being disposed in opposed relation to the shaft next thereto, and means operatively connecting the second mentioned casting with the first mentioned casting.

1,380,442. FUEL-SUPPLYING MEANS FOR MOTOR-VEHICLES. JOHN T. TRUMBLE, Detroit, Mich., assignor of one-half to Walter L. Mack, Detroit, Mich. Filed July 29, 1919. Serial No. 314,123. 7 Claims. (Cl. 158—36.)



1. In a device of the character described, the combination of a receiving chamber having an outlet, suction means for discharging fuel into said chamber, electrically operated means for operating said suction means, an electrical circuit for said electrical means, a switch operated by movement of said suction means for controlling said circuit, and a float in said receiving chamber for opening said switch.

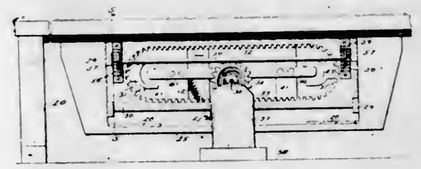
1,380,443. DRAFT-GEAR. HERBERT E. VAN DORN, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 320,992. 9 Claims. (Cl. 213—42.)



7. In combination, a drawbar, a horizontal hinge pin supported at the front end of said drawbar, a horizontal spring pressed plunger lying below and extending parallel with the drawbar, a bracket mounted on said hinge pin and extending downwardly in front of said plunger, said bracket having a forwardly extending arm, and a coupler head hung on said hinge pin and resting loosely upon said arm.

1,380,444. EXCAVATING-BUCKET. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed May 27, 1918. Serial No. 236,687. 21 Claims. (Cl. 37—30.)

1. A clam shell bucket comprising in combination, a pair of scoop segments, hinge members therefor pivotally connecting the segments together, an upper frame extending longitudinally of the bucket, substantially vertical supporting bars between the frame and the scoop segments, an operating sheave in the frame on each side of the hinge pivot and an operating sheave in a hinge member on each side of the pivotal connection between the segments, and an operating cable reeved on said sheaves.

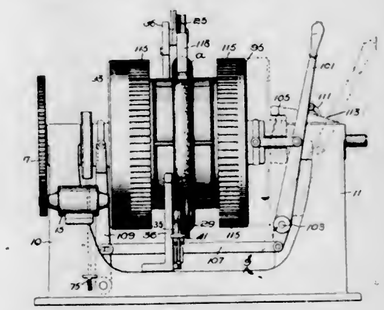


1,380,445. REPRODUCER FOR TALKING-MACHINES. OTTO H. WANDERSEE, Rochester, N. Y. Filed July 7, 1920. Serial No. 394,433. 11 Claims. (Cl. 274—35.)

5. The combination with a reproducer casing, of a stylus lever having laterally extending arms provided with screw threaded openings, extensions secured in said openings, and means for supporting said extensions.

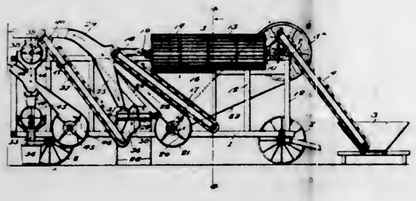
1,380,446. PRESS BED-MOVEMENT. JOHN WILLIS WEAVER, Raleigh, N. C. Filed June 26, 1920. Serial No. 392,131. 7 Claims. (Cl. 74—98.)

2. In a mechanical movement the combination of a reciprocating bed member, a rack-plate suspended therefrom and mounted to have vertical movement independent of the bed, said plate including top and bottom gear racks connected at their ends by arcuate gear racks of similar pitch, a driving pinion mounted to rotate continuously and meshing with said gear racks, a riding roll carried on the shaft of said pinion, a horizontal control bar mounted in the center between said top and bottom gear



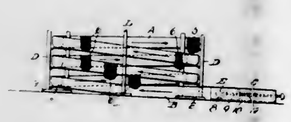
racks and means for causing the control bar to raise and lower, and travel in contact with the riding roll, said means including intermeshing gear parts carried respectively by the bed and the rack plate.

1,380,447. TROCAR. WILLIAM B. WESCOTT, Wellesley, Mass., assignor, by mesne assignments, to Protein Products Corporation, Boston, Mass., a Corporation of Massachusetts. Filed June 14, 1919, Serial No. 304,317. Renewed Nov. 26, 1920. Serial No. 426,607. 7 Claims. (Cl. 128—347.)



1. A trocar comprising a cannula having a walled aperture extending transversely through the cannula body dividing the interior cannula passage into two imperforate parts, and crossed retaining levers extending through said aperture.

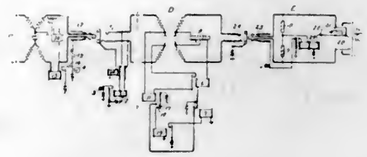
1,380,448. WRAPPING-MACHINE FOR ANNULAR ARTICLES. WILLIAM M. WHEILDON, Ashland, and EDWARD H. ANGIER, Framingham, Mass.; said Wheildon assignor to said Angier. Filed Apr. 26, 1917. Serial No. 164,825. 23 Claims. (Cl. 93—5.)



22. A machine of the class described comprising means to support a tire with a wrapping strip encircling its inner circumference and means to fold both edges of the strip up over the sides of the tire.

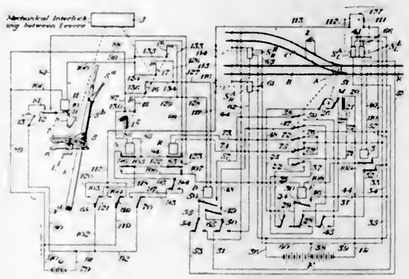
1,380,449. PORTABLE PEANUT CLEANER AND GRADER. JOSEPH W. WHITMORE, Dendron, Va., and THOMAS J. WHITMORE, deceased, Dendron, Va., by Thomas B. Whitmore, administrator, Dendron, Va. Filed Feb. 15, 1919, Serial No. 277,376. Renewed Apr. 19, 1921. Serial No. 462,645. 2 Claims. (Cl. 130—30.)

1. A combined peanut grader and cleaner including a source of power; a grading and polishing cylinder driven from said source of power; mechanism for subjecting the materials to a blast associated with said cylinder; a separating instrumentality for apportioning materials so subjected to the blast; a hand-picker belt associated with the separating instrumentality and adapted to receive materials therefrom; means for conveying materials selected from the picker belt; a grading and shelling instrumentality associated with the conveyer; and mechanism for subjecting the materials to a blast associated with the grading and shelling instrumentality; the conveyers, picker belt, cylinder, blast-producing, grading and shelling instrumentalities all being in driving connection with the source of power.



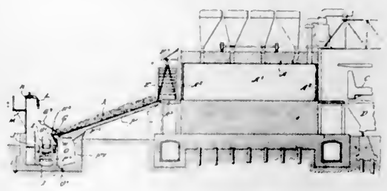
1,380,450. GAME. GEORGE A. WIGGINS, Hamilton, Ontario, Canada. Filed Aug. 28, 1920. Serial No. 406,609. 2 Claims. (Cl. 46—61.)

1. In a game apparatus of the class described, the combination with a spiral runway, of a plurality of pockets spaced at intervals along said runway and communicative therewith, a ball adapted to travel said runway in an upward direction, a plurality of one-way gates pivotally suspended in said runway adjacent to said pockets and normally closed by gravitational control, means to permit said gates to yield to the force of said ball when driven upwardly and to resist it on return, a ball starting compartment member tangentially communicative with said runway at its lower termination, a tee in said compartment having the ball mounted thereupon and a plunger alined with said tee and adapted to be struck by an instrument to impart momentum to the ball, and a spring for returning said plunger to normal position.



1,380,451. TELEPHONE-EXCHANGE SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 13, 1918. Serial No. 234,347. 7 Claims. (Cl. 179—50.)

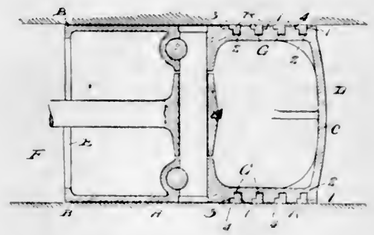
7. In a telephone exchange system, a trunk circuit, a relay at one end of the trunk circuit adapted to successively open its contacts upon its release, a signal at the other end of the trunk circuit, and means controlled by



the successve opening of the contacts of the relay to cause the continuous operation of the signal.

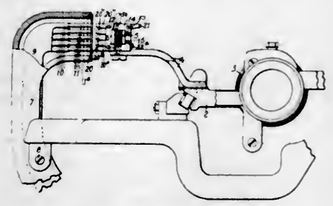
1,380,452. APPARATUS FOR THE CONTROL OF RAILWAY SWITCHES AND SIGNALS. PAUL F. WILLARD, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 1, 1920. Serial No. 378,235. 11 Claims. (Cl. 246—135.)

1. Railway traffic controlling apparatus comprising a lever having normal and reverse positions, a railway switch having normal and reverse positions, an indication relay controlled by said switch and energized in normal or reverse direction according as the switch is in normal or reverse position and deënergized when the switch is between said two positions, a neutral relay, means for energizing said neutral relay when said indication relay is deënergized, means for holding said neutral relay energized when the indication relay is energized in normal direction and said lever is in normal position, also when the indication relay is energized in reverse direction and the lever is in reverse position, and means for controlling said switch by said lever and by said two relays.



1,380,453. COKE QUENCHING AND HANDLING APPARATUS. LOUIS WILPUTTE, New Rochelle, N. Y., assignor of two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Feb. 6, 1920. Serial No. 356,622. 6 Claims. (Cl. 202—11.)

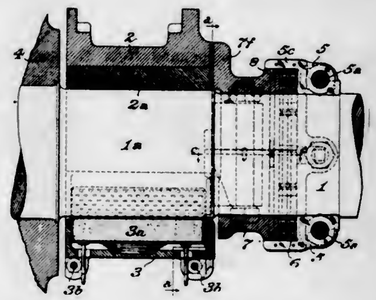
1. The combination with an inclined coke quenching wharf of a wall adjacent the lower edge of the wharf,



but separated therefrom by a slot like space, gate members movable into and out of the position in which they prevent coke from sliding off the wharf, and bridge members movable from one position in which they form extensions of the wharf projecting beyond said wall into a second position in which they permit the ready passage of excess quenching water running off said wharf through said space.

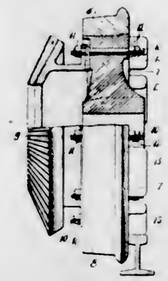
1,380,454. COMBINED PISTON AND PACKING-RING. JOHN T. WILSON, Alameda, Calif. Filed Apr. 7, 1919. Serial No. 288,040. 1 Claim. (Cl. 74—109.)

The combination with a cylinder and a piston having a circumferential groove wider adjacent the exterior surface of the piston than at the bottom, the greatest depth of said groove being adjacent the explosion chamber, of a single cut resilient expansible flanged packing ring of a shape in cross section matching and loosely fitting the groove and its entire exterior surface frictionally engaging the interior surface of the cylinder, and a joint member excluding explosion and charge compression pressure from the flanged portion of the ring, but admitting atmospheric pressure to the entire under surface of the ring while the explosive charge is being drawn into the explosion chamber, said groove in the piston when the packing ring is in place being entirely closed as far as possible to the entrance of gas under pressure to the space beneath the packing ring.



1,380,455. TYPEWRITING-MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 3, 1920. Serial No. 349,192. 9 Claims. (Cl. 192—70.)

1. In a typewriter machine, the combination of a series of key controlled stops each having its contact movable only in a single fixed unvariable path, and a series of counter stops provided with two series of engaging members or arresting portions one series arranged for column selection and the other arranged for column-to-column work only, all of said members of the column-to-column series coacting with the contact on a single one only of said key controlled stops for column-to-column work, and the said members of the other series each coacting only with the contact of its own individual key controlled stop for column selection work.

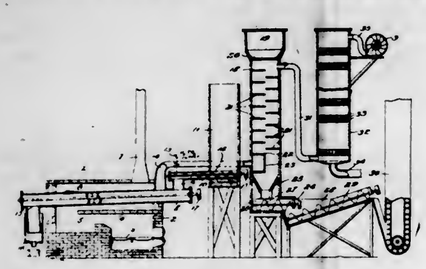


9. In a typewriting machine, the combination of a carriage having a column-stop support, a set of reversible duplex column stops thereon, one side of said set of stops having a series of contacts in stepped arrangement and the other side of said set of stops having contacts all arranged in a single straight row, a set of key controlled column stops adapted to coöperate with either the series of stepped contacts or the series of straight row contacts, according to which series of contacts is adjusted to coact with the key controlled stops.

1,380,456. LATERAL-THRUST-BEARING APPLIANCE FOR RAILROAD-AXLES. WILLIAM E. WOODARD, Lima, Ohio. Filed Mar. 15, 1919. Serial No. 282,798. 4 Claims. (Cl. 64—35.)

1. In a lateral thrust bearing appliance for railroad axles, the combination of an axle; an axle bearing box fitted thereon with the capacity of relative longitudinal movement; a lubricant cellar coupled to said box; a bearing collar fixed on the axle; and a transmission ring mounted on the axle between the axle bearing box and the bearing collar composed of two parts, the part nearest the cellar being cut away relative to the other part to afford access to the cellar without removal of the ring.

1,380,457. DRIVING-WHEEL CENTER. WILLIAM E. WOODARD, Forest Hills, N. Y., and HERBERT W. SNYDER, Lima, Ohio. Filed May 4, 1920. Serial No. 378,752. 3 Claims. (Cl. 295—5.)

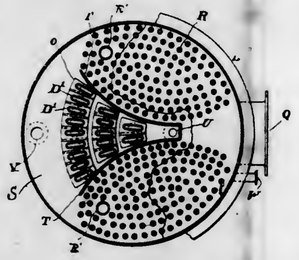


1. A driver for gear driven locomotives having means projecting laterally from the inner face thereof for protecting the rim bolts in case of derailment.

1,380,458. PROCESS FOR PURIFYING GRAPHITE AND CARBON. CHARLES W. WOODRUFF and ROBERT H. PAUSCH, Columbus, Ohio. Filed May 25, 1920. Serial No. 384,122. 3 Claims. (Cl. 252.)

3. The process of purifying graphite or carbon bearing material, which consists in generating gaseous hydrogen

fluorid, and in bringing the vapors thereof into intimate contact with a body of said graphite bearing material



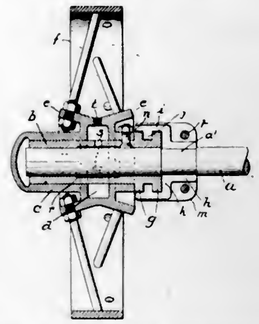
and washing soluble compounds from the material so treated.

1,380,459. TIE-CLASP. EDWARD R. YOUNGS, Miami, Fla. Filed Aug. 25, 1920. Serial No. 405,786. 1 Claim. (Cl. 24—85.)

A tie holder comprising a clasp for engaging the shirt, a closed loop member having a part rigidly connected with the clasp and a safety pin for engaging the depending part of the tie and said loop member.

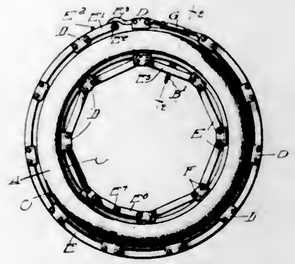
1,380,460. METHOD AND APPARATUS FOR DEVAPORIZING AND COOLING. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 5, 1920. Serial No. 386,766. 14 Claims. (Cl. 257—51.)

1. The method, substantially as herein described, of devaporizing and cooling a flowing mixture of condensable vapor and gas, which consists in passing said mixture over relatively cold surfaces and retarding the flow of the mixture at points between said surfaces remote from the surfaces themselves, thereby securing a higher proportionate condensation and preventing the withdrawal of a large proportion of uncondensed vapor.



1,380,461. FUSE-PLUG. WILLARD R. BENNINGTON, Xenia, Ohio. Filed Oct. 13, 1919. Serial No. 330,286. 7 Claims. (Cl. 200—130.)

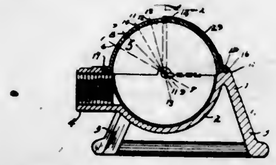
1. In a fuse plug, a metallic jacket, separate insulating elements connected in spaced relation by said jacket, one of the insulating elements having a central opening therein, and transversely arranged fuse link interposed between the insulating elements having its opposite ends elec-



trically connected with the jacket the medial portion of the fuse link being exposed through the central opening in one of the insulating elements.

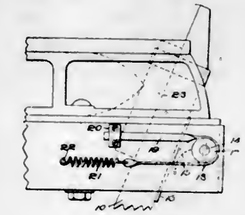
1,380,462. WHEEL-MOUNTING. EARL E. BERRY, Kennett Square, Pa., assignor to American Road Machinery Company, Inc., Kennett Square, Pa., a Corporation of Delaware. Filed Mar. 6, 1919. Serial No. 280,972. 1 Claim. (Cl. 301—122.)

In a vehicle wheel mounting, the combination with a cylindrical axle, of a long hub member rotatably mounted thereon, said hub member having an annular groove in its periphery near the inner end, there being an annular groove in the periphery of the axle near the inner end of the hub member, a split dust guard and hub retainer bolts for clamping the guard about the axle and within the groove in the axle to restrain said guard from rotary and endwise movement in either direction along the axle, and an annular flange in the guard seated in the groove of the hub member for retaining said hub member in position on the axle.



1,380,463. VULCANIZING APPARATUS. GEORGE W. BULLEY, Chicago, Ill. Filed June 10, 1916. Serial No. 102,868. 11 Claims. (Cl. 18—35.)

1. In a tire vulcanizing mold, the combination of a hollow annular, imperforate shell of uniform thickness cross-sectionally, said shell being divided circumferentially

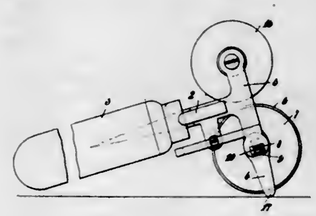


into two separable sections, inner and outer flanges outstanding from said sections, and inner and outer flexible clamping members having clamps engaging said flanges at intervals around their circumferences.

1,380,464. LAWN-SPRINKLER. CHARLES E. BROOKS, Minneapolis, Minn. Filed Feb. 15, 1919. Serial No. 277,688. 1 Claim. (Cl. 299—19.)

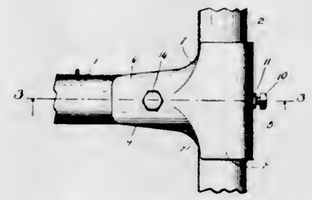
In a lawn sprinkler the combination of a base, a bowl of general hemispherical shape projecting upwardly therefrom and having a series of apertures therein, an inner shell of general hemispherical shape, but having a portion thereof cut away, positioned within said bowl and journaled therein to allow rotation therewith so as to shut off a greater or lesser portion of the apertures of said bowl, and an outer shell of general quarter-spherical shape hinged to said base and adapted to shut off substantially half of the apertures of said bowl when swung against the outer surface of said bowl.

1,380,465. PICKER-CHECK MEANS FOR LOOMS. LOUIS S. BURBANK, Ludlow, Mass., assignor to Ludlow Manufacturing Associates. Original application filed Nov. 23, 1917, Serial No. 203,497. Divided and this application filed Jan. 31, 1919. Serial No. 274,293. 10 Claims. (Cl. 139—22.)



1. Picking mechanism for looms comprising in combination, a picker stick and a frictional resistance therefor including a shaft having a cam, a strap passing about said shaft, and a spring engaging said strap, said picker stick being adapted to engage said cam.

1,380,466. DRAWERS-SUPPORTER. JOHN H. BUSTER, Marysville, Calif. Filed May 15, 1920. Serial No. 381,718. 1 Claim. (Cl. 24—84.)

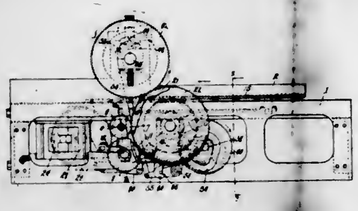


A garment supporter comprising a spring hook adapted to pass over and frictionally engage one edge of a garment, and a pair of arms integral with the hook and between which another garment may be passed, one arm having an opening therein to receive a portion of the garment and the other arm having a portion extending laterally therefrom at its end adapted to pass into the garment receiving opening in the other arm to secure the garment thereto.

1,380,467. HAND INKING-ROLLER FOR INKING CLICHÉS. JEAN DOREL, Ville D'Avray, France. Filed Feb. 25, 1920. Serial No. 361,328. 8 Claims. (Cl. 91—48.)

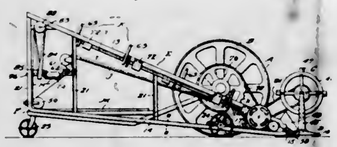
1. Apparatus for inking cliches by hand, comprising in combination a frame having a handle and carrying two superposed rollers, a pivoted operating bar on the frame engaging the ends of the journals of the upper roller and causing, when actuated, this upper roller to be moved vertically out of contact with the lower roller, substantially as described.

1,380,468. COUPLING. HERBERT H. DREW, Waterloo, Wis. Filed Nov. 29, 1918. Serial No. 264,558. 1 Claim. (Cl. 287—54.)



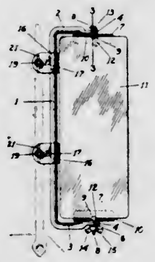
A coupling of the class described formed from a single piece of sheet metal bent upon itself, the portion of the piece adjacent the bend being transversely substantially cylindrical to receive a section of cylindrical piping, the free end portions of the piece being longitudinally substantially semi-cylindrical with their concave sides toward each other to provide a socket for the reception of the end of a second section of cylindrical piping, said cylindrical portion of the piece having an aperture, a bushing extending through said aperture and loosely mounted therein, a flange on the inner end of said bushing between the cylindrical portion and said section of cylindrical piping, said flange being curved to conform to the curvature of the latter to prevent rotation of the same, a set bolt adjustable in said bushing and movable toward and into engagement with the first mentioned section of cylindrical piping, and means for holding the free end portions of the piece against spreading apart.

1,380,469. PRINTING-PRESS. MICHAEL A. DROITCOUR, Delphos, Ohio. Original application filed Apr. 11, 1917, Serial No. 161,338. Divided and this application filed Dec. 12, 1917. Serial No. 206,754. 2 Claims. (Cl. 101—284.)



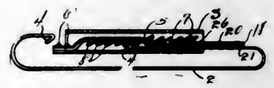
2. In a printing press, an impression cylinder; a rotatable cam; a rocker arm actuated by said cam; a second rocker arm having a stud; means controlled by said second rocker arm to move said cylinder on and off impression; a catch pivotally hung on said first rocker arm and releasably engaged with said stud to lock the rocker arms together, said catch having a cam surface; an impression trip lever, a trip member pivotally mounted on said lever and adapted to be positioned thereby against

the cam surface of said catch; and a cam member moving with said cam adapted to engage said trip-member and



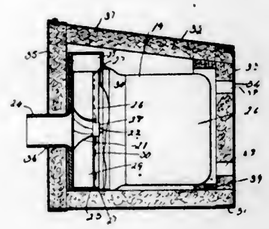
cause it to forme the catch out of engagement with said stud when the trip lever is shifted to tripping position, and the cam reaches a predetermined point in its revolution.

1,380,470. SEED THRESHING AND COLLECTING MACHINE. JULIUS C. FORD, Summit, Miss. Filed Mar. 22, 1919. Serial No. 284,398. 16 Claims. (Cl. 56—123.)



1. In a seed harvesting machine, the combination, of cutting apparatus adapted to be advanced over the field and sever the plant growth from the stubble, a sieve-like conveyer in close proximity to and at the rear of said cutting apparatus upon which the severed plant growths fall for supporting and conveying the plant growths from the cutting apparatus, and a conveyer beneath said sieve-like conveyer and in close proximity to said cutting apparatus for supporting and conveying seed which passes through said sieve-like conveyer from adjacent said cutting apparatus.

1,380,471. DRAFT-DEFLECTOR FOR MOTOR-VEHICLES. MARSHALL E. FRANCISCO, Fresno, Calif., assignor, by mesne assignments, of one-half to Louis W. Darden and Andrew O. Wilson, Fresno, Calif. Filed Oct. 4, 1919. Serial No. 328,540. 3 Claims. (Cl. 296—84.)

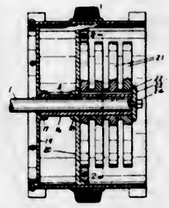


2. A draft deflector for automobiles comprising a frame having horizontal arms, a glass panel between the arms, horizontally grooved members pivoted at the outer ends of the arms and arranged to support the panel and prevent sliding movement thereof, one of such grooved members being permanently mounted in its arm, a bolt attached to the other grooved member and projecting through the corresponding arm, the latter being slotted to its outer end, and means whereby said bolt cannot normally slide in the slotted arm.

1,380,472. STRAP BINDER OR LOCK AND RECORD-CHECK. AMOS A. GLISSON, Fort Worth, Tex. Filed Sept. 27, 1920. Serial No. 412,934. 6 Claims. (Cl. 24—17.)

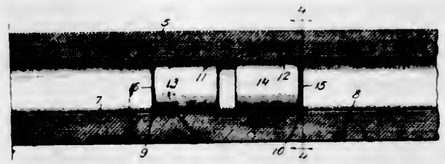
1. A tubular locking device having a bar secured therein and provided with yielding locking members and a band provided with yielding hooks thereon to engage the locking members within said tubular device.

1,380,473. SUCTION ATTACHMENT FOR PLAYER-PIANO MECHANISM. ROBERT A. GUARNIERY, Philadelphia, Pa., assignor to Graeber Vacuum Piano-Player Attachment Company, Inc., a Corporation of Delaware. Filed Nov. 30, 1917. Serial No. 204,758. 3 Claims. (Cl. 230—11.)



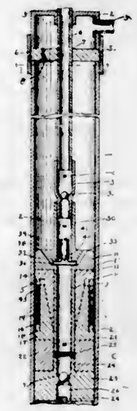
1. In a suction producing device the combination of a container inclosed at the front and having an opening at the back, an air inlet in the front of the container, an electric motor in the rear portion of the container, a fan casing mounted directly upon the casing of the motor at the front of the container and forming a continuation of the motor casing and having a reduced air inlet opening in its front wall, and a plurality of rotary fan blades operating within the fan casing and actuated by the motor.

2. In a suction producing device, the combination of a container inclosed at the front and having an opening at the back, an air inlet in the front of the container, an electric motor in the rear portion of the container, a fan casing mounted directly upon the casing of the motor and forming an enlarged continuation of the motor casing and having a reduced air inlet opening in its front wall, said air inlet opening being in line with the shaft of the motor and a plurality of rotary fan blades mounted on the motor shaft and actuated by the same.



3. In a suction producing device the combination of a container inclosed at the front and having an opening at the back, an air inlet in the front of the container, an electric motor in the rear portion of the container, a fan casing mounted directly upon the casing of the motor at the front of the container and forming a continuation of the motor casing and having a reduced air inlet opening in its front wall, and a plurality of rotary fan blades operating within the fan casing and actuated by the motor, and a cushioning ring of sound deadening material surrounding the motor and cushioning the same and the fan housing and rotary blades.

1,380,474. TRACTION-WHEEL. EDMUND E. HANS, Detroit, Mich. Filed Nov. 26, 1919. Serial No. 340,825. 5 Claims. (Cl. 301—38.)

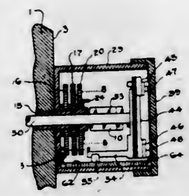


1. In a traction wheel, the combination with an axle, of a hub keyed to said axle, a rim, spoke members connecting said hub and rim, the outer spoke member being arranged in a spaced relation relative to the outer ends of the hub and rim, and circular weighting disks keyed upon said hub at the outer side of its outer web, said disks being removable to permit a variation in the number or the substitution of others to vary the weight.

1,380,475. ROLL AND PACKAGE. OTTO A. HEPPES, La Grange, Ill. Filed Sept. 6, 1918. Serial No. 252,839. 8 Claims. (Cl. 206—47.)

1. In combination with a convolved roll of sheet material having an axial opening; a carton container therein comprising an unsegregated strip attached to one end of the sheet, of a width not greater than the diameter of the carton, extending over the ends and sides of the carton, or cartons and in engagement with the inner convolution of the roll.

1,380,476. PUMP. GRANVILLE A. HUMASON, Houston, Tex. Filed Jan. 20, 1920, Serial No. 352,660. Renewed Dec. 4, 1920. Serial No. 428,380. 5 Claims. (Cl. 103—63.)

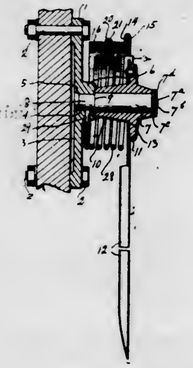


1. In a pump, a working barrel, a plunger reciprocable therein, said plunger comprising a tubular member, a conical sleeve thereon, a longitudinally divided expanding sleeve fitting on said conical sleeve, said expanding sleeve being recessed on its outer face and provided with a series of split rings and means between said rings and said sleeves in the upper and lower ends thereof to normally prevent the movement of said sleeves toward each other and means to expand said expanding sleeves and said rings when desired.

1,380,477. HEEL-SUPPORT. CARL B. IMRIE, New York, N. Y. Filed Jan. 14, 1920. Serial No. 351,477. 9 Claims. (Cl. 36—37.)

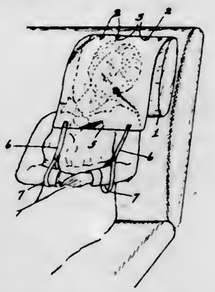
1. A heel support comprising a pad or cushion having its bottom surface substantially flat and its top surface substantially flat at its rearward portion and sloping transversely at its forward portion.

1,380,478. AUTO-LOCK. ROBERT F. INGERSOLL, deceased, by Jessie B. Ingersoll, special administratrix, Kellogg, Idaho, assignor to T. S. Ingersoll, San Francisco, Calif. Filed Mar. 22, 1920. Serial No. 367,798. 3 Claims. (Cl. 200—45.)



1. A lock switch comprising a casing, permutation disks in said casing, each disk being provided with a recess, means for operating said disks to aline said recesses, diametrically opposed contacts in said casing, a reciprocable and rotatable shaft concentric with said disks and operating means therefor, a crosshead carried by said shaft comprising a conducting portion insulated from the shaft, lugs on the bottom of said casing, a spring normally holding said crosshead between said lugs to prevent rotation thereof and of the shaft, a lug carried by said crosshead and normally engaging said disks to prevent reciprocation of said shaft but positioned to enter said recesses when said recesses are properly alined, whereupon said shaft and crosshead may be reciprocated to move said crosshead above the plane of said contacts, rotated to bring said crosshead directly over said contacts, and released to permit said crosshead to engage said contacts.

1,380,479. DIRECTION SIGNAL OR INDICATOR. SIGMUND JANSON, Detroit, Mich. Filed Nov. 10, 1920. Serial No. 423,125. 3 Claims. (Cl. 116—52.)

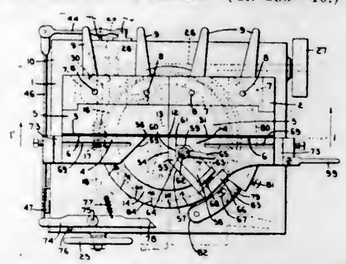


1. In a direction indicator, a supporting plate having a spindle, a sleeve rotatably mounted on the spindle and provided with an annular flange, an indicator engaged with the sleeve and secured to the annular flange, a coiled spring surrounding the sleeve and having one end connected to the indicator, its other end to the plate, cooperating with and tensioning with the sleeve to hold the indicator, whereby the indicator may move to a downward inclined position under the action of the spring to signal a turn to the right, a guard carried by the indicator and housing the spring, a rotating guide on the plate, and

a pull medium engaging the rotating guide and connected to the guard, whereby the indicator may be moved from

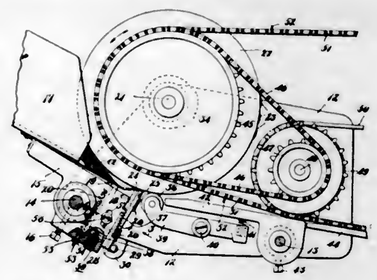
its downward inclined position to an intermediate or slow down position, or to an upward inclined position indicating a left hand turn.

1,380,480. PILLOW-CASE. JOHN C. JENNINGS, Kansas City, Kans. Filed Sept. 27, 1920. Serial No. 412,957. 2 Claims. (Cl. 5—15.)



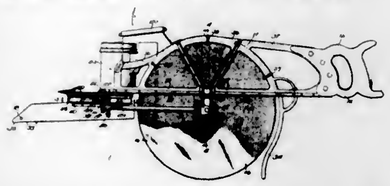
1. A pillow case having an extension adapted to overlap the front side of the pillow case and cover the face of a person resting against the pillow, tapes attached at their upper ends to the extension and fastening means at the lower ends of the tapes adapted to be anchored to hold the extension in operative position.

1,380,481. CUP. RAY JENNINGS, La Grange, Mo. Filed Mar. 11, 1921. Serial No. 451,472. 3 Claims. (Cl. 65—58.)



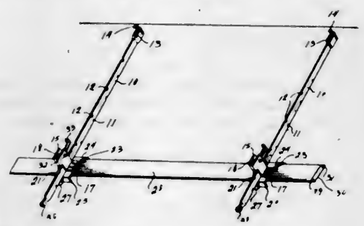
1. A device of the character described comprising a tumbler, a member adapted to fit tightly over the open upper end of the tumbler and to extend thereabove, said member having a transverse partition abutting the upper end of said tumbler so as to provide a closure therefor, said partition being formed with an opening therethrough, and means carried by said member for controlling the flow of the liquid from said tumbler through said opening in the partition.

1,380,482. MACHINE FOR BENDING ANGLE-IRON. JOHN KARPOUICH, Boston, Mass. Filed Oct. 19, 1918. Serial No. 258,791. 4 Claims. (Cl. 153—40.)



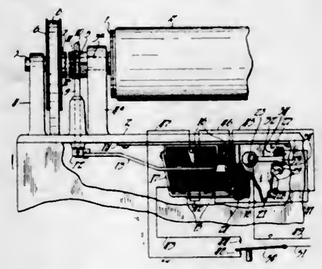
4. In a machine for bending metal, the combination with a frame, of a work-holding member fixed thereto, a second work-holding member mounted thereon to turn about a vertical axis, each work-holding member being recessed in its upper face, a clamping member received in each recess and adapted to clamp the work between it and one wall of the recess, each work-holding member also having a plurality of recesses in its side communicating with the first named recess and cams pivoted in the recesses and acting against the clamping member.

1,380,483. BLANK-FEEDER. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 10, 1917. Serial No. 206,383. 10 Claims. (Cl. 271—36.)



1. A blank feeder comprising a feed wheel, a hopper for blanks, a fixed gage having its tip located to permit the passage of blanks singly between it and said wheel and having its rear face adjacent the tip substantially radial with respect to the wheel, and a guide for directing the blanks to position to be acted upon by the wheel, the delivery end of said guide terminating close to said gage and yieldingly movable toward and away from said wheel.

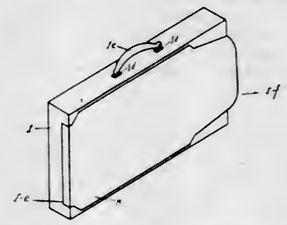
1,380,484. PORTABLE ELECTRIC SAW. DAVID C. LANGE, College Station, Tex. Filed Jan. 5, 1920. Serial No. 349,608. 4 Claims. (Cl. 143—43.)



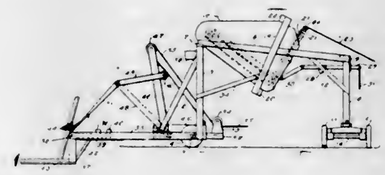
1. A portable electric saw comprising a frame, a handle at one end of the frame, an electric motor carried by the opposite end of the frame, a second handle near said motor, a circular saw rotatably mounted between said handles, means connected with the motor for rotating the saw, and a pivoted guard member carried by the frame in the rear of the circular saw and arranged to be gradually moved about its pivot into inoperative position upon contact with the work engaged and continued operation of the saw blade.

1,380,485. SHINGLING STRAIGHT-EDGE. AUGUST R. LANGEBERG, Dell Rapids, S. D. Filed Oct. 6, 1920. Serial No. 415,062. 4 Claims. (Cl. 33—188.)

2. In a device of the type described, a pair of notched bars, a straight edge, brackets carried by said straight edge and embodying portions adapted to engage in the notches of said bars, said straight edge being provided upon the under surface thereof with a protecting strip of metal, said strip of metal projecting slightly beyond the upper edge of said straight edge.



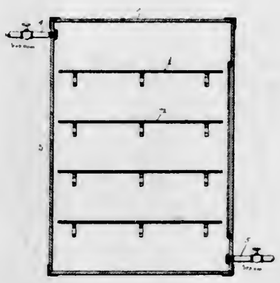
1,380,486. CONTROLLING DEVICE. SAM G. LANGLEY, Maplewood, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 18, 1919. Serial No. 291,009. 16 Claims. (Cl. 200—98.)



1. In a device of the character described, a movable member, electro-magnets having independently mounted armatures for controlling said member and a switch comprising a movable contact mounted independently of said armatures and adapted to be controlled thereby to control the circuits of said electro-magnets, substantially as described.

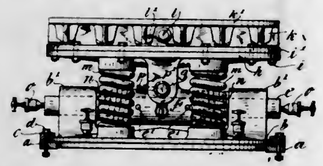
1,380,487. CHIROPRACTIC TABLE. CARL T. LINDHOLM, Davenport, Iowa. Filed Feb. 19, 1920. Serial No. 359,934. 7 Claims. (Cl. 45—50.)

2. A chiropractic table having a head member capable of conformable attachment engagingly within the end, side and corner portions of a suitcase member, each member having at either end a pair of legs supported by brace means, transversely secured thereto by hinge means in such manner as to fold flatly, inwardly, disengagingly disposed to each other, in such manner that when one member is attached engagingly within the other, their respective leg and brace attachments comformably repose upon each other forming spring means; means provided on said members for securing them together when engagingly attached, handle means attached to one of said members for carrying the same when the parts are engagingly attached.



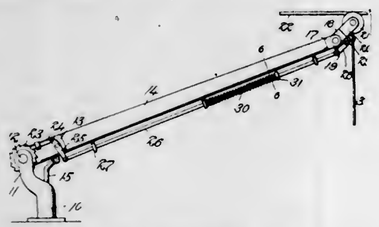
1,380,488. DIRT-LOADING MACHINE. JOHN EDWIN LONG, Havelock, Nebr. Filed May 9, 1919. Serial No. 295,930. 3 Claims. (Cl. 214—149.)

1. In a device of the class described, a first frame; a hopper mounted on the frame; a belt conveyer forming a bottom for the hopper; a second frame pivoted to the first frame for vertical swinging movement; a platform on the second frame and discharging on the conveyer in the general direction of travel of the conveyer when the second frame is swung upwardly and rearwardly; means for swinging the second frame upwardly and rearwardly; and means for stopping the upward and rearward movement of the second frame whereby the material on the platform will be discharged on the conveyer and facilitate the movement of the conveyer.



1,380,489. METHOD OF PRODUCING FOODSTUFFS. WHARTON B. MCLAUGHLIN, New York, N. Y. Filed Oct. 17, 1917, Serial No. 197,162. Renewed Nov. 5, 1920. Serial No. 422,077. 1 Claim. (Cl. 99—8.)

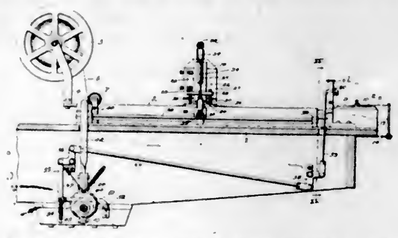
The method of packing vegetables of high water content so as to reduce their bulk which consists in partially



dehydrating the vegetables to remove the greater portion of the contained water while leaving sufficient water in the vegetables to constitute at least 30% by weight of the partially dehydrated vegetable, then packing the vegetables in containers, exhausting the air from the containers and the contents, then subjecting the contents while exhausted to the action of steam at a sterilizing temperature and hermetically sealing the containers while the contents are sterile.

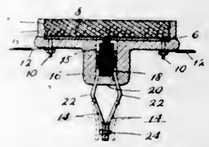
1,380,490. TRAILER CONNECTION. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 28, 1919. Serial No. 320,340. 5 Claims. (Cl. 280—33.1.)

1. A connection for semi-trailers comprising in combination a ring carried on the tractor unit, a plate rotatably supported thereon, a universal joint comprising two shafts extending at right angles to each other mounted on the plate, a second plate constituting an element of the universal joint, means to connect the semi-trailer to the second plate, and equalizer springs operatively interposed in all the quadrants formed by said shafts between said plates to counteract the universal movements.



1,380,491. TROLLEY-POLE. JOSEPH J. MATTY, Glen Jean, W. Va. Filed May 9, 1917, Serial No. 167,563. Renewed Mar. 24, 1921. Serial No. 455,328. 1 Claim. (Cl. 191—95.)

In a trolley pole, the combination with a base carrying a ratchet wheel, the pole proper pivoted at its lower end to said base alongside the wheel, a lever pivoted to the pole, and a latch supported by the pole and moved by the lever into and out of engagement with said ratchet; of a sectional harp at the upper end of the pole comprising a stationary member fixed to the pole and a movable member pivoted to the stationary member and having a shoulder depending from its pivot for holding said members alined and also having a lug, a link pivoted to the lug and passing under said shoulder, a rod pivotally connected with the link below the shoulder and with said lever at the inner end of the pole, a spring between the pole and rod and bearing the latter normally upward, a fork swiveled to the movable member of the harp and carrying the trolley wheel, and a trolley rope depending from said fork.



1,380,492. MACHINE FOR PUNCHING AND CUTTING TAPE. JOHN A. MOORE, Louisville, Ky., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed July 21, 1917. Serial No. 182,078. 5 Claims. (Cl. 164—15.)

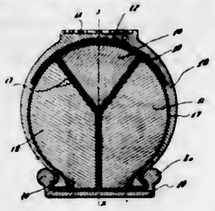
1. In a machine for forming predetermined lengths of fish-tailed strips from a flexible tape of paper or cloth, the combination of means for holding a supply of such tape, a fixed blade beneath which the tape passes and against which it may be drawn laterally to sever the same; a gage located forward of and adjustable toward

and from the fixed blade; and a punch located to the rear of the blade and adjustable toward and from the same, said punch being so formed as to produce oppositely disposed fish-tailed ends.

1,380,493. AUTOMATIC CIRCUIT-BREAKER. PETER L. NISSEN, Kansas City, Mo., assignor to The United States Automatic Fire Alarm Company, a Corporation of Missouri. Filed Aug. 29, 1919. Serial No. 320,676. 2 Claims. (Cl. 200—142.)

1. In a device of the character described, an insulator having a transverse recess therein, a pair of oppositely-disposed conductors sealed within said recess, a pair of resilient contacts each having one end projecting from the insulator and its opposite end secured within said insulator and in permanent contact with its respective conductor, and fusible means to normally hold the outer ends of the contacts together, so that an electric current may pass from one conductor to the other through said contacts.

1,380,494. CASEIN-TUNG-OIL PRODUCT AND METHOD OF PRODUCING THE SAME. EARLE T. OAKES, New York, N. Y., assignor, by mesne assignments, to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 19, 1920. Serial No. 352,544. 6 Claims. (Cl. 134—26.)

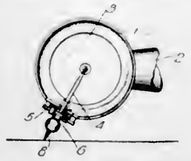


3. The process of producing a casein tung oil product, comprising, thoroughly mixing together in finely subdivided form a solidified casein product and gelatinized tung oil.

1,380,495. PULLEY. EDD C. OLIVER, Adrian, Mich. Filed Aug. 9, 1919. Serial No. 316,386. 7 Claims. (Cl. 254—197.)

1. A pulley comprising an inner and an outer ball race, a series of balls therebetween and a pair of circumferentially flanged plates secured in fixed relation with opposite sides of the inner ball race and extending about and spaced from the outer ball race, the plates being spaced at the periphery permitting the introduction of a cord or belt onto the outer ball race and forming a guide therefor.

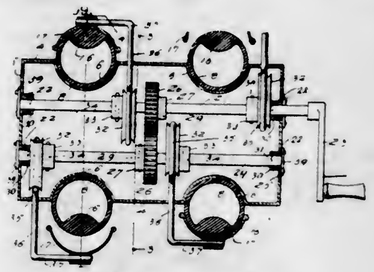
1,380,496. AUTOMOBILE-TIRE. MICHAEL E. OSBORN and JOHN R. WOLLAM, Midland, Pa. Filed Oct. 8, 1920. Serial No. 415,617. 2 Claims. (Cl. 152—1.)



1. A resilient tire comprising a core formed of a plurality of circumferentially extending sections the outermost of which is triangular in cross section with its base curved to conform to the tread of the tire, the other sections having outer curved sides conforming to the transverse curvature of the tire and sides abutting the sides of the first section and each other throughout the lengths of said sides, and an inclosing shoe portion vulcanized to the curved sides of the sections and forming a part of the tire, the faces of the outermost section and the faces of the other sections which abut therewith emanating directly from the said shoe portion.

1,380,497. ADVERTISING DEVICE. WILLIAM MARK PALMER, Buffalo, N. Y. Filed Jan. 19, 1920. Serial No. 352,334. 7 Claims. (Cl. 40—139.)

1. An advertising device comprising a table rotatable about a substantially horizontal axis, means for rotating said table, a guideway arranged on the face of the said table and within the dimensional area thereof, and a slidable object movable by gravity on said guideway.

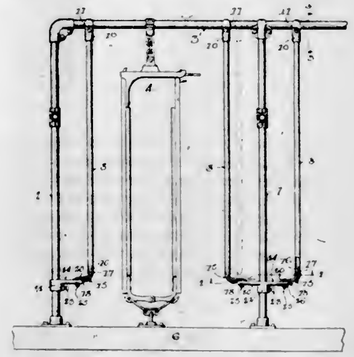


1,380,498. PHONOGRAPHIC REPRODUCER. LEWIS C. PETTITT, Chicago, Ill. Filed July 10, 1919. Serial No. 309,892. 3 Claims. (Cl. 181—32.)

2. A phonograph reproducer diaphragm formed of a malleable, springy, and fine grained magnesium alloy of aluminum.

1,380,499. MILKING-MACHINE. HENRY W. RINTELMAN, Cottonwood, S. D. Filed Apr. 21, 1920. Serial No. 375,627. 9 Claims. (Cl. 31—96.)

1. A milking machine comprising a casing, means supporting and attaching the casing in spaced relation and over a pail, nipples detachably secured to said casing and adapted to receive a cow's teats, and means for squeezing said nipples.



3. A milking machine comprising a casing having recesses, elastic nipples partially confined in said recesses, supports engaging said nipples and adjustably and yieldably connected to the casing, squeezing elements hinged to said supports and engaging the nipples, and means for actuating the squeezing elements.

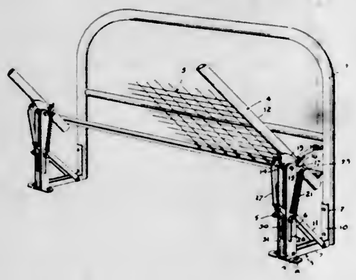
5. A milking machine comprising a casing having recesses, elastic nipples partially confined in said recesses, semi-circular flanges formed on the upper ends of the nipples, substantially U-shaped supports engaging the nipples under the flanges and adjustably and yieldably secured to the casing, squeezing means carried by said supports, and means for actuating said squeezing means.

7. A milking machine comprising a casing having recesses, elastic nipples partially confined in said recesses, supports securing the nipples to said casing, plates hinged to said supports and curved to conform to the contour of the nipples and extending lengthwise of the latter, and means connected to said plates for causing said plates to squeeze the nipples.

9. A milking machine comprising a casing, nipples carried by said casing, means for squeezing said nipples, a pair of supports adjustably secured to said casing and each including a single length of wire bent upon itself to form a handle, the ends of said handle being bent to form clamps adapted to engage the edge of a pail, the ends of said clamps being extended upwardly and inwardly in a plane with the handle and then disposed horizontally to form attaching arms that are adjustably secured to the casing.

1,380,500. ADJUSTABLE GUARD FOR STANCHION-SUPPORTING FRAMES. EMIL A. ROESELER, Juneau, Wis. Filed Nov. 5, 1919. Serial No. 335,794. 4 Claims. (Cl. 119—149.)

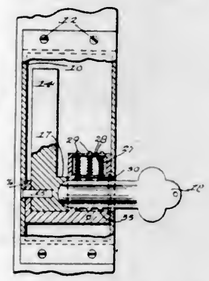
1. An adjustable guard for stanchion supporting frames having frame posts comprising a bracket rigidly con-



nected with, and carried solely by, one of the frame posts and provided with a laterally projecting arm; and a guard bar having its upper end connected with the frame and its lower end adjustably locked to said laterally projecting arm, whereby the lower portion of the structure is unobstructed by lower cross rods and whereby said guard bar may be moved directly outwardly or inwardly along said bracket and locked in any one of a plurality of positions of adjustment.

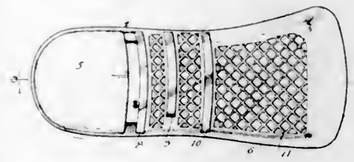
1,380,501. TIRE. RYUMATSU SERA, Los Angeles, Calif. Filed Sept. 13, 1920. Serial No. 409,782. 2 Claims. (Cl. 152—5.)

2. In a tire construction, in combination with a tire-casing, a strap of fabric, pads made of fabric, a filling of sawdust and cork disposed in the pads, the pads sewed to the strap in spaced relation one to the other, a second strap, a number of rubber blocks secured to the second-named strap in a similarly spaced relation as the pads on the first-named strap, the two straps disposed in the tire-casing so that the second-named strap with the rubber comes into a position to encircle the felly of a wheel when the casing is so disposed and bringing the second-named strap into a position as to encircle the first-named strap, the rubber blocks of the one strap located to engage between the pads of the other strap, the first-named strap having a width to engage the whole pads and the second-named strap with the rubber block overlapping over the first-named strap, and a filling of asbestos disposed between the pads and blocks and within the tire-casing.



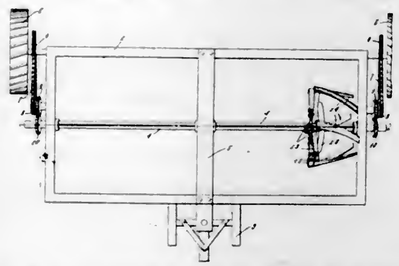
1,380,502. EXTENSIBLE BED. NEIL SINCLAIR, Oakland, Calif., assignor to The Rip Van Winkle Wall Bed Company, Oakland, Calif. Filed Nov. 1, 1920. Serial No. 421,015. 4 Claims. (Cl. 5—37.)

1. An extensible bed embodying in its construction a mounting, a mattress supporting frame pivoted upon the mounting, retractile springs secured at certain ends to the frame rearwardly of the pivot point thereof, means slidable upon said mounting with which the other ends of said springs are connected and a lever connected with said frame forwardly of the pivot point and at one end and at its other end secured to said means.



1,380,503. LOCK. DONALD P. SLIND, Ryley, Alberta, Canada. Filed Sept. 8, 1920. Serial No. 408,861. 4 Claims. (Cl. 70—47.)

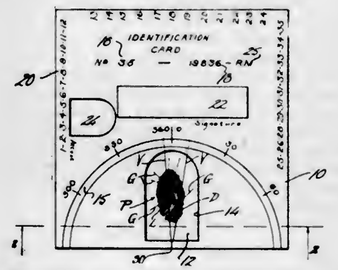
2. In a lock of the character described, the combination of a casing adapted to be secured to a door, and having an opening in its side, a locking bolt pivotally secured within said casing and adapted to be swung through the opening in said side into a keeper in the jamb of the door, a stationary cylinder, a rotatable, recessed barrel within said cylinder provided with a key-hole, a block secured between the side walls of said casing and having an inner chamber, a predetermined number of springs



secured with their upper ends to the roof of said chamber and projecting with their lower ends to different depths into the recess of said barsel, a key provided with projections of a number and size corresponding to the number and size of the springs, said springs adapted to be engaged by corresponding higher or lower projections of said key when introduced through the key-hole.

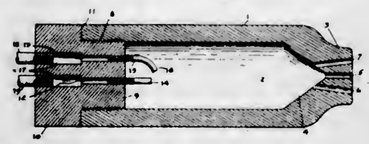
1,380,504. ARCH-SUPPORT FOR THE FOOT. SOTER B. TUSIS, Chicago, Ill. Filed Jan. 24, 1920, Serial No. 353,672. Renewed Apr. 18, 1921. Serial No. 462,339. 4 Claims. (Cl. 36—71.)

1. An arch support for the foot, comprising a body portion having transverse grooves corresponding in position to the articulations of the foot whereby the foot will be supported mainly between the joints or articulations.



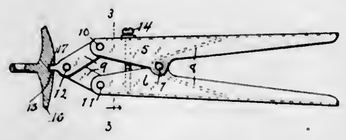
1,380,505. CULTIVATOR. OTTO O. UHLHORN, Lisbon, N. D. Filed Oct. 21, 1920. Serial No. 418,515. 1 Claim. (Cl. 55—61.)

A cultivator comprising a wheel supported structure, transverse shafts carried thereby and diverging downwardly and laterally, a plurality of cultivating units on each shaft, each of said units including spiral blades extending laterally toward the outer end of its shaft,



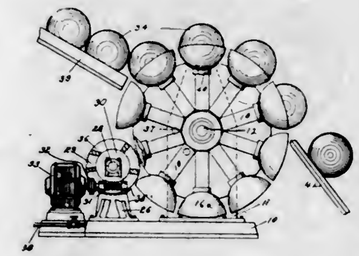
the blades of all of the units on each shaft coöperating to define a cone frustum and means for simultaneously rotating the shafts to move the lowermost blades of the cultivating units forwardly at a greater speed than the forward movement of the structure, each of said blades producing a shearing cut upon material in the path thereof.

1,380,506. FINGER-PRINT IDENTIFICATION-CARD AND METHOD OF PRODUCING SAME. JOHN P. S. VOGHT, Denver, Colo. Filed June 26, 1920. Serial No. 391,989. 10 Claims. (Cl. 41—26.)



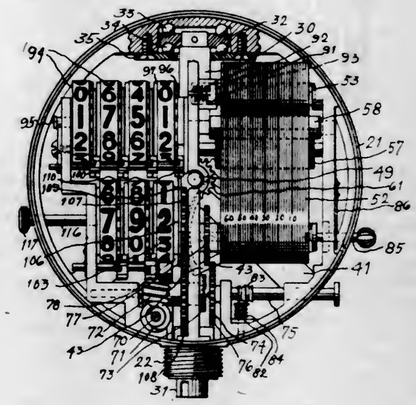
1. The method of producing finger prints and the like comprising the application of a chemical which will attack a metal to the finger, and pressing the finger upon a sheet of metal subject to attack by said chemical whereby a print is produced.

1,380,507. OIL-BURNER. CLYDE K. WALLACE, Oakland, Calif., assignor of one-half to Samuel H. Chambers, Oakland, Calif. Filed Mar. 13, 1920. Serial No. 365,446. 1 Claim. (Cl. 158—75.)



An oil burner embodying in its construction a one-piece tubular body portion closed except for small outlet passages at one end and having a screw threaded opening at its other end, a flanged plug having screw threads engaging with the screw threads of said opening, the flange of said plug being flush with the body, and means extending through the plug for discharging oil and an atomizing fluid into said body, said body being in conical form interiorly at the end thereof in which the outlet passages are provided, one of said outlet passages being in line with the apex of said conical portion and the other outlets being disposed on opposite sides of said apex, said body portion having a reduced tip portion through which portion the outlet passsages are formed.

1,380,508. VALVE-LIFTING TOOL. GEORGE W. WILSON, Los Angeles, Calif. Filed July 23, 1920. Serial No. 398,412. 2 Claims. (Cl. 29—86.3.)

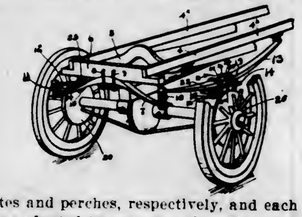


1. A valve lifter comprising a pair of handle members pivotally connected; lifting blades, having points for engaging the kerf of the valve pivotally connected to said handle members, said blades being connected at their other ends.

1,380,509. PRINTING-MACHINE. ANSEL S. WYSONG, Los Angeles, Calif. Filed Dec. 20, 1920. Serial No. 431,899. 4 Claims. (Cl. 101—35.)

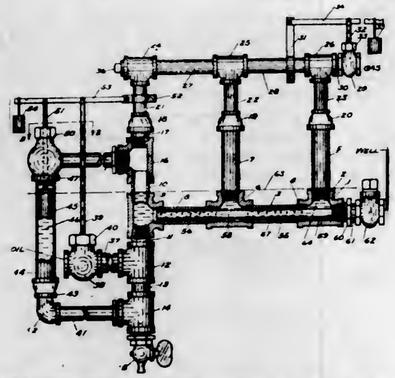
1. In a printing machine for printing on fruit, type; means to place printing material on the type; means to carry fruit and type; and suction means to cause the fruit and type to engage, whereby the printing material on the type is transferred to the fruit.

1,380,510. INDICATING AND RECORDING SPEEDOMETER. KUZO YOSHINAGA, Los Angeles, Calif. Filed June 1, 1920. Serial No. 385,673. 3 Claims. (Cl. 234—5.)



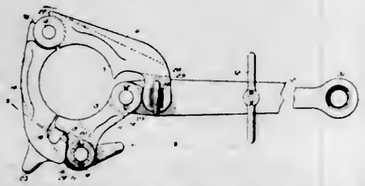
1. In a speedometer, the combination with a housing, of a vertically disposed rotary shaft mounted therein, distance recording means mounted therein, a train of gears whereby the rotary shaft actuates the distance recording means, centrifugally operated elements disposed on the rotary shaft, speed indicating elements actuated by the centrifugally operated elements, speed recording elements actuated by the movement of the speed indicating elements, speed recording elements actuated by the movement of the distance recording means, and clutch means to engage and disengage the last-named speed recording elements, said last-named speed recording elements coöperating with the first-named speed recording elements in the clutch engaging position.

1,380,511. PLATFORM-SPRING ATTACHMENT FOR MOTOR-VEHICLES. JOHN ZAPF, North Bend, Ohio. Filed Aug. 28, 1919. Serial No. 320,379. 6 Claims. (Cl. 280—106.5.)



1. In a vehicle having a frame, a cross-spring attached to said frame, side springs attached at their ends to said frame and to the ends of the cross-spring, respectively, a

plate secured to and adapted to support each side spring, a perch for each side spring, a pivotal connection between



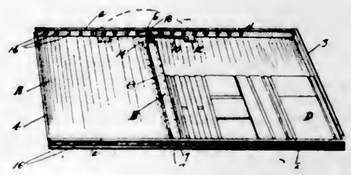
the plates and perches, respectively, and each plate having a bearing adapted to rest upon the adjacent perch.

1,380,512. EMULSION-PREVENTIVE. MICHAEL ZAPF and GEORGE ROBERTSON, Maricopa, Calif. Filed June 9, 1919. Serial No. 302,898. 1 Claim. (Cl. 183—39.)

In an apparatus for continuously separating gas from oil, a substantially tubular member, risers connected thereto, a tubular member connecting the upper ends of said risers and combining therewith to form a gas chamber, an automatically operating gas discharge valve connected to said gas chamber, an oil and gas supply pipe leading into the first mentioned tubular member, the external diameter of which supply pipe is slightly less than the internal diameter of said tubular member, the wall of said supply pipe being perforated at points between the lower ends of the risers, tubular connection between the first mentioned tubular member and the tubular member that connects the upper ends of the risers, and said tubular connection being provided with a valved outlet below the first mentioned tubular member.

1,380,513. WELL-CASING WRENCH. VICTOR W. ZILEN and RALPH E. FAIR, Chattanooga, Tenn., assignors to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 2, 1920. Serial No. 400,819. 3 Claims. (Cl. 81—66.)

1. In a pipe wrench, the combination of an operating lever, a pair of gripping jaws pivotally connected to the operating lever, one of said jaws being formed of pivotally connected sections and having a handle formed thereon, and means for locking said jaws in closed position, said locking means comprising a catch formed on one jaw, a pivot pin carried by the other jaw, a latch pivotally mounted on said pin, and adapted to engage said catch, and a spring surrounding said pin and engaging the latch for yieldingly maintaining said latch in engagement with the catch and a handle formed on said latch.



1,380,514. PROCESS FOR THE MANUFACTURE OF ZINC OXID DIRECT FROM OXIDIZED ZINC ORES. JOHN ALLINGHAM, Los Angeles, Calif. Filed Nov. 4, 1919. Serial No. 335,612. 1 Claim. (Cl. 134—78.)

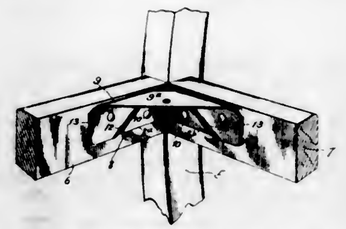
The process of making zinc oxid direct from oxidized ores, which consists in subjecting such ore to the solvent action of a solution of sulfuric acid and sodium chlorid, separating the resulting solution from the residue, treating the solution to remove compounds of metals other than zinc, treating the solution with calcium hydroxid to precipitate zinc as hydroxid, subjecting the resulting precipitate in the presence of the solution to the action of carbon dioxid to produce zinc carbonate, separating the zinc carbonate from the solution, and drying and igniting the zinc carbonate.

1,380,515. PROCESS FOR THE MANUFACTURE OF ZINC OXID DIRECT FROM OXIDIZED ZINC ORES. JOHN ALLINGHAM, Los Angeles, Calif. Filed Nov. 12, 1919. Serial No. 337,555. 1 Claim. (Cl. 134—78.)

The process of making zinc oxid direct from oxidized ores, which consists in subjecting such ore to the solvent action of a solution of sulfuric acid and sodium chlorid, separating the resulting solution from the residue, treating the solution to remove compounds of metals other than zinc, treating the solution with trona to precipitate zinc as carbonate, separating the zinc carbonate from the solution, drying and igniting the zinc carbonate, treating the solution from which the zinc carbonate has been removed to recover sodium sulfate and adding part of such sodium sulfate to the solution produced in cyclic operation of the process by solvent action on the ore, to remove lime from such solution.

1,380,516. GALLEY DEVICE. ARTHUR D. AVERY, Los Angeles, Calif. Filed July 24, 1920. Serial No. 398,724. 13 Claims. (Cl. 276—43.)

2. In a galley device, the combination with a printer's galley having side walls formed with perforations, of rotatable means adjustably and removably held between the side walls and within the perforations thereof; said rotatable means having a part for engaging a form within the galley whereby upon a rotation of the galley device the form may be justified.

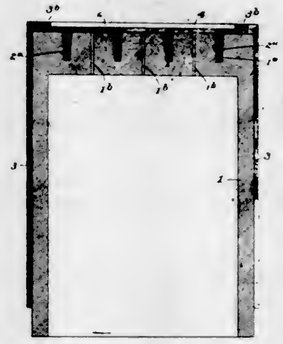


1,380,517. WELL-SCREEN CLEANER. SAMUEL F. BASHARA, Houston, Tex. Filed June 28, 1920. Serial No. 392,153. 10 Claims. (Cl. 166—20.)

1. In a cleaner for well screens, a perforated pipe, a tapered surface on said pipe having threads formed thereon, said threads being shallow and inclined sharply downward, a divided collar fitting on said tapered surface and having shallow interior threads formed to fit the threads

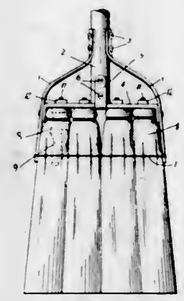
on said surface, and compressible means to hold the parts of said collar together..

1,380,518. BRACE AND CORNER-BLOCK FOR CHAIRS AND OTHER ARTICLES OF FURNITURE. DANIEL E. BELLIG, Montoursville, Pa. Filed Feb. 26, 1921. Serial No. 448,086. 2 Claims. (Cl. 45—48.)



2. A combined corner brace and block composed of two metal sections one of which is bent into approximately V-shape and having inwardly bent or offset ends and the second section supported on said V-shape section and having bent ends resting within the recesses formed by offsetting the ends of the V-shaped section, the said section having alined screw holes for attaching them to the rails of a chair.

1,380,519. HOOK AND EYE. DUDLEY C. BENTON, San Diego, Calif. Filed Aug. 19, 1920. Serial No. 404,547. 3 Claims. (Cl. 24—228.)

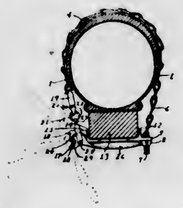


3. A hook and eye fastener, including a spring wire member folded intermediate its ends to a close bend, then spread slightly, diverging for some distance, then converging and crossing, then bent backwardly and formed into a loop for a support, and an eye member adapted to engage and pass over the closely bent point in U form provided with loops for supporting the same, each of said members being provided with short flattened bends at the points of engagement when hooked together.

1,380,520. HARD-RUBBER BATTERY-CELL AND PROCESS FOR MAKING SAME. RAYMOND H. BLANCHARD, Malden, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Apr. 20, 1920. Serial No. 375,223. 3 Claims. (Cl. 18—59.)

1. A hard rubber battery cell comprising a partially vulcanized bottom and cross bridges or ribs, and a cell wall vulcanized to said bottom.

1,380,521. BROOM. FRANK P. BLASINGAME, Canton, Tex. Filed Apr. 1, 1920. Serial No. 370,616. 1 Claim. (Cl. 15—19.)

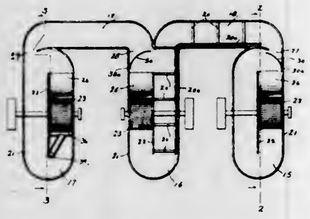


A broom comprising a handle, a frame consisting of two arms with their upper ends connected to the handle and curved obliquely dawnwardly and outwardly, a cross arm spanning the space between and connected to the arms and to the handle, a plurality of members spaced apart and removably secured to the cross arm, said members forming a supporting means or core for a sweeping element secured to each of the cores and forming the body or sweeping portion of the broom, and means for connecting the cores comprising the sweeping units together and to each lower end of the arms.

1,380,522. ANTISKID AND MUD-CHAINS. BRUCE E. BLISS, Wichita, Kans. Filed Aug. 31, 1920. Serial No. 407,092. 1 Claim. (Cl. 152—14.)

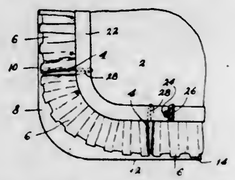
In combination in a device of the kind described, a rim-plate, a lever contacting said plate, fastening means tensioning the lever against said plate, other fastening means comprising a bolt passing freely through a hole in the rim-

plate, and a wing-nut on said bolt at the outer face of said plate; the free end of said lever being positioned so



as to provide a latch to prevent full rotation of said wing-nut.

1,380,523. SPRING. CLARENCE A. BROCK, Detroit, Mich. Filed Feb. 5, 1917. Serial No. 146,605. 8 Claims. (Cl. 267—47.)

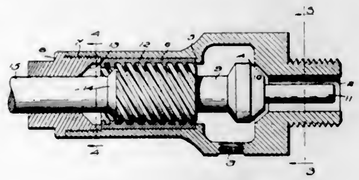


5. A spring comprising a series of leaves of equal length provided at their ends with spherical lugs, a shackle uniting the ends of said leaves composed of plates placed side by side and having recesses embracing said lugs.

1,380,524. PULP-PRODUCING APPARATUS. CHARLES J. BROWN, Tonawanda, N. Y., assignor of one-half to Louis C. Newman, Buffalo, N. Y. Filed July 5, 1918. Serial No. 243,394. 7 Claims. (Cl. 92—23.)

1. In a pulp producing apparatus, the combination of a plurality of beating tubs, channels connecting the tubs, each tub having its wall cut away at the point where it connects with one of the channels, and a screen arranged across the opening connecting the tub with the channel.

1,380,525. CAP, HAT, AND BONNET. MARY V. BRUNK, Kansas City, Mo. Filed July 3, 1920. Serial No. 393,916. 3 Claims. (Cl. 2—108.)

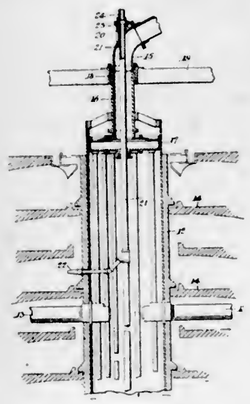


1. An article of the character described, consisting of a crown made from one piece of material adapted to be flattened out, a brim separable from said crown and consisting of one piece of material adapted to be flattened out, and a band secured at intervals to said brim to leave spaces for the passage of the margins of the crown so that the latter and the brim will be held in assembled position.

1,380,526. RETRIEVER FOR GOLF-BALLS. ARTHUR C. CARPENTER, Pasadena, Calif. Filed Mar. 16, 1920. Serial No. 366,336. 1 Claim. (Cl. 46—4.)

A retriever for golf balls comprising a handle having a reduced threaded end portion, an internally threaded ferrule seated on the threaded end of said handle, a pair of oppositely disposed curved arms formed integral with and projecting outwardly and downwardly from said ferrule and a ring formed integral with the lower ends of said arms, the internal diameter of which ring is slightly less than the diameter of an ordinary golf ball.

1,380,527. VALVE. ALVA BRUCE CARR, Bellevue, Alberta, Canada. Filed June 28, 1920. Serial No. 392,269. 2 Claims. (Cl. 251—36.)

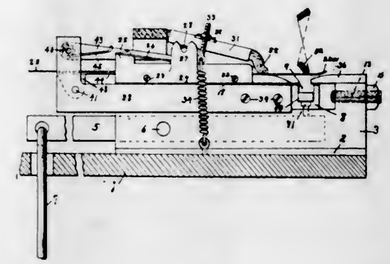


1. A valve comprising a casing, a valve seat arranged in the valve casing, an annular shoulder formed in the casing above the seat, an internally threaded cylindrical sleeve arranged thereon, means for securing said sleeve against rotation, a valve adapted to engage said valve seat, and a valve stem to which said valve is secured, a portion of said valve stem being threaded and adapted to engage the threads of said sleeve to permit opening and closing, said sleeve when released from said securing means being capable of rotation with said valve stem to grind said valve and valve seat, the sleeve securing means comprising a locking nut arranged in the end of the casing and surrounding the valve stem, said nut being adapted to engage the upper end of said sleeve to hold the sleeve stationary.

1,380,528. METHOD OF MAKING TIRE-MANDRELS. DON A. CLARK and CLYDE E. LOWE, Cleveland, Ohio, assignors, by mesne assignments, to The Republic Tool and Manufacturing Company, Cleveland, Ohio, a Corporation of Delaware. Filed July 31, 1919. Serial No. 314,551. 12 Claims. (Cl. 29—148.2.)

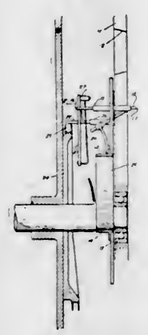
1. The process of making a pneumatic tire mandrel, which includes the steps of first forming a plurality of curvilinear sheet metal channel members, second arranging said members in circular form and butt welding them interiorly at their transverse margins, and afterward welding them together exteriorly at their longitudinal margins.

1,380,529. ORE-ROASTING FURNACE. HARRY ALLEN CLARK and JOHN FRANCIS HILL, Douglas, and ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed July 19, 1920. Serial No. 397,371. 4 Claims. (Cl. 263—26.)



1. In a roasting furnace of the class described, the combination with a central hollow rotating shaft, of a burner mounted to rotate therewith and opening into the chamber of the furnace, and means for supplying fuel to said burner, said means comprising oil and air supply pipes within and rotating with said shaft, stationary oil and air supply pipes, and packed joints between said rotating and stationary pipes.

1,380,530. DENTAL-FLOSS HOLDER. THOMAS W. COOK, Berkeley, Calif. Filed June 14, 1918. Serial No. 239,914. 4 Claims. (Cl. 132—92.)

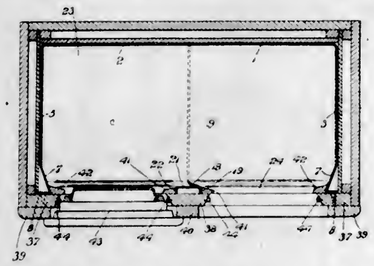


2. A dental floss holder including a handle, a bow on said handle, means on the handle for holding a spool of dental floss, a fork on the forward end of the bow for securing the forward end of the floss, said fork having an inner knife edge, and means for holding the floss taut across said bow.

1,380,531. WRAPPING-MACHINE. JASPER F. CULLIN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Oct. 8, 1920. Serial No. 415,554. 9 Claims. (Cl. 216—28.)

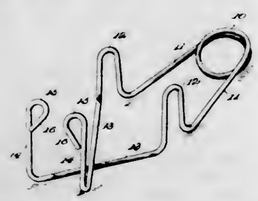
1. In a wrapping machine, the combination of a movable head having a groove into which cement covered paper may be pressed by the article to be wrapped, a plate under which the head may be moved to fold the loose end of the paper down on the article to be wrapped, a cutting device for the paper so positioned that the paper is severed when the head is moved under it, and by which the second end of the wrapping is pressed down.

1,380,532. EXPANDING CLAW FOR MOVING-PICTURE MACHINES. HARRY G. CUNNINGHAM, Los Angeles, Calif. Filed Sept. 4, 1920. Serial No. 408,135. 6 Claims. (Cl. 88—18.4.)



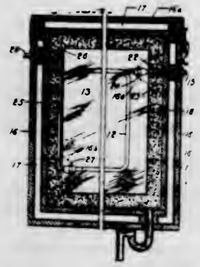
1. A claw mechanism for moving picture machines adapted for film with perforations, comprising in combination picker fingers having expansible tips, and means to expand the tips after their insertion in said perforations.

1,380,533. REFRIGERATOR. FRANK J. M. CURRAN, Grand Rapids, Mich. Filed Mar. 1, 1920. Serial No. 362,329. 7 Claims. (Cl. 217—5.)



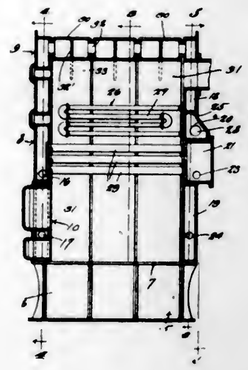
1. In a refrigerator, a lining comprising an L-shaped back having ends bent forward from the outer vertical edges thereof, a metal member having a vertical slit therein a short distance back of its front edge extending from its bottom edge to a height substantially equal to the horizontal part of the back, the portion of said member back of the slit being bent upwardly and outwardly to substantially horizontal position, said member being secured to

the back and shorter end of said first named portion of the lining, a bottom secured at the lower edges of said



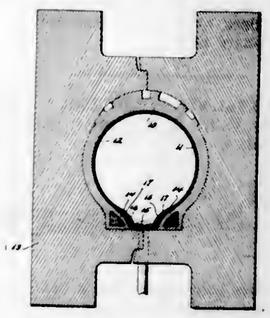
back and ends, and a top secured in place to complete the lining, leaving the front side open, substantially as described.

1,380,534. DISPLAY-HOLDER. LLOYD HENRY DALTON, Coffeyville, Kans. Filed Oct. 15, 1919. Serial No. 330,749. 1 Claim. (Cl. 211—24.)



A display holder for neckties or other articles of merchandise piled one upon another consisting of a single strand of wire formed into a spring coil at its center, arms diverging from said coil, upstanding posts at the ends of said arms, crossed arms extending from said posts, jaws rising from the free ends of said crossed arms, and lateral shoulders on the inner sides of said jaws at the upper terminals of the same, the coil, the diverging arms and the crossed arms forming a base upon which the pile of articles may rest, the posts and jaws restraining the articles in the pile from displacement, and the shoulders on the jaws bearing upon the pile to yieldably hold the articles against withdrawal therefrom.

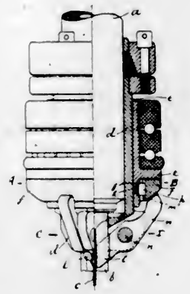
1,380,535. LIQUID-COOLING APPARATUS. GEORGE H. E. DAVIS, Lynn, Mass. Filed Nov. 11, 1919. Serial No. 337,337. 3 Claims. (Cl. 62—147.)



1. A liquid-cooling apparatus comprising a heat-insulating box adapted to be opened and to be closed practically air tight, terminal conduit members passing through, and supported by portions of the box, and provided within the box with coupling parts, and a portable cooling element formed for insertion in the box when the latter is opened, and insulated from external heat by the closing of the box, said element including an intermediate sinuous conduit member, provided at its ends with coupling parts complemental to, and coinciding with, the coupling parts on the said terminal members, and a block of ice incasing and contacting with the said intermediate conduit member between its coupling parts, the latter being exposed at the exterior of the block, so that the intermediate conduit member may be detachably secured to the terminal conduit members, after the insertion of the said portable element in the box, the said block constituting a cooling unit having surface portions interposed between the intermediate conduit and the internal surfaces of the box.

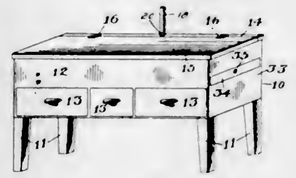
1,380,536. BOILER. SAMUEL S. DAVIS, Sidney, Ohio. Filed Aug. 8, 1919. Serial No. 316,129. 2 Claims. (Cl. 122—225.)

1. In a steam boiler construction, header sections, arch-shaped boiler sections disposed between, and in communication with the header sections, a partition disposed within each of the arch-shaped boiler sections, said partitions adapted to obstruct the passage of steam through the upper portions of the boiler sections, a reservoir forming a part of one of the header sections, and a plurality of super-imposed horizontal water tubes having communication with the reservoir.



1,380,537. CORE FOR USE IN CURING PNEUMATIC TIRES. WALTER R. DENMAN, Cleveland, Ohio. Filed April 24, 1920. Serial No. 376,359. 9 Claims. (Cl. 18—45.)

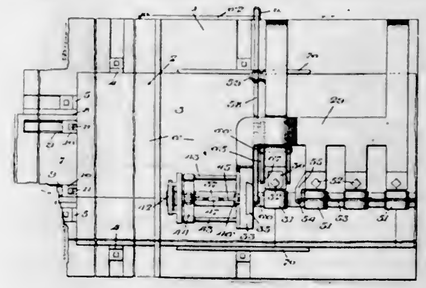
1. A core for use in curing pneumatic tires comprising an air bag having a ring at its inner periphery, said ring comprising a base portion of uniform diameter and



a pair of spaced outwardly projecting flanges, said flanges diverging outwardly and being spaced and shaped to provide outer surfaces between which and the mold the beads are formed.

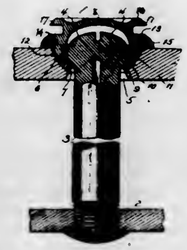
1,380,538. WIRE-FEED MECHANISM OF SCREWING-MACHINES. MARK THOMAS DENNE, Rushden, England. Filed Oct. 22, 1919. Serial No. 332,550. 3 Claims. (Cl. 1—26.)

1. Wire feed mechanism for screwing machines, comprising in combination a hollow spindle through which the wire passes axially, a gripper carrier adapted to be reciprocated longitudinally of the said spindle, a plurality of grippers mounted on the said carrier, and means for closing the said grippers on the wire adapted to be reciprocated on the said spindle relatively to the said gripper carrier and to adjust itself automatically in any direction in a plane at right angles to the axis of the spindle to cause each of the grippers to exert an equal pressure on the wire.



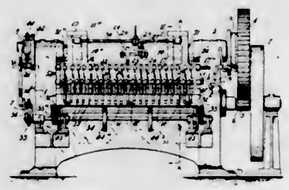
1,380,539. CABINET. LILLIE CATHERINE DIMICK, Fort Wayne, Ind. Filed Mar. 3, 1919. Serial No. 280,397. 2 Claims. (Cl. 217—60.)

1. A cabinet of the character described having a top wall including a rear stationary strip and a cover hinged to the said strip, an upright supporting member hinged to the said stationary strip to fold downwardly upon the rear wall of the cabinet, and connections for detachably holding the said upright in vertical position to form a support for the cover when the latter is raised.



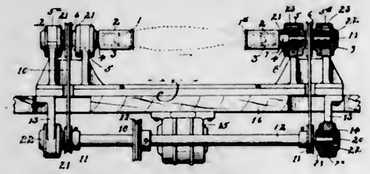
1,380,540. TAPE-APPLYING MACHINE. MOSES B. DISKIN, New York, N. Y. Filed May 8, 1919. Serial No. 295,762. 14 Claims. (Cl. 216—22.)

8. A tape applying machine embodying means for feeding an object a predetermined distance, means for feeding a tape to the object, means for pressing the tape when fed against the object and bringing the feeding means into



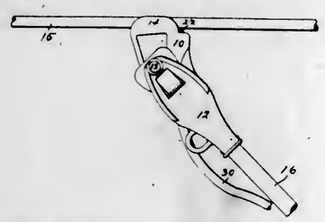
operation, and means operable for cutting the tape when the object has moved the predetermined distance.

1,380,541. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 20, 1920. Serial No. 352,692. 10 Claims. (Cl. 85—1.5.)



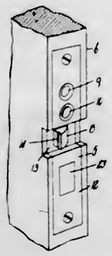
1. In a staybolt structure, the combination with a boiler sheet having an opening of a closure member permanently closed at its outer end and threaded interiorly, said closure member initially seated freely against the boiler sheet approximately in line with the opening therein, a bearing member threaded in said closure member and having an interior seat, a staybolt having a head mounted on the seat in said bearing member, and a weld uniting said closure member to the boiler sheet.

1,380,542. PUNCHING-MACHINE. JOHANNES DREWES, Gideon, Netherlands. Filed Nov. 10, 1919. Serial No. 336,873. 17 Claims. (Cl. 164—90.)



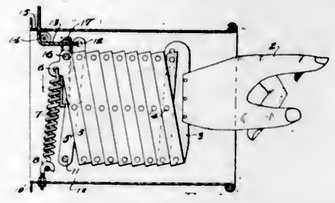
1. In a punching machine, the combination of a reciprocatory element; a plurality of punching devices pivoted thereto; and means for automatically and positively swinging a certain selected punching device or devices into inoperative position.

1,380,543. WRAPPER-SEALING MACHINE. DAVILA S. DU BAUL, Cincinnati, Ohio, assignor to John E. Davis, Columbus, Ohio. Filed Jan. 15, 1921. Serial No. 437,434. 6 Claims. (Cl. 93—2.)



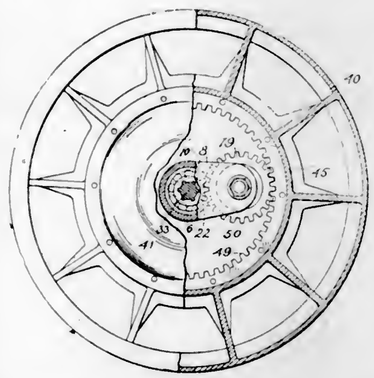
1. In a wrapper sealing machine, a pair of oppositely presented foil spinning thimbles adapted to receive the respective ends of an article to be sealed, and means for positively rotating said thimbles.

1,380,544. SLEET-HAMMER. JOHN N. DUNCAN, Boone, Iowa, assignor to himself, Art F. Brannberg, and J. C. Flannery, Boone, Iowa. Filed Oct. 14, 1920. Serial No. 416,883. 3 Claims. (Cl. 191—59.1.)



1. A sleet hammer comprising a housing removably and replaceably mounted on and adapted to be carried by a trolley harp, means on said housing adapted for electrical contact with a conductor, a pneumatic hammer mounted in said housing and means for applying air within said housing for the operation of said hammer.

1,380,545. LATCH FOR DOORS. JOHN A. EDGERLY, Boston, Mass., assignor of one-half to Matthew Edgerly, Brookline, Mass. Filed Mar. 4, 1920. Serial No 363,253. 2 Claims. (Cl. 292—169.)



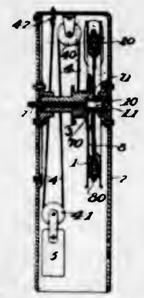
1. A latch embodying a front plate adapted to be fastened to the front edge of a door and having a channel-shaped recess extending horizontally thereacross, a horizontally movable member in said latch adapted normally to project through said front plate and into said recess and having a vertical slot in one face thereof, a striker plate adapted to be fastened to a door casing, and a projection on said striker plate adapted to enter said recess when said door is closed, said projection having a hole therein adapted to receive and entirely inclose the outer end of said horizontally movable member when the same is in advanced position, said projection at one side of said hole being adapted to project into said vertical slot when the door is moved laterally thereof to prevent said member and striker plate from being disengaged from each other.

1,380,546. AUTO DIRECTION-SIGNAL. JAMES DEWAR, Los Angeles, Calif. Filed Mar. 16, 1920. Serial No. 366,331. 6 Claims. (Cl. 116—40.)

1. A signal device attachable to a road vehicle and comprising a box, a series of lazy-tong levers arranged within the box, one end of one of the levers at the inner end of the series of levers being pivoted to the box, the opposite end of the companion lever being slidably connected to the box so as to move toward and away from the said pivot; a spring for normally actuating the lazy-tong levers to an extended position; a signal member on the outer end of the series of lazy-tongs; and a manually operable device restraining the actuation of said lazy-tongs by said spring.

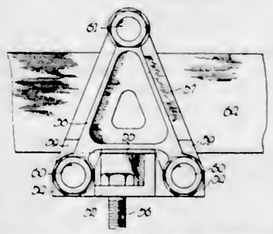
1,380,547. INTERNAL-DRIVE REAR AXLE. FRANK H. FARMER, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1919. Serial No. 281,983. 4 Claims. (Cl. 74—7.)

4. In an internal drive axle of the character specified, the combination of a tubular pinion, bearing rings within which said pinion is rotatably mounted, and a tubular gear cage member within which said bearing rings are fitted and by which they are supported,—the bore of said gear cage being large enough to permit the pinion and its bearing rings to be introduced through the end thereof to operative positions.



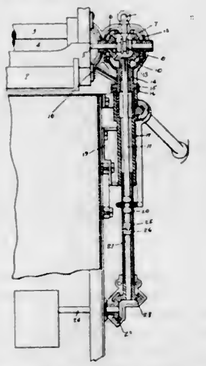
1,380,548. AUTOMOBILE-LIFTING DEVICE. HENRY F. FIENUP, Wellston, Mo. Filed Aug. 31, 1918. Serial No. 252,248. 2 Claims. (Cl. 254—91.)

1. An automobile jack comprising a base frame, a lifting frame pivotally mounted above said base frame and connected therewith, a lifting lever having a cutaway portion hingedly connected at its lower end to said base frame, a strap iron member spanning the cutaway portion of said lever, a hinge plate fixed to one end of said movable lifting frame and extending therefrom, and a pin



carried by the extended end of said hinge plate adapted to slidably engage the rear face of said strap iron member during the raising and lowering operations of the lifting lever.

1,380,549. HOSE-REEL. JOHN R. FLOOD, Everett, Wash., assignor of one-half to Thos. L. Moore and Wm. Sheller, Everett, Wash. Filed Apr. 12, 1920. Serial No. 373,268. 1 Claim. (Cl. 299—78.)



A hose reel comprising a casing having a hose exit opening, a hose reel mounted within said casing to deliver its hose to said opening, the hub of the hose reel having a distributing chamber and a pipe extending therefrom to the hose storage channel of the reel and adapted to have the hose secured thereto, a non-rotative pipe extending through the hub of the reel and entering said distributing chamber, said latter pipe having a bearing flange engaging the inner end face of said distributing chamber, a small take-up drum at one side of the hose reel, a take-up rope secured to and winding upon said take-up drum, a guide pulley for the take-up drum secured to the upper part of the casing, a pulley and weight secured thereto supported in a bight of the take-up rope, the end of the rope being secured to the upper part of the casing.

1,380,550. BUS-BAR CLAMP. FRANK E. GETTS, deceased, Chicago, Ill., by Eva J. Getts, administratrix, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 21, 1918, Serial No. 255,184. Divided and this application filed Dec. 17, 1919. Serial No. 345,671. 7 Claims. (Cl. 173—313.)

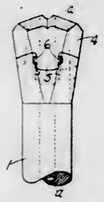
1. In combination, a bus-bar clamp, comprising a base portion said base portion having an upstanding ridge, and integrally formed with bolt carrying lugs disposed on either side of the said ridge, the upper surface of the said ridge being in a parallel plane with the plane of the bolts carried by the said lugs, each of the said bolts extending through the said lugs and having threaded portions on either side thereof, a pair of clamping members adapted to be carried on the said bolts, one on each side of the said base portion the said clamping members having opposing parallel faces and clamping nuts on the ends of said bolts to secure the said clamping members.

1,380,551. WRINGER MECHANISM FOR WASHING-MACHINES. BENJAMIN E. GETZ, Morton, Ill., assignor to Getz Power Washer Co., Morton, Ill., a Corporation of Illinois. Filed July 11, 1919. Serial No. 310,099. 7 Claims. (Cl. 68—32.)

1. In a machine of the character described, in combination, a wringer, a swingable support therefor, including a tubular casing, a shaft journaled in said casing, means to operate said shaft, means to operate the wringer from said shaft, means adapted to have a frictional locking relation with said casing to lock the same against rotation, and means to disconnect said shaft from its operating means, simultaneously with the release of said lock.

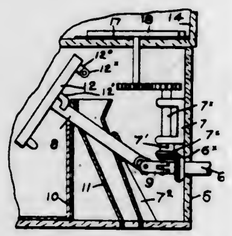
1,380,552. MANUFACTURE OF ALUMINIUM COMPOUNDS FROM SILICATES. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway, assignor to Det Norske Aktieselskab for elektrokemisk Industri, Norsk Industrihypotekbank, Christiania, Norway. Filed Mar. 19, 1917. Serial No. 155,881. 6 Claims. (Cl. 23—13.)

1. The process of producing aluminium compounds from minerals rich in plagioclases containing combined sodium, which comprises treating the said minerals with an acid not containing combined fluorin to form a solution containing aluminium salts, and recovering aluminium compounds from the solution thus formed.



1,380,553. VAPORIZER. ARCHIBALD W. GRIFFIN, Toledo, Ohio, assignor to The Electric Vaporizing Nozzle Company, Toledo, Ohio, a Corporation of Ohio. Filed May 29, 1920. Serial No. 385,099. 4 Claims. (Cl. 219—38.)

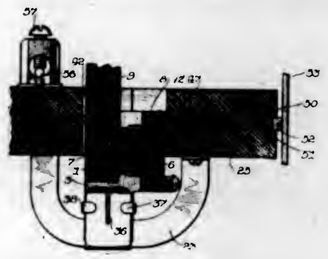
1. In a carbureter, a nozzle, a resistance wire located adjacent the passageway of the carbureter leading to the



nozzle and located beneath the nozzle for heating the liquid of the fuel as it passes to the nozzle, and means for connecting the resistance wire to a source of current supply.

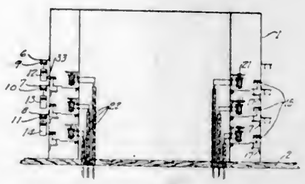
1,380,554. DRILL. ARTHUR L. HAWKESWORTH, Butte, Mont. Filed Mar. 21, 1919. Serial No. 283,954. 3 Claims. (Cl. 287—103.)

3. In combination with a drill-bar or shank, a bit movable across the shank, a transverse groove disposed across the axis of the shank at an incline to said axis and tapering on the sides in a general direction from the cutting end of the drill, lateral recesses having parallel side walls leading from the groove in a direction transverse to the axis of the shank, the faces of the shank terminal on either side of the groove being parallel to the groove bottom, a bit provided with a transverse tongue shaped to be received by, and to engage the walls and bottom of the groove, ribs on the tongue for entering the recesses aforesaid, the tongue being bounded by offsets adapted to engage and be supported by the end faces of the shank on either side of the groove.



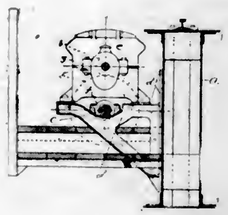
1,380,555. SEEDING-MACHINE. AUGUST FREDRICK HEMME, Dublin, Ontario, Canada. Filed Apr. 7, 1919. Serial No. 288,026. 2 Claims. (Cl. 221—135.)

1. In a device of the class described, the combination with the seed container and discharge spout located adjacent to the container, of a disk rotatably mounted and set in an inclined position so that the lower peripheral portion thereof extends into the body of the seed in the seed container and the upper peripheral portion overhangs the seed discharge spout, and cups carried on the under face of the inclined disk and projecting therefrom for lifting successively portions of seed and discharging them into the seed discharge spout.



1,380,556. FUSED CUT-OUT. ALFRED HERZ, Chicago, Ill., assignor of one-half to Edmund O. Schweitzer, Chicago, Ill. Filed Aug. 10, 1917. Serial No. 185,597. 14 Claims. (Cl. 200—129.)

12. In combination a fuse, a pair of compression blocks lying on each side of said fuse, means for forcing the compression blocks toward each other, means for limiting the movement of the compression blocks away from each other,

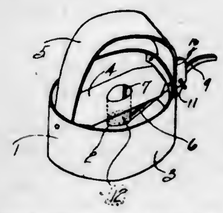


a body of oil inclosing said fuse and said compression blocks, and a substantially fluid tight casing inclosing the body of oil.

1,380,557. VOTE-REGISTERING MACHINE. EUGENE E. HINES, Lawrenceville, Ill. Filed Feb. 24, 1920. Serial No. 361,064. 3 Claims. (Cl. 235—52.)

1. In a voting machine, a vertically mounted cylinder; horizontal rows of ports cut through the cylinder wall, a row for each record desired; arrows pivoted within the cylinder, one at each port and adapted to oscillate their heads therethrough; and means for moving said arrows as indicated.

1,380,558. TRAVELING CRANE. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 27, 1919. Serial No. 333,741. 1 Claim. (Cl. 104—166.)



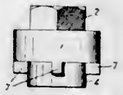
In a traveling crane of the character described, the combination with a motor and a transmission shaft, of a bracket fixed to the framework of the crane and adapted to support the motor, a pinion fixed on the motor shaft, a gear wheel fixed on the transmission shaft and adapted to be engaged by the said pinion, and a bearing in the said bracket for the transmission shaft, the said motor being detachably secured to the bracket.

1,380,559. WEDGE. AKSEL THEODOR JESPERSEN, Omaha, Nebr. Filed Apr. 14, 1920. Serial No. 373,875. 6 Claims. (Cl. 254—104.)

1. A wedge comprising, a main section, an auxiliary section slidably associated with the main section, and a head detachably connected to the auxiliary section.

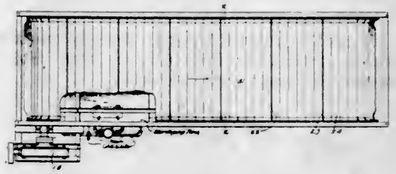
1,380,560. DOUGHNUT-CUTTER. ALFRED E. JOHNSON, Racine, Wis. Filed Nov. 17, 1920. Serial No. 424,593. 3 Claims. (Cl. 107—51.)

1. In combination with a doughnut cutter having circular inner and outer blades, an ejecting trigger extended loosely outwardly through the walls of said blades, as means for ejecting the center dough from the inner blade.



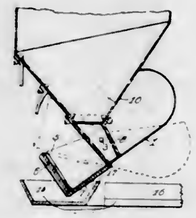
1,380,561. DISPLAY-BOX. ABRAHAM J. KAUFMANN, Philadelphia, Pa., assignor to Edwin Wolf, Clarence Wolf, Benjamin Wolf, Louis Wolf, and Albert Wolf, Copartners trading and doing business as National Metal Edge Box Company, Philadelphia, Pa. Filed Oct. 20, 1919. Serial No. 331,800. 2 Claims. (Cl. 206—44.)

1. A box made of a paper blank having a flat bottom, rectangular ends of different heights, trapezoidal sides, all extending normal to the bottom, and a false bottom substantially parallel with the upper edges of the sides.



1,380,562. VALVE-PLUG REMOVER. MICHAEL KEATING, Dayton, Ohio. Filed Sept. 13, 1920. Serial No. 409,861. 1 Claim. (Cl. 81—71.)

A device of the type described comprising a member having a middle shoulder portion, a projection adapted to be gripped by a wrench on one side of said shoulder portion, a cylindrical projection on the other side of said shoulder portion, and lugs projecting outwardly from said

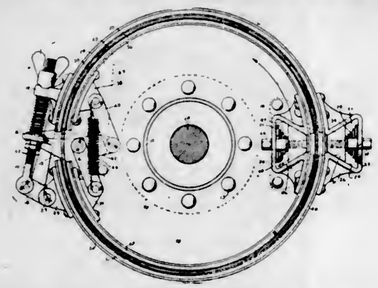


shoulder portion along the cylindrical projection a distance less than the distance between said shoulder portion and the outer edge of the cylindrical projection.

1,380,563. VISCERA-INSPECTION TABLE. ELMER KEEBLER, Chicago, Ill., assignor to The Mechanical Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1919. Serial No. 309,102. 13 Claims. (Cl. 193—7.)

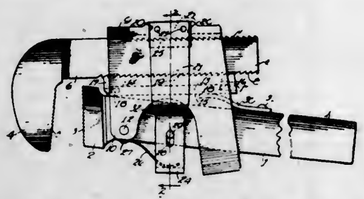
1. In a device of the character described, an endless conveyer comprising a plurality of loosely connected flights, means for maintaining said flights in close engagement during the operative travel thereof, and means for separating the flights during their return travel.

1,380,564. FEEDING DEVICE. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Apr. 12, 1920. Serial No. 373,236. 12 Claims. (Cl. 119—54.)



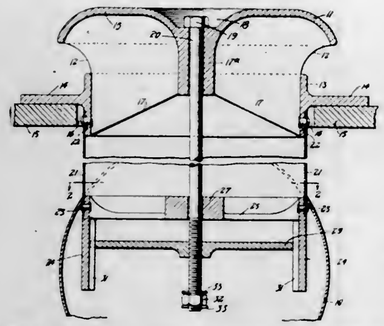
1. In a feeding device, a hopper, and an open top feeding vessel pivotally mounted intermediate its ends, one end of said vessel being terminally closed to serve as a feed receptacle and the opposite end being terminally open to serve as a delivery chute, and into which the hopper extends in such a relation to the vessel that in one position of the vessel the upper surface of its bottom closes the delivery orifice of the hopper.

1,380,565. BRAKE MECHANISM. WALTER C. KEYS, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 6, 1918. Serial No. 252,812. 4 Claims. (Cl. 188—77.)



3. In brake mechanism, the combination of a revoluble member, a brake anchorage, a brake coöperating with said member, means adjacent the ends of the brake for actuating the same, a bracket secured to said brake intermediate

its ends coöperating with said anchorage to hold the brake and force the adjacent part thereof against said

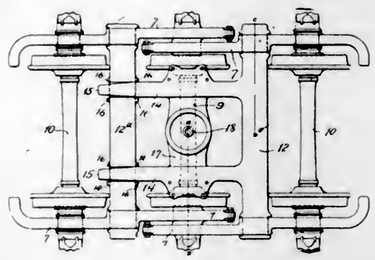


member upon actuation of the brake, and spring means cooperating with said bracket and said anchorage to retract said brake upon the release thereof.

1,380,566. PIPE-WRENCH. ARTHUR WELLINGTON KIEFER, Chicago, Ill. Filed Oct. 21, 1920. Serial No. 418,392. 5 Claims. (Cl. 81—103.)

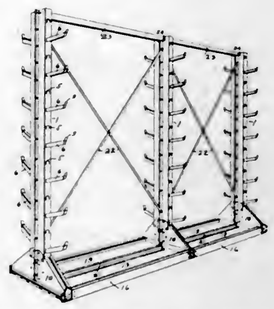
1. A pipe wrench comprising a handle having one end formed to provide a jaw, a guiding and retaining member having a pivotal connection with said handle, a second jaw arranged to oppose said first named jaw and provided with a shank slidable in said guiding and retaining member, said shank being provided with teeth in its upper and lower side, a spacing member secured to said guiding and retaining member and provided with teeth in its side adjacent the lower teeth in said shank, and means carried by said handle for causing the teeth on said spacing member to normally engage the teeth on said shank to prevent movement of said shank in one direction, said means having teeth adapted to engage the upper teeth of said shank.

1,380,567. VENTILATING-VALVE. ARTHUR F. KNOWLES, Montclair, N. J. Filed Oct. 7, 1916. Serial No. 124,435. 6 Claims. (Cl. 98—49.)



5. In a ventilator, in combination with a distributing member, a valve portion adapted to vary the amount of ventilating fluid admitted into the distributing member, said valve portion consisting of a sleeve attached to the distributing member at the lower portion thereof, an open spider rigidly mounted in said sleeve in communicative relation with the distributing member, a threaded bolt passing from the distributing member into the sleeve and through the spider, a plate threaded on said bolt at the lower extremity thereof adapted to travel thereon, and guide members for said plate attached to the sleeve at the lower extremity thereof.

1,380,568. ADHESIVE COMPOSITION. ARTHUR LAFLAMME, Montreal, Quebec, Canada, assignor of one-half to Aldama Laflamme, Montreal, Canada. Filed Nov. 22, 1919. Serial No. 340,040. 1 Claim. (Cl. 87—17.)

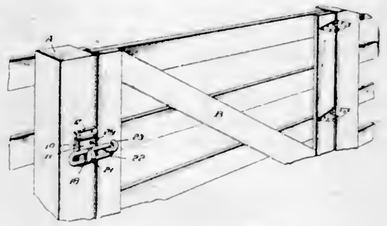


An adhesive formed of 2 ounces of caustic, 1 lb. of rosin, ¼ lb. of ammonium chlorid, ¼ lb. of sugar of lead, 1 lb. of glue, 3 lbs. of whiting, 3 lbs. of plaster, 1 lb. of saltpeter mixed in approximately 4 gallons of boiling water, to which are added 10 lbs. of fluor mixed separately in approximately 4 gallons of water.

1,380,569. BOLSTER CONSTRUCTION FOR SIX-WHEEL TRUCKS. JACOB C. LARSEN, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Jan. 17, 1921. Serial No. 437,857. 6 Claims. (Cl. 105—195.)

1. In a six wheel truck, the combination of a truck frame each side of which is composed of two connected members, two transverse bolsters independent of said side members and supported at their ends thereby, two longitudinal parallel bolsters integral with one of said transverse bolsters and having interlocking connection at their free ends with the other transverse bolster, and a center or main bolster carried by the two longitudinal bolsters.

1,380,570. BAR-RACK. EDWARD G. LEHMAN, Canton, Ohio, assignor to The Berger Manufacturing Company, Canton, Ohio, a Corporation. Filed Sept. 21, 1918. Serial No. 255,085. 16 Claims. (Cl. 211—14.)

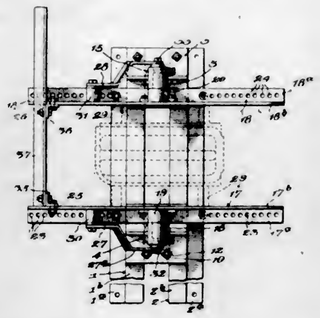


2. A column for racks and the like including two spaced upright walls, series of slots in the walls, and rack arms

respectively engaged in a slot in one wall and bearing in a slot in the other wall.

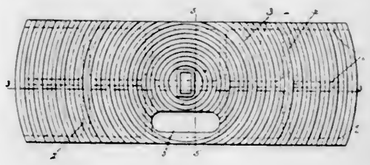
12. A rack for bars and the like including a plurality of columns having supporting arms thereon, bases for the columns including inverted V-gusset plates and transverse channels, and longitudinal channels connecting the ends of the bases.

1,380,571. LOCK. ARTHUR G. LEONARD, Chicago, Ill. Filed Aug. 30, 1920. Serial No. 406,833. 20 Claims. (Cl. 70—5.)



18. A lock comprising in combination a casing, a rotatable stem projecting from the casing and having means on its projecting portion for interlocking, after a partial rotation of the stem, with a member not connected with the casing, a rotatable support with which the inner end of the stem has screw-threaded connection, and means for holding said support stationary to permit the stem to be turned relatively thereto.

1,380,572. PROCESS OF PRODUCING PECTIN. RALPH H. MCKEE, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,535. 4 Claims. (Cl. 99—11.)



4. The herein described process which consists in heating fruit and substantially an equal weight of water to a temperature of approximately 125° C., for several minutes, separating the fibrous material from the resulting mush, adding finely divided absorbent carbon to the resulting solution, evaporating such solution at a pressure less than atmospheric pressure, and separating the concentrated solution from the absorbent carbon.

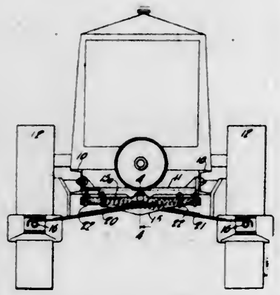
1,380,573. ENGINE-STAND. ROBERT E. MANLEY, York, Pa., assignor to The Manley Manufacturing Company, York, Pa., a Corporation of Pennsylvania. Filed July 18, 1917. Serial No. 181,286. 5 Claims. (Cl. 29—89.)

1. A supporting member, a plurality of upright members secured thereto, a plurality of work holding elements coaxially pivoted one on each of said upright members providing an unobstructed passage-way, means for securing an engine to said work holding elements, means connected to one of said work holding elements and to the upright member on which it is pivoted for holding said elements in desired adjusted position, and similar means for the other holding element and the upright member on which it is pivoted.

1,380,574. TRACTION-PLATE. WILLIAM C. MASON, Albany, N. Y. Filed Apr. 28, 1920. Serial No. 377,381. 4 Claims. (Cl. 238—14.)

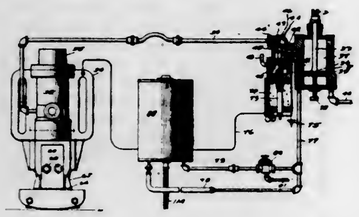
1. A traction-plate having on one side a tread-surface, and on the opposite side a rocker-surface tapering toward an end of the plate.

1,380,575. MEANS FOR AUTOMATICALLY REGISTERING A SHIP'S DRAFT. FRANK W. MERRITT and ALFRED E. WATTS, Duluth, Minn. Filed Nov. 17, 1919. Serial No. 338,675. 5 Claims. (Cl. 73—54.)



1. In a device for registering the temporary draft of a vessel, the combination with the hull of a vessel having an aperture formed through its bottom communicating with the free water in which the ship floats, of a water conductor covering said opening and communicating therewith at one end, a pressure cylinder communicating at one end with the opposite end of said conductor, a floating piston within said cylinder, a fluid container communicating at one end with the opposite end of said pressure cylinder, said fluid container communicating at its opposite end with an internal fluid pressure gage, means for filling said fluid container, and means for varying the cubical capacity of said container, said piston being adapted to prevent the passage of water through said cylinder from said water conductor and to prevent the passage through said cylinder of fluid from said fluid container.

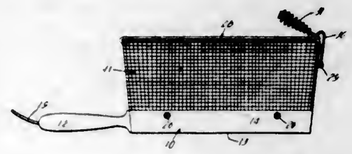
1,380,576. AIRPLANE. DAYTON M. MILLS, Armada, Mich.. Filed Mar. 21, 1919. Serial No. 284,197. 5 Claims. (Cl. 244—29.)



1. An aero foil, two parallel pivoted rods adjacent and parallel to the axis of said aero foil and resting in bearings so that each shall be capable of oscillating about its axis, each of said rods being provided with a rigid, laterally-extending arm extending in a direction away from the other of said rods and secured to said aero foil, and means for simultaneously rotating said rods in the same direction.

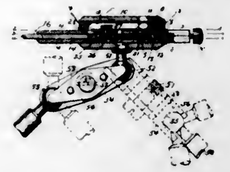
1,380,577. SPRING SUSPENSION FOR TRACK-LAYING TRACTORS. MATHEW B. MORGAN, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 20, 1920. Serial No. 397,610. 2 Claims. (Cl. 305—9.)

1. In a track laying tractor, the combination of a main frame, two endless track structures located respectively on opposite sides of the main frame, an equalizer bar centrally pivoted to the main frame on a longitudinal axis near one end of said main frame and two leaf springs which are respectively connected to said equalizer bar near opposite ends thereof,—each spring being extended from its point of connection with the equalizer bar transversely across the machine and into operative engagement with that endless track structure which lies on the opposite side of the main frame.



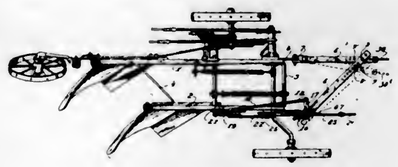
1,380,578. TRAIN-CONTROLLING SYSTEM. WILLIAM B. MURRAY, Danville, Ill., assignor to The Miller Train Control Corporation, Staunton, Va., a Corporation of Virginia. Filed May 6, 1918. Serial No. 232,906. 15 Claims. (Cl. 246—181.)

1. The combination with the engineer's brake valve of a locomotive, of automatic control means therefor, comprising an operating member connected thereto, a piston rod connected to said operating member, a pressure cylinder, a piston arranged in said cylinder and connected to said piston rod, said cylinder being provided with an outlet communicating with the atmosphere, an electrically operated valve normally closing said outlet, a pipe connected to said outlet, a casing communicating therewith, a valve arranged in said casing, means for operating said electrically controlled valve, speed responsive means to operate said second valve, and means operable by said first mentioned means to vary the speed at which said speed responsive means will actuate said valve.



1,380,579. ELECTRIC POPCORN-POPPER. ABNER E. NEFF, Long Beach, Calif. Filed May 31, 1919. Serial No. 300,831. 13 Claims. (Cl. 219—37.)

1. An electrically heated pop-corn popper embodying a pan, a heating element therein, a foraminous cage over the top of the pan; the heating element being spaced at its edges from the walls of the pan, and a sloping fillet

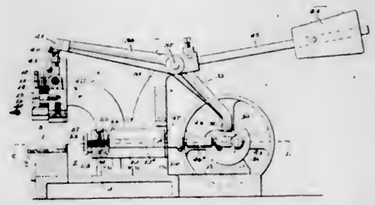


member around the walls of the pan with its slope leading to a point over the heating element to direct pop-corn away from the walls and over the heating element.

1,380,580. SURFACE AND CENTER INDICATOR. JAMES A. NELL, New Britain, Conn. Filed Mar. 25, 1919. Serial No. 284,925. 3 Claims. (Cl. 33—172.)

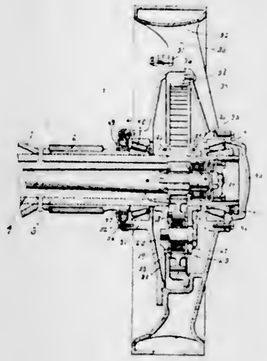
1. In a device of the character described, the combination with a frame, a pointer, a spring for retaining said pointer in and returning it to normal position, a pivoted lever, and means between said pivoted lever and pointer for transmitting movement to the latter, of a second lever coöperating with said first-mentioned lever, a sliding bar, a contact head connected with said bar, a bell-crank lever, a rod having pivotal connection with said bar and with one arm of the bell-crank lever, and a rod having pivotal connection with the other arm of said bell-crank lever and said second lever.

1,380,581. GANG-PLOW. FRANKLIN B. NIESZ, Canton, Ohio, assignor to The Bucher and Gibbs Plow Company, a Corporation of Ohio. Filed Aug. 27, 1917. Serial No. 188,400. 1 Claim. (Cl. 97—7.)



In combination with the frame of a gang plow, a draft bar pivotally connected to the frame, a rock shaft having a crank arm and being pivoted to the frame at a lateral interval from the draft bar connection, a diagonal brace bar pivotally connected at its forward end to the draft bar and at its rear end to the crank arm, and means for adjusting the rock shaft and to swing the crank arm to vary the angle of the draft bar.

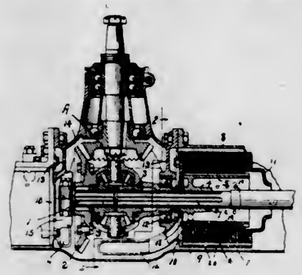
1,380,582. MACHINE FOR SHAPING CANDLE ENDS. FREDERICK L. NITSCH, Syracuse, N. Y., assignor, by mesne assignments, to George F. Sax, Syracuse, N. Y. Filed June 9, 1919. Serial No. 302,683. 15 Claims. (Cl. 18—27.)



14. A machine for shaping candle ends comprising means for holding the shank of the candle with one end projecting, a die supported by the carriage and movable

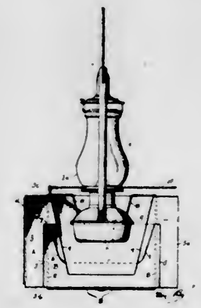
therewith, the die being arranged in advance of the candle holding means, a plunger supported by the carriage and movable therewith axially of the die, a fixed support, a power transmitting part carried by the fixed support and

coacting with the plunger, and the pusher associated with the carriage and movable into engagement with the power transmitting part after the carriage has carried the die a predetermined distance, substantially as and for the purpose st forth.



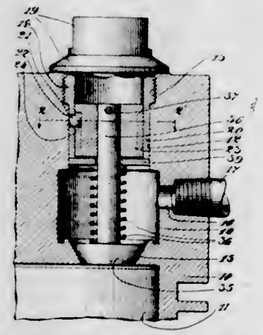
1,380,583. TRACTOR AXLE AND WHEEL. CLARK W. PARKER, New York, N. Y. Filed Aug. 20, 1919. Serial No. 318,662. 3 Claims. (Cl. 74—7.)

1. In a vehicle, the combination of a casing, a tubular axle of substantially uniform external diameter throughout its length mounted in one end of the axle casing and having an opening near its end, a tractor wheel hub rotatable on the axle and having a hub in two spaced sections, one on either side of the opening in the axle, a driving shaft within the axle, a pinion on the shaft at the opening in the axle, an idler gear extending into the opening in the tubular axle and meshing with said pinion, a pin on which said idler gear is mounted, a supporting device for said pin clamped on said axle, and an internal gear connected to the wheel hub and meshing with said idler gear.



1,380,584. LUBRICATOR FOR VEHICLE-BRAKES. CLARK W. PARKER, New York, N. Y. Filed Sept. 30, 1920. Serial No. 413,862. 5 Claims. (Cl. 188—264.)

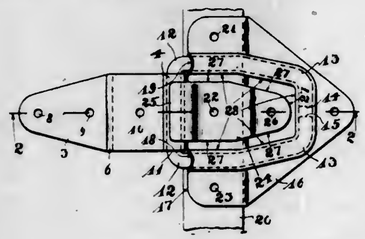
1. A lubricating mechanism for disk-brake mechanisms of alined shafts which are connected and actuated by differential gearing, consisting of an oil conductor for each brake mechanism extending toward the main ring gear



of the differential and having its inlet at substantially the level of the central line of the shafts.

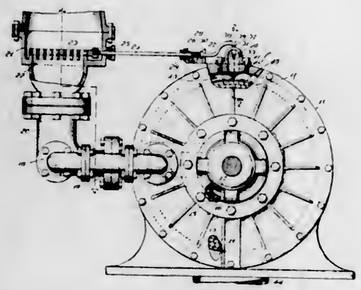
1,380,585. INSECT-TRAP. EUGENE F. PARKS, Winston-Salem, N. C. Filed Dec. 7, 1920. Serial No. 428,950. 12 Claims. (Cl. 43—113.)

1. Apparatus for trapping insects, comprising a central hopper, a chamber surrounding the hopper, means defining a trap opening therebetween, a source of light disposed immediately above the hopper and means operative to produce a zone of relative darkness in the hopper below the source of light and an illuminated zone outwardly from said zone of darkness.



1,380,586. VALVE. HENRY E. PELLETIER, Newark, N. J., assignor to Pelletier Products Mfg. Co., Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 3, 1920. Serial No. 370,924. 6 Claims. (Cl. 251—129.)

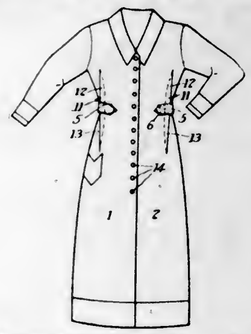
1. A valve comprising a body having a chamber and an outlet therefor, a conical seat forming an inlet into



the chamber, a cap engaging said body registering with said seat, a sleeve formed with said cap extending into the chamber, a plug movable in said sleeve, a valve element suited to said seat rigidly connected with said plug, and means carried coöperatively in said sleeve and plug for partially rotating said valve at each full movement thereof.

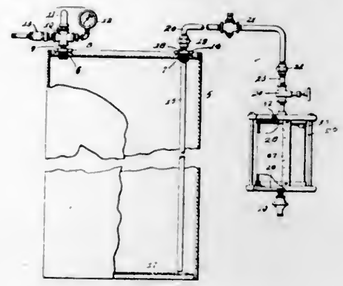
1,380,587. HINGE. ISIDORE PHILLIPS, Los Angeles, Calif. Filed Dec. 18, 1920. Serial No. 431,700. 4 Claims. (Cl. 16—106.)

3. In a hinge, one member folded upon itself forming a knuckle, a link member disposed through the knuckle extending away from the knuckle so that the free ends practically meet having bent terminations practically parallel to the portion in the knuckle, and a second member having a recess in its underside engaging the free portion of the link so that the link cannot withdraw from the second member when the second member is placed over it.



1,380,588. GOVERNOR. PETER PHILLIP, Chicago, Ill. Filed May 18, 1917. Serial No. 169,436. 6 Claims. (Cl. 253—82.)

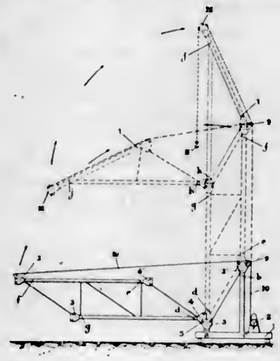
1. The combination with a fluid operated turbine having a rotor with a circular series of vanes operated on by the motive fluid for imparting rotation to the rotor, of governing mechanism including an actuating member adjacent the path of movement of said vanes and adapted for movement in a direction corresponding to the direction of movement of the adjacent vanes so as to be displaced by the motive fluid as it leaves said vanes of the rotor.



1,380,589. GARMENT. EMMA POYER, Los Angeles, Calif. Filed Sept. 30, 1919. Serial No. 327,538. 1 Claim. (Cl. 2—145.)

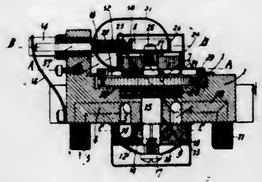
In a garment, front pieces, a back piece fastened to the front pieces, and a belt fastened at its opposite ends to the front pieces and fastened intermediate of its ends to the back piece, there being folds in the front pieces respectively fastened only at the belt and gradually disappearing toward the neck and hem of the garment, and there being a box plait in the back piece fastened at the belt and for a slight distance below the belt and loose above the belt and somewhat below the belt and gradually

disappearing toward the neck and hem of the garment, and the belt having its ends spaced apart and the front pieces hanging straight and loose.



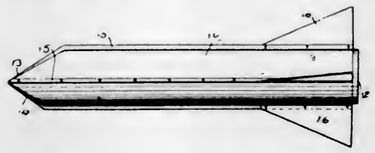
1,380,590. OIL DISPENSING AND MEASURING DEVICE. STEPHEN C. PRICE, Louisiana, Mo., and EARL E. RICHARDSON, Quincy, Ill., assignors, by direct and mesne assignments, to P. R. B. Pump Co., Hannibal, Mo., a Corporation of Missouri. Filed July 28, 1919. Serial No. 313,899. 2 Claims. (Cl. 221—99.)

1. An oil dispensing and measuring device, comprising a single tank for storing the oil and air under pressure, and provided with screw-threaded openings, an internally and externally screw-threaded nut secured in each opening and providing air-tight connections for said openings except through the nuts, a cross shaped fitting detachably mounted in one of said nuts, a pressure gage and safety valve carried by said fitting, an outwardly seating check valve for admitting and retaining air under pressure carried by said fitting, a discharge pipe located in said tank having its upper end screw seated in the other nut, a goose neck provided with a cut-off valve, a swivel connection between the goose neck and discharge pipe permitting the same to bes wung and adjusted to different sides of the tank, a measuring chamber, a swivel connection between the measuring chamber and goose neck, whereby the latter may be disconnected from the goose neck and adjusted so as to bring the scale on the measuring chamber in desired position independent of the adjustment of the goose neck.



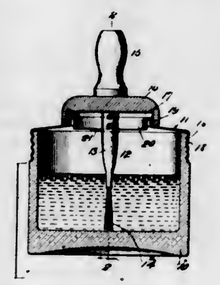
1,380,591. PORTABLE LIFTING APPARATUS. FRANÇOIS QUET, Nice, France. Filed Mar. 25, 1919. Serial No. 285,064. 3 Claims. (Cl. 212—8.)

1. A jib crane comprising a structural framework constructed of separate component parts, the said component parts being pivotally connected with each other by horizontal bolts and having oblique assembling planes proceeding from the pivotal axis, the said oblique plane of one component part in the erection of the structure being brought to bear upon the corresponding oblique assembling



plane of the other component part already erected, and means for completing the connection of the respective component parts to form integral members of the structure, substantially as described.

1,380,592. APPARATUS FOR CONTROLLING THE GAS-SUPPLY, IGNITING, AND EXTINGUISHING GAS-BURNERS. LÉON RADET, Paris, France. Filed June 12, 1919. Serial No. 303,780. 3 Claims. (Cl. 67—20.1.)



1. Apparatus for controlling gas supply, igniting, and extinguishing gas lamps, comprising in combination: a rotatable shaft mechanism on said shaft for opening and closing the gas supply to a pilot jet and to a main burner respectively; a spring drum on said shaft having a roughened outer surface; a stationary ring surrounding said shaft; internal projections on said ring; an eccentric on said shaft; a bolt in operative connection with said eccentric and passing through the said spring drum, so adjusted with regard to the stationary ring as to alternately stop and release the spring drum during the rotation of the shaft; and a spring-impelled sparking rod in contact with the roughened surface of the drum.

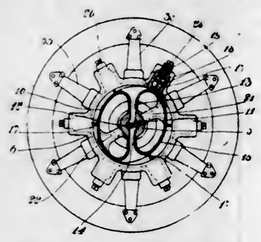
1,380,593. CONVEYER FOR UNLOADING ARTICLES FROM AIRCRAFT. JACK M. REAY, Blackfoot, Idaho. Filed Feb. 19, 1921. Serial No. 446,370. 7 Claims. (Cl. 9—8.)

1. A conveyer for unloading articles from aircraft comprising a hollow body pointed at one end and having radially projecting wings at its opposite end, the butt end of the body being open, and a lid having water-tight engagement with the butt end of the conveyer, the forward end of the conveyer having oppositely beveled faces, one longer than the other, whereby to cause the conveyer to rise quickly after striking the water.

1,380,594. MUCILAGE-STAND. JAMES T. RILEY, Brooklyn, N. Y., assignor to Kimpton, Haupt & Co., New York, N. Y., a Firm composed of Charles F. Kimpton, Harry Haupt, and Elizabeth H. Harbottle. Filed Sept. 15, 1920. Serial No. 410,552. 3 Claims. (Cl. 91—67.3.)

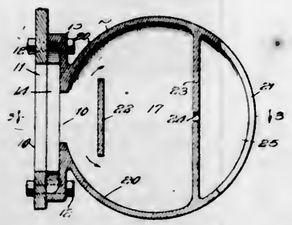
1. A mucilage stand comprising a receptacle, a cover therefor having a central opening and a brush having a handle and a lid for said opening, said cover having a peripheral edge portion to engage the receptacle and at said opening having a double-flange comprising an upwardly extending outer member and an inner member extending downwardly from the folded-over upper edge of the said outer member, and said cover also having a bar connected at its ends with the lower edge of said inner member and crossing said opening at one side of the center thereof.

1,380,595. QUICK-THROW ELECTRIC SWITCH. EMIL RITZ, Jr., Cincinnati, Ohio, assignor to The Hisey-Wolf Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 29, 1918. Serial No. 231,329. 8 Claims. (Cl. 200—78.)



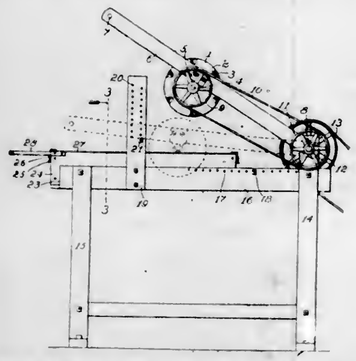
1. In a quick throw electrical switch, a sliding switch closing member, a spring bearing directly on said member, a member adapted to engage the switch closing member and draw it out of closing position, a spring bearing directly on said engaging member, pawls to retain the switch closing member and the engaging members therefor in position, and means for compressing the springs, and releasing the pawls after the springs are compressed, and an independent latch for controlling the opening movement of the closing member, for the purpose described.

1,380,596. HYDRAULIC MOTOR. CARL AUGUST RUDQVIST, Stäket, Sweden, assignor to J. & C. G. Bolinders Mekaniska Verkstadts Aktiebolag, Stockholm, Sweden, a Manufacturing Company of Sweden. Filed Nov. 1, 1920. Serial No. 421,063. 1 Claim. (Cl. 121—54.)



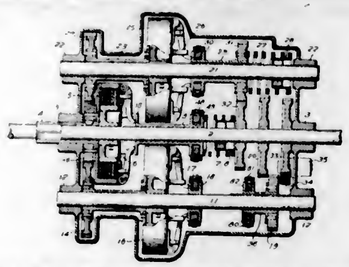
In a hydraulic motor, the combination of a stationary stator having eccentric bounding surfaces and axial inlet and outlet passages for the driving liquid, a rotatable casing surrounding said stator, and movable pistons in said casing bearing against the bounding surfaces of said

stator, said bounding surfaces having such different shapes as to produce working chambers of different volumes be-



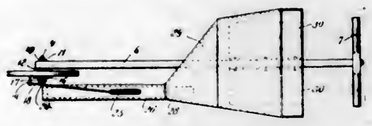
tween said surfaces and said casing, each of which chambers communicates with one of said inlet passages.

1,380,597. FUEL-SAVING ATTACHMENT FOR FURNACES. NELSON J. RUSSELL, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,744. 3 Claims. (Cl. 110—175.)



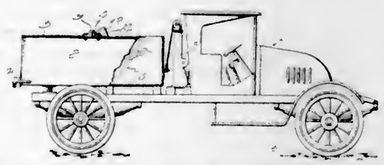
3. As a new article of manufacture, a fuel saving attachment for furnaces comprising a member having at its edge a receiving chamber-casing with a reduced outlet and provided with a horizontally disposed cavity in communication with said chamber-casing through said outlet, a baffle plate located within said cavity near the receiving chamber, and a centrally orificed partition located in said cavity parallel with said baffle plate thereof, said member having in the inner or front portion of its wall a horizontally disposed discharging slot.

1,380,598. MACHINE FOR FORMING CONCRETE BLOCKS. JOHN M. SCHENK, deceased, Waterloo, Iowa, by Ella M. Schenk, administratrix, assignor to Ella M. Schenk, Waterloo, Iowa. Filed Apr. 22, 1920. Serial No. 375,829. 11 Claims. (Cl. 25—119.)



1. In a machine for forming concrete blocks, an open mold mounted for reciprocation, and a rotary former-head having a plurality of troweling cheeks movable into and out of said mold.

1,380,599. TRANSMISSION-GEARING. CHARLES R. SCOTT, Wyandotte, Okla. Filed Jan. 24, 1920. Serial No. 353,733. 14 Claims. (Cl. 74—58.)

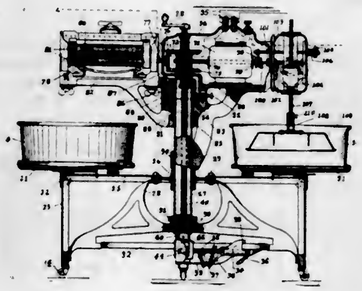


1. Transmission gearing comprising a main drive shaft, high, intermediate and low speed shafts, gearing mounted on said shafts, gearing on the main drive shaft adapted to mesh therewith, controlling means for said high and intermediate gearing, separate control means for said low speed gearing, and means operable by said low speed control means to disconnect said high or intermediate speed gearing.

1,380,600. PLAYGROUND-MARKER. MILTON H. SEITZ, Akron, Ohio. Filed Aug. 12, 1920. Serial No. 402,992. 2 Claims. (Cl. 275—2.)

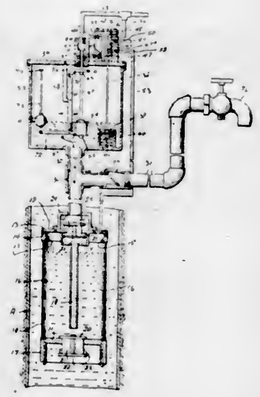
2. In a device of the character specified, a wheel supported hopper having a discharge chute of uniform cross-section throughout its length, a grid arranged within the chute, and a connection between the supporting wheel and the grid for reciprocating said grid.

1,380,601. DUMPING-TRUCK. TIMOTHY E. SHAFER, Fowler, Calif. Filed Jan. 5, 1920. Serial No. 349,498. 2 Claims. (Cl. 298—8.)



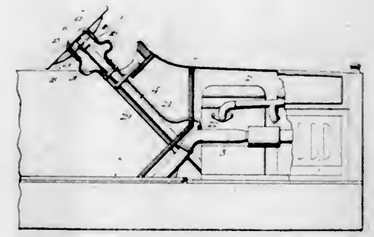
1. The combination with a vehicle body including a movable end gate; of a longitudinally adjustable transverse partition disposed between the gate and the opposite end of the body, oppositely disposed bearings shiftable along the upper edges of the sides of the body, a rock shaft including a crank portion, having its opposite ends journaled in the bearings, said shaft being secured to the partition and serving as the pivotal mounting for the latter, a bolt connected to the crank portion of the shaft, a guide on the partition, the bolt being slidable through the guide, the bottom of said body being provided with spaced openings into which the free end of the bolt is receivable.

1,380,602. LAUNDRYING-MACHINE. JOHN H. SIERT and ALVIN H. SIERT, Omaha, Nebr. Filed Mar. 8, 1920. Serial No. 364,062. 2 Claims. (Cl. 68—19.)



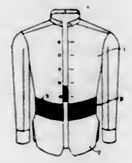
1. A laundrying machine comprising a clothes pounder including a plunger, a rod carrying said plunger and

mounted to reciprocate vertically, a casing slidingly receiving said rod, a head on the rod within the casing, said head adapted to reciprocate the rod to permit the rod to turn therein, means for turning said rod in the head during the reciprocating movement of the rod, said



head having horizontally extending cam grooves therein with an offset portion at its central part, a crank arm engaged with said groove and moving alternately in and out of the depressed central part thereof, and means for causing the crank arm to move in a circular path.

1,380,603. PNEUMATIC PUMP. THOMAS E. SMYTHE, Hammond, Ind. Filed Nov. 1, 1919. Serial No. 335,054. 6 Claims. (Cl. 103—8.)

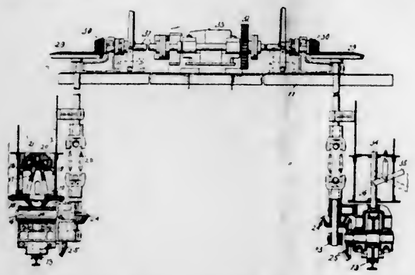


1. A pneumatic pump comprising a lower chamber connected to a source of liquid, an upper chamber into which the lower chamber discharges, said upper chamber having a liquid discharge outlet, a valve mechanism adapted in one position to permit the entrance of air under compression into the lower chamber to force the liquid therein into the upper chamber, and in this position permitting the outlet of air from the upper chamber, said valve in its other position permitting the inlet of air under pressure into said upper chamber to discharge the water therefrom and permitting the outlet of air from the lower chamber to permit the lower chamber to fill, and float actuated means within the upper chamber for controlling the movement of said valve and comprising means shiftable suddenly in one direction when the liquid within the upper chamber has risen to a predetermined level therein and shiftable suddenly in the other direction when the liquid within the chamber has descended to a predetermined point.

1,380,604. STEERING-WHEEL HAND-WARMING DEVICE FOR AUTOMOBILES AND MARINE AND AVIATING MACHINES. LEMAN F. STUMBAUGH, Denver, Colo. Filed Jan. 28, 1920. Serial No. 354,608. 2 Claims. (Cl. 237—12.3.)

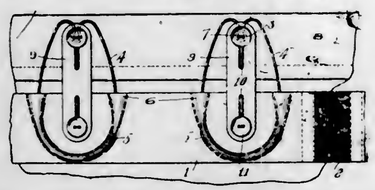
1. A hand warming device for steering wheels comprising a pair of hollow hand grips attached to opposite sides of a steering wheel and lying outside of the same, an inlet pipe connecting similarly disposed ends of said hand grips, a T centrally located in said inlet pipe, an outlet pipe connecting the opposite ends of said hand grips, a T centrally located in said outlet pipe, means for supplying a heating medium to the T of said inlet pipe and comprising a section of flexible tubing and a valved pipe adapted to be connected to the exhaust pipe of an engine, and means including a section of flexible tubing and a pipe opening to the atmosphere for conducting the heating medium from the T of said outlet pipe.

1,380,605. LOCK-GARMENT. SAMUEL F. SWANTEES, St. Louis, Mo. Filed Feb. 5, 1919. Serial No. 275,195. Renewed Apr. 23, 1921. Serial No. 463,977. 2 Claims. (Cl. 2—142.)



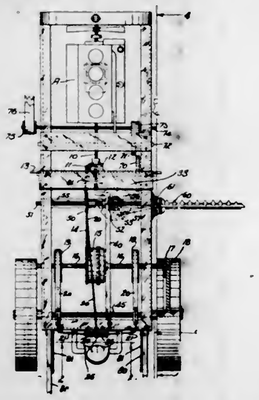
2. A garment of the class described comprising upper and lower encircling members, a waistband connecting the said member and provided with exterior and interior gripping faces.

1,380,606. WINDOW FOR VEHICLE-CURTAINS. RITCHIE O. TAYLOR, Detroit, Mich., assignor of one-half to Jack Heinze, Detroit, Mich. Filed May 10, 1920. Serial No. 380,069. 6 Claims. (Cl. 296—145.)



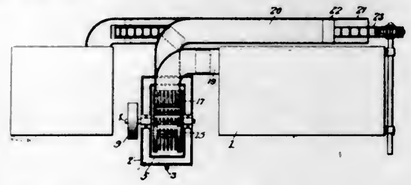
1. In a window for vehicle curtains, the combination with a curtain having a window opening, of a transparent closure for said opening, a frame providing a seat for said closure, a clamping member securing said frame to the curtain, and a retaining member for said closure covering the clamping member and secured independently of the latter to said frame.

1,380,607. TWO-WHEEL SWIVELING AND EQUALIZING CRANE-TRUCK. IVOR D. THOMAS, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1919. Serial No. 328,504. 13 Claims. (Cl. 105—118.)



1. In combination with a crane structure, a two-wheel truck comprising a truck frame or casting, a load supporting spindle for holding the truck in upright position and supported in vertical position between the crane structure and truck so that the truck may have a swiveling action about its axis and said spindle having a connection with the truck whereby the truck may have an equalizing action about a different axis.

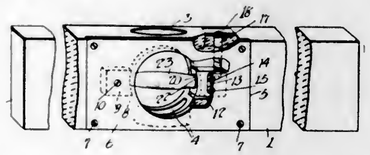
1,380,608. GARMENT-SUPPORTING BELT. ORVILLE C. THOMPSON, Rochester, N. Y. Filed July 18, 1919. Serial No. 311,788. 5 Claims. (Cl. 241—9.)



3. A belt provided with U shaped channels opening upwardly, and looped struts fitted in said channels to turn therein, said struts having garment engaging means at their swinging ends.

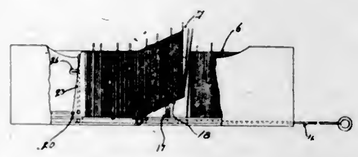
1,380,609. TRACTOR. EDGAR V. ULLRICH, Colorado Springs, Colo. Filed July 29, 1918. Serial No. 247,152. 2 Claims. (Cl. 180—17.)

1. The combination with a tractor having a gear shift, a differential and jack shafts extending from said differential, of braking mechanism for each jack shaft, a lever pivoted to move in planes at angles to each other, a connection between said lever and braking mechanism to operate the latter when the lever is moved in one plane, and a connection between the lever and said gear shift to operate said gear shift when the lever is moved in the other plane.



1,380,610. METHOD OF AND MACHINE FOR APPLYING A COATING TO CANS. OTTO VOSS, Honolulu, Hawaii, assignor to Hawaiian Pineapple Company, Limited, Honolulu, Hawaii. Filed Sept. 21, 1918. Serial No. 255,109. 8 Claims. (Cl. 99—8.)

1. The method of treating sealed cans of food stuffs, and the like, which consists in heating the cans to cook the contents and create a pressure within the cans in excess of the outside pressure, and applying a coating to the exterior of the cans during the continuance of the excess pressure within said cans.



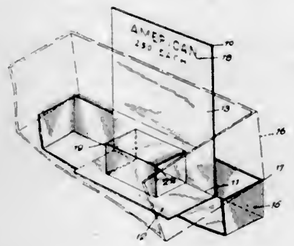
5. The combination with a cooker for cooking the contents of sealed cans, of means connected with the cooker for applying a liquid coating to the exterior of the cans before the temperature of the cans is materially reduced.

1,380,611. LEVEL. ROBERT WALKER, Toronto, Ontario, Canada. Filed May 27, 1919. Serial No. 300,066. 2 Claims. (Cl. 33—214.)

1. In a level, the combination with the level body having sighting orifices extending inwardly at the center of the level from all sides and a level glass tapered toward its ends, a block turnably supported within the level body having a level glass receiving recess into which one end of the level glass fits, an adjustable block carried in the level body at the opposite side of the sighting orifices having a level glass receiving recess into which the opposite end of the level glass fits, and means for adjusting the block within the level body.

1,380,612. CARD-RAISING ATTACHMENT FOR FILING-DRAWERS. WILLIAM E. WALKER, Denver, Colo. Filed May 7, 1919. Serial No. 295,366. 10 Claims. (Cl. 129—16.)

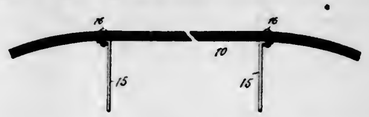
1. A card-raising device for filing drawers, comprising in combination with the drawer, a frame slidable in the drawer below the cards, a rod journaled in the frame and provided with a crank arm, and a plate hinged to the frame and adapted to be acted on by the crank arm to lift the cards.



8. The combination with a filing drawer, of means longitudinally slidable in said drawer below the cards, a card raising device liftably mounted on said means, and a longitudinally disposed rod connected with the said means for actuating the raising device.

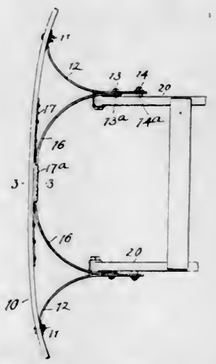
1,380,613. CONCRETE-REINFORCEMENT. MICHAEL J. WALL, Troy, N. Y. Filed June 22, 1916. Serial No. 105,179. 1 Claim. (Cl. 72—113.)

A reinforcing element for plastic structures comprising a bar having an enlarged base portion and a reduced upper portion, longitudinally disposed ribs on opposite sides of the bar, said reduced portion of the bar being provided with spaced rows of longitudinally alined incisions extending in both directions from the central point thereof and arranged in relatively staggered positions to form overlapping sections when the reduced portion of the bar is expanded in a single, vertical plane in the direction of the depth of the bar, said overlapping sections being permanently attached to each other to present a continuous, horizontal, top edge, said edge having a right angular transverse slit, the terminals constituted by the slit overlapping and of the same width when the reduced portion of the bar is vertically expanded.



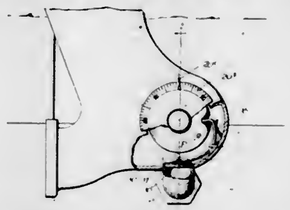
1,380,614. EASEL. NATHAN WARSHAW, New York, N. Y. Filed Jan. 17, 1919. Serial No. 271,724. 1 Claim (Cl. 211—28.)

The combination with a box having a body with a removable lid, of an easel consisting of a pliable plate creased transversely to provide two members one foldable upon the other and one of the members being held to the bottom interiorly of the box body so that the other member may be swung upwardly and downwardly outward of the box body, said pliable plate having in its central part crosswise of its crease spaced parallel slits to provide a strip which is also creased transversely intermediate its ends for being folded together between the members of the plate when said members are folded toward each other as well as assuming the shape substantially of an inverted L to provide a support protruding from the members of the plate when one of the members is swung outwardly of the box body.



1,380,615. RESILIENT BUMPER-BAR. ELVERTON W. WEAVER, Cleveland Heights, Ohio. Filed Sept. 9, 1920. Serial No. 409,154. 3 Claims. (Cl. 293—55.)

3. A resilient bumper bar for automobiles comprising a plurality of bent laminæ glued together with the joints between them occupying substantially vertical positions, brackets for securing said bumper bar to an automobile,

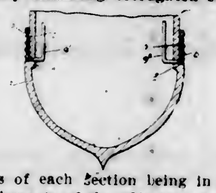


each bracket being secured against the inner face of the bumper bar, and bolts passing through said bumper bar from front to rear and through said brackets.

1,380,616. BUMPER-BAR. ELVERTON W. WEAVER, Cleveland Heights, Ohio. Filed Feb. 16, 1921. Serial No. 445,438. 7 Claims. (Cl. 293—55.)

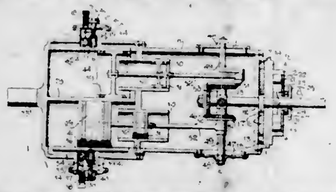
2. An automobile bumper comprising a resilient bumper bar, two bracket bars whose front ends are bent outward and are fastened to the bumper bar and whose rear ends are substantially parallel and are adapted to be connected with the side frame members of an automobile, a resilient arch brace whose middle part lies behind and is in contact with the bumper bar and whose ends are connected to the respective brace bars at points such that the bumper bar and the arch brace are distorted and put under stress or tension.

1,380,617. AUTOMOBILE-THEFT-PREVENTING DEVICE. PERCY WELLIVER, Hereford, Tex. Filed Sept. 14, 1920. Serial No. 410,246. 6 Claims. (Cl. 251—6.)



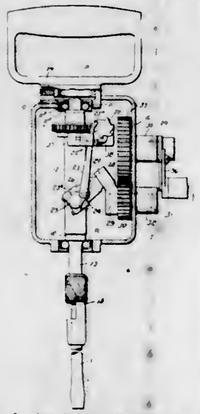
4. In an automobile theft preventing device of the character described, in combination with an engine of an automobile including a carbureter, an intake manifold and a crank case, a bypass leading from the intake manifold, intermediate the carbureter and the engine to the crank case.

1,380,618. OUTBOARD-CONDENSER. DAVID WESTFALL, New York, N. Y. Filed May 21, 1919. Serial No. 298,701. 1 Claim. (Cl. 257—26.)



A steam condenser for ships comprising a chambered member extending along the hull of the ship, the outer wall

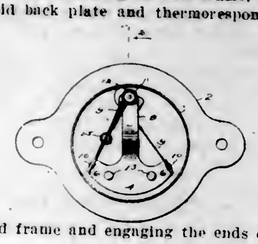
of said member being divided longitudinally into a series of longitudinally extending corrugated sections, the con-



vexed elements of each section being in alinement with the concaved elements of the adjacent section.

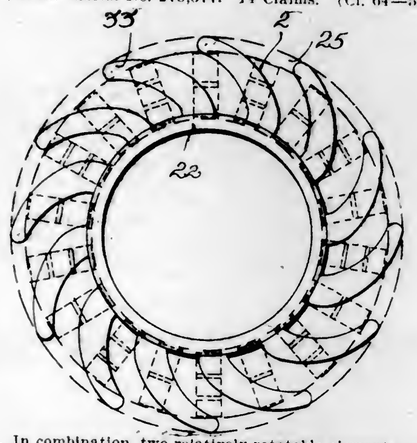
1,380,619. SPEED-CHANGING MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed July 6, 1918. Serial No. 243,526. 6 Claims. (Cl. 192—59.)

1. In a speed changing mechanism, a driving shaft, a driven shaft, and means operatively connecting the driving and driven shafts including a plurality of non-communicative cylinders, a reciprocating piston in each cylinder, a mobile medium retarding the reciprocatory movement of the pistons, automatically regulated means offering a variable resistance to the movement of said medium, crank shafts operatively connected to the respective pistons and gearing connecting the crank shafts to the driving shaft.



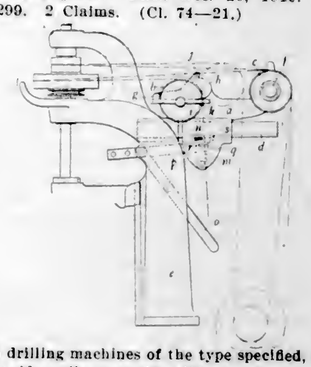
1,380,620. VALVE-GRINDING DEVICE. FORREST R WHITCOMB, West Somerville, Mass. Filed May 16, 1919. Serial No. 297,661. 8 Claims. (Cl. 74—14.)

4. A device of the kind described, comprising a tool spindle mounted for rotation, means for oscillating said spindle, and means for unidirectionally advancing said spindle step-by-step including a worm wheel and worm through which said oscillatory movement is transmitted, and a pawl and ratchet device for turning said worm connected for actuation by said oscillating means.



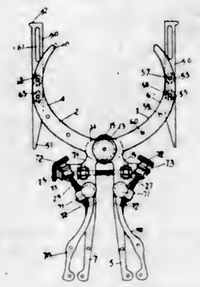
1,380,621. OVEN-THERMOMETER. HORACE R. WHITTIER, Plymouth, Conn., assignor to Cooper Oven Thermometer Company, Plymouth, Conn., a Corporation of Connecticut. Filed Dec. 3, 1920. Serial No. 427,956. 4 Claims. (Cl. 73—119.)

1. An oven thermometer having a back plate, a frame secured to said back plate, an arbor carrying a yoke rotatably supported by a bearing in said frame, and an end bearing in said back plate and thermoresponsive fingers



secured to said frame and engaging the ends of the yoke on the arbor.

1,380,622. ANTIFRICTION-BEARING. CHARLES A. WINN, Chicago, Ill., assignor to Chicago Bearings Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1919. Serial No. 275,377. 14 Claims. (Cl. 64—50.)

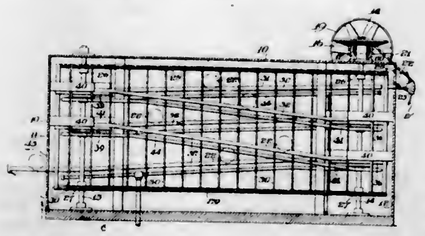


1. In combination, two relatively rotatable elements, one at least thereof comprising a thin walled sleeve, an antifriction thrust bearing interposed between said elements, comprising a relatively thin flat cage, antifriction rollers carried by the cage, a relatively thin flat race ring between the bearing and said sleeve, the sleeve being positioned against the inner edge of said ring, and outwardly projecting ribs on the sleeve for extending the ring backing surface at the end of the said sleeve.

1,380,623. ADJUSTABLE BELT-GUIDE FOR DRILLING-MACHINES. ISAAC HENRY WRIGHT, Salford, Manchester, England, assignor to Smith & Coventry Limited, Salford, England. Filed Dec. 16, 1919. Serial No. 345,299. 2 Claims. (Cl. 74—21.)

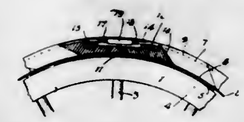
1. In drilling machines of the type specified, in combination, a guide pulley carrying slide, a rod upon which said slide is mounted, a pivoted locking catch upon the slide normally held in engagement with said rod, a hand operated link for moving the slide, the said link actuating the catch to disengage the same prior to moving the slide for releasing the belt tension, as set forth.

1,380,624. COMBINATION-CALIPERS. EDWARD WULZ, New York, N. Y. Filed June 9, 1920. Serial No. 387,660. 2 Claims. (Cl. 33—154.)



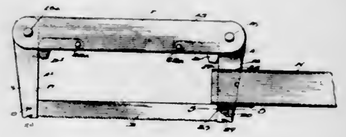
1. In a pair of calipers of the type described, a pair of extra legs attached to the principal legs thereof, swiveling connections between said extra legs and the principal legs, and means for regulating the position of each individual leg of the extra pair of legs with relation to the principal legs, so that when the principal legs have been adjusted an additional measurement can be made without disturbing said principal legs.

1,380,625. TIRE-PROTECTOR. MARVIN C. ALTMAYER, New York, N. Y. Filed June 4, 1919. Serial No. 301,716. 5 Claims. (Cl. 152—16.)



5. A tire protector adapted to be secured over the tread of a tire composed of overlapping metal plates, in combination with hollow metal blocks secured over holes in the plates, a coating of rubber vulcanized to the exposed surface of the plates and the sides of the blocks, said hollow portions of the blocks and holes in the plates forming an air cooling void in the protector adapted to cool the plates and blocks.

1,380,626. COOKING-MACHINE FOR CANNED GOODS. CHARLES H. AYARS, Salem, N. J. Filed Oct. 29, 1919. Serial No. 334,296. 3 Claims. (Cl. 193—8.)

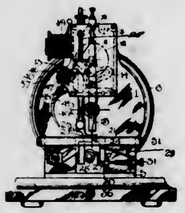


1. A machine of the character described including an elongated casing; a track within the casing and having sections adjacent the opposite sides of said casing, said sections extending in a zig-zag manner from the top to the bottom of said casing; and conveying means including belts at different levels having common upright members secured thereto and spaced apart and movable longitudinally adjacent the track sections at different levels whereby articles on said sections will be moved by said common upright members along all sections of the track from the top to the bottom; substantially as described.

1,380,627. EMERGENCY-TIRE. WILLIAM B. BANFIELD, Winnipeg, Manitoba, Canada. Filed Sept. 8, 1920. Serial No. 408,798. 2 Claims. (Cl. 152—23.)

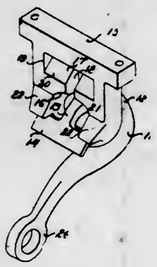
2. A tire comprising a cushioning band adapted to encircle the rim of a wheel, a plurality of abutting tread sections secured upon said band and having the abutting faces thereof angularly disposed to the band and the rim of the wheel, said sections having the outer faces thereof grooved longitudinally to provide an encircling channel and certain of said sections having the abutting ends thereof recessed to conjointly provide a pocket communicating with said channel, a tie wire passing around the sections and contained within said channel and a tightening device connecting the ends of said wire and contained within said pocket.

1,380,628. FOLDABLE HACKSAW. LAWRENCE DUNSTON BARNER, Fort Bliss, Tex. Filed Mar. 5, 1920. Serial No. 363,439. 5 Claims. (Cl. 145—33.)



1. A foldable hack saw comprising, a frame, arms pivoted in the frame and capable of occupying folded and extended positions, a saw body, coacting means formed on the arms and on said blade for supporting the latter upon the arms when in extended position, means carried by said frame for locking the arms in extended position, and a handle detachably associated with one of the arms and adapted to partially house the frame.

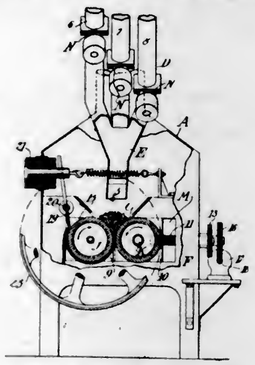
1,380,629. KNIFE. ARTHUR R. BARNETT, Portland, Oreg. Filed Mar. 10, 1920. Serial No. 364,647. 6 Claims. (Cl. 30—9.)



1. A knife comprising in combination a blade body, having downwardly projecting spaced members at or near its point and hilt, a removable cutting edge therefor adapted to be held in tension between the downwardly projecting spaced members, and having its back portion adapted to fit the lower edge of the blade body to form a continuous face, a handle therefor.

1,380,630. LOCK-STITCH SEWING-MACHINE. HERBERT ALFRED LUCAS BARRY, London, England, assignor to Silver Lock Stitch Sewing Machine Syndicate Limited, Bloomsbury, London, England, a British Limited Liability Company. Filed Dec. 11, 1920. Serial No. 430,007. 1 Claim. (Cl. 112—238.)

In a sewing machine having a head carrying a presser foot bar and a lever for lifting the same, a thread tension comprising a stud projection from said head, a pair of tension disks loosely mounted on the stud, a spring on said stud forcing one of said disks toward the other, a plate on said stud interposed between the outer disk and the spring and having a tail piece extending from one edge of the plate at right angles thereto to project into the path of the lever, and a cam surface on said lever engageable with the tail piece to move the plate against the action of the spring and thereby release the pressure on the plates.



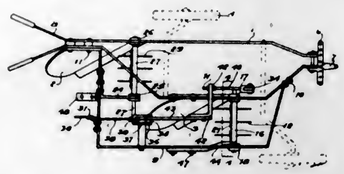
1,380,631. HOOKING DEVICE. WILLIAM MATHIS BATEMAN, Newark, Del. Filed July 3, 1920. Serial No. 393,921. 3 Claims. (Cl. 24—201.)

1. A device of the character described including a hook having an enlarged engaging end; and means for attachment with the hook including an aperture having an enlarged portion into which the enlargement of the hook is initially inserted whereby when tension is relatively imposed upon said means and hook, the enlargement of the hook will be moved into a position adjacent the smaller part of the aperture with the comparatively narrow portion of said hook in the small portion of the aperture, said means having a lug projecting therefrom, the part of the hook including said enlarged engaging end being of sufficient length to cause said enlarged portion of the hook to engage under the lug; substantially as described.

1,380,632. ROLLING-MACHINE FOR WORKING PLASTIC MATERIAL. WILLIAM CLARENCE BOWDEN, Middle Village, N. Y. Filed June 10, 1920. Serial No. 388,046. 11 Claims. (Cl. 18—2.)

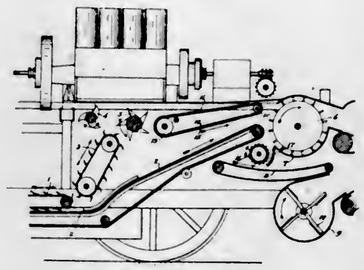
11. In a machine for rolling plastic materials, the combination of coöperating rolls, a plurality of means for discharging materials thereto, means for periodically spacing the rolls, a dividing member to separate material adhering to a roll, and controlling means adapted to operate said discharging means, spacing means, and dividing means to compound a mixture of prescribed ingredients, to commingle the same to homogeneity, to recommingle the same and finally to sever and discharge the mixture.

1,380,633. TOOTHBRUSH-MARKER. ELMER J. BROWN, Rangeley, Me. Filed Sept. 24, 1920. Serial No. 412,526. 2 Claims. (Cl. 40—2.)



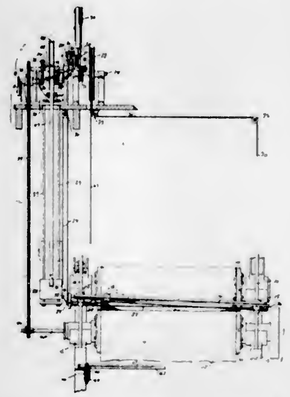
1. A tooth-brush marker comprising a thin elastic body adapted to surround and tightly grip the handle of a tooth-brush and of a transparent nature, and an identification card interposed between the holder and the tooth-brush handle.

1,380,634. PROCESS OF REMOVING DISCOLORING-DEPOSITS FROM MASONRY STRUCTURES. DOLARD CADIAUX, Lowell, Mass. Filed July 12, 1919. Serial No. 310,435. 3 Claims. (Cl. 91—68.)



2. The process of treating stone, brick, etc., consisting in first cleaning the same by an application of mineral cleansing acid, thereto and second by the application of a mixture of essential oils and glycerin as will render the cleaned surface impervious to moisture without alteration of the natural appearance of the same.

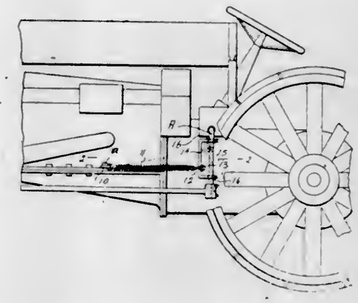
1,380,635. MACHINE FOR ERADICATING QUACK-GRASS. WILLIAM EDWARD CLARK, Brandon, Manitoba, Canada. Filed Jan. 31, 1920. Serial No. 355,351. 2 Claims. (Cl. 97—43.)



1. The combination with a gang plow frame and the plows thereof, of a side bar permanently secured to the furrow side of the plow frame and forming with the plow frame an extension frame, a front set of cutting disks carried by the extension frame and located in advance of the front plow, a rear set of cutting disks carried by the extension and plow frames and located in advance of the rear plow, an operating connection between the front and rear sets of disks, and a controlling lever connected to the rear set of disks, for simultaneously raising and lowering both sets of disks through the medium of the connection extending between the latter.

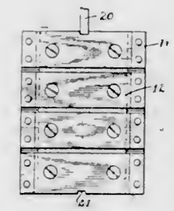
1,380,636. TRAVELING THRESHING-MACHINE. JACOB CLOVE, Calgary, Alberta, Canada. Filed Jan. 22, 1920. Serial No. 353,368. 5 Claims. (Cl. 130—27.)

1. In a threshing machine, the combination with a main cylinder and concave and feeding means for delivering material to be threshed to the cylinder, of an auxiliary cylinder and concave positioned adjacent the main cylinder and designed to receive and thresh the shattered material escaping downwardly between the feeding means and the main cylinder.



1,380,637. WET-MACHINE. HENRY A. CONSTANTINE, Niagara Falls, N. Y. Filed Jan. 31, 1919. Serial No. 274,332. 13 Claims. (Cl. 92—67.)

1. In a wet machine, a roll adapted to accumulate a deposit thereon, a cutter movable across the roll, means for forcing the cutter toward the roll during the cutting stroke, and means for retracting the cutter from the roll during the return stroke.



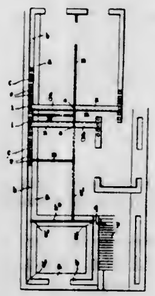
1,380,638. STEERING DEVICE FOR TRACTORS. ALBERT G. CRAWFORD, Iroquois, S. D. Filed Aug. 5, 1920. Serial No. 401,399. 4 Claims. (Cl. 280—87.)

1. The combination with a tractor having ground engaging, dirigible steering wheels, and a manually controlled steering mechanism including an arm, of a track detachably clamped to the arm and moving therewith,

a spring attached at one end to the frame of the machine and at its other end having a roller shiftably engageable with said track.

1,380,639. HEAD-BLOCK FOR HAY-BALERS. JOHN A. DAILING, Quincy, Ill., assignor of one-half to Anthony Badamo. Filed Feb. 13, 1920. Serial No. 358,531. 3 Claims. (Cl. 100—24.)

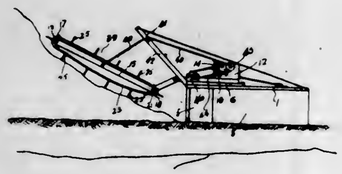
1. A head block for baling presses comprising a pair of blocks, slats secured on opposite faces of said blocks so as to form a rectangular space, a block adapted to be inserted in said space, and means for securing the first mentioned blocks and the slats to the second mentioned block.



3. A head block for baling presses comprising a central block, a plurality of slats spaced apart and removably secured to opposite faces of the block by means of bolts passing entirely therethrough, a plurality of short blocks adjacent the long edges of the central block, said short blocks being permanently secured to the slats, and metallic U-shaped members secured around the ends of the slats and the short blocks.

1,380,640. MANUFACTURE OF RUBBER. SAMUEL CLELAND DAVIDSON, Belfast, Ireland. Filed Feb. 24, 1920. Serial No. 360,834. 2 Claims. (Cl. 18—50.)

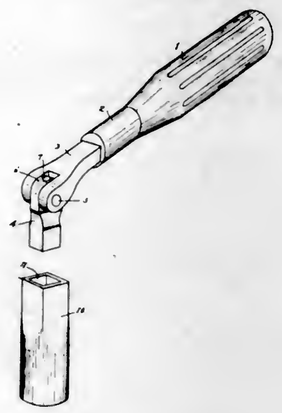
1. A process for preparing raw rubber of high grade directly from rubber latex in a simplified manner and with the omission of evaporating drying or smoking which consists in the combination of several consecutive and, when so employed, conjointly operative treatments, as follows: first, treating the latex, as soon as practicable after being tapped from the rubber trees, with a dilute aqueous solution of alkalized phenol to preserve the latex in a fluid and sound condition for any required length of time prior to coagulation; second, adding thereto a dilute solution of a suitable acid in sufficient quantity to neutralize the alkalinity of said preservative treatment and acidify the latex, whereby nascent phenol is liberated and energetic coagulation of the contained rubber in the latex takes place, the bulk of the impurities originally contained in



the latex remaining in solution in mother liquor; and third, subjecting the coagulum of rubber thus obtained to a mechanical dehydrating treatment, all substantially as hereinbefore described.

1,380,641. CONSTRUCTION OF PORTABLE HOUSES AND BUILDINGS. TEOTIMO DE FORTUNY Y DE CARPI, Barcelona, Spain. Filed May 28, 1920. Serial No. 385,055. 3 Claims. (Cl. 20—2.)

1. The method of constructing portable houses and buildings from loose structural members, which consists in forming the foundation of a series of slabs each slab having one or more grooves in its upper surface, the said slabs being so laid that a series of grooves are formed the positions of which coincide with the positions of the walls, forming the walls of a series of courses of building blocks which are interconnected and locked together by means of interlocking projections and recesses on the blocks, the lower course of such blocks having plain surfaces and fitting into the grooves in the foundation slabs, and forming each floor and the roof of the building of a course of girder-like members such members having projections and recesses at their ends corresponding with those of the building blocks whereby the said members are interlocked with the adjacent courses of building blocks.



1,380,642. GROUND-SLUCING APPARATUS. JAMES WESLEY DUNHAM, Burnaby, British Columbia, Canada. Filed Mar. 4, 1920. Serial No. 363,299. 4 Claims. (Cl. 37—11.)

1. An apparatus of the class described comprising, a platform, mechanical means mounted thereon for loosening placer ground whereby the working of the same during hydraulicking is facilitated, and a sluiceway under the platform adapted to direct the loosened ground to a sluice box at its rear end.

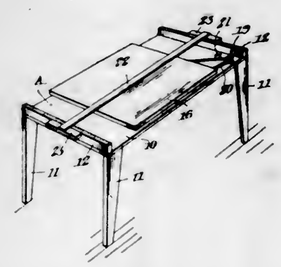
1,380,643. WRENCH. SAMUEL EAGLE, Gilbert Plains, Manitoba, Canada. Filed Oct. 13, 1920. Serial No. 416,731. 1 Claim. (Cl. 81—58.)

A wrench comprising a handle having a bifurcated shank, a socket support having one end mounted and pivotally secured between the branches of the shank bifurcations and the other end squared, a nut engaging socket having a squared bore adapted to slidably receive the

squared end of the socket support therein, and means carried by the handle and engageable with the rounded end of the socket support to hold the latter in different positions.

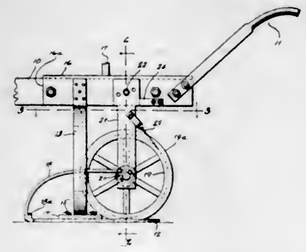
1,380,644. DEVICE FOR HOLDING PRINTING-PRESS CUTTER-SHAFTS. FRED S. ENGLISH, New London, Conn., assignor to The Babcock Printing Press Manufacturing Company, New London, Conn., a Corporation of Connecticut. Filed Aug. 12, 1918. Serial No. 249,410. 1 Claim. (Cl. 164—61.)

In a printing press a device for cutting the sheets into sections as they are delivered from the impression cylinder and comprising upper and lower shafts, coöperating propelling and cutting devices on said shafts, springs acting to raise said upper shaft, levers for forcing down said upper shaft in opposition to said springs, springs for forcing said levers upwardly and means for adjusting the position of said levers, said levers having cams and adapted to effect the release and return of said upper shaft to position without disturbing the adjustment of said adjusting means.



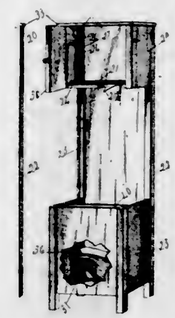
1,380,645. MOLD FOR RUBBER TIRES AND TUBES. HARRY E. FISHER, Mifflin township, Franklin county, Ohio. Filed Mar. 20, 1920. Serial No. 367,408. 1 Claim. (Cl. 18—38.)

A mold for a rubber tire member comprising in combination, a housing of circular form divided centrally in its plane to form two parts, and separable sections having molding surfaces seated in each of said housing parts,



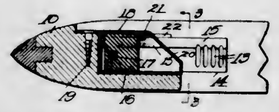
and means for securing said separable molding sections to the housing parts.

1,380,646. DRAWING-BOARD. GEORGE HAGAR GILCHRIST, Ottawa, Ontario, Canada. Filed Oct. 20, 1919. Serial No. 331,894. 1 Claim. (Cl. 88—1.)



A drawing board comprising a table having end guide members, a drawing board, a pulley attached to the drawing board, a pin carried by the pulley, a bearing centrally located in the top of the table and designed to receive the pin, anti-friction rollers between the pulley and the table, a second pulley, an endless strap engaging the two pulleys and provided on the outer face with graduations, and a reflector on the table adjacent to the outer face of the strap whereby the graduated portion of the strap in front of the reflector will be reflected to show the angle of rotation of the drawing board, as and for the purpose specified.

1,380,647. VEGETABLE-TOPPING MACHINE. WILLIAM B. GRAHAM, Deaver, Wyo. Filed Aug. 6, 1920. Serial No. 401,599. 4 Claims. (Cl. 55—107.)

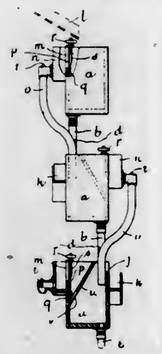


1. A vegetable cutter comprising a pair of laterally spaced topping knives having their cutting edges facing each other, a gage wheel running between the cutting portions of the knives and having peripheral ribs which are sharp to produce cutting edges, the level of said cutting edges coinciding with the level of the cutting edges of the knives, and a supporting means for the knives and the gage wheel.

1,380,648. TOWEL-DISPENSING CABINET. GEORGE E. HADLEY and WILLIAM E. RILEY, Louisville, Ky. Filed Sept. 23, 1920. Serial No. 412,185. 2 Claims. (Cl. 45—32.)

1. A towel dispensing cabinet including an upper compartment with means for opening, closing and locking the same, proper supports to retain said compartment at the desired elevation, a slotted opening in the bottom of said compartment, means for supporting a stack of towels, a receptacle for soiled towels, a guide member, part rigid and part flexible, the rigid part provided with perforations, the flexible part rigidly attached to the rigid part, and long enough to reach into the soiled towel compartment, said guide member having at the lower end a cotter-pin large enough to prevent the passage of the grommets in the towels, the upper compartment also having a spring latch holder for holding the guide member in proper position above said slotted opening, said opening being so formed that the bottom will support a stack of towels resting on the same but permitting a corner or a portion of each succeeding towel, from the bottom of the stack up, to fall in view and in such position so that said part may be readily grasped for the purpose of pulling said towel through said opening, all substantially as set forth.

1,380,649. LOOM-SHUTTLE. HUDSON W. HAKES, Millbury, Mass., assignor to Walter C. Watson, Leicester, Mass. Filed Apr. 27, 1918. Serial No. 231,063. 1 Claim. (Cl. 139—27.)



In a loom shuttle, a two-armed bobbin-holding spring, a bobbin-guiding retainer inclosing said spring, a spring-holding plate interposed between the upper edge of said spring and said retainer, said plate having a body portion and branched side portions extending forwardly to engage the arms of said spring and having an opening through its body portion, a separate spacing block held in fixed position between the sides of said spring, said block extending above said spring and fitting into said opening to position said plate and to positively prevent longitudinal or transverse movement of said plate relative to said block, and means to hold said parts in opertive relation in said shuttle.

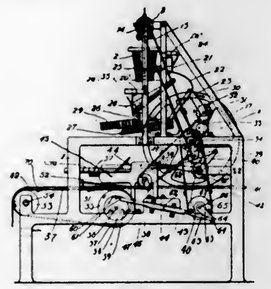
1,380,650. APPARATUS FOR THE CONCENTRATION OF ORES. JAMES HEBBARD, Broken Hill, New South Wales, Australia, assignor to Minerals Separation North American Corporation, New York, N. Y. Filed Nov. 20, 1917, Serial No. 203,024. Renewed Mar. 26, 1921. Serial No. 455,980. 8 Claims. (Cl. 83—85.)

1. Froth-flotation ore-separating apparatus of the class in which the aeration and agitation are effected by by-

draulic action of a gravity flow of the ore pulp through successive separating vessels: comprising a level-regulating overflow for each vessel disposed at a lower level than

its concentrates overflow, and each level-regulating overflow (except the last) discharging directly into the next separating vessel in the series.

1,380,651. BROOMHOLDER. CHARLES KEMPER HUFF, Christiansburg, Va. Filed Jan. 30, 1920. Serial No. 355,105. 1 Claim. (Cl. 15—19.)

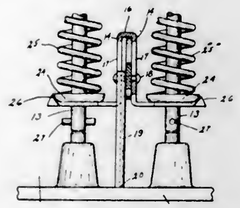


A broomholder comprising a handle having an interior bore, a nut held by a ferrule upon the bored end of said handle, an annulus slidable over said ferrule, said annulus being an extension of a flaring shaped shell, a flaring shaped block conforming in contour to said shell, and a bolt attached to said block and mating with said nut to draw said block into said shell and said annulus up over the ferrule and handle.

1,380,652. BREAD-MAKING MACHINE. ROGELIO GALLO HUIDOBRO, Mexico, Mexico. Filed Oct. 27, 1919. Serial No. 333,692. 5 Claims. (Cl. 107—9.)

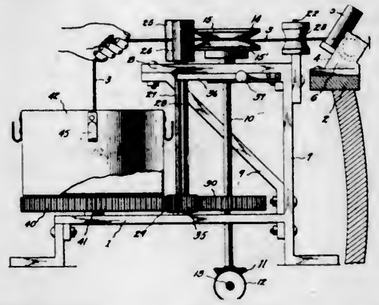
3. In bread-making machinery, the combination of kneading mechanism; means for supplying lumps of dough thereto; mechanism for shaping the kneaded lumps, comprising a fixed lower shaper and an upper shaper slidable thereon; conveying mechanism operating in timed sequence with the upper shaper and including a cloth-supporting element adapted to be loaded with the shaped lumps; and a reciprocating comb for forming pockets in the cloth to receive the individual shaped lumps and space them from one another.

5. In bread-making machinery, the combination of a lower fixed kneader; an upper kneader slidable thereon; means for delivering lumps of dough to the space between said kneaders to be kneaded by the kneaders; shaping mechanism located beneath the kneaders and comprising a fixed, curved lower shaper and a slidable upper shaper; a pusher carried by the slidable kneader to force a kneaded lump of dough over the edge of the fixed kneader and thereby deliver it to the shaping mechanism; conveying mechanism located beneath the shaping mechanism for removing the shaped lumps from the machine; and a pusher



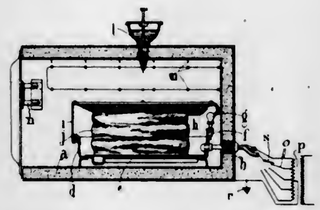
carried by the slidable shaper to force a shaped lump of dough over the edge of the fixed shaper and thereby deliver it to the conveying mechanism.

1,380,653. PIPE-CUTTER. DAVID KILGOUR, Jr., Vancouver, British Columbia, Canada. Filed Sept. 8, 1919. Serial No. 322,431. 2 Claims. (Cl. 81—192.)



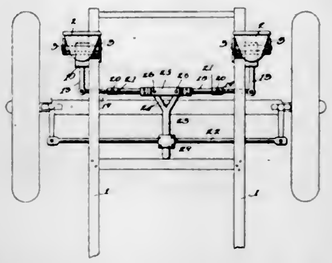
2. In a pipe cutter of the kind described, a cutter, a threaded handle bar controlling the cutter, a frame in which the handle bar is slidably mounted, said frame having a recess at one side of the handle bar, a threaded block mounted in said recess to move toward and from the handle bar to engage and disengage therewith, said frame and block having engaging surfaces inclined to the axis of the handle bar and positioned to resist lengthwise movement of the block, and a lever pivoted in the frame and having controlling connection with said block.

1,380,654. VALVE-LIFTER. NILS G. LARSON, Attleboro, Mass. Filed Feb. 19, 1920. Serial No. 360,015. 2 Claims. (Cl. 29—86.3.)



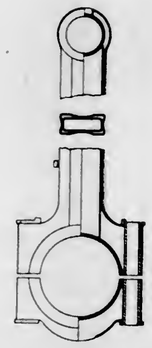
1. A valve lifter having a fulcrum post, a cam pivoted in said post, and a spring engaging member guided on said post and adapted to be operated by the movement of said cam to compress said spring.

1,380,655. HALIBUT-FISHING DEVICE. WALTER J. LARSON, Wrangell, Alaska. Filed Apr. 27, 1920. Serial No. 376,967. 6 Claims. (Cl. 254—137.)



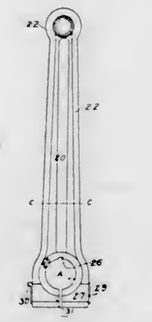
1. In a device of the character described, a revolubly driven winding head, about which a halibut line may be extended to be drawn in by operation of the head, and a pair of revolubly driven coacting rollers for taking up the line as it is delivered from the head and for maintaining it taut about the head, for the purpose set forth.

1,380,656. ELECTRIC OVEN FOR COOKING PURPOSES. CLARENCE HAROLD LAUTH, Islington, London, England. Filed June 16, 1920. Serial No. 389,472. 10 Claims. (Cl. 219—35.)



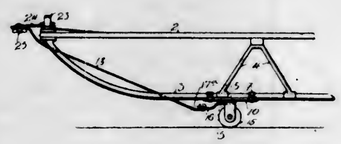
1. An electric oven for cooking solid food comprising a casing having a door for closing the casing and electrodes mounted in the casing and capable of being brought into direct contact with the solid food intended to be cooked, as set forth.

1,380,657. DIRIGIBLE HEADLIGHT. WALTER MARCELLUS LAWRENCE, OSCAR BLEDSOE LAWRENCE, and NEALY SUMMERS LAWRENCE, Birmingham, Ala. Filed Dec. 9, 1919. Serial No. 343,652. 3 Claims. (Cl. 240—62.)



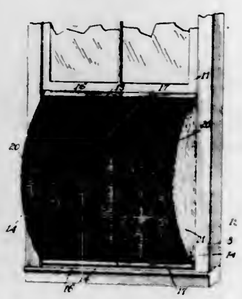
1. In a motor vehicle, the combination with the swinging headlights and the rod connecting the headlights for constraining them to swing together, of a plate for connecting said rod with the spindle connecting rod, said plate having one end connected to the rod and arranged to move vertically with respect thereto within limits, a sliding connection between the other end of the plate and the spindle connecting rod, and means for clamping the plate to the said spindle connecting rod, said sliding connection comprising clamping sections, one of said sections being secured to the spindle connecting rod, and means for clamping the other section to the first named section.

1,380,658. CONNECTING-ROD. HEBRON BERNARD LAYMAN, New York, N. Y., assignor to The Layman Pressed Rod Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1917. Serial No. 157,273. 17 Claims. (Cl. 74—17.)



12. A connecting rod comprising a one-piece sheet metal shell having a single longitudinal joint, and provided with a bearing; said rod being adapted to be separated through the bearing to form a cap, the rod and cap portions having attaching bosses.

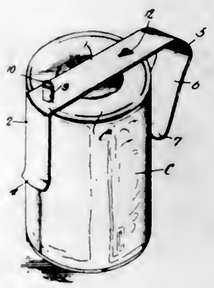
1,380,659. LINK, LEVER, AND THE LIKE. HEBRON BERNARD LAYMAN, New York, N. Y., assignor to The Layman Pressed Rod Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 26, 1916, Serial No. 93,606. Renewed Apr. 8, 1918. Serial No. 227,373. 18 Claims. (Cl. 74—5.)



1. A link lever or the like having closed pin and shaft ends, composed of substantially similar abutting parts having flanges, said flanges having parts in association therewith to receive and connect with a shaft and prevent independent rotational movement with respect thereto.

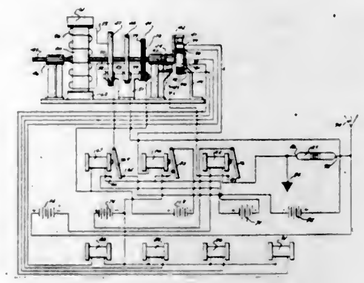
1,380,660. ATTACHMENT FOR SLEDS. LOUIS LEICHT, Yonkers, N. Y., assignor of one-half to John Walter, Yonkers, N. Y. Filed July 28, 1919. Serial No. 313,727. 3 Claims. (Cl. 280—8.)

3. A device of the class described comprising clamps adapted to be attached to a sled runner, pivoted wheels or rollers attached to said clamps and having steering arms for turning said wheels or rollers on the pivots, a bar pivotally connected with said arms to cause them to move in parallelism, a forwardly extending rod having a fixed connection with said bar, a lever extending crosswise of said body and pivoted to said body at its middle portion, an arch or bow on said lever extending forwardly of said lever and a sliding, pivotal connection between the forward end of said rod and said bow for the purpose set forth.



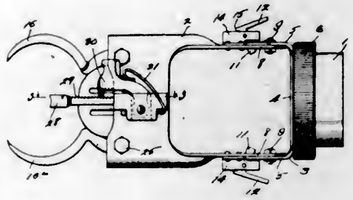
1,380,661. SCREEN. WILLIAM LEININGER, New York, N. Y., assignor of one-half to John J. Leininger, Long Island City, N. Y. Filed June 5, 1920. Serial No. 386,875. 3 Claims. (Cl. 156—14.)

2. In a screen of the class specified, a pair of screen sections of woven wire fabric, rigid members to which each fabric section is attached, resilient members attached to the edge portions of the fabric sections to extend at right angles to the rigid members and secured at opposite ends to the rigid members, the rigid members of one screen section being arranged with a slideway and the rigid members of the other screen section arranged to slidably engage in the slideways of such rigid members whereby the screen sections are slidably adjustable relative to each other and both sections are adapted to have flexing movement.



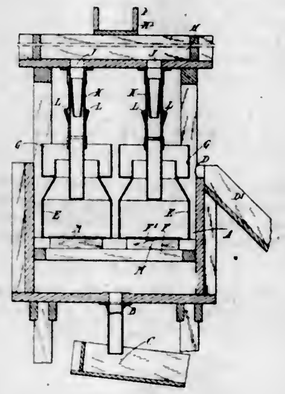
1,380,662. DISPENSING ATTACHMENT FOR CANS. PLUS RAND LEVI, Charleston, W. Va. Filed Feb. 18, 1920. Serial No. 359,530. 2 Claims. (Cl. 221—23.)

1. A device of the class described comprising a resilient strip-like body to extend across the top of a can, one end portion of the body being extended downwardly for engagement against one side of the body of the can, the other end portion of the body being extended downwardly and inwardly to provide a handle portion, and beyond the handle portion being bent to extend upwardly to provide a gripping jaw portion to engage the opposite side of the can, a spout extending through the body near the first mentioned end portion thereof and above and below the



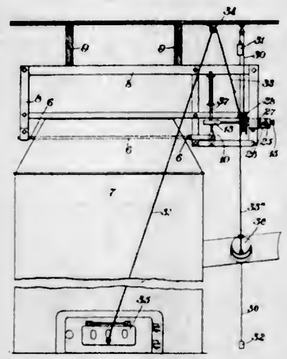
said body and provided with a piercing lower end, and a piercing element formed up from the body near the said handle.

1,380,663. WIRELESS CONTROL DEVICE. JOHN LINDGREN, Lemont, Ill. Filed May 16, 1918. Serial No. 234,876. 11 Claims. (Cl. 250—2.)



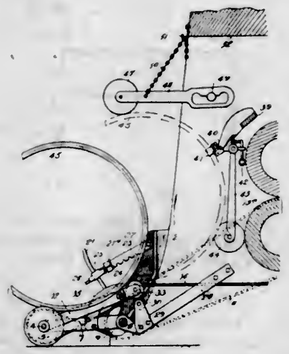
1. In a wireless control device, the combination of means at the sending station for generating jig-currents at regular intervals, with an armature rotatable in an electric field at the receiving station; means for utilizing the jig-currents to cause a partial rotation of the armature; and automatic means at the receiving station for completing the rotation of the armature during each interval.

1,380,664. ARTIFICIAL HAND. WILLIAM E. LUKE, Kalispell, Mont. Filed Apr. 21, 1920. Serial No. 375,509. 6 Claims. (Cl. 3—12.)



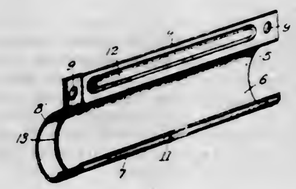
4. In an artificial hand, a supporting frame, fingers pivoted thereto, a slide mounted on the frame and operable between the fingers to effect an opening and a closing thereof, and a pressure piece connected with the slide and adapted to be engaged by an object received between the fingers to effect a closing of the latter thereon.

1,380,665. APPARATUS FOR THE CONCENTRATION OF ORES. FLEURY JAMES LYSTER, Broken Hill, New South Wales, Australia, assignor, by mesne assignments, to Minerals Separation North American Corporation. Filed Nov. 18, 1916. Serial No. 132,058. 15 Claims. (Cl. 83—85.)



1. Apparatus for the concentration of ores by flotation separation comprising in combination a separating box having a residues outflow at the bottom and an overflow at the top, a vessel mounted therein with its lower end immersed in the liquid and having an outlet at the bottom into the separating box and an overflow launder at the top, and a feed box having a discharge pipe at the bottom forming a pulp-operated air injector delivering into the said vessel.

1,380,666. DRAFT-REGULATOR FOR FURNACES. ROBERT MCCANN, Columbus, Ohio. Filed Mar. 10, 1921. Serial No. 451,250. 5 Claims. (Cl. 236—10.)

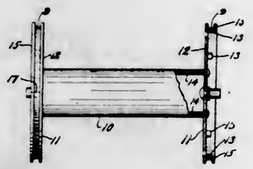


1. In means for regulating the temperature of a furnace or the like having a draft controlling device, the combination of a thermostatic bar, a stop block operated by said thermostatic bar, a rotary bladed member arranged to be released and arrested by said stop block and means for driving said bladed member and operating the draft controlling device.

1,380,667. RUBBER-TIRE-BUILDING MACHINE. ROBERT MCCLENATHEN, Cuyahoga Falls, Ohio, assignor to Kelly Springfield Tire Co. Filed June 23, 1920. Serial No. 391,097. 11 Claims. (Cl. 154—9.)

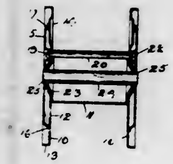
1. In a machine of the character described, mounted rim carrying rollers adapted to be raised and lowered while carrying a tire rim, means to revolve said rollers and to raise and lower said rollers and rim.

1,380,668. DOOR-HANGER TRACK AND HOUSING. CECIL R. MARTIN, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed June 20, 1918. Serial No. 241,045. 6 Claims. (Cl. 16—7.)



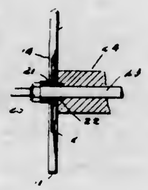
1. In a door hanger track and housing structure for supporting sliding doors, a plurality of sheet metal housing sections, a sectional track on said housing sections, integral therewith, so that each entire track and housing section is formed from a single piece of sheet metal, and a door hanger traveling on and supported entirely by said track, the ends of said sections being lapped one upon the other and secured together, thereby to provide a lap-joint between adjacent sections, and to stiffen the housing against sagging under the weight of the door, so that the housing sections are in themselves sufficient to support said track, the lap-joint thus formed by the integral ends of the sections having provisions at the upper end thereof for securing the housing to a building, and the tread of said track being formed in cross section to both stiffen the structure and prevent lateral displacement of the hanger therefrom.

1,380,669. BEAM-HEAD. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1919. Serial No. 319,346. 3 Claims. (Cl. 139—56.)



2. In an article of the character described, a head member comprising a sheet metal disk, a circular flange mem-

ber L-shape in cross section and secured at one edge to the face of said disk a distance within the periphery

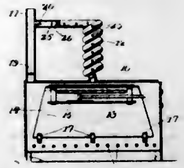


thereof and portions of said disk being bent from its normal plane to engage and centrally support said flange thereon to form an annular peripheral groove.

1,380,670. REEL OR BEAM. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 9, 1919. Serial No. 322,699. 4 Claims. (Cl. 242—77.)

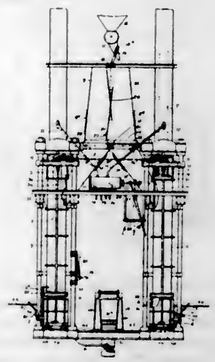
1. In a reel or beam, a body portion having a head at either end, each of said heads comprising a main plate and an auxiliary supporting plate, said auxiliary plate having a stiffening inturned edge or flange engaging and supporting said main plate adjacent its periphery, and bolts passing through both of said plates to exert a pressure on said auxiliary plate about its outer edge and also binding said heads to said body.

1,380,671. BEAM-HEAD. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 11, 1919. Serial No. 323,144. 4 Claims. (Cl. 139—56.)



1. A beam-head comprising a main plate, an auxiliary plate having an inwardly-turned peripheral stiffening flange positioned against the outer surface of said main plate said flange being recessed at intervals to fit over said ribs, and means for binding said auxiliary plate to said main plate causing the outer edge of said auxiliary plate to support said main plate.

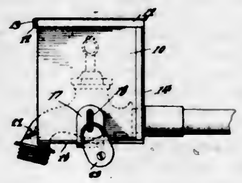
1,380,672. BOBBIN. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Oct. 15, 1919. Serial No. 330,865. 3 Claims. (Cl. 242—120.)



1. A braider bobbin having a non-metallic tubular body portion, a metal head at one end of said body having ratchet teeth said head being provided with a central opening into which one end of said body is fixed.

1,380,673. HEATING DEVICE. HENRY L. MUNSON, Fort Wayne, Ind. Filed Feb. 2, 1921. Serial No. 441,942. 1 Claim. (Cl. 126—94.)

A heater comprising an outer inclosing shell, a flue connected with the shell, a casing within the shell and consisting of a horizontal upper wall spaced below the upper wall of the shell and downwardly and outwardly inclined side walls, said side walls having their ends spaced from the end walls of the shell and their lower edges spaced inwardly from the side walls of the shell and upwardly from the bottom of the shell, the side walls of the shell having air inlet openings below the lower edges of said side walls of the casing, and brackets on the side walls of the shell supporting the side walls of the casing.

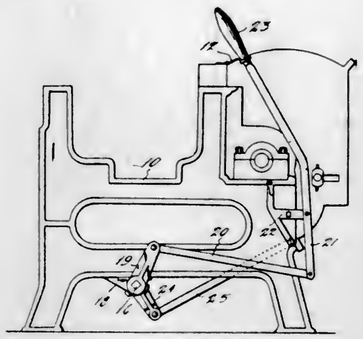


1,380,674. MACHINE FOR COMPRESSING AND PACKING COMMODITIES. HENRY LAMONT MURRAY and ALFRED GUY, Palmerston, New Zealand, assignors to Joseph Nathan and Company, Limited, Wellington, New Zealand. Filed Nov. 24, 1919. Serial No. 340,223. 18 Claims. (Cl. 226—71.)

1. A machine for the purpose set forth, comprising a pair of mutually balanced hydraulic rams; molds below

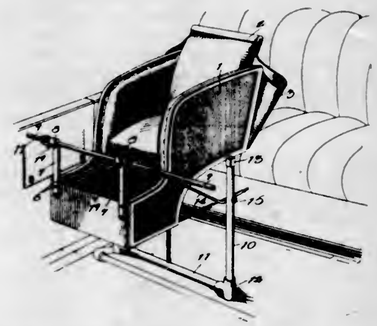
said rams; a pair of bins between said rams; inclined chutes from said bins to said molds; a bent plate keyed on a rocking shaft and adapted to close the bottom of one bin only at a time; a hopper; a pivoted chute from the hopper over said bins; gearing between said rocking shaft and said pivoted chute whereby movement of the latter over a bin synchronizes with the closing of the bottom of said bin by said bent plate; slides at the lower ends of said chutes adapted to open the latter to the molds on the ascent of ram heads within the molds and to close said chutes on the descent of said ram heads; reinforcing tin containers placed below said molds, and means for controlling the operation of said rams.

1,380,675. GAS-COCK AND FAUCET PROTECTOR. HARRY H. MYERS, Bessemer, Ala. Filed Nov. 30, 1917. Serial No. 204,754. 1 Claim. (Cl. 70—123.)



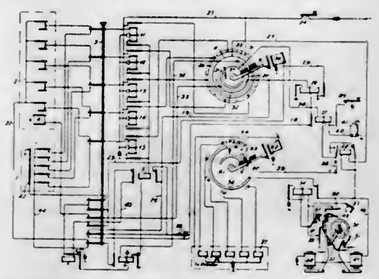
A guard for faucets comprising a housing having top, front, rear and side walls, said front and rear walls having notches in their lower edges adapted to receive the body of a faucet adjacent the inlet and outlet ends thereof, a plate hinged to the lower edge of one side wall and foldable against the other side wall beneath the faucet, said plate having a notch in its front edge registering with the notch in the front wall whereby the notch in the front wall and the notch in the plate embrace the downturned portion of the faucet, and locking means for securing the plate in closed position.

1,380,676. METHOD OF HEAT-TREATING STEEL. WALTER C. PETERSON, Detroit, Mich. Filed May 19, 1919. Serial No. 298,348. 8 Claims. (Cl. 148—13.)



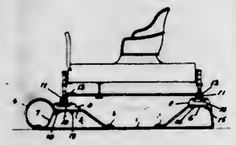
1. In a process of treating steel articles the steps consisting in heating the article to a predetermined temperature above its critical point at a predetermined rate and then quenching, said temperature and rate being such that the article after being quenched assumes the same dimensions as previous to the heating.

1,380,677. LIFT FOR GIN-BREASTS. CHARLES R. P. POOL, Dallas, Tex. Filed May 22, 1920. Serial No. 383,475. 5 Claims. (Cl. 13—9.)



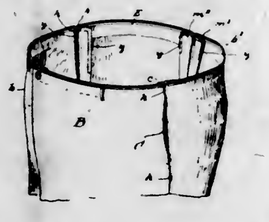
3. In a gin breast lifting attachment, the combination with a rock shaft extending longitudinally of the gin frame at a point remote from the gin breast, a bearing supported from the gin frame and receiving the rock shaft, said bearing having a stop abutment, a lever pivotally mounted upon the gin frame, a rocking connection between the lever and the rock shaft, a crank rigidly secured to the rock shaft and having a stop abutment to engage the first named stop abutment, when the crank is swung upwardly past dead center, and a lifting rod engaging the gin breast and pivotally connected with said crank.

1,380,678. BABY-CARRIAGE ATTACHMENT FOR MOTOR-VEHICLES. ABRAHAM ROBERT PRICE, Oregon City, Oreg. Filed Oct. 27, 1920. Serial No. 419,853. 4 Claims. (Cl. 155—10.)



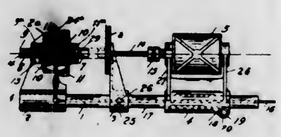
1. An attachment of the character specified, comprising a body having at its front end hooks for engaging the robe rail of an automobile, a pair of connected standards for supporting the rear of the body and adapted to rest upon the floor of the automobile, and coil springs arranged between the body and the standards, inclined braces having hooks at their forward ends for engaging the robe rail and pivoted to the standards near their rear ends, the body having a depending arm near its rear end and the springs being arranged between the rear ends of the braces and the arm and between the arm and the connection between the standards.

1,380,679. PRINTING-TELEGRAPH SYSTEM. PAUL M. RAINEY, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1918. Serial No. 233,288. 4 Claims. (Cl. 178—23.)



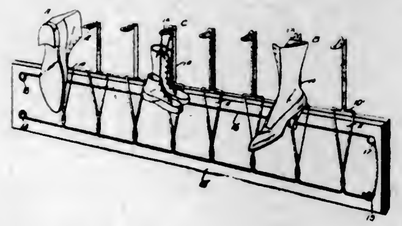
1. A signaling system comprising a line, a plurality of stations having character recording devices associated with but normally disconnected from said line, a rotary distributer at each of said stations, means at each of said stations selectively and automatically to establish a line of communication between said station and any of the character recording devices through the instrumentality of said distributer, whereby a message may be transmitted to and recorded by said selected character recording device under the control of a single operator.

1,380,680. SLEIGH-RUNNER. ANDREW REID, Moosomin, Saskatchewan, Canada. Filed Sept. 8, 1920. Serial No. 408,859. 6 Claims. (Cl. 280—14.)



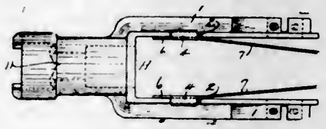
1. In a runner, a shoe having the front and rear ends turned backwardly on themselves and fastened to the intermediate portion of the runner and formed to present front and rear elevated horizontally disposed bearing faces, a beam mounted on each bearing face, a hub mounted on each beam and means demountably securing the hub and beam to the bearing face in each instance.

1,380,681. TROUSERS. BENJAMIN CARDENAS REYES, San Antonio, Tex., assignor of one-half to Maurice J. Roos, San Antonio, Tex. Filed Nov. 21, 1919. Serial No. 339,533. 1 Claim. (Cl. 2—122.)



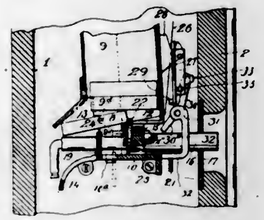
Trousers, comprising a body portion provided with side pockets and a waist-band, the lower portion of the body having side seams sewn upward to points a considerable distance below the bottom of the side pockets and having openings extending in rear of the side pockets through the waist-band, said openings being each provided on its side next the side pocket with sufficient material to be turned and on its opposite side with a flap of considerable width adapted to be folded on various lines to adjust the width of the waist-band and the body of the trousers in rear of the side pockets.

1,380,682. DRILL. GABRIEL E. ROHMER, Brooklyn, N. Y. Filed Apr. 30, 1919. Serial No. 293,729. 5 Claims. (Cl. 77—7.)



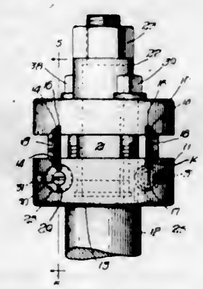
1. In a drilling apparatus, a support, a drill mounted upon said support, a housing secured on the support, a part movable through said housing and having work engaged upon said part within the housing to axially move gaging upon said part within the housing to axially move said part and effectively engage the work-engaging means with the work, and means associated with said part adapted to automatically establish and maintain a positive locking action to prevent retrograde movement thereof and positively lock the work holding means in its effective position.

1,380,683. SHOE-RACK. FLORENCE E. SANDERS, Benson, Minn. Filed Jan. 14, 1920. Serial No. 351,446. 1 Claim. (Cl. 211—14.)



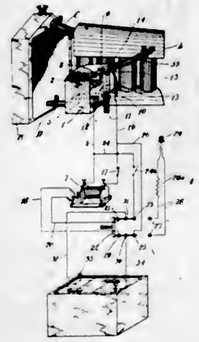
A shoe rack formed from a single length of wire and including a horizontal elongated rectangular base frame adapted for attachment to a support, vertical parallel arms emanating from one of the longer sides of the frame and being twisted at their points of emanation from the said side and being disposed in divergent relation from said points to the approximate centers of said arms, the arms being thence extended upwardly in parallel proximity and connected by a laterally extending and downwardly bowed hight portion.

1,380,684. TROLLEY-HARP. ROY C. SHOWALTER, Altoona, Pa., assignor of one-fifth to Scott S. Crane and two-fifths to John P. Reilly, Altoona, Pa. Filed Mar. 15, 1921. Serial No. 452,500. 6 Claims. (Cl. 191—61.)



1. In a trolley harp, the combination with the trolley harp arms, of contact springs having relatively yielding gripping fingers for engaging with opposite sides of the arms of the harp.

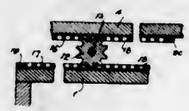
1,380,685. VENDING-MACHINE. ELIJAH F. SPAULDING, Brooklyn, N. Y., assignor to Arthur Zimtbaum, Brooklyn, N. Y. Filed Dec. 9, 1919. Serial No. 343,506. 11 Claims. (Cl. 194—80.)



1. A vending machine comprising a magazine for articles, a coin receiver below the magazine having spaced openings for coins, a stop for coins slidably carried by said receiver between said openings, said stop having opposite edges to coincide with said openings when the stop is in one position to retain coins in the openings, said stop having notches on opposite sides to coincide with said openings when the stop is in another position to release the coins, and means to cause said stop to be shifted to coin retaining and releasing position.

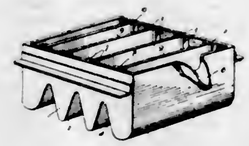
1,380,686. CUTTER-HEAD. JOHN STANLEY STULL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1919. Serial No. 295,626. 5 Claims. (Cl. 144—231.)

1. In a cutter head, a plurality of cutter knives each provided upon one edge with a locking surface, separable collar members, clamping means for securing said cutter knives between said collars, and combined locking and adjusting means associated therewith and removable therefrom adapted to coöperate with the locking surface on said cutter knives to control the adjustment thereof and to retain said cutter knives against longitudinal movement independently of the clamping means, said means adapted for removal from said clamping means without affecting the proper clamping of the knives thereby.



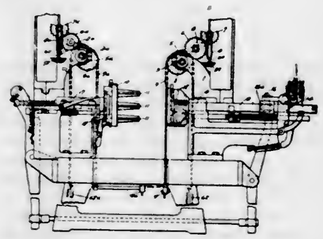
1,380,687. AUTOMATIC HEATING SYSTEM. EUGENE WINTON SUSNICH, Wellsville, Ohio, assignor to Charles E. Webster, Wellsville, Ohio. Filed Feb. 25, 1920. Serial No. 361,232. 1 Claim. (Cl. 219—38.)

In combination with an internal combustion engine including a water jacket, a radiator having its upper water compartment connected to said jacket, a casing having an upper water compartment and a lower water compartment communicating with the water jacket and the lower water compartment of the radiator respectively, tubes connecting the upper and lower compartments of said casing, heating coils mounted between said tubes, a source of supply of electrical energy connected to said coils, and means interposed to the circuit of said source of supply of electrical energy for closing said circuit when the temperature of the water flowing through said casing falls below a predetermined degree.



1,380,688. STORAGE-BIN. CHARLES EVERETT SWEENEY, Osborne, Manitoba, Canada. Filed June 24, 1920. Serial No. 391,460. 3 Claims. (Cl. 211—6.)

1. The combination with a receiving casing, a pullout bin normally contained within the casing and a freely movable carrying roller interposed between the bottom of the bin and the bottom of the casing and adapted to support the weight of the bin, of the means associated with

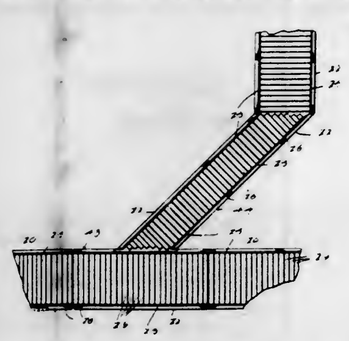


the ends of the roller, the bottom of the bin and the bottom of the casing for maintaining the roller at all times in a position at right angles to the direction of travel of the bin.

1,380,689. CASCADE-PAN. LUDWIG A. THIELE, Columbus, Ohio. Filed July 15, 1920. Serial No. 396,565. 3 Claims. (Cl. 23—1.)

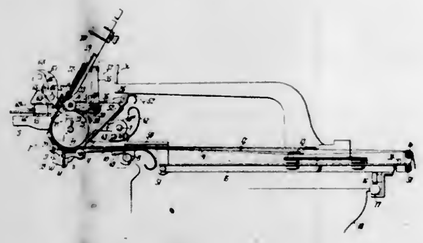
1. A pan for use in the concentration of sulfuric acid comprising a body portion formed to include an open top, vertical side walls and a deeply corrugated bottom, and a discharge spout provided at one end of said pan.

1,380,690. NAILING-MACHINE. ARCHIBALD B. TOZER, Erie, Pa., assignor, by mesne assignments, to Reed Manufacturing Company. Filed June 21, 1917. Serial No. 176,069. 10 Claims. (Cl. 1—10.)



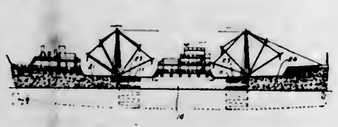
10. In a nailing machine, the combination of a nail feeding device; a swinging hammer having a major portion of its driving force incident to its momentum and having its momentum stopped by the material operated upon, said hammer being constructed and arranged to take a nail from the device and to carry the same to the work; a spring for actuating the hammer in a driving direction; means comprising a continuously operating power shaft for tensioning and releasing the spring; and a controlling device for said means.

1,380,691. PORTABLE SECTIONAL CONVEYER. JAMES D. TUOHY, Oak Park, Ill. Filed Aug. 11, 1916. Serial No. 114,442. 2 Claims. (Cl. 193—55.)



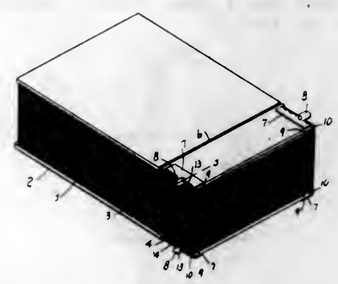
1. A conveyer comprising a plurality of frames arranged in endwise relation, means for detachably securing the frames together, rollers journaled to each of the frames and having one of their ends projecting beyond

one of the sides of the frames, sprocket wheels secured to said ends of the rollers, a sprocket chain trained over



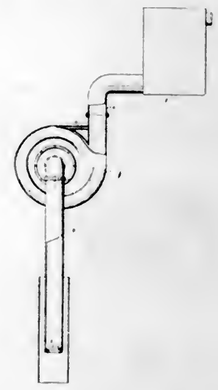
the sprocket wheels of the frames, a motor secured to the under side of the frames, and sprocket wheels secured to the motors and engaging the sprocket chains.

1,380,692. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1919. Serial No. 330,817. 31 Claims. (Cl. 197—126.)



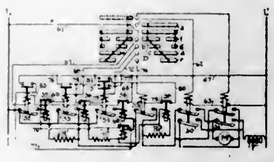
1. In a typewriting machine, in combination, a revoluble platen, a guide to direct webs to the lower part of said platen, a guide to direct a record-sheet to the lower part of said platen between the same and said webs, main feed-rollers to press said webs and record-sheet against said platen, an auxiliary feed-roll for holding said record-sheet in engagement with said platen, line-spacing means for said platen, and means for retracting said main feed-rollers from said platen and concomitantly operating said line-spacing means to feed said record-sheet independently of said webs.

1,380,693. COMPOSITE SHIP. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Co., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1917. Serial No. 207,054. 8 Claims. (Cl. 114—65.)



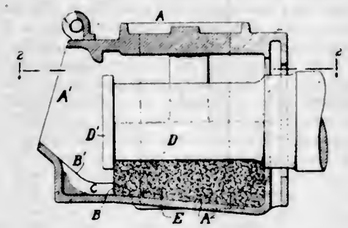
5. A mid-ship portion of standard steel ship construction, combined with and jointd to fore and aft bodies formed by concretion by casting the hull portions thereof of concrete material.

1,380,694. FLEXIBLE BOUND BOOK. FRANK J. WILKINS, Cincinnati, Ohio. Filed Jan. 15, 1920. Serial No. 351,549. 2 Claims. (Cl. 129—18.)



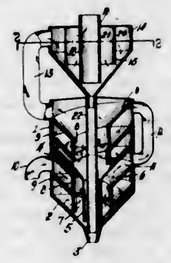
1. In a book of the character described, covers and leaves therefor, the leaves provided with recesses at their rear side edges, a spring for fitting into said recesses, and clips for holding said springs onto the covers.

1,380,695. PROCESS OF AND APPARATUS FOR PUMPING LIQUID AND GAS. CLARENCE C. WILSON, Corcoran, Calif. Filed Aug. 18, 1919. Serial No. 318,210. 1 Claim. (Cl. 103—43.)



The combination of a centrifugal pump, a suction pipe leading to said pump, a non-return valve in said pipe, an outlet pipe from the pump, a tank in free communication with said pipe and of sufficient size to hold the contents of the pump, and a passage leading from the upper portion of the pump to the outlet pipe.

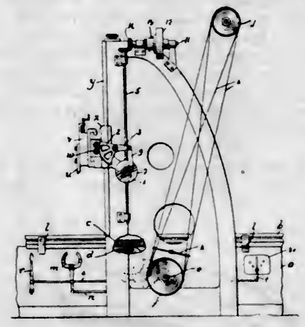
1,380,696. MOTOR-CONTROLLER. CHARLES W. YERGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 23, 1919. Serial No. 305,968. 10 Claims. (Cl. 172—179.)



1. In a controller for electric motors, the combination with a plurality of resistance sections adapted to be connected in series in the motor circuit, of a plurality of electro-responsive switches adapted to short circuit certain of said sections progressively while maintaining other of said sections in circuit, thereafter to reinclude certain of said excluded sections in parallel with the section or sections retained in circuit, and finally to exclude all of said sections, and control means for said switches, including interlocks providing for operation thereof only in a predetermined sequence, for effecting the aforestated functions.

1,380,697. JOURNAL-BOX. JACOB J. ZELL, Philadelphia, and AXEL S. VOGT, Altoona, Pa. Filed Mar. 11, 1919. Serial No. 281,910. 3 Claims. (Cl. 64—24.)

1. A journal box formed with a packing retaining shoulder extending up from its bottom in approximately the vertical plane of the end of the journal to be inclosed in the box.

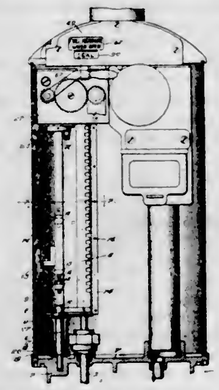


1,380,698. DUST-COLLECTOR. FRANK M. ANSPACH and FRANK L. MYERS, Toledo, Ohio. Filed May 20, 1920. Serial No. 382,747. 4 Claims. (Cl. 183—34.)

1. In a dust collector, a casing having an outlet at its top and a conical bottom with an outlet at its center, a conical spiral flange extending around within the interior of the casing and forming a central vertical passageway and coöperating with the casing to form a spiral passageway with an inlet at its upper end and an outlet at its lower end into the central passageway, each convolution of the spiral passagewny having restricted communication at its inner bottom edge with the vertical passageway for the escape therein of some air and the heavier particles of dust from the spiral passageway, the vertical passageway communicating at its bottom with the bottom outlet and at its top with the top outlet whereby particles of dust pass downward through the central passageway and bottom outlet and the air current passes upward through the central passageway and through the top outlet.

1,380,699. PLANER. GEORGE H. BENZON, Jr., Jenkintown, Pa., assignor to William Sellers & Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 18, 1920. Serial No. 389,812. 7 Claims. (Cl. 90—49.)

1. A metal working machine comprising means for reciprocating the cutting tool and the piece to be cut relative to each other, means for reversing the motion at the end of each stroke, electrically controlled feeding mechanism for shifting the cutting tool at the end of each complete reciprocation, and means for preventing the electrically controlled feeding mechanism from getting out of timed relation with the reciprocating means.

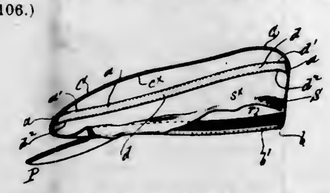


1,380,700. REFRACTORY MATERIAL AND PROCESS OF MAKING THE SAME. CHARLES H. BREERWOOD, Philadelphia, Pa. Filed Mar. 11, 1918. Serial No. 221,656. 4 Claims. (Cl. 106—9.)

1. The process of making refractory substances adapted for use in making refractory linings or walls of furnaces, crucibles and the like, which consists in introducing material adapted to form a sinter in a finely dicided state into a furnace, mixing with it small pieces of material to which the finely divided substance is adapted to adhere in its passage through the furnace to form balls, and subjecting it in such form to such heat and for such a length of time, as to make the substance refractory.

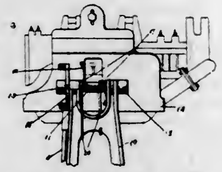
1,380,701. PROCESS FOR MAKING DOLOMITE BRICKS. CHARLES H. BREERWOOD, Philadelphia, Pa., assignor to Ceplay Cement Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1919. Serial No. 308,823. 9 Claims. (Cl. 18—47.5.)

1. The process of making dolomite bricks which consists in grinding dolomite containing a small amount of iron exceedingly fine, burning the mixture at a sufficiently high temperature to amalgamate or vitrify it, re-grinding the burnt mixture exceedingly fine, compressing it under great pressure into the desired shape and burning it at a temperature sufficiently high to amalgamate and vitrify the brick.



1,380,702. POSITIVE-STROKE PUMP MECHANISM. ROBERT P. CALLARD, Fort Wayne, Ind. Filed Apr. 18, 1918. Serial No. 229,343. 18 Claims. (Cl. 221—103.)

5. The combination with a reciprocable member, of oppositely inclined bearing means adjacent the member,



spring-pressed rollers coöperating with said bearing means to prevent movement of the member in opposite directions, a longitudinally movable rod, a member carried thereby having a projection to engage one but not both of the rollers at the same time, adjustable stops carried by the rod, and a stop arm carried by the reciprocable member and movable between the stops for moving the rod at the end of the stroke of the reciprocable member to release the clutch roller which permits the reverse movement of the reciprocable member.

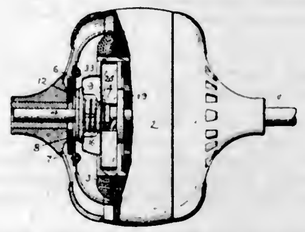
1,380,703. CAP. JULIUS CARLSON, Brooklyn, N. Y. Filed Aug. 30, 1920. Serial No. 406,964. 1 Claim. (Cl. 2—106.)

A cap of the character designated, formed with side cover sections and linings the rim edges of which are inturned and stitched together only on the inturn, together with a vizor the inner edge of which is interposed between and stitched to said inturned rim edges of the side cover sections and lining thereof, and also together with an annular "size" stiffener one edge of which is stitched to said inturned rim edges of the side cover sections and linings thereof by the stitching that secures said vizor in place, for the purpose described.

1,380,704. MOTOR BLOCK-STAND. JOSEPH S. CARSWELL and AMIL R. HAMMOND, Boone, Iowa. Filed Sept. 24, 1920. Serial No. 412,605. 2 Claims. (Cl. 29—89.)

1. In a motor block stand, the combination of a base, a platform pivotally mounted upon the base and designed to receive a motor to be repaired, and two torsion springs interposed between the platform and the base, and so arranged that when the platform is tilted in either direction both of the springs will be brought under progressively increased tension during such tilting movement, to thereby cushion the platform against falling movement in either direction, and also to exert spring pressure in a direction tending to return the platform to normal position after it has been tilted in either direction, for the purposes stated.

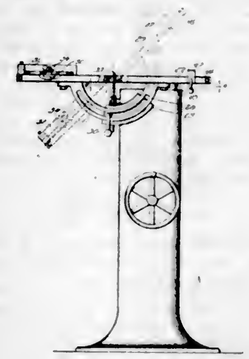
1,380,705. ANTISLIPPING SHOE FOR HORSES. EDWARD A. CONNER, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,580. 4 Claims. (Cl. 24—170.)



1. In an anti-slipping shoe for horses, a tread portion provided with two free ends adapted to be drawn toward each other over the front of the hoof, one of said ends being provided with an eye, a strap buckle comprising a base plate provided at each end with a strap anchorage, flexible connection between one of said anchorages and one of said free ends, a cam mounted on supports extending from said base plate, said cam being adapted to rotate on an axis parallel with said base plate and transversely thereof, a cam lever provided at its free ends with a strap aperture, the radius of the cam being less than the perpendicular from said axis to said base plate, and the angle formed by the lever of the cam being such as to permit said cam to be oscillated in an arc intersecting the said perpendicular, a strap anchored to the other of said anchorages and rove through an eye in the other of said free ends, adapted to pass freely beneath said cam when the said lever is in elevated position and to be compressed between said cam and said base plate when the lever is in depressed position.

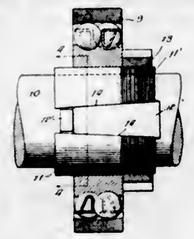
2. In an anti-slipping shoe for horses having a tread portion provided with two terminals adapted to be drawn toward each other over the front of the hoof, a buckle connected end to end with one of said terminals, a flexible member connected to the opposite end of said buckle adapted to be rove through an eye in the other of said terminals, said buckle comprising a base plate and a bell crank lever having a short arm and a long arm disposed with respect to each other at an obtuse angle, said lever being pivotally mounted over said plate and transversely thereof and at such an elevation therefrom as to leave clearance between the free end of said short arm and said plate, the amount of said clearance being such as to cause said flexible member to be compressed between said short arm and said plate when the long arm is depressed and the said flexible member is passed between the said short arm and the said plate.

3. In an anti-slipping shoe for horses having a tread portion provided with two terminals adapted to be drawn toward each other over the front of the hoof, a buckle connected end to end with one of said terminals, said buckle comprising a base plate and a bell crank lever having a short arm and a long arm disposed at an obtuse angle with respect to each other, said lever being pivotally mounted over said plate and transversely thereof and at such an elevation from said plate as to leave clearance between the free end of said short arm and said plate, said long arm being provided with an eye at its free end and a flexible member connected to the opposite end of said buckle and adapted to be rove through an eye in the other of said terminals, thence between said short arm and said base plate and thence through said eye in said long arm.



4. In an anti-slipping shoe for horses having a tread portion provided with two terminals adapted to be drawn toward each other over the front of the hoof, a buckle comprising a base plate and a bell crank lever having a short arm and a long arm disposed at an obtuse angle with respect to each other, said bell crank lever being pivotally mounted over said plate and transversely thereof and at such an elevation from said plate as to leave clearanec between the free end of said short arm and the said plate, said long arm being provided at its free end with an eye whereby a strap having connection with the other of said terminals may be rove through the clearance space beneath said short arm and thence through said eye.

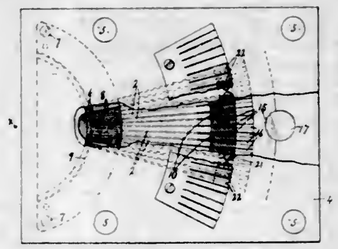
1,380,706. CENTRIFUGAL SWITCH. ALFRED N. EDEBURN, Cleveland, Ohio. Filed Nov. 4, 1919. Serial No. 335,627. 17 Claims. (Cl. 200—80.)



1. A centrifugal switch, comprising separable contact members, a centrifugal element acting in its centripetal movement to press said members into contact, and a centrifugal element and co-acting means adapted to effect a snap break of contact between said members.

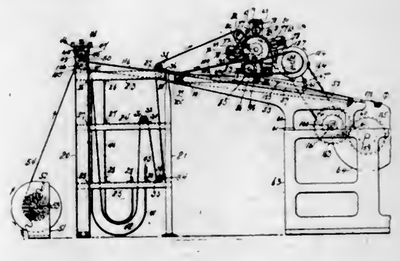
1,380,707. SAW-MOUNTING. VICTOR F. FEHRM, Chicago, Ill. Filed July 30, 1919. Serial No. 314,305. 1 Claim. (Cl. 143—35.)

In a device of the character described, the combination with a saw table and a saw vertically adjustable to project a greater or less degree above the table; a housing forming a columnar support for the table and having within the same guide brackets; a frame comprising parallel rods longitudinally slidable in said brackets; a cross bar at the upper ends of said rods carrying bearings for the saw shaft, and a cross bar carrying a motor adjustable above lower ends of said rods for adjusting a belt connecting the motor and said saw shaft; an elevating screw within the housing parallel to said rods and connected to the frame, the shaft projecting through the housing and a gear to operate said elevating screw.



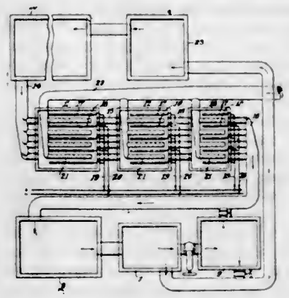
1,380,708. BALL-BEARING-LOCKING DEVICE. CHARLES FREDERICK FORD, Chicago, Ill. Filed Apr. 15, 1920. Serial No. 374,161. 9 Claims. (Cl. 287—52.)

1. A ball bearing locking device comprising, in combination, a shaft, a sleeve on the shaft divided by a wedge space, a wedge key in said wedge space, a bearing mounted on the sleeve and wedge, and a collar on the sleeve and key adapted to be tightened against the bearing to tighten the key in the wedge space and lock the bearing on the shaft.



1,380,709. METHOD OF FORMING AND ALINING TYPE ON THE TYPE-BARS OF TYPEWRITING-MACHINES. FREDERICK GANSERT and HERMAN GANSERT, Jr., Syracuse, N. Y. Filed Oct. 27, 1920. Serial No. 420,046. 1 Claim. (Cl. 199—80.)

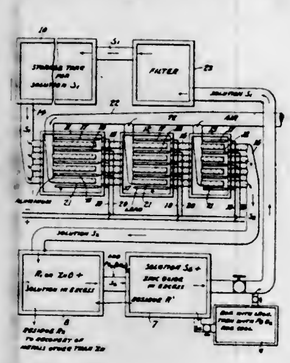
The herein described method of forming and alining type on the type bars of typewriting machines, consisting in supporting the type receiving portions of the several bars in fixed spaced relation within a suitable type-mold



and then casting the type on the bar in a position to cause them to be properly alined for printing, when the bars with the type thereon are assembled in the machine.

1,380,710. CUTTING-MACHINE FOR CLOTH AND OTHER MATERIAL. EDWARD GUY GOBEN, New Orleans, La., assignor to The E. V. Benjamin Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Dec. 8, 1919. Serial No. 343,391. 5 Claims. (Cl. 164—68.)

1. In a cutting machine the combination of supporting beams each with a dove-tail guide slot in the upper face thereof, a pair of housings each with a dove-tail projection supported upon said beams, the said projections registering with said guide slots, cutting devices carried by said housings, and bolts with dovetail shaped heads extending through said housings and the heads thereof engaging said dovetail guide slots.



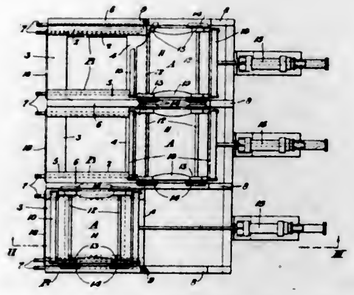
1,380,711. ELECTROLYTIC PRODUCTION OF ZINC. ARTHUR E. HALL, Omaha, Nebr., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed July 15, 1915. Serial No. 39,977. 18 Claims. (Cl. 204—15.)

1. The continuous and cyclical process of producing metallic zinc by electrolytic deposition, comprising deliv-

ering to a cascade of deposition cells having lead anodes a neutral solution of a zinc salt, containing chlorin in suitable form; electrolyzing the solution with successively higher current densities, whereby zinc is deposited in metallic form and the acid of the zinc salt liberated, and lead peroxid and chloric acid are produced; removing the lead peroxid from the cells; treating with an excess of acidic solution from the cascade the residue left from previous treatment of an excess of zinc-bearing material, whereby the zinc of said residue is substantially all dissolved and the solution left acidic; treating with the acidic zinc-bearing solution fresh zinc-bearing material in excess, thereby neutralizing the solution, precipitating iron and similar impurities, and leaving zinc-bearing residue for treatment with an excess of acidic solution from the cascade as described above; treating more or less of the neutral solution to purification to remove other impurities; and returning the neutral solution, with the purified portion thereof, to the cascade of deposition cells.

1,380,712. PURIFICATION OF ZINC-BEARING SOLUTIONS. ARTHUR E. HALL, Omaha, Nebr., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 7, 1916. Serial No. 70,717. 8 Claims. (Cl. 204—15.)

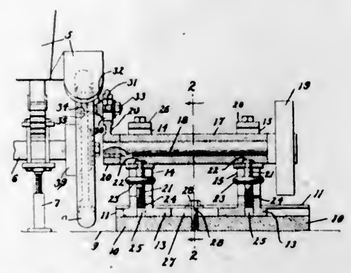
1. The process of producing zinc by electrolytic deposition, comprising (*a*) electrolyzing a zinc salt solution, whereby metallic zinc is deposited and the acid with which it was combined is liberated and the solution rendered acidic; (*b*) adding iron in soluble form to the acidic solution in amount equal to about .044 lbs. of ferric sulfate to each gallon of the solution; (*c*) treating an excess of zinc-bearing material with the solution, whereby zinc is dissolved from the material and the acid neutralized and any antimony present is precipitated; (*d*) and returning the neutral and now antimony-free solution for electrolysis.



2. The herein described method of removing antimony from a zinc-salt solution, comprising adding iron in soluble form to the extent of about .044 lbs. of ferric sulfate per gallon of solution, and treating the solution with zinc-bearing material in amount sufficient to cause precipitation of antimony.

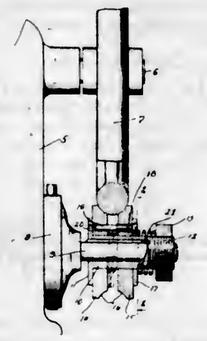
3. The herein described method of removing antimony from an acidic zinc sulfate solution containing an oxidizing agent, comprising adding ferric sulfate, and treating the zinc-bearing material in amount sufficient to render the solution alkaline, whereby antimony and iron are precipitated.

4. A process of treating zinc-oxid-bearing material which comprises first subjecting an excess of each solution containing free sulfuric acid and containing an oxidizing reagent, to the action of a deficiency of zinc-oxid-bearing material to dissovle substantially all the zinc values therefrom, adding ferric sulfate in amount equivalent to several times the amount of antimony compounds contained in the solution, and treating the solution with an excess of zinc-oxid-bearing material, such excess being sufficient to produce an alkaline solution substantially free from antimony, and removing the solution from contact with the undissolved zinc-oxid-bearing material.



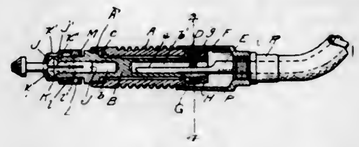
5. A process of treating zinc-oxid bearing material which comprises first subjecting an excess of solution containing free sulfuric acid and containing an oxidizing reagent, to the action of a deficiency of zinc-oxid-bearing material to dissolve substantially all the zinc values therefrom, adding ferric sulfate in amount equivalent to several times the amount of antimony compounds contained in the solution, and treating the solution with an excess of zinc-oxid-bearing material, such excess being sufficient to produce an alkaline solution substantially free from antimony, removing the solution from contact with the undissolved zinc-oxid-bearing material, and thereafter boiling the said liquor with metallic iron, to completely remove the dissolved antimony.

1,380,713. SOAKING-PIT. BENJAMIN P. HAZELTINE, Wheeling, W. Va. Filed Nov. 8, 1920. Serial No. 422,449. 5 Claims. (Cl. 263—44.)



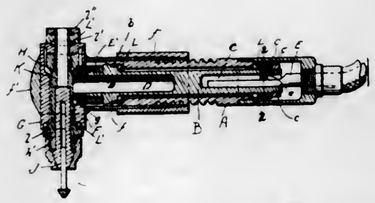
1. In a soaking pit, the combination with the side walls, of top plates, and means for artificially cooling said plates.

1,380,714. POWER-TRANSMITTING DEVICE. HARRY H. HARTUNG, Boston, Mass. Filed June 26, 1919. Serial 306,770. 13 Claims. (Cl. 74—106.)



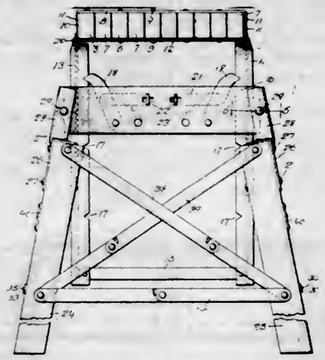
9. A power transmitting device, comprising a base member; a standard member slidably secured to said base member and provided with a longitudinal bearing; a rotatable shaft supported in said bearing; a crank arm secured to one end of said shaft for rotating therewith and provided with an adjustable crank pin adapted to adjustably engage the driving element for said device, a power transmitting member secured to said shaft for driving an auxiliary apparatus; and means for securing said slidable standard member in fixed relation with said base member.

1,380,715. SEWING-MACHINE PULLEY. CHARLES W. H'DOUBLER, Racine, Wis. Filed Mar. 26, 1920. Serial No. 368,970. 9 Claims. (Cl. 74—26.)



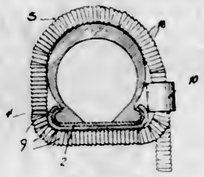
1. A device of the class described, comprising a pair of opposed disks, yieldable means disposed between the disks to normally tend to urge the same apart, and means yieldably resisting the movement apart of the disks under the action of said first mentioned means.

1,380,716. BALL-BEARING HANDPIECE FOR TOOLS. CLAUDE A. HERMAN, Bridgeport, Conn. Filed June 7, 1920. Serial No. 387,113. 5 Claims. (Cl. 32—15.)



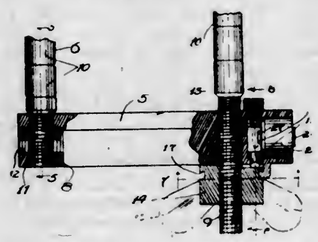
1. A handpiece comprising a casing, a stem formed with sockets in each end and being arranged to rotate in said casing, means for rotating said stem, means for fastening said stem rotating means in one of said sockets, a clutch carried by the other socket, and means for operating said clutch, said clutch operating means including an externally threaded sleeve having a slot, a ball adapted to travel in said slot, and means for causing longitudinal movement of said sleeve.

1,380,717. ANGLED HANDPIECE. CLAUDE A. HERMAN, Bridgeport, Conn. Filed June 8, 1920. Serial No. 387,400. 7 Claims. (Cl. 32—11.)



2. A handpiece comprising a casing, a rotatable stem arranged within said casing and having driving means adapted to rotate said stem connected at one end thereof, a tool carrier, and means for detachably connecting said stem to said tool carrier.

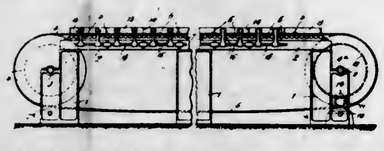
1,380,718. TRESTLE. MEYER HERMAN, Chicago, Ill. Filed June 11, 1919. Serial No. 303,334. 3 Claims. (Cl. 304—6.)



1. A device of the character described providing in combination, a top support, having pivoted at each end thereto a leg structure, each structure comprising a pair of parallel legs; a sub-leg structure in which said parallel legs are vertically adjustable, comprising a pair of pivoted, laterally-diverging legs, a pair of ears extending from the laterally diverging legs, a pair of longitudinally diverging legs, pivoted to said ears, and folding braces to hold the legs in their extended positions.

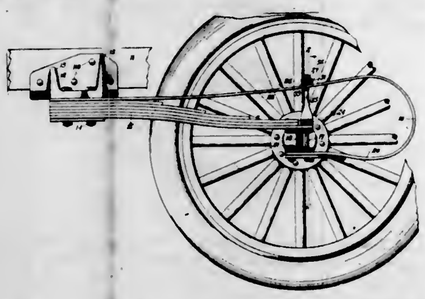
1,380,719. LOCKING DEVICE. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1919. Serial No. 322,438. 4 Claims. (Cl. 70—17.)

1. A locking device comprising a block, an armored cable including a cable and a series of rings therearound, means for connecting one end of the armored cable to the block, said block having an aperture therein for the passage of the other end of the armored cable therethrough and a locking member adapted releasably to engage a shoulder on one or other of the rings to retain the cable in position in said aperture.



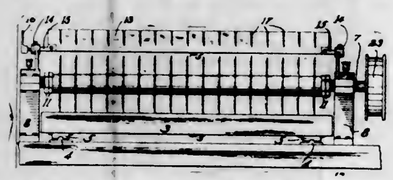
1,380,720. LOCKING DEVICE. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1919. Serial No. 322,440. 5 Claims. (Cl. 70—17.)

3. A locking device comprising a bar, a cable having threaded terminals, said bar having two threaded aper-



tures at one end for alternative engagement with one terminal, one of said apertures being transversely and the other longitudinally arranged within the bar, said bar also having an aperture at the other end for the free passage of the other terminal therethrough, a nut for engagement with the projecting end of the last mentioned terminal, and a lock adapted normally to prevent detachment of the nut from said terminal.

1,380,721. PLASTER-SLAB-MOLDING MACHINE. FRANK MIHILL JOHNSON, Mitcham, England, assignor of one-half to the Firm of Cafferata & Co., Newark-upon-Trent, England. Filed Dec. 15, 1919. Serial No. 345,020. 4 Claims. (Cl. 25—99.)

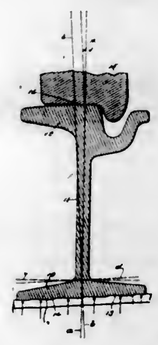


1. A plaster slab molding machine comprising a molding table, an endless conveyer, one run of which passes over said table, to constitute a mold base, swinging members disposed adjacent the lateral edges of the belt and adapted to form mold walls, removable plates, disposed transversely of the table between said swinging members to constitute other mold walls and means for moving the conveyer over the table.

1,380,722. SPRING AND SHOCK-ABSORBER. STEPHEN A. KOST and ALBERT L. DANIEL, Buffalo, N. Y. Filed Sept. 29, 1919. Serial No. 327,093. 4 Claims. (Cl. 267—45.)

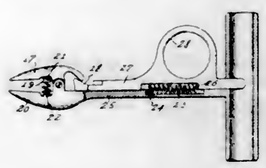
3. A vehicle spring and shock absorber comprising a vehicle frame; a primary spring; a U shaped secondary spring secured to said frame; a vehicle axle connected to the lower arm of said secondary spring; a yoke connected at its lower end to said primary spring and provided with a presser bar adapted to normally and adjustably bear downwardly against the upper arm of said secondary spring; and means for longitudinally adjusting either the upper or the lower arms of said secondary spring.

1,380,723. MACHINE FOR CUTTING PLASTIC MATERIALS. DAVID KUPFER, Chicago, Ill. Filed Sept. 8, 1919. Serial No. 322,394. 1 Claim. (Cl. 107—22.)



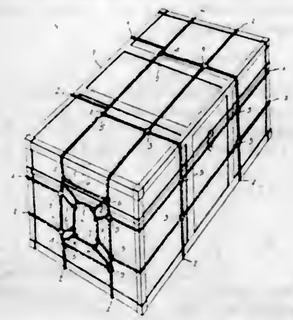
A device of the kind described comprising a support, a table movable at various rates of speed along tracks on the support, a series of rotatable disks above the table for cutting tacky plastic material resting on the table as the latter is traversed beneath said disks, means for rotating the disks at a high rate of speed relative to the speed of the table movement, and means for cleaning said disks pivoted above the disks and adapted to be locked out of operative position.

1,380,724. TAKE-UP AND TENSION ATTACHMENT FOR AUTOMOBILE STEERING DEVICES. LEROY J. LINDSAY, Seymour, Iowa, assignor to Charles Wesley Bryant, Centerville, Iowa. Filed July 29, 1920. Serial No. 399,685. 4 Claims. (Cl. 280—95.)



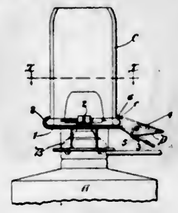
1. The combination with an automobile steering mechanism, of clips designed to be detachably secured to the steering levers, a connecting device pivoted to said clips between their ends, and means for adjusting the said connecting device for holding the said clips toward each other.

1,380,725. RAILWAY-RAIL. JOHN LUNDIE, New York, N. Y., and WILLIAM R. DUNHAM, Jr., New Haven, Conn. Filed Nov. 16, 1920. Serial No. 424,391. 21 Claims. (Cl. 238—125.)



19. An inclined railway rail, in which its base is provided with stepped seating surfaces.

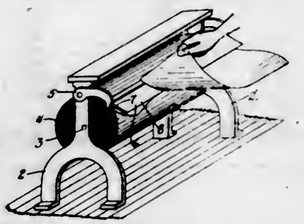
1,380,726. DENTAL FORCEPS. WILLIAM A. LURIE, New Orleans, La. Filed Aug. 10, 1920. Serial No. 402,535. 6 Claims. (Cl. 32—34.)



3. In a forceps for gripping teeth and the like an independent pivoted jaw adapted to coöperate with a fixed jaw for gripping an object held between the said jaws, a spring for holding the jaws apart normally, and a finger-controlled member coöperating with the movable jaw for causing the said movable jaw to grip the object held between the said jaws.

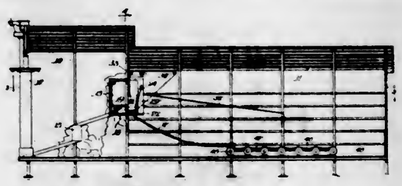
1,380,727. TRUNK-CHAIN. CHARLES K. MATTHEWS, Portland, Oreg. Filed June 29, 1920. Serial No. 392,858. 3 Claims. (Cl. 190—27.)

1. In a trunk chain, the combination of a plurality of chains having rings at their terminals, said chains beginning at one end of the trunk, encircling the trunk in vertical and horizontal directions at right angles to the edges of said trunk and returning to within a short distance of the starting point, a short chain end secured in one of said rings, having a snap hook at the other end, adapted to slip through the rings of the free chain ends and hook in at the point of beginning.



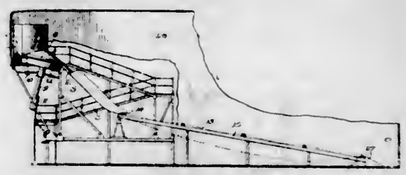
1,380,728. LAMP-BURNER. AUGUST MEYER, Wellston, Mo., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 2, 1919. Serial No. 308,211. 2 Claims. (Cl. 240—99.)

1. In a lamp, a chimney having an outwardly extending bead at its lower edge, a burner having a horizontal chimney-seat provided at its outer margin with a series of upwardly extending fingers one of which is in the form of a hook turned inwardly at its upper end to overlie said bead, said seat being open between two of said fingers to receive the chimney and to permit horizontal movement of the chimney on said horizontal seat, an arm projecting from said chimney seat at a point between said two fingers, an approximately horizontal clip pivoted to said arm and extending over said bead at a point opposite said hook to prevent horizontal movement of said chimney, the clip pivot being approximately in the horizonal plane of said horizontal seat and a spring whereby one end of said clip is yieldingly forced onto said bead, said end of the approximately horizontal clip being movable upwardly from said bead in an arc of a circle so as to permit horizontal displacement of the chimney.



1,380,729. PAPER-ROLL-DISPENSING MACHINE. BARNET MILLER, Rockville, Conn. Filed Nov. 27, 1920. Serial No. 426,777. 3 Claims. (Cl. 211—32.)

1. An attachment for a paper roll-dispensing machine involving a cutting member, comprising a clip-like body to detachably fit said cutting member, the forward cheek of the clip-like body having a downwardly-extending

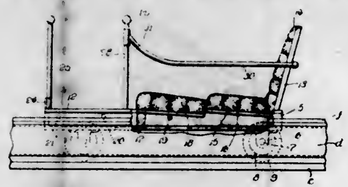


flange along the upper portion thereof and which is at an angle thereto and the free portion of which constitutes a cutting edge.

1,380,730. AMUSEMENT STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Jan. 10, 1920. Serial No. 350,540. 6 Claims. (Cl. 46—71.)

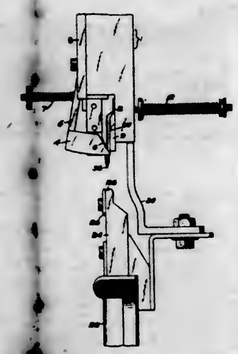
2. In an amusement structure, the combination of an elevated chamber comprising a stationary part and a movable part, a chute leading from said chamber, a tiltable seat in the stationary part of said chamber and in front of the chute end, said movable chamber part having a floor section normally held to form a foot rest for occupants of said seat, and means for moving said movable chamber part to carry said floor section away from under the feet of the occupants and away from said chute, and means for tilting said seat to deposit the occupants directly on to said chute independently of said floor section.

1,380,731. AMUSEMENT STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Mar. 6, 1920. Serial No. 363,685. 12 Claims. (Cl. 46—71.)



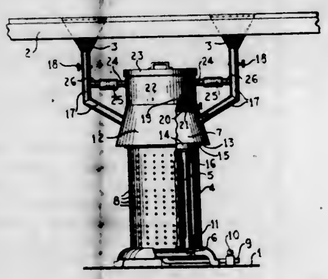
2. In an amusement structure of the class described, the combination of an elevated chamber, a chute, and a receiving and discharging structure between said chamber and chute, said structure being rotatable on an inclined axis and presenting a seating surface to the chamber and a discharge surface to the chute.

1,380,732. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Nov. 6, 1920. Serial No. 422,116. 4 Claims. (Cl. 105—344.)



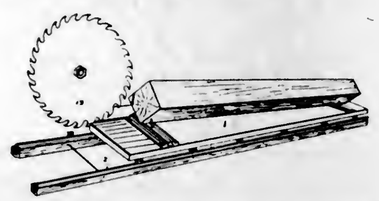
1. In a vehicle for pleasure railways of the class described, the combination of the vehicle body, vehicle

wheels, seat sections placed one directly in front of the other between the sides of the vehicle body, there being space at the sides of said seat sections whereby per-



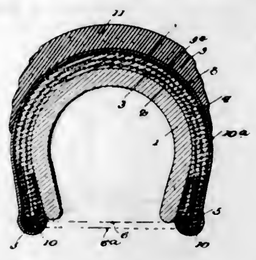
sons may sit straddle the respective seat sections with their bodies close together and with their legs alongside of said seat sections.

1,380,733. WIRE-STITCHING MACHINE. ALFRED M. MOORE, Malden, Mass., assignor to Alfred M. Moore and Chester M. Moore, Copartners, doing business under the name and style of Moore & Company, Everett, Mass. Filed May 21, 1919. Serial No. 298,699. 13 Claims. (Cl. 1—2.)



3. In a wire stitching machine, staple forming means, staple setting means, guides for the staple legs, and work positioning and staple guiding points carried by said guides adapted to enter apertures in the work and to be retracted within the guides.

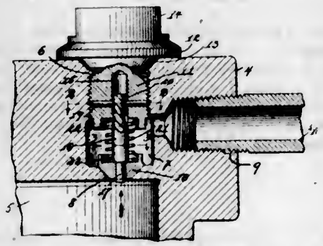
1,380,734. HOT-AIR FURNACE. MAXIMILIAN J. OTTO, New York, N. Y. Filed Oct. 1, 1919. Serial No. 327,712. 2 Claims. (Cl. 126—113.)



1. A hot air furnace comprising a cylindrical heating member having mounted thereon a hot air drum; means for generating heat at or near the bottom of the said member; means for conveying the heat to the hot air drum; a steam drum mounted on the hot air drum; a damper interposed between the steam drum and the hot air drum; conduits extending from the hot air drum; conduits extending from the steam drum; and means for coupling the two conduits, whereby the hot air from the air drum and the steam from the steam drum may be commingled and distributed.

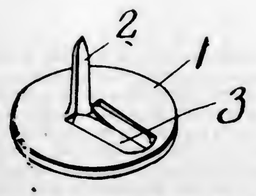
1,380,735. MAST-TRIMMING MECHANISM. WILLIAM HENRY PALMER and GEORGE EDWARD DAVIES, Montreal, Quebec, Canada. Filed Feb. 26, 1920. Serial No. 361,557. 4 Claims. (Cl. 143—125.)

1. In timber trimming mechanism, a transverse slide mounted on the carriage of a log cutter, the slide having spiked projections set apart for the log or timber to settle on and be held as on the prongs of a fork during sawing operations.



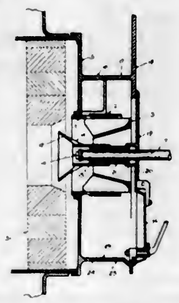
1,380,736. METHOD OF MAKING AUTOMOBILE-TIRES. JOHN H. PATTEN, Kent, Wash., assignor to W. T. Behne, King county, Wash. Filed Mar. 5, 1920. Serial No. 363,424. 1 Claim. (Cl. 154—14.)

A method of making a cord tire consisting in coating a form with a layer of resilient material winding a layer of cord biasly over the resilient material, applying a coat of cushion gum over the cord layer, applying beads, severing the cord layer on the inner periphery between the beads, bending the ends outwardly around the beads and against the side walls of the tire, winding a second layer of cord around the periphery of the construction thus made, applying layer of cushion gum over the said periphery wrapping, applying another wrapping of cord biasly around the tire, severing the ends and bending the ends inwardly around the beads and against the inner portions of the side walls, applying chafing strips around the bead portions coating the tire with a layer of cushion gum over the last cord layer, coating the tire with a layer of resilient material, over the last mentioned cushion gum layer and the chafing strips, and applying a layer of resilient material over the last mentioned layer to form the tread.



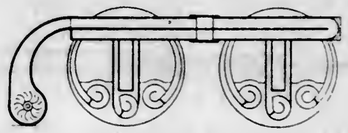
1,380,737. VALVE. HENRY E. PELLETIER, Newark, N. J., assignor to Pelletier Products Mfg. Co., Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 1, 1920. Serial No. 362,464. 4 Claims. (Cl. 251—43.)

4. The combination of a container adapted for holding fluid under pressure, a valve chamber provided in the container wall and having a tapering seat forming an inlet from the container into the chamber, a plug threaded into the container wall in line with the tapering seat and having an opening therein, a valve proper fitting the seat and provided with a stem having moving fit in said



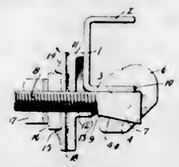
plug opening and spirally grooved in two directions, pins arranged to engage said grooves to give the valve quick rotative movement when moved to and from its seat, and a spring confined between the plug and valve proper for normally holding the valve against its seat.

1,380,738. THUMB-TACK AND METHOD OF PRODUCING THE SAME. WILLIAM RAEBURN, Waterbury, Conn., assignor to The Hoge Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 351,031. 2 Claims. (Cl. 85—16.)



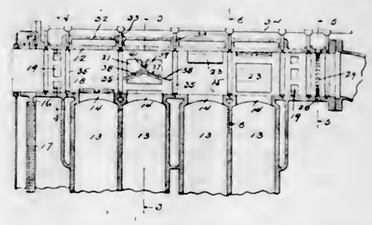
1. In a sheet metal tack, the combination of a head, a centrally located prong integral therewith and projecting therefrom, said head having a radial division extending to the base of said prong and of lesser width than the width of said prong, the portions of said head adjacent to said division being thinner than the larger portion of said head.

1,380,739. FURNACE-FRONT. JOHN REID, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,388. 15 Claims. (Cl. 158—1.5.)



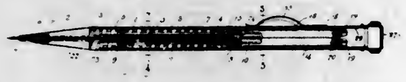
1. In a furnace front, a main frame, having front and back plates spaced by intermediate walls and openings through said plates to the firebox, and an air register having a deflector formed of guide plates mounted on a tubular center piece and supported in a cylinder encircled by an adjustable sleeve.

1,380,740. OIL-BURNING-FURNACE FRONT. JOHN REID, New York, N. Y. Filed Mar. 8, 1920. Serial No. 364,343. 4 Claims. (Cl. 158—1.5.)



1. In an oil burning furnace front of the forced draft system of furnaces and having front and back plates forming an air pocket therebetween, an air passage from a suitable air supply, one wall of said passage being an intermediate wall distancing said front and back plates and inclosing said air pocket, and a deflecting wall within said pocket associated with said outer wall in distributing the air throughout said pocket before reaching the flame.

1,380,741. CLAMP FOR ATTACHING AUTOMOBILE-BUFFERS. JOHN R. REYBURN, Fairfield, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Jan. 29, 1921. Serial No. 440,867. 25 Claims. (Cl. 293—55.)

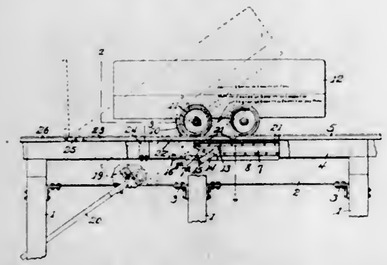


13. In an attaching clamp for automobiles, a coupling member including a pair of hooks provided with straight bights adapted to engage the inner side of a flange of a channel bar and a wedging surface supported by and between said hooks, said wedging surface and the plane of said bights being converging, a buffer arm support consisting of a wedge-shaped portion provided with a shank, said wedge-shaped portion being adapted to wedgingly fit between said wedging surface and said flange when the parts are adjusted to a channel bar, and a nut on said shank for drawing the wedge-shaped portion into wedging engagement with said wedging surface and said flange.

1,380,742. INTERNAL-COMBUSTION ENGINE. HARVEY J. SALLEE, Whitehouse, Calif. Filed Aug. 6, 1917. Serial No. 184,647. 12 Claims. (Cl. 123—177.)

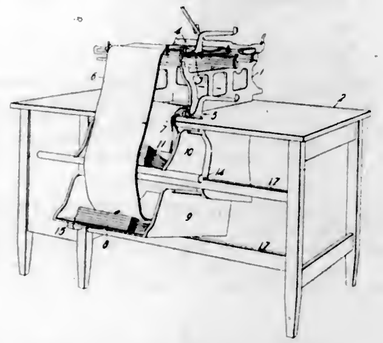
10. In an internal combustion engine, a rotary distributer valve having a port opening on the face thereof, a series of circumferential oil grooves in said valve spaced longitudinally thereof, oil grooves in said valve disposed longitudinally thereof and connecting said circumferential grooves, means for introducing oil into said circumferential grooves and a groove connecting each longitudinal groove with said port.

1,380,743. PROPEL-PENCIL. WILLIAM M. SAUNDERS, Waterbury, Conn., assignor to The Hoge Manufacturing Company, New York, N. Y., a Corporation of New York. Filed July 21, 1920. Serial No. 397,944. 12 Claims. (Cl. 120—18.)



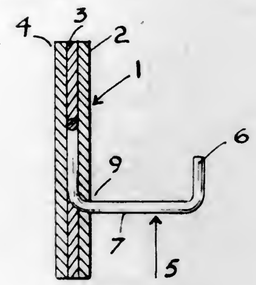
5. In a propel pencil, the combination of a casing having an internal screw-thread, a lead carrying tube, an externally screw-threaded plug engaging said internal screw-threads, a follower secured to said plug and having a portion normally in line with the bore thereof, a magazine having an opening in line with the axis of said plug, said follower being in the form of a hairpin and having its legs secured to said plug on opposite sides of its axis, a core within said magazine having an elongated opening adapted to receive said hairpin follower and whose axis is in line with the axis of said lead carrying tube, the rear end of said core having a cam engaged by the rear end of said hairpin follower when fully retracted so as to be deflected by said rear end out of alinement with said opening.

1,380,744. TOOL- HOLDER. CHARLES A. SIMMONS, Albany, N. Y. Filed Sept. 24, 1920. Serial No. 412,463. 9 Claims. (Cl. 29—96.)



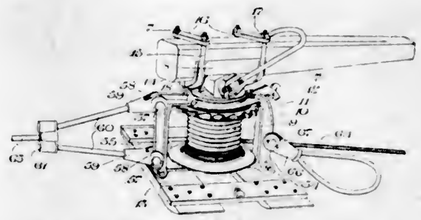
1. A tool holder for holding tools of varying sizes, of round, square or other shape in cross section and with plain or tapered shanks, comprising a body portion provided with an angled tool holding recess, a clamping plate to force the tool into the angle of the tool holding recess, fulcrumed on the body portion so as to permit of a small transverse movement, the plate being provided with a spherical seat and with an enlarged hole to allow for the play of a clamping bolt, and a clamping bolt with a spherical bearing passing through the hole and engageable in the seat.

1,380,745. CAR-DUMPING PLATFORM. CLEMENT C. SMITH, Wheeling, W. Va. Filed Aug. 26, 1919. Serial No. 319,945. 14 Claims. (Cl. 214—47.)



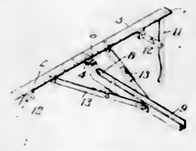
1. The combination with a tipple structure having track rails leading thereto, of a dumping platform comprising a pair of opposite longitudinally disposed rockers having approximately sled-runner form, unyielding supports for said rockers, rail sections superimposed on and wholly supported by said rockers with their rear ends in register with said track rails, wheel chocks carried adjacent to the front ends of said rail sections, and means for preventing longitudinal movement of said rockers on said supports.

1,380,746. TYPEWRITING-MACHINE AND SUPPORTS THEREFOR. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed June 21, 1917, Serial No. 175,996. Divided and this application filed May 17, 1920. Serial No. 382,166. 6 Claims. (Cl. 197—126.)



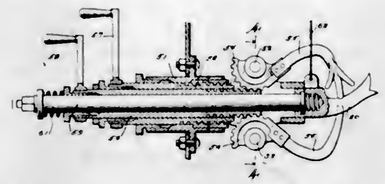
1. The combination with a machine having a plurality of interchangeable sheet-frames for carrying carbon sheets interleaved with a manifold web, of a plurality of receptacles arranged in tier with said machine, each receptacle adapted to hold a pack of the manifold-form-web while being written on in the machine and attached to one of said frames individually, said frames and webs being interchangeable to working positions on said machine without separating the carbon sheets and web while the latter is held in the receptacle whereby a rapid change may be made between different types of work by merely interchanging said frames.

1,380,747. HOOK-RACK. MAURICE L. STANFORD, San Francisco, and MALCOLM MACAULAY, Sausalito, Calif. Filed Nov. 22, 1920. Serial No. 425,674. 5 Claims. (Cl. 211—14.)



5. A rack embodying in its construction a base made up of a plurality of relatively thin sheets of material secured one upon the other and a plurality of article supporting hooks each of which extends through one of the outermost sheets and has an angularly disposed anchoring portion lying between the outermost sheets and permanently anchored in the intermediate sheet.

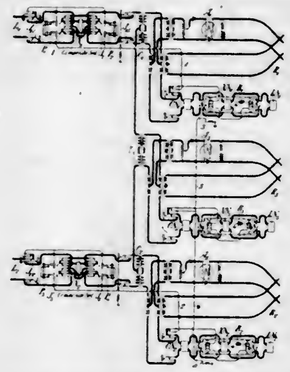
1,380,748. STUMP-PULLER. WALTER W. STOPPLE, Escanaba, Mich., assignor to A. J. Kirstin Company, Escanaba, Mich., a Corporation of Michigan. Filed Apr. 12, 1920. Serial No. 373,357. 8 Claims. (Cl. 254—182.)



1. In a stump puller, the combination, with a frame having spaced frame members provided with coaxial openings, of bearing bushings mounted in said openings and extending inwardly beyond the frame members, a drum mounted in the frame and journaled on the extended ends of said bushings, and a sweep trough having a hub portion journaled in one of the bushings and a spindle portion journaled in the other bushing.

1,380,749. FOLDING BED. VINCENT TERRANOVA, San Francisco, Calif. Filed June 24, 1920. Serial No. 391,412. 5 Claims. (Cl. 5—5.)

1. A folding bed comprising a pair of end rails, each end rail formed of two parts pivotally connected by a knuckle joint, and a reach rod formed of a plurality of parts pivotally connected by a knuckle joint connecting said end rails and pivoted in said end rail knuckle joints.

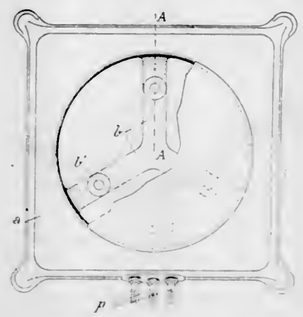


1,380,750. DIVING-CHAMBER FOR SUBMARINE OPERATIONS. ALEXANDER O. TESCH, Chicago, Ill. Filed June 15, 1920. Serial No. 389,255. 2 Claims. (Cl. 61—69.)

1. In an apparatus of the character described, a grapple including relatively movable gripping jaws, a rotary sleeve for operating said jaws, a rod yieldably held within said sleeve and adapted to receive on one end a tool, said tool to operate in conjunction with said gripping jaws.

1,380,751. REPEATER-NETWORK-SELECTING APPARATUS. JOHN F. TOOMEY, New York, and CHARLES S. DEMAREST, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 9, 1919. Serial No. 309,595. 6 Claims. (Cl. 179—170.)

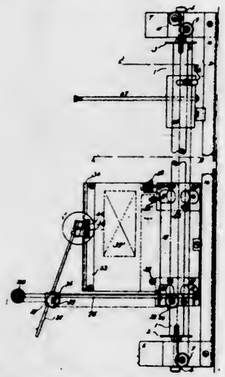
6. A balancing arrangement comprising an artificial line for simulating a transmission line, an auxiliary balancing set for simulating the auxiliary apparatus associated with a transmission line, switching means controllable at will, adapted to disconnect said artificial line



from the balancing arrangement, and means to prevent the said disconnection whenever said auxiliary apparatus is replaced by similar apparatus.

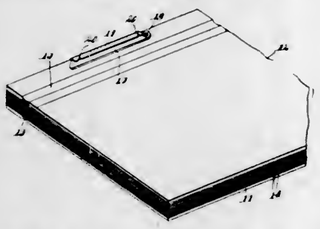
1,380,752. ELECTRICAL RELAY. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 9, 1919. Serial No. 309,673. 3 Claims. (Cl. 200—87.)

3. An electromagnet, a receptacle associated with the pole thereof, contact points and metallic filings included in said receptacle, a circuit completed over said contact points, and means controlled by the repellent action on said metallic filings produced by an alternating electromagnetic force in said magnet for controlling said circuit.



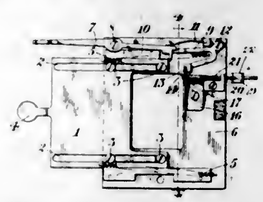
1,380,753. ELECTRIC STOVE. LEO TROUILHET and GASTON DUVEAU, Lyon, France. Filed Nov. 19, 1919. Serial No. 339,022. 3 Claims. (Cl. 219—35.)

3. In an electric stove the combination of a pedestal having an aperture in its upper part and arms bent downward from the rim of said aperture and extending across the same, said arms having bolt holes, a hot plate adapted to enter said aperture above said arms and having down-



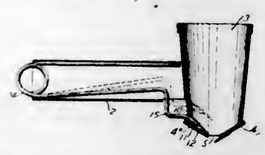
wardly directed bosses, an insulating plate under said hot plate having holes for said bosses, an electric resistance embedded in said insulating plate and having terminal studs protruding from the under surface of said plate, a plate under said insulating plate, having holes for said bosses and holes located below said studs, insulated contact devices in the last mentioned holes, and bolts passing through the bolt holes in said arms and screwed into said bosses.

1,380,754. INTEGRAPH AND DIFFERENTIATOR. JOHN PHILIP VAN BOGAERT, Brussels, Belgium. Filed Mar. 25, 1919. Serial No. 285,083. 4 Claims. (Cl. 33—27.)



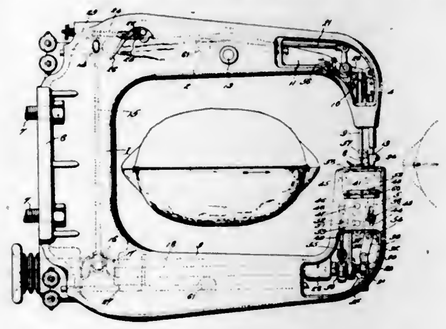
1. In an integraph, the combination with a pointer which is moved over the original curve, a slide on which the said pointer is mounted rigidly, a tracing wheel which traces the integral curve on the same ordinate, a truck on which the said tracing wheel is pivotally carried, and a shaft on which the said slide and truck are slidable independently parallel to the ordinate and movable in unison at right angles to the said ordinate, of a slide carried by the truck, means for moving the said slide relatively to the truck at right angles to the ordinate to an extent proportionate to the extent of the movement of the pointer parallel to the ordinate, and means actuated by the said slide for controlling the direction of the tracing wheel.

1,380,755. LOOSE-LEAF BINDER. CHESTER G. VAN BUREN, Chicago, Ill. Filed June 26, 1918. Serial No. 241,912. 4 Claims. (Cl. 129—7.)



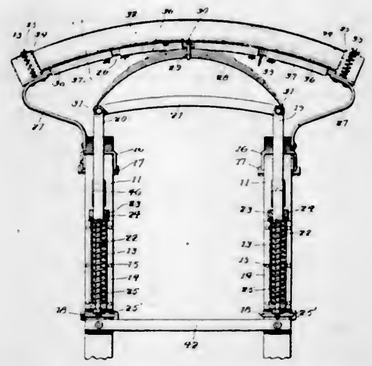
1. A binder or file for sheets of paper or the like, comprising a pair of covers; spaced flexible fastening means arising from one of said covers adjacent the inner edge thereof, and adapted to pass through openings provided in the other cover and be clenched over the latter; a flat blade on said last mentioned cover, pivotally connected therewith, adapted to be adjusted to engage over the clenched ends of said fastening means to hold the same in clenched condition; and a flange on said last mentioned cover under which said blade is adapted to engage when in operative relation with said fastening means, said flange extending parallel with said blade when the latter is in engagement therewith and engaging with said blade throughout substantially its entire length, substantially as described.

1,380,756. CINEMATOGRAPH AND SAFETY DEVICE THEREFOR. WILLIAM VAN DEN BROECK, London, England. Filed Mar. 17, 1920. Serial No. 366,636. 12 Claims. (Cl. 88—17.)



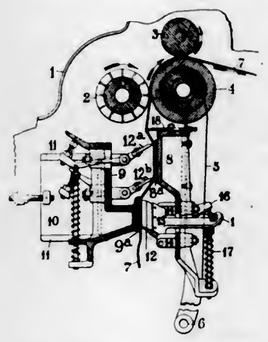
1. In a safety device for a cinematograph having a light source, the combination of a gate frame, a film therein, a sliding door in the said frame between the light source and the film, self acting means within said frame for closing the door when free, means within said frame in contact with and operated by said film when intact to hold the door open, and means within said frame for releasing the door when said film breaks.

1,380,757. ICE-SCRAPER. WILLIAM S. VAN SANT, Oakland, Calif., assignor of one-third to Everett N. McCutcheon and one-third to Elijah M. Hiatt, Oakland, Calif. Filed June 2, 1920. Serial No. 386,121. 4 Claims. (Cl. 83—62.)



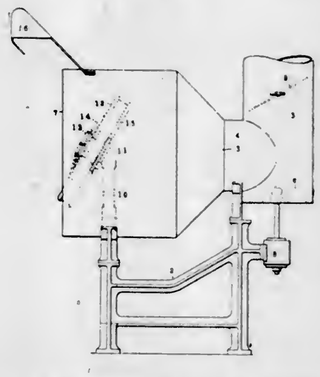
1. A combination mold and scraper, comprising a cone shaped mold, a handle therefor, a bottom section in the mold having a transverse slot, a scraper adjacent said slot, an ejector plate adjacent the bottom section of the mold, and means by which said plate may be lifted to eject the contents of the mold.

1,380,758. BAG-SEWING MACHINE. IRVING F. WEBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Apr. 29, 1919. Serial No. 293,537. 5 Claims. (Cl. 112—11.)



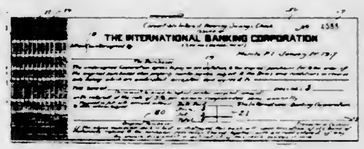
2. A sewing machine having stitch-forming mechanism including a horizontally reciprocating needle and work-advancing mechanism including a feed-dog, said feed-dog having four motions in a plane substantially parallel to the needle-bar, a frame operatively supporting said stitch-forming and work-advancing mechanisms including horizontally spaced arms extending in the general direction of the plane of feed-dog movement and a support for said arms to one side of the path in which the bag mouth is advanced by the feed-dog, said arms and support defining a bag passage open upwardly whereby mouths of bags dropped through the space between the arms and support may be stitched and removed from the machine by movement thereof in the direction of feed without hindrance.

1,380,759. PNEUMATIC BUMPER. JAMES KNOX WHITAKER, Jr., St. Louis, Mo. Filed Sept. 2, 1920. Serial No. 407,790. 9 Claims. (Cl. 293—55.)



5. A bumper for motor vehicles comprising a bumper frame including spaced arms and a connection portion at their forward ends, the frame being adapted for connection with a chassis, a bumper head, a leaf spring connected between its ends with the bumper head and having terminal shackle connections with the bumper frame at the forward ends of its arms whereby the head may have lateral movement with respect to the frame and a goose necked spring connected between each end portion of the bumper head and the forward end portion of a frame arm, the bumper head including a pneumatic element disposed forwardly in position to receive direct contact in use.

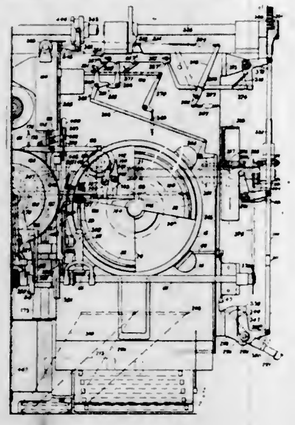
1,380,760. LEATHER-WORKING MACHINE. ROBERT F. WHITNEY, Winchester, Mass. Filed Aug. 11, 1919. Serial No. 316,583. 4 Claims. (Cl. 149—20.)



1. In a leather working machine of the character described, a pair of co-acting, horizontally disposed, stretching and squeezing members, between which the leather is drawn; one member being furnished with a vertically disposed bed plate; and the other member being furnished with a series of angularly disposed blades axially journaled thereon and furnished, each, with an arm adjustably disposed between and in engagement with a stop and a spring mounted on said last mentioned member; whereby the axial movement of the blades is cushioned and their movement toward the oppositely disposed bed plate limited.

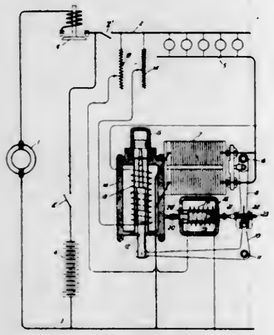
1,380,761. PAINT-BELL. CHARLES S. ASH, Buffalo, N. Y., assignor, by mesne assignments, to Wire Wheel Corporation of America. Filed July 14, 1916. Serial No. 109,279. 2 Claims. (Cl. 91—60.)

1. In apparatus for painting wheels, the combination of a housing, means for insuring a draft of air therethrough, and an upwardly inclined support within the housing on which the wheel to be painted rests by gravity and about which it is freely rotatable, said inclined support being turnable about a vertical axis, substantially as described.



1,380,762. CONVERTIBLE INTEREST-BEARING SAVINGS-CHECK. GEORGE H. BANKS, Memphis, Tenn. Filed June 17, 1918. Serial No. 240,461. 1 Claim. (Cl. 283—59.)

A convertible interest bearing savings check comprising a single sheet divided transversely on one side by separately designated severance indication lines into a stub portion and a body portion, said stub portion having a binding part segregated by a line of perforations whereby the stub may be removed from a binder subsequent to the closing of the account, said stub portion having on one face a plurality of blocks defined by marginal lines for the reception of various data relative to check and interest handling, said body portion being divided on its face by lines into a block for the serial number of the check, a second block designated for the signature of the purchaser at the time of purchase from the bank, another block in which is adapted to be written the amount for which the check may be subsequently issued by the purchaser, and another block for the second signature of the purchaser for comparison with the signature in said second block, said body portion also being divided by lines



on its face into a space for the date of payment of the sum named on the face of the check, another space for the amount of interest paid, a further space for the sum total of the transaction, and constructed with a still further space for the signature of an officer of the bank issuing the check, and means on the reverse side of said body portion for governing entries therein to control the withdrawals from the savings account.

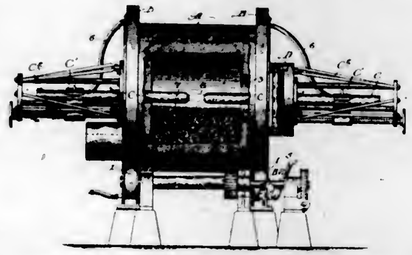
1,380,763. MECHANISM FOR COMPOSING AND CASTING TYPOGRAPHICAL MATTER. MARK BARR, Chelsea, and THOMAS FREDERICK MAW, Cricklewood, England, assignors to Mergenthaler Linotype Company, a Corporation of New York. Filed May 12, 1917. Serial No. 168,083. 91 Claims. (Cl. 199—71.)

4. In a machine for casting justified lines of separate and individual type from matrices presented successively and individually in casting position, the combination with a bi-partite mold liner according to claim 3, of abutments on the matrices determining the casting position of one part of the liner.

1,380,764. SYSTEM OF ELECTRICAL REGULATION. ERNST BAUER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 25, 1918. Serial No. 213,620. 9 Claims. (Cl. 171—229.)

1. In combination, a compressible rheostat, electro-magnetic means for controlling the compression of said rheostat, resilient means for tightly compressing said rheostat, and electro-magnetic means for overcoming said resilient means whereby said first mentioned electro-magnetic means may control said rheostat.

1,380,765. ART OF COMPOUNDING RUBBER. CLAYTON W. BEDFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 12, 1919. Serial No. 310,463. 11 Claims. (Cl. 18—53.)



1. The method of producing vulcanized rubber, which consists in dissolving an accelerator, mixing the solution with a compounding ingredient, incorporating the mixture with rubber, and vulcanizing the rubber compound.

1,380,766. METHOD OF MAKING GRAPNELS. SEELEY P. BIRDSEY, Middletown, Conn., assignor to Wilcox, Crittenden and Company, Inc., Middletown, Conn., a Corporation of Connecticut. Filed June 17, 1919. Serial No. 304,800. 6 Claims. (Cl. 29—148.)

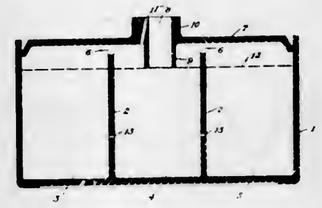
1. The herein described method of making grapnels, which consists in forming a series of bars each with a shank substantially trapezoidal in cross-section having opposite curved faces, then in arranging the bars with one end about a central shank having a substantially cylindrical cross-section with the inner curved faces of the bar shanks in contact therewith and with the opposite ends of the bars free and extending beyond the central shank, then in welding all of the parts together to form the shank of the finished grapnel and finally in bending said free ends of the bars to form prongs for the grapnel.

1,380,767. PROCESS FOR MELTING METAL TURNINGS, BORINGS, &c. WILLIAM K. BOOTH, Chicago, Ill., assignor to The Booth Electric Furnace Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1919. Serial No. 342,132. 5 Claims. (Cl. 204—64.)

1. The method of treating metallic turnings, etc., which comprises subjecting a charge of such materials to a disintegrating tumbling action while simultaneously applying a high degree of heat.

1,380,768. COURSE-INDICATOR OR THE LIKE. GERARD FORT BUCKLE, St. Leonards-on-Sea, and FRANK PARFETT, London, England; said Parfett assignor to said Buckle. Filed Feb. 12, 1920. Serial No. 358,226. 23 Claims. (Cl. 40—42.)

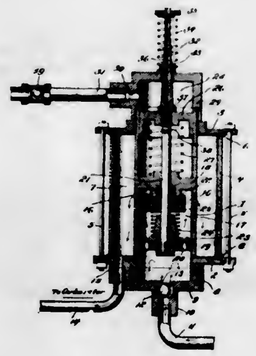
1. In a course indicator or the like the combination of two driven members, means for moving them rectilinearly in parallel planes but in directions at right angles to each other to indicate a course or the like by the resultant of their movements and means for adjusting



the speeds of the two driven members comprising a setting member, means for rotating said setting member into a position to correspond to the said course, a disk one for each of the two driven members, gearing between said disks and the setting member whereby they may be rotated therefrom, a pin eccentricallly situated in each disk, said disks being so situated relatively to each other that the pin in one is displaced through an angle of 90° relatively to the corresponding position of the pin in the other, two slotted adjusting members one connected to the speed-varying gear for each of the said driven members and guideways for the adjusting members, said adjusting members sliding along the guideways to adjust the speed-varying gear and each receiving in its slot one of the said pins whereby rotation of the disks is translated into longitudinal movement of the adjusting members.

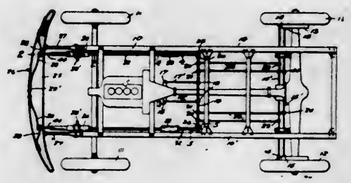
1,380,769. SPRINKLER. JOHN CARLSON, Chicago, Ill. Filed Sept. 16, 1920. Serial No. 410,578. 1 Claim. (Cl. 299—153.)

A lawn sprinkler comprising a tube having a diagonal slot formed in one side thereof, the shorter side of said slot being relieved.



1,380,770. STORAGE-BATTERY CONSTRUCTION. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Sept. 20, 1919. Serial No. 325,173. 4 Claims. (Cl. 204—29.)

1. A storage battery having a plurality of compartments, said compartments being separated by walls having apertures to permit the passage of electrolyte, said apertures being sufficiently small to provide a sufficient resistance, through the interior of said battery to prevent the voltage at the terminals of said battery from sending a substantial discharging current through the interior of said battery.



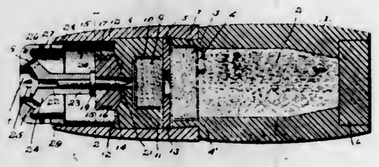
1,380,771. FUEL-FEEDING PUMP. DAVID J. CARTWRIGHT, New York, N. Y. Filed Sept. 2, 1919. Serial No. 321,239. 9 Claims. (Cl. 158—36.)

1. In an apparatus for supplying liquid fuel to an engine, the combination of a pump including a piston, said pump having an inlet port connected to a source of fuel supply and an exhaust port leading to the fuel line of the engine; a pressure cylinder; a trunk type piston mounted therein and connected to the pump piston; a spring serving to move the trunk piston in one direction; means connecting one end of the pressure cylinder to the explosion pressure space of the engine being supplied with fuel

whereby pressure will be applied to the trunk piston acting in opposition to the spring; and an automatically controlled vent in the pressure cylinder.

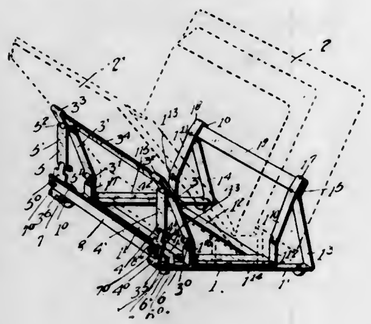
1,380,772. VEHICLE-BRAKE. WILLIAM R. CLARK, Seattle, Wash. Filed Oct. 8, 1919. Serial No. 329,183. 3 Claims. (Cl. 180—83.)

3. In a motor vehicle, the combination with the usual wheel brakes and operating mechanism therefor including a pedal and a controlling lever adapted to be employed selectively to appply the brakes, of a bumper comprising two transversely arranged resilient members disposed one in front of the other, brackets connecting the rearmost of said members to the vehicle frame for supporting the bumper, rods connected to said brake operating mechanism, springs connected to the respective rods and tending to render said rods operative, means for releasably securing said rods in operative positions, yieldable devices engageable with the respective means and extending through the rearmost of said bumper members, and means provided intermediate said bumper members and rendered operable by the bumper colliding with an object to cause said devices to act whereby the spring pressed rods are released by the aforesaid means to effect the applying of the brakes.



1,380,773. ARMOR-PIERCING, SPOTLIGHT, AND INCENDIARY BULLET. WALLACE L. CLAY, U. S. Army. Filed Nov. 20, 1918. Serial No. 263,382. 5 Claims. (Cl. 102—26.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

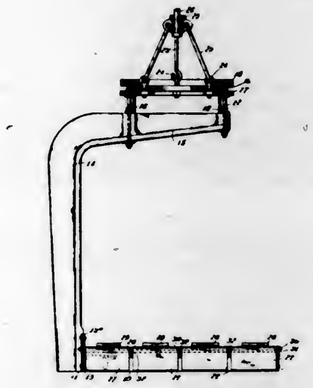
1. A projectile of the class described, comprising a slug, a shell of a material fracturable by impact and inclosing



the slug, a mass of relatively soft metallic substance between the slug and shell, and a mass of a light and vapor producing substance between the slug and the soft metallic substance.

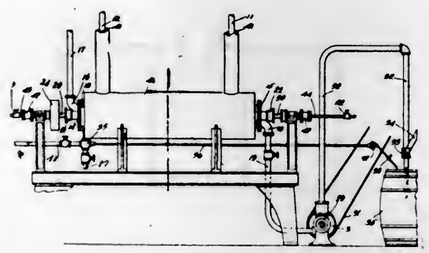
1,380,774. FUSE. WALLACE L. CLAY, Bridesburg, and JOHN W. TAYLOR, Frankford, Pa. Filed June 30, 1919. Serial No. 307,796. 5 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a fuse for projectiles, the combination with the primer, of a firing-pin, safety means for normally maintaining the firing-pin in unarmed position, a firing-pin holder having a tubular stem within which said firing-pin projects, a head at one end of said stem provided with air inlet apertures, and a tubular flange extending circumferentially of said head for guiding the holder during longitudinal motion thereof.



1,380,775. POSTING-LEDGER RACK. CHARLES EDWIN CLIFFORD and THOMAS JAMES MACKLE, Brampton, Ontario, Canada. Filed May 10, 1920. Serial No. 380,162. 4 Claims. (Cl. 45—57.)

1. A ledger rack comprising a base frame, a stationary support extending upwardly from one side of the base frame and against which one cover of the ledger is designed to rest, a hinged supporting arm against which the other ledger cover is adapted to rest, a divided strut having one end hingedly connected to the base frame and the opposite end to the support and having the divided portions hinged together and adapted to break joint when released, and a spring held curved arm pivotally supported in the base frame and having a toothed convex portion adapted to engage a suitable portion of the divided strut to hold it in the unbroken position.



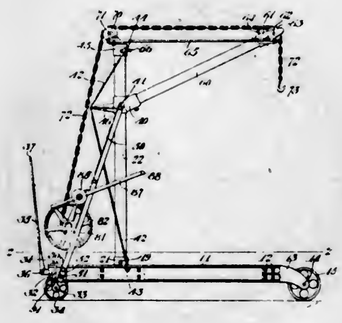
1,380,776. APPARATUS FOR HANDLING BRICK. RALPH B. COBB, River Forest, Ill. Filed June 10, 1920. Serial No. 387,863. 12 Claims. (Cl. 294—63.)

1. A brick handling apparatus comprising a frame having a plurality of parallel arms projecting therefrom and adapted to be introduced into the spaces between parallel rows of bricks, and clamping devices carried by said arms

and arranged to be directly actuated to operatively engage the bricks of such rows by the weight of bricks superimposed thereon.

1,380,777. FOOD FAT AND PROCESS OF FINISHING THE SAME. JOHN T. COX, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Nov. 26, 1919. Serial No. 340,702. 10 Claims. (Cl. 99—13.)

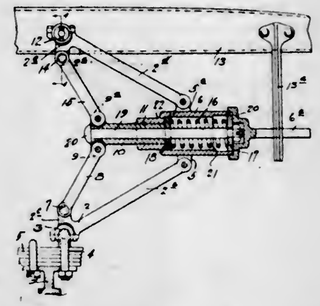
1. The process of treating edible fat, which consists in continuously chilling and solidifying successive portions of a body of liquid fat, and simultaneously incorporating said solidified portions in the body of the fat until the mass is converted into a semi-solid.



1,380,778. SAFETY ATTACHMENT FOR POCKETBOOKS. FRANK CUCINOTTA, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,396. 3 Claims. (Cl. 150—47.)

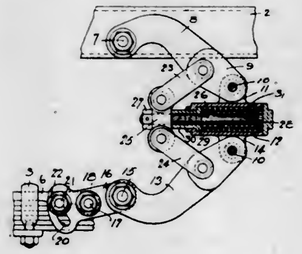
1. The combination with a pocketbook having a flap to cover its mouth and perforations in said mouth and flap to register with one another when the flap is closed, of a button having a shank to extend through said perforations in the mouth and flap, a loop on the free end of said shank of the button, a chain to be passed loosely through said loop for fastening the mouth of the pocketbook closed,

and means for fastening both ends of the chain to the clothing.



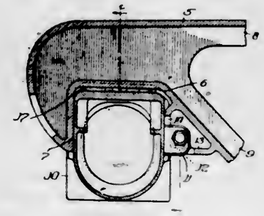
1,380,779. PORTABLE CRANE. ROBERT CRAIG, Berkeley, Calif. Filed Feb. 8, 1919. Serial No. 275,906. 4 Claims. (Cl. 189—16.)

1. In a portable crane, a base; a three wheel support therefor; a mast socketed to said base intermediate said points of support of said wheels on said base; a boom casting secured to said mast intermediate of the ends thereof; an oblique brace connecting said boom casting to the forward end of said base; a strut integral with and projecting from said boom casting in the direction of the forward end of said truck; a truss rod secured at either end to said mast and passing over the outer end of said strut; a boom having its forward end secured in said boom casting; and a tension rod secured at one end to the upper end of said mast and at the other end to the end of said boom.



1,380,780. SHOCK-ABSORBER. JOHN DAHLSTROM, Pittsburgh, Pa. Filed July 16, 1919. Serial No. 311,122. 10 Claims. (Cl. 267—20.)

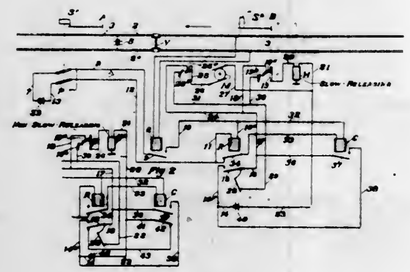
2. In a shock absorber, the combination of a longitudinally movable casing, a spring contained therein, followers in said casing between which said spring is interposed, a movable member entering said casing to move one of said followers, a rod connected to the other follower passing through said movable member, a stop on said rod to control the movement of said movable member,



connections between said casing and the axle and vehicle frame, and means for moving said followers in said casing alternately as the vehicle frame moves up and down.

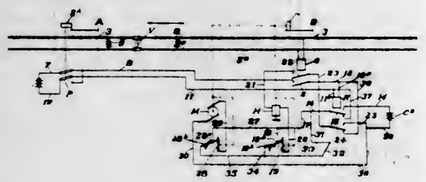
1,380,781. SHOCK-ABSORBER. JOHN DAHLSTROM, Pittsburgh, Pa. Filed Dec. 23, 1919. Serial No. 346,947. 5 Claims. (Cl. 267—20.)

2. In a shock absorber, the combination with the vehicle frame and axle of a casing, followers in said casing, a spring interposed between said followers, arms pivotally connected to opposite sides of said casing and to the frame and axle, and links connected to said arms and to one of said followers whereby on deflection and rebound of said frame said casing is moved in one direction carrying with it one of said followers and the other follower is moved simultaneously in opposite direction to compress the spring.



1,380,782. TRUCK SIDE FRAME. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 10, 1918. Serial No. 227,648. 2 Claims. (Cl. 105—220.)

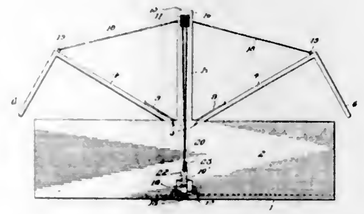
1. In combination, a truck side frame having a pedestal jaw with apertured spaced walls, a journal box having a



lug with a vertically elongated slot and extending between said walls, said frame and box being relatively adjustable, and a bolt connecting the walls and lugs, said connection permitting shims of varying thickness to be inserted between the journal box and truck pedestal to vary the relative position therebetween.

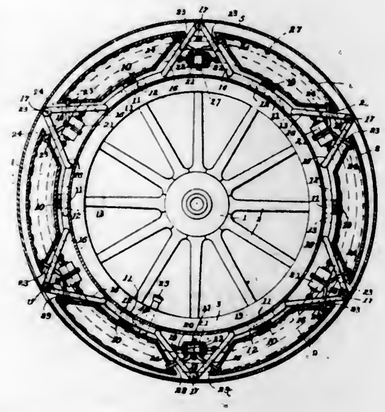
1,380,783. RAILWAY SIGNALING. CHARLES W. DUNHAM, Fairmont, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 323,247, filed Sept. 12, 1919. This application filed Mar. 26, 1920. Serial No. 368,873. 10 Claims. (Cl. 246—53.)

10. In combination, a polarized relay, a circuit for said relay including a source of current, means included in said circuit for reversing the polarity of the current supplied to said relay from said source, a second relay, means controlled by said polarized relay for energizing said second relay when the polarized relay is open during response of the latter relay to reversal of the polarity of the current supplied thereto, and a signal controlled by a neutral front contact of said polarized relay and a front contact of said second relay in multiple.



1,380,784. RAILWAY SIGNALING. CHARLES W. DUNHAM, Fairmont, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1919. Serial No. 347,748. 13 Claims. (Cl. 246—45.)

12. In combination, a relay having front and back contacts, a circuit for said relay including a source of current and a pole-changer, a magnet, a second source of current, a circuit for said magnet including said second source and the front contacts of said relay, and a second circuit for said magnet including the first source of current and the back contacts of said relay.

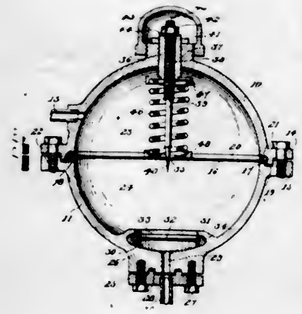


1,380,785. ANIMAL-TRAP. STANLEY DYBOWSKI, deceased, by Juzefa Nawacka, administratrix, Rockford, Ill. Filed June 11, 1920. Serial No. 388,086. 3 Claims. (Cl. 43—61.)

1. An animal trap of the character described comprising a casing, trap doors pivotally carried thereby, spring arms for maintaining the trap doors in their lowered closed positions, cords connected to said trap doors, a lever arm within said casing and projecting through one side wall thereof, a prop connection between the projecting end of said lever arm and the cords connected to said trap doors, said casing having an opening therein to facilitate the

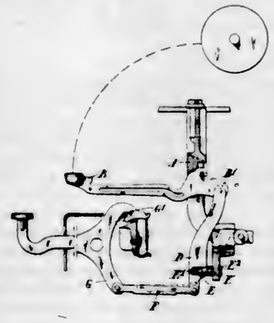
passage of said lever arm and springs secured to the opposite sides of said lever arm and frictionally engaging the side walls of the opening to hold the lever arm elevated against its weight, and being of insufficient strength to maintain the arm elevated with an animal resting on the lever arm.

1,380,786. VEHICLE-TIRE. OTTO J. EISELE, New York, N. Y. Filed Jan. 17, 1920, Serial No. 352,060. Renewed Nov. 10, 1920. Serial No. 423,176. 14 Claims. (Cl. 152—33.)



1. A vehicle tire comprising an inner and an outer rim, rigid air reservoirs arranged between said rims, out of contact with the same, means in contact with the outer rim and also arranged between the reservoirs for compressing the air in said reservoirs when the tire is under a load and connections between said compressing means arranged to slide between the inner rim and the reservoirs.

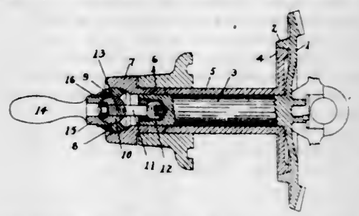
1,380,787. AUTOMATIC EXPANSION-VALVE FOR REFRIGERATING SYSTEMS. JOSEF ELLMAUER, Milwaukee, Wis., assignor to Refrigo Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 7, 1919. Serial No. 329,166. 4 Claims. (Cl. 50—14.)



1. An automatic expansion valve adapted for employment in the circulating system of a refrigeration plant comprising means through which the refrigerant is conducted, retarding means therein having a constantly open passage and means of less cross sectional area than said

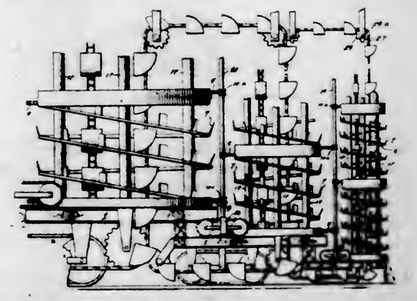
passage axially projecting therethrough and adapted to automatically vary the diameter of said passage operable

upon a change of pressure of the refrigerant at the inlet side of the retarding means.



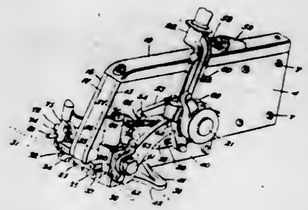
1,380,788. TYPE-BAR MECHANISM. HERBERT ETHERIDGE, Ealing, England, assignor to The Bar-Lock Typewriter Company, Limited, London, England. Filed Mar. 17, 1920. Serial No. 366,648. 2 Claims. (Cl. 197—27.)

1. In a front strike typewriting machine, the combination of a shift frame comprising a segment, and a plurality of independently detachable type actions mounted thereon, each of said type actions comprising a vertical sub-lever pivotally mounted on said segment and detachable therefrom independently of the other sub-levers, a normally horizontal type-bar hung on said segment so as to be readily detachable therefrom and pivotally connected to the upper end of the sub-lever, a key lever hung by a hook on the frame of the machine so as to be readily detachably fulcrumed thereon, and a horizontal link pivotally connected to the front end of the key lever and at the rear end to the sub-lever, whereby each type action can be assembled and adjusted in a machine and removed therefrom independently of the other.



1,380,789. CLUTCH. FREDERICK S. FLOETER, Saginaw, Mich. Filed Aug. 2, 1920. Serial No. 400,717. 3 Claims. (Cl. 192—93.)

1. In combination, a clutch-member having an integral stem, a link having one end swiveled to said stem, a ball fixed to the other end of said link, a hollow ball inclosing said first-mentioned ball and eccentric thereto, an operating handle secured to said hollow ball, a cup formed wth a seat to receive said hollow ball, a second clutch-

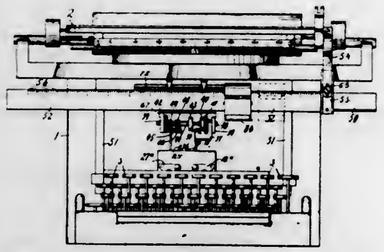


member, a hollow cylindrical stem connecting said cup and said second clutch member, for the purposes set forth.

1,380,790. EXCAVATOR. THEOPHIL J. FREDA, Detroit, Mich. Filed May 1, 1920. Serial No. 378,057. 19 Claims. (Cl. 37—27.)

1. In a ditch digging machine, a series of vertical, cylindrical, rotary excavators positioned one in the rear of the other to form a train, separate successive excavators being of increasing diameter from front to rear of said train, means connecting the same together so they will move forward as one unit, means for propelling the same forward, means for rotating said excavators.

1,380,791. BUNDLING-MACHINE. ALEC J. GERRARD, Chicago, Ill. Continuation of application Serial No. 287,487, filed Apr. 4, 1919. This application filed Nov. 26, 1920. Serial No. 426,500. 14 Claims. (Cl. 140—93.)

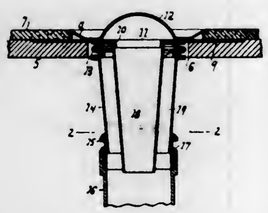


2. In a wire tying machine the combination of a wire twisting mechanism comprising a slidable wire holding member; and means to so move said member at the end of the twisting operation as to forcibly eject the twisted wire therefrom, substantially as described.

1,380,792. CALCULATING-MACHINE. HYMAN ELI GOLDBERG, (now by judicial change of name Hyman Golber,) Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed May 28, 1904. Serial No. 210,158. 265 Claims. (Cl. 235—59.)

24. In a recording calculating machine, the combination of a receiving mechanism; means for operating the

same to add a number thereon and simultaneously print in a given decimal column; and other means operative upon the same receiving mechanism in the same given decimal column as before to subtract a number therefrom and simultaneously print in a different decimal column.

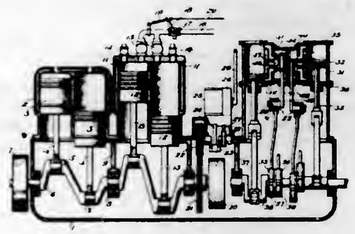


120. In a computing machine, the combination of an element to be shifted in a register actuating mechanism, of a traveling bar having offset portions arranged at predetermined positions thereon, and a power transmitting device arranged between the element to be shifted and said bar and arranged to transmit the shifting motion to the element to be shifted.

155. In a calculating machine, the combination of two reversible receiving mechanisms and two setting members, one for each receiving mechanism, said setting members being adapted to operate said receiving mechanisms simultaneously equal amounts in opposite directions, and means for simultaneously reversing the direction of rotation of said setting members.

235. In a calculating machine, the combination of indicating mechanism adapted for travel, a supporting frame for said indicating mechanism, numeral keys, driving mechanism associated with said numeral keys, the actuation of any key causing the indicating mechanism to be driven to perform calculation, means for rigidly locking the indicating mechanism against bodily movement while a key is being depressed and releasing said indicating mechanism when the key has reached the bottom of the same stroke.

1,380,793. ROOF LEADER CONNECTION. BARNEY GOLDMAN, New York, N. Y. Filed Dec. 31, 1919. Serial No. 348,645. 3 Claims. (Cl. 182—10.)

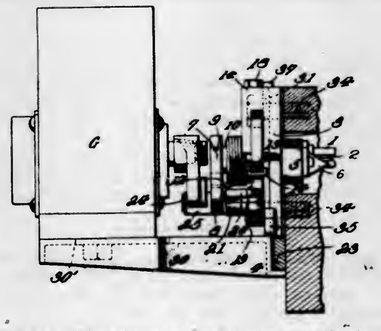


1. A leader connection comprising a roof having an opening therein, a plate with an opening arranged on the opening, a discharge conduit connected to the plate, and a duct secured to the plate spaced from the discharge conduit to form a chamber closed at the top for circulating air.

1,380,794. MONKEY-WRENCH. WILLIAM GORDON, Union, N. J. Filed Oct. 20, 1919. Serial No. 331,952. 13 Claims. (Cl. 81—139.)

1. In a monkey wrench, the combination with a fixed jaw and a movable jaw, one of which is provided with a rack having teeth extending inwardly and the other with a shank having a rack engaging member provided with a series of teeth extending outwardly and adapted to engage the said rack, said rack engaging member comprising an arm extending rearwardly and having a connection at the rear end of the shank, and means at the front of the wrench for actuating said rack-engaging member.

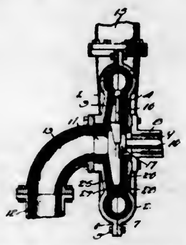
1,380,795. MOTOR. JOSEPH GRAZIANO, son of Rosario, and Joseph Graziano, son of Peter, Newburgh, N. Y. Filed Nov. 1, 1919. Serial No. 334,990. 1 Claim. (Cl. 60—14.)



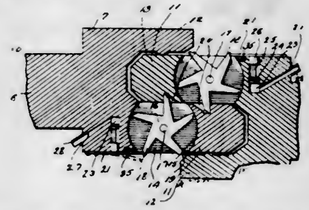
In a driving device for automobiles or the like, an internal combustion engine having reciprocatory pistons therein and a crank shaft connected to said pistons an air compressor including cylinders having reciprocatory pistons therein which are operated by the crank shaft of the internal combustion engine, valved air inlets for the cylinders, valves outlets for the cylinders, a pipe connected to said outlet valves, an air storage tank connected to said pipe, a spring influenced relief valve in the pipe, manually operated means for operating the valve to close the passage between the valve and tank and to open the passage to the atmosphere, a starter for imparting initial motion to the pistons of the engine including a reciprocatory member having means operated thereby co engaging with means on the crank shaft for turning the said crank shaft, a valve pipe connection between the starter and the storage tank, an air engine having a crank shaft independent of the first mentioned crank shaft and connected to the drive means of the automobile, said air engine including cylinders having reciprocatory pistons therein connected with the crank shaft, valve chests to the sides of the cylinders, inlet and outlet ports between the cylinders and the valve seat, reciprocatory pistons in the valve and operated in timed relation by mechanism connected with the crank shaft, manually operated means for reversing the stroke of the valves and consequently reversing the stroke of the pistons, means for feeding compressed air from the tank to the valve chests, controlling means for said feed means, and means for heating the fluid in the tank.

1,380,796. FRONT DRIVE AND STEERING WHEEL FOR AUTOMOBILES. BENJAMIN F. GREGORY and WILLIAM H. CRAUN, Kansas City, Mo. Filed Sept. 25, 1920. Serial No. 412,632. 7 Claims. (Cl. 180—47.)

1. In front wheels for motor vehicles, a steering knuckle-member comprising an annulus having a peripheral ball bearing groove, a plurality of annuli encompassing said steering knuckle-member and spaced off from each other and from said knuckle-member, an annulus arranged intermediate the aforesaid annuli and said knuckle-member and provided with a plurality of orifices, a plurality of spherical bearings positioned within said orifices, a compensating washer positioned intermediate the aforesaid annuli and spaced off edgewise from said plurality of spherical bearings, set-bolts passed through the aforesaid annuli and through said washer and adapted to space off said annuli to receive said washer therebetween, and means for rotatably mounting said annuli upon said steering knuckle-member.

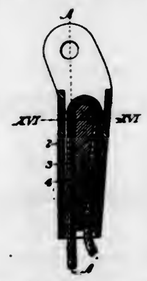


1,380,797. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM GRUNOW, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed July 21, 1919. Serial No. 312,172. 12 Claims. (Cl. 123—149.)



1. In an ignition device, a fixed and a movable electrode, a magneto generator having a current generating member, a shaft carrying the movable electrode a sleeve freely journaled on said shaft, a spring encircling said shaft and connected at one end to said sleeve, an arm on the end of the shaft to which the other end of said spring is connected, means whereby said sleeve may be turned and released for actuation by the spring, and means carried by the sleeve for engaging the arm on said shaft and actuating the current generating member.

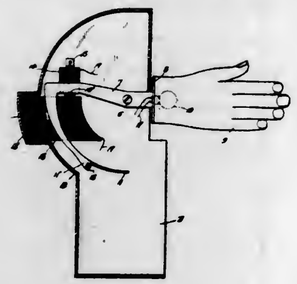
1,380,798. PUMP. GEORGE T. HANSEN and CHARLES F. SHERWOOD, Salt Lake City, Utah. Filed Apr. 28, 1919. Serial No. 293,295. 6 Claims. (Cl. 103—43.)



1. In a centrifugal pump for pumping a liquid containing abrasive material, a casing having an axial inlet and a peripheral outlet, said casing being divided on a plane substantially at right angles to the axis of the pump, an impeller within the casing comprising a hub, a driving shaft secured to the hub, said impeller comprising a rigid flat portion lying in a plane at substantially right angles to the axis of the shaft, and a plurality of rigid integral flanges forming vanes and extending generally radially and lying at right angles to the flat portion, said flat portion and said flanges being completely coated with rubber secured permanently to the surfaces of the same and a removable liner of rubber having a flexible sheet metal backing fitting the interior surfaces of said casing, said liner being divided on substantially the same plane as the casing, the parts of said liner being removable laterally from the interior of the casing for repair or replacement, said impeller having its rigid portion lying between the two casing sections and partly in each.

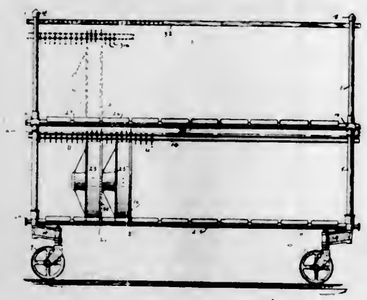
1,380,799. COUPLING. WILLIAM B. HATHAWAY, Grand Junction, Colo. Filed Apr. 5, 1919. Serial No. 287,849. 3 Claims. (Cl. 213—53.)

1. A coupling comprising a pair of heads each having a long arm and a short arm thus providing a receiving pocket therebetween for receiving the long arm, said long arm of the other head having a slot formed therethrough, a coupling wheel positioned within said slot and consisting of a body having fingers extending therefrom at a tangent, a shaft carried by the long arm and passing through said body for rotatably supporting said wheel, said long arm also having a receiving socket formed therein beyond said slot to receive a finger of the wheel of the other head, a latch carried by the head and engaging one of said fingers for releasably holding the coupling wheel against rotation in one direction, and means for moving said latch from engagement with said wheels.



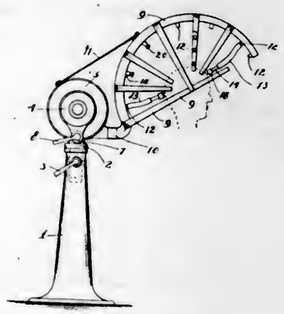
1,380,800. WIRE OR CABLE END CONNECTOR. JEHU FREDERIC HAWORTH, Edgeworth, Pa. Filed Sept. 27, 1917. Serial No. 193,504. 6 Claims. (Cl. 24—136.)

3. A connector for a cable or wire when under stress, comprising a member having a substantially tapered seat for engaging at substantially diametrically opposite sides the outer surfaces of reversely extending loop portions of a wire, and a movable wedge member coöperating therewith adapted to engage at substantially diametrically opposite portions the inner surfaces of said reversely extending loop portions of the wire, a portion of the sides of the



smaller end of said wedge member having a greater taper than the taper of said seat to form a gradually increasing space between the sides of said wedge member and said seat for increasing the bite on one part of the engaged portion of the cable cover the bite on another part of the engaged portion of the cable, and means for pivotally connecting said member for holding at least a part of the clamped portion of the wire within said member in the plane of the line of pull thereon, substantially as described.

1,380,801. TRAFFIC-SIGNAL. ELVIN C. HODGES, Cambridge, Mass. Filed May 9, 1919. Serial No. 295,860. 1 Claim. (Cl. 177—329.)

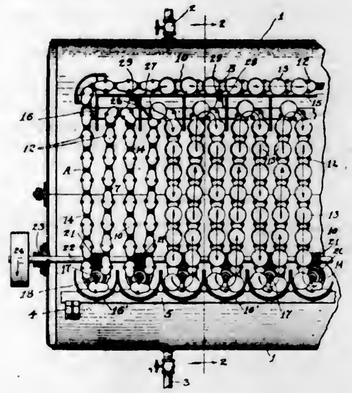


A device of the class described comprising a casing, an arm pivoted therein, a signal connected with one end of the arm, a curved extension on the other end of the arm, a solenoid in the casing to which the extension is adapted to pass, a pair of electro-magnets arranged in the casing above the solenoid, said magnets being spaced apart to receive the arm between them for holding said arm in operative position, said extension having a projection adjacent its lower end and a magnetized bar in said casing for engaging said projection and thus helping the magnets to hold the signal arm in operative position.

1,380,802. PORTABLE WHEEL-RACK. HENRY A. HOUSE, Jr., Buffalo, N. Y., assignor to Wire Wheel Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Sept. 4, 1918. Serial No. 252,670. 5 Claims. (Cl. 280—49.)

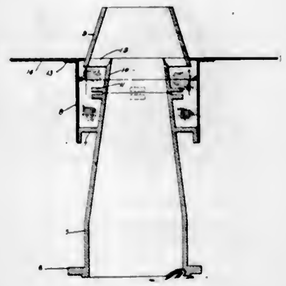
1. In a wheel rack comprising a frame work including parallel supporting bars adapted to support a plurality of wheels thereon, a longitudinal bar in sliding engagement with said frame, a series of pins on said bar adapted for longitudinal reciprocation transverse to said bar, and adapted to hold the upper parts of said wheels in releasable engagement therewith.

1,380,803. HAIR WAVING AND DRYING APPARATUS. HARRY JACOBS and HANNAH JACOBS, New York, N. Y. Filed Dec. 26, 1919. Serial No. 347,423. 7 Claims. (Cl. 34—26.)



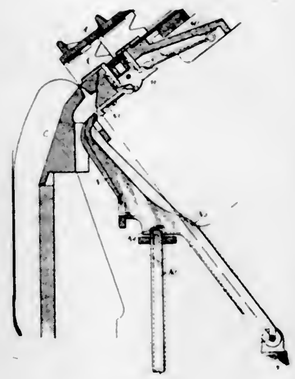
6. In a hair drying and waving apparatus, a drying chamber having inlet and outlet passages and adapted to engage a winding stem having hair wound thereon, means for forcing heated air under pressure through the said drying chamber, and pivotal connecting members upon the pedestal providing vertical and horizontal adjustment.

1,380,804. CARBONIZING-BOX, ANNEALING-POT, AND SIMILAR ARTICLE. WILLIAM E. JEANNOT, Muskegon, Mich., assignor to West Michigan Steel Foundry Co., Muskegon, Mich., a Corporation of Michigan. Filed May 15, 1920. Serial No. 381,775. 8 Claims. (Cl. 75—1.)



1. A carbonizing box or like container composed of ferrous alloy having as a leading ingredient silicon in proportion from 1 to 6%, together with carbon and manganese.

1,380,805. MEANS FOR CONTROLLING THE PERIOD OF COOK OF PACKAGED PRODUCTS. AXEL JOHNSON, Oakland, Calif. Filed Aug. 9, 1920. Serial No 402,196. 7 Claims. (Cl. 126—272.)



1. A continuous cooker comprising a box, means for heating the same, a can conveyer within the box disposed to form a continuous zig-zag path, with adjacent points in communicating relation, a plurality of can transfer gates disposed within the length of said conveyer for receiving and transferring cans from one flight to another, and means common to all of said gates and extending exteriorly of the box for selectively controlling the operation thereof.

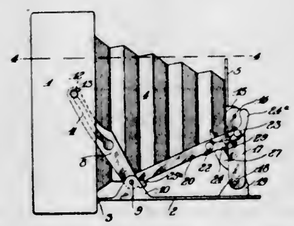
1,380,806. EXHAUST-NOZZLE. GEORGE WILLIAM KELLER, Portsmouth, Ohio. Filed Sept. 3, 1920. Serial No. 407,904. 2 Claims. (Cl. 162—5.)

1. A steam nozzle including a body portion having the walls thereof tapering toward its outer end, a nozzle head positioned on one end of the body portion, arms forming a part of the nozzle head to support the head in spaced relation with the body portion to provide passageways, and a guard of wire mesh material housing the upper end of the body portion, and the lower end of the nozzle to guard said passageways.

1,380,807. TYPOGRAPHICAL COMPOSING-MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed May 22, 1916, Serial No. 99,059. Divided and this application filed Mar. 19, 1919. Serial No. 283,520½. 3 Claims. (Cl. 199—25.)

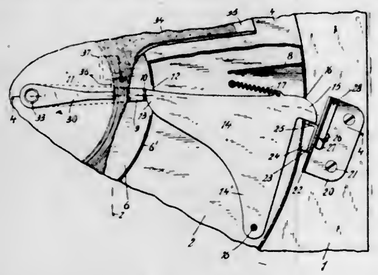
1. In a typographical composing machine, the combination of a matrix-releasing escapement, and operating means therefor, the said means including a sliding plunger connected to the escapement, and a pivoted actuating lever of relatively great length and arranged with its upper end in position to engage said plunger and having its pivotal point located in a plane extending substantially at right angles to the plunger and passing through the point of engagement of the lever with the plunger, said pivotal point being positioned a relatively remote distance from the escapement-plunger so that in the pivotal motions of the lever, its upper end will describe an arc to which the longitude of the plunger in tangent, and the circular measure of which arc will be substantially equal to the sine of the angle of rotation, whereby wear from sliding of the lever on the plunger is prevented.

1,380,808. BURGLAR-ALARM. BLASIUS A. KOVACIC, Detroit, Mich. Filed July 30, 1920. Serial No. 400,284 5 Claims. (Cl. 116—82.)



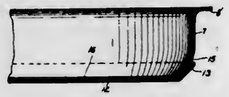
1. The combination of an alarm device having an operating push button disposed to solely support one end of said alarm device and be actuated by pressure on the device, and a retaining member under which the pusb button of said device engages to hold the device against accidental movement when pressure is brought to bear thereon.

1,380,809. ELECTRICAL BATTERY AND BULB TESTER. WILLIAM B. KOUWENHOVEN, Baltimore, Md., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed July 10, 1920 Serial No. 395,404. 3 Claims. (Cl. 175—183.)



3. An electrical battery- and bulb-tester, comprising a panel and a plurality of independently organized testing units differentiated in size and each comprising two battery-contacts, a testing-lamp, and inner, outer, and intermediate bulb-contacts, all connected by wires housed within the panel, the battery connections being normally closed through the testing-lamp, and the introduction of a bulb to be tested cutting out the testing-lamp and closing the circuit through the bulb to be tested.

1,380,810. FOLDING CAMERA. ROBERT KROEDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 13, 1919. Serial No. 344,558. 11 Claims. (Cl 95—40.)

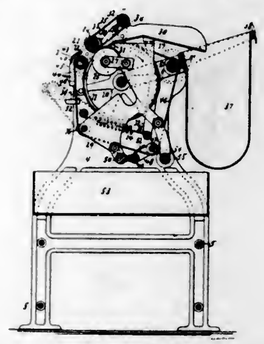


1. In a folding camera, the combination with a body, a bed hinged thereto and a lens mount pivotally supported on the bed, of a jointed brace for the lens mount pivoted to the bed and a device for breaking the joint of the brace

1,380,811. ATTACHMENT FOR TALKING-MACHINES. FERDINAND KRAUSE, New York, and JOHN ODORFER, Brooklyn, N. Y. Filed Aug. 15, 1919. Serial No. 317,640. 10 Claims. (Cl. 192—116.)

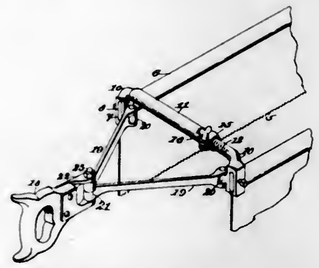
2. An attachment for talking machines comprising a disk adapted to be rotated by the talking machine mechanism and to support a record, a device carried by said record independently of the said disk and including a pair of arms extending across the record respectively above and below the latter, and a hub-like element on which said arms are fixed pivotally carried by the record centrally thereof, the upper one of said arms being adapted to be engaged and stopped by the sound reproducing device of the talking machine when it reaches the end of the record grooves, a brake, and means coöperating with the lower arm whereby continued rotation of the said disk causes the brake to be actuated.

1,380,812. CLOCK-DIAL BACK AND MAT. HAROLD L. LATHROP, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Aug. 13, 1920. Serial No. 403,225. 1 Claim. (Cl. 113—116.)



A method of making clock-dials consisting in producing a flat-bottomed, circular, cup-like blank comprising an annular mat-portion having its outer edge turned outwardly to form a rim, a flat dial-back portion, and a beveled corner portion interposed between the said mat-portion and dial-back portion; then dividing the said blank on a line substantially coincident with the line where the upper edge of the beveled corner portion of the blank merges into the lower edge of the mat-portion of the blank, whereby a dial-back having an upturned flange, and a rimmed mat-blank are produced, then turning the lower edge of such a mat-blank inward to adapt it to fit within the upturned edge of such a dial-back, then applying a dial to the inner face of the dial-back, and then setting the inwardly turned edge of the mat-blank into the dial-back over the edge of the dial, whereby the edge of the same is covered and concealed.

1,380,813. TOBACCO STRIPPING AND BOOKING MACHINE. JOHN LAURELL, Newark, N. J., assignor to I. Lewis Cigar Manufacturing Co., Newark, N. J., a Corporation of New Jersey. Filed Apr. 27, 1920. Serial No. 376,988. 7 Claims. (Cl. 131—57.)



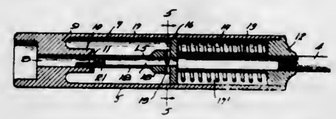
1. In a machine for stripping and booking tobacco the combination with rotary oscillating cylinders, a revolving cutter, endless belts coacting with the cylinders to feed a leaf, a chute located behind the knife to divert the stripped stem, and a belt connecting the chute with the hub of the knife.

6. In a machine for stripping and booking tobacco the combination with rotary cylinders, endless belts coacting with the cylinders to feed a leaf, a hanger to swingingly mount the cylinders, arms extending downwardly from

the hanger between its fulcrum and weight, coiled springs connected to the arms to balance the cylinders, a two armed rock lever fulcrumed below the cylinders, an idler roller carried by the lever to engage the belts, and yielding means coacting with the lever to tension the belts.

1,380,814. SAW-HOLDER. KENNETH LINDSAY, Cedar Rapids, Iowa. Filed May 10, 1920. Serial No. 380,078. 3 Claims. (Cl. 145—31.)

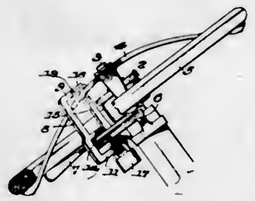
2. A holder for a pair of carpenters' saws, comprising a pair of arched yokes with extensible, mutually engaging shanks, and spaced fastenings, whereby the length of the shanks may be accurately adjusted, heads connecting with said shanks, and slotted to receive saw-backs and hold the saws at right angles to the shanks, and means for securing the saws therein.



3. Combined with a holder for saws composed of a pair of extensible yokes, having heads slotted to receive the backs of saws, and hold the saws at right angles to the shanks, a pair of jointed links connecting with one of said yokes, a handle attached to the links at their connecting joint, and means for holding the handle tightly in position.

1,380,815. FOOD PRODUCT. SIGMUND LUFT, Maywood, Ill. Filed July 7, 1920. Serial No. 394,469. 5 Claims. (Cl. 99—11.)

2. A process of preparing a dry soup product which consists in roasting a starchy material, impregnating it with fat while maintaining it in a substantially dry state and subsequently adding seasoning materials in such quantity and of such water content as not to change, substantially, the percentage of water in the mass to any material extent.

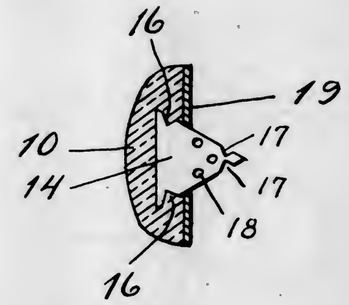


5. A substantially dry soup product which consists of a starchy material roasted to a point short of complete caramelization, with the removal of substantially all moisture, and, while maintaining it in a substantially dry state, impregnated with fat to prevent reabsorption of moisture, and subsequently added seasoning material, the product being quickly transformable into soup by treatment with water.

1,380,816. SAFETY APPLIANCE. CHARLES E. MCDONALD, Butte, Mont. Filed Feb. 16, 1920. Serial No. 359,013. 11 Claims. (Cl. 126—35.)

1. In a pressure relief appliance for water fronts, a casing, a relief valve mounted in said casing, said valve having a passage therethrough, and means within said passage normally closing same, said means being adapted to be displaced to relieve abnormal pressure independent of valve movement.

1,380,817. PEDAL AND CONTROL-LEVER LOCK. CLARENCE L. MCDUFF, Detroit, Mich. Filed Nov. 5, 1920. Serial No. 421,829. 2 Claims. (Cl. 70—126.)

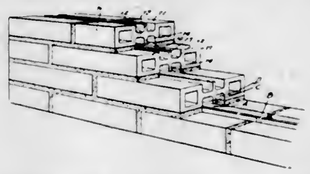


1. A device of the character described comprising a rigid frame member having a laterally extending arm at each end and an intermediate laterally extending arm, one of said end arms being formed with an eye and the other of said end arms being formed with an opening, a bar to close the open side of said frame and adapted to be inserted endwise through said eye, said bar being formed with a rectangular head to seat against the arm having the eye and said bar being provided at its opposite end with an opening to register with the opening in the adjacent frame arm, said intermediate frame arm being of a length to engage the side of said insertible bar intermediate its ends.

1,380,818. GAGE. FRANK R. MCGOWAN, Lowell, Mass. Filed Nov. 22, 1920. Serial No. 425,900. 6 Claims. (Cl. 265—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A gage for determining the tautness of aeronautical fabrics comprising a bar having on its lower side near one end a single longitudinal rib and near the other end two longitudinal ribs, the three ribs together affording a three point support for the bar; a feeler, means whereby said feeler is mounted at the medial portion of the bar for movement transversely thereof, movement indicating means controlled by the feeler; a weight having an opening through which the feeler passes and means whereby the weight may be connected interchangeably to either the feeler or the support.

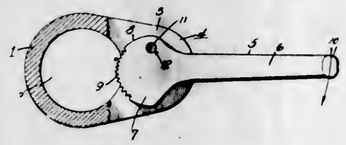
1,380,819. ARTIFICIAL TOOTH. JOHN E. MABRIOTT, Latrobe, Pa. Filed Nov. 12, 1920. Serial No. 423,697. 1 Claim. (Cl. 32—9.)



A tooth of the character described comprising a porcelain body, a triangular shaped securing pin projecting from the lingual surface of the body with its base embedded within the body, and a backing plate disposed against the lingual surface of the body and formed with a slot for the accommodation of said pin, the side edges of the pin near the base portion being formed with notches insuring retention of the pin within the body, the pin projecting beyond the backing plate and being adapted to be embedded within vulcanite used in "plate" work, the portion of the pin projecting beyond the backing plate being formed in its edges with notches.

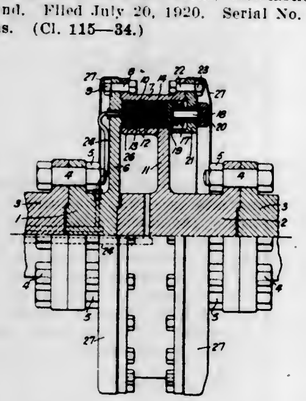
1,380,820. VEHICLE-TIRE. LOUIS F. MARTIN, St. Paul, Minn. Filed Nov. 16, 1920. Serial No. 424,346. 2 Claims. (Cl. 152—22.)

1. In combination with the outer casing of a vehicle tire and the rim of a wheel on which said casing is mounted, an endless inner tube occupying the outer portion of the space in said casing and having a valve stem projecting inwardly through the rim of the wheel, and an auxiliary inner tube occupying the inner portion of the space in said casing in position to be inflated in the event the first mentioned inner tube is punctured and having a valve stem also projecting inwardly through the rim of the wheel, said first mentioned valve stem being passed between the adjacent ends of said auxiliary tube.



1,380,821. WALL CONSTRUCTION AND BRICK THEREFOR. ROBERT F. MARTIN, New York, N. Y., assignor to Robert F. Martin Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1918. Serial No. 240,673. 6 Claims. (Cl. 72—43.)

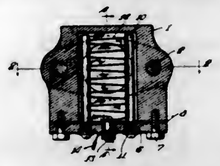
3. A building block comprising two longitudinally extending hollow load bearing sections transversely spaced



from each other for a distance not greater than the width of the individual sections, and non-load bearing means integrally connecting said hollow sections to each other and forming a plurality of longitudinally extending air passages in each side of the block, each passage being of a width appreciably less than the width of said hollow load-bearing sections.

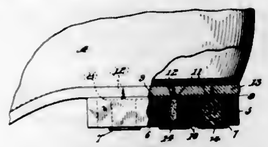
1,380,822. LATHE-DOG. WILLIAM L. MASON, Holyoke, Mass. Filed Apr. 10, 1919. Serial No. 288,913. 1 Claim. (Cl. 82—42.)

In a lathe-dog, an annular head provided with a slotted elongated side, a lever pivotally mounted within said slot and provided with an angularly projecting finger, said lever provided with a circular face struck from the middle of said lever, the pivotal mount for said lever being positioned to the side of said middle on said lever and distant from the inner part of said annulus, so that when said middle is radial to the center of said annulus said annulus will receive a member to be clamped of almost the size of its inner diameter.



1,380,823. CLUTCH FOR TURBINE-DRIVEN GEARED PROPELLER-SHAFTS. THOMAS HUMPHREY MATTHEWS and HUGH WARREN LEE, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Elswick Works, Newcastle-upon-Tyne, England. Filed July 20, 1920. Serial No. 397,640. 3 Claims. (Cl. 115—34.)

1. The combination of a propeller, a divided propeller shaft, a clutch connected to said shaft, a geared turbine, and means adapted both to prevent the clutch from slipping when transmitting the drive and to prevent damage to the gearing by allowing slip when the propeller is unduly strained.



1,380,824. ENGINE INTAKE ATTACHMENT. FRANK P. MIES and FRANKLIN W. JARVIS, Chicago, Ill.; said Mies assignor, by direct and mesne assignments, to said Jarvis. Filed Feb. 9, 1920. Serial No. 357,123. 12 Claims. (Cl. 219—38.)

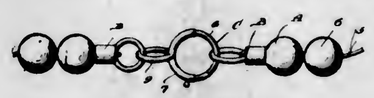
1. An engine intake attachment comprising a casing clamped between two consecutive portions of the normal intake duct of the engine, the said casing having a chamber larger in cross-section transversely of the said duct than the major portion of the latter and having an opening transverse of the said duct, intake screening means disposed within the said chamber transverse of the said

duct and adapted to be inserted and withdrawn through the said opening without detaching the casing from the adjacent duct portions, and movable means normally closing the said opening.

1,380,825. CUSHION SHOE-HEEL. JAMES I. MONNETT and HERBERT S. BLYNT, Yale, Okla. Filed Feb. 18, 1919. Serial No. 277,852. 1 Claim. (Cl. 36—59.)

A cushion heel, comprising a resilient lift having transverse openings therethrough and a recess in the upper face thereof, a flat plate of slightly smaller dimensions than the lift and snugly fitting in said recess, a plurality of cylindrical metallic thimbles rigid with said plate and extending through said openings in frictional contact with the walls of the latter, resilient plugs in said thimbles and extending slightly beyond the free ends of the latter, and screws extending through the plate centrally of the thimbles to secure the heel to the heel portion of a shoe, said screws being independent of the plugs whereby the plugs may be removed and inserted without removal of the heel as a whole.

1,380,826. SNAP-FASTENER. ISIDOR MOSS, Brookline, Mass. Filed Sept. 10, 1920. Serial No. 409,423. 2 Claims. (Cl. 24—213.)

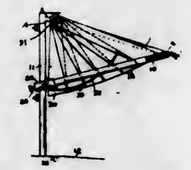


1. A snap fastener composed of two duplicate members each including an attaching base which is dished to present a bulging side and a recessed side, and a slotted hollow boss surrounded by and projecting from the recessed side of the base, said boss including a socket portion opening on the bulging side of the base and a head portion offset from the recessed side of the base, the head portion of either member being adapted to snap into engagement with the socket portion of the other member, so that one boss receives the head and is superimposed on the other boss, the dished form of the said bases distributing, at opposite sides of the fastener, the displacement, by the fastener, of two carrying parts between which the members are interposed.

1,380,827. BEAD-CLASP BASE. SHELBY S. MULLINS, Stuttgart, Ark. Filed May 21, 1920. Serial No. 383,225. 4 Claims. (Cl. 63—2.)

4. In a necklace, the combination with a plurality of beads, a string for the beads, a clasp, and bases arranged

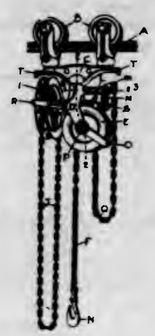
at the terminals of said beads for engaging said clasps, said bases each including a cylindrical sleeve arranged to engage the outer surface of the end beads, and an outwardly extending ring arranged diametrically across the



outer ends of the sleeves, the bead carrying string being threaded through the spaces between the ring and sleeve and over the ring and having the terminals thereof tied and positioned in said sleeves.

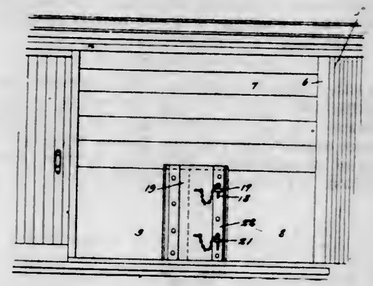
1,380,828. PROCESS OF MAKING LEAVEN. ROMEO NACIMENTO, San Francisco, Calif. Filed Dec. 20, 1917. Serial No. 208,069. 1 Claim. (Cl. 99—10.)

The method of making a leavening substance which consists of boiling about two pounds of potato peelings in sea water for about twenty-five minutes; thoroughly boiling about one-fourth pounti of hops separately; mashing the skins and thoroughly mixing therewith about three pounds of sugar and about three cupfuls of wheat flour; mixing with the mass the hops and hop water; mixing cream of tartar and carbonate of soda with the mass; reducing the temperature by adding sea water, and then setting the substance to raise.



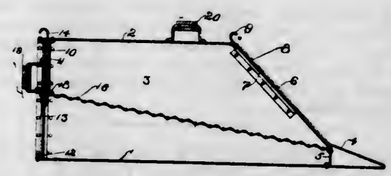
1,380,829. STORM AND SUN SHIELD. SHOICHI NAKAGAWA, San Jose, Calif. Filed July 27, 1920. Serial No. 399,265. 4 Claims. (Cl. 295—95.)

1. In combination with an automobile having a wind shield, of a frame hingedly connected with the wind shield and movable into vertical and inclined positions relative to said wind shield, a transparent wind shield carried by said frame and bars pivoted to and for supporting said frame with the wind shield therein in downwardly and outwardly inclined position relative to the first-named wind shield, shutter members pivotally and slidably associated with one another on opposite sides of said frame and arranged to inclose spaces on the sides of said frame when said frame is extended into inclined position, and hook members on said bars adapted to engage portions of the automobile wind shield to support the frame in operative position, certain of said shutter members having openings therein through which said hook members extend.



1,380,830. COMBINED TROLLEY AND HOIST. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed July 19, 1920. Serial No. 397,284. 4 Claims. (Cl. 212—134.)

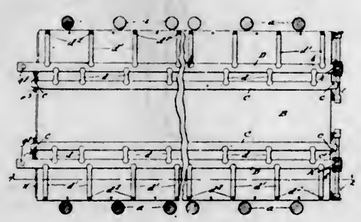
1. The combination of a trolley adapted to run on an overhead track, a hoisting device having a frame connected to the trolley, a rotatable shaft having means adapted to operate the hoisting device mounted in said frame, a horizontally disposed fixed member having its inner end inserted in the frame above the rotatable shaft, its outer end being extended in a line approximately parallel with the rotatable shaft, and a downwardly de-



pending bracket secured to the outer end of said member, and the outer end of the rotatable shaft journaled in the lower end of the bracket.

1,380,831. CAR-DOOR. CARL NELSON and FRANK SNYDER, Council Bluffs, Iowa. Filed July 7, 1920. Serial No. 394,424. 1 Claim. (Cl. 20—30.)

In a car door, door members separable from one another, the said door members having metallic facings on their inner sides at the outer ends apertured to receive fastenings entering a door frame of a box car, a face plate adapted to lap the joint between the said door members and project thereabove to form an abutment for a lowermost closure member above the door, and means for securing the face plate to the door members on opposite sides of the joint between said door members.



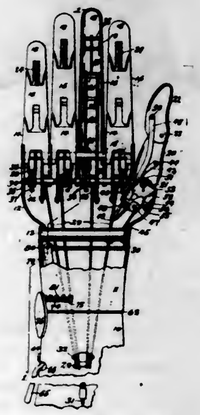
1,380,832. ASH-SIFTER. EDWARD NICHOLAS, Cambridge, Mass. Filed Nov. 17, 1920. Serial No. 424,646. 6 Claims. (Cl. 83—60.)

1. In an ash sifter, the combination of a casing, an interior screen extending lengthwise of the casing and

forming a foraminous partition dividing the casing into upper and lower compartments, open at their opposite ends to form respectively an intake and outlet, and doors mounted in said casing to tightly close said open ends to prevent the escape of dust during the sifting operation, substantially as described.

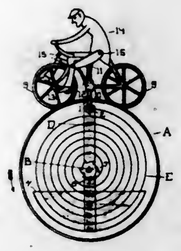
1,380,833. APPARATUS FOR USE IN MAKING BELTS OR THE LIKE. CHARLES H. PAEPLOW, Buffalo, N. Y. Filed Dec. 10, 1920. Serial No. 429,774. 17 Claims. (Cl. 18—17.)

1. In an apparatus for treating belting and the like, the combination of a platen adapted to receive the belt and to press the same against another platen, side bars movable toward and from the belt, and means engaging said side bars at intervals for moving the same toward and from the belt and for holding said side bars in operative relation to the belt.



1,380,834. SPRAY-NOZZLE AND METHOD OF DISTRIBUTING LIQUID. LEE H. PARKER, Boston, and CHARLES H. LANDON, Wollaston, Mass., assignors to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed June 3, 1920. Serial No. 386,246. 23 Claims. (Cl. 299—115.)

1. A spray nozzle comprising a shell or casing having an inlet and an outlet, means to subject all the entering liquid to a centrifugal or whirling action, and means to cause the simultaneous withdrawal and inward projection of a portion of the liquid so subjected to a centrifugal or whirling action.

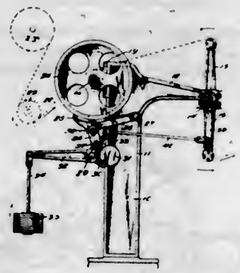


1,380,835. ARTIFICIAL LIMB. ALBERTO PECORELLA and VINCENT PATRICOLO, Buffalo, and FREDERICK H. APEL, Athol Springs, N. Y. Filed Oct. 23, 1919. Serial No. 332,698. 17 Claims. (Cl. 3—12.)

1. An artificial limb comprising a palm, a finger pivoted on said palm, and means operating constantly to turn said finger into a closed position relatively to said palm comprising a hub mounted on the finger, and a leaf spring

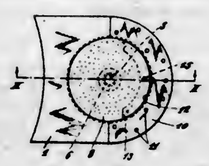
secured at one end to said hub and engaging its opposite end with said palm.

1,380,836. TOY. VICTOR E. RANDALL, Battle Creek, Mich., assignor of one-half to Walter Clemence, Battle Creek, Mich. Filed Feb. 24, 1919. Serial No. 278,900. 1 Claim. (Cl. 46—45.)



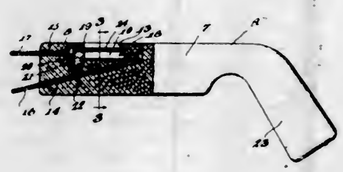
In a toy, the combination of two hemispherical bodies spaced to form a slot, an axle connecting said bodies, a frame suspended on said axle having vertically spaced intermediate portions with overlapping offset ends, an arm passing through said offset ends above said axle; and extending through the slot between said bodies, a ratchet wheel fixed on said axle between said intermediate frame portions, a coil spring having an offset at its free end adapted to engage the teeth of said ratchet and fastened at its opposite end to said arm at its junction with said offset frame ends, counterbalancing weight supported in said frame on ether side of said spring below said axle.

1,380,837. TENSION DEVICE. MARK A. REPLOGLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 15, 1918. Serial No. 244,990. 5 Claims. (Cl. 273.)



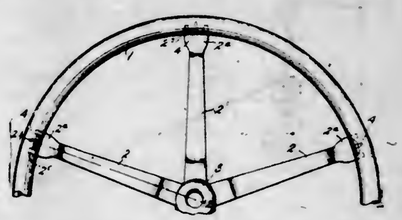
1. A tensioning structure comprising a support, a primary pressure-producing device sustained thereby and including a drum, a brake-shoe engageable therewith, a primary pressure-producing device associated with the brake-shoe and including a counterbalanced bell-crank-lever; in combination with a seconadry pressure-producing

device including an oscillatory instrumentality and a connection between said instrumentality and the bell-crank-



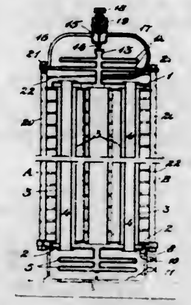
lever whereby movement of the instrumentality effects movement of the bell-crank to change the relation of the brake-shoe with respect to the drum.

1,380,838. HEEL. JAMES G. ROBERTSON, New York, N. Y. Filed June 6, 1918. Serial No. 238,446. 5 Claims. (Cl. 36—39.)



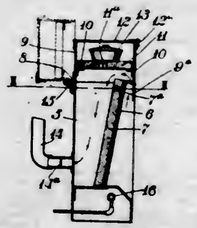
1. In a device of the class described, the combination with a heel having a recess formed in its lower surface, a wear piece forming a portion of the wall of said recess, a disk mounted in said recess, and means positioned within said heel for rotatably supporting said disk.

1,380,839. SPARK-PLUG TESTER. GUSTAVE ROSENBAUER, Jersey City, N. J. Filed July 26, 1920. Serial No. 398,863. 6 Claims. (Cl. 175—183.)



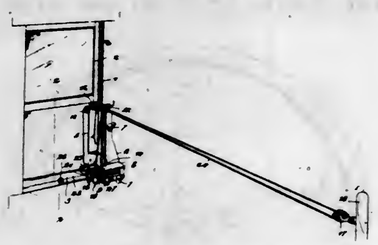
2. A spark plug tester comprising a body formed of electric non-conducting material, having a recess formed in its upper edge, an electric lamp fitted in said recess including a pair of spaced electrodes, a block of insulating material arranged to engage the upper surface of the lamp to hold the same in position against accidental displacement, and a pair of forwardly projecting contacts embedded in said body and connected to said electrodes.

1,380,840. STEERING-WHEEL. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Feb. 9, 1920. Serial No. 357,323. 10 Claims. (Cl. 74—33.)



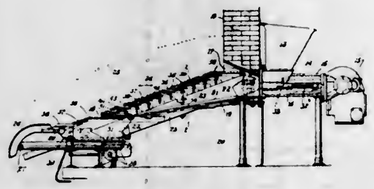
1. In a wheel, a rim, and spokes having lips and dowels on their outer ends, the dowels being adapted to enter the rim and the lips to bear against the rim.

1,380,841. PNEUMOTHERMIC APPARATUS. ADOLFO SALVADOR SALAS, Buenos Aires, Argentina. Filed Dec. 27, 1920. Serial No. 433,525. 6 Claims. (Cl. 200—140.)



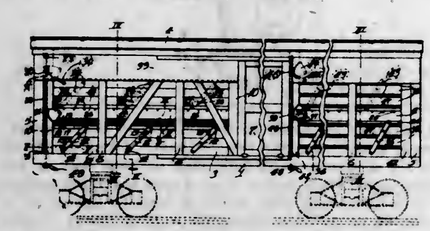
3. In a thermostatic alarm, an expansion chamber, a passage permitting air to enter and leave said chamber arranged to be opened and closed by an expansible portion of said chamber.

1,380,842. STOVE. AUGUST SCHAFFER, Columbus, Ohio. Filed May 26, 1919. Serial No. 299,719. 3 Claims. (Cl. 126—86.)



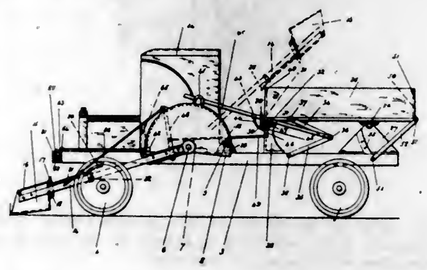
1. A stove including in combination, a body having a burner, a fire plate the back of which forms an upright seat for a slab, a removable slab on said seat, a hood having a seat for a slab, a slab of heat absorbing material on that seat, said seat being in spaced relation to the upper end of the first mentioned seat, said body provided with a vent in its rear below the upper end of the first mentioned seat whereby the products of combustion are deflected by the second mentioned slab across the back of the first mentioned slab.

1,380,843. CLOTHESLINE-PROTECTOR. IRVING SCHENKER, Ellenville, N. Y. Filed July 3, 1920. Serial No. 393,925. 3 Claims. (Cl. 68—3.)



2. A clothesline support comprising an arm for supporting one end of a pulley line, means for pivotally mounting said arm exteriorly of a window in such a manner as to be capable of swinging through the window, means for locking the arm exteriorly of the window, means for locking the arm against movement when extending through the window, a rotatable bar carried by said arm formed with a clamping hook at one end adapted to partially encircle and bring under tension said line when the arm is swung to an outer position, and means for locking said bar against rotation.

1,380,844. TWYER CONSTRUCTION FOR FURNACES AND UNDERFEED STOKERS. HERMAN SCHMIDT, New York, N. Y., assignor to Ernest B. Priebe and Warren C. Drake, Inwood, N. Y. Filed Aug. 31, 1918. Serial No. 252,230. 11 Claims. (Cl. 110—44.)

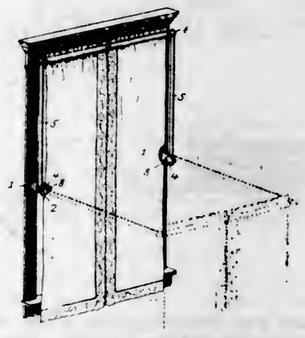


1. For a furnace grate of the type having inclined air boxes between and above which the fuel bed advances descendingly toward the furnace rear, a twyer system overlying each air box, and comprising a series of flatwise members resting in overlapping relation upon each other and relatively arranged to afford a series of air nozzles directed upwardly into the fuel bed overlying said members.

1,380,845. CONVERTIBLE STOCK-CAR. GEORGE L. SEANOR, Sapulpa, Okla., assignor of one-half to Alfred S. Abbott, Springfield, Mo. Filed July 31, 1916. Serial No. 112,270. 5 Claims. (Cl. 119—8.)

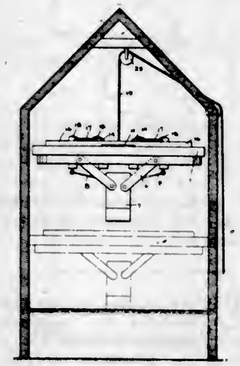
1. In a vehicle construction, a side wall comprising a series of slidably mounted members, said members adapted to abut each other, means for spacing said members apart and a pocket for receiving the displacement of one of said members, said pocket and said member to be displaced therein providing means whereby when said members abut one another a continuous wall is formed.

1,380,846. DUMPING-TRUCK. FREDERICK R. SILLS, Statesville, N. C., assignor of one-half to Carolina Motor Company, Statesville, N. C. Filed June 29, 1920. Serial No. 392,783. 7 Claims. (Cl. 298—21.)



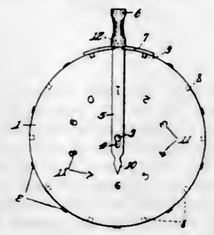
1. The combination, with a wheeled frame, of supports pivoted to the frame and provided with laterally projecting pins, a receptacle for dirt pivoted to the frame, lever mechanism for tilting the said receptacle, operating rods connected with the said lever mechanism and provided with gab ends for engaging with the said pins, and means for moving the said supports pivotally to operate the said rods and tilt the receptacle.

1,380,847. METHOD FOR TREATING FERROUS-METAL ARTICLES. FRANK L. SORENSEN, Detroit, Mich., assignor to The Metal Protection Laboratories, Detroit, Mich., a Corporation of Michigan. Filed July 17, 1919. Serial No. 311,575. 10 Claims. (Cl. 91—68.)



9. The method of providing metal with a corrosion resisting coating which consists in the frictional application thereto of a mixture of another metal in finely divided form together with a compound of said other metal and caustic alkali and water.

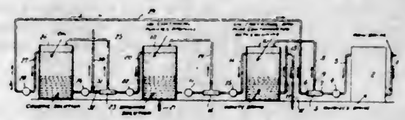
1,380,848. CURTAIN-POLE SUPPORT. STANLEY W. STACK, Chicago, Ill. Filed Dec. 3, 1920. Serial No. 427,955. 5 Claims. (Cl. 156—22.)



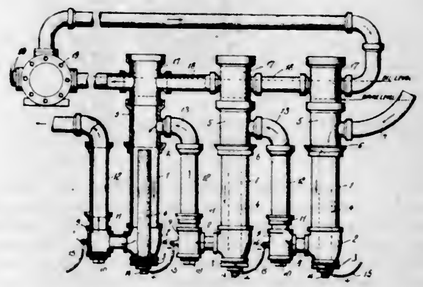
4. In a curtain support of the type described, a swinging arm adapted to carry a curtain pole at one end, a bracket member adapted for attachment to a window frame and having an expanded pivot head at its free end provided with a vertical holding channel in one face for holding engagement with said arm and with a stop lug at one side of said channel, a casing secured to the opposite face of the bracket, a headed pivot stud secured to said arm and extending through said shell and bracket, and a spring associated with said stud and adapted to maintain said arm in the holding channel of the bracket.

1,380,849. COVER FOR ENSILAGE. JOHN H. STACY, Clintonville, Wis. Filed Aug. 4, 1920. Serial No. 401,154. 5 Claims. (Cl. 217—86.)

1. A cover for ensilage, including opposed relatively movable lower sections, means for covering the space between said sections during said relative movement, opposed top sections movable relative to each other along lines at right angles to the direction of relative movement of the lower sections, a weight suspended below the cover, connections between the weight and the opposed lower sections for holding said sections normally drawn together, means for transmitting motion from the lower section to the upper section for holding said upper sections normally drawn together, and a flexible support for the cover.



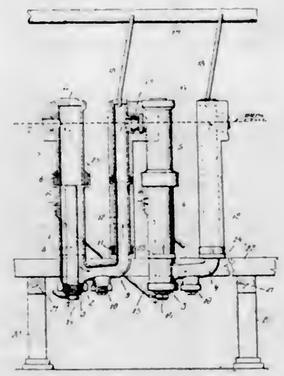
1,380,850. MULTIPLE-CHARACTER STENCIL. WILLIAM H. STRAUSER, Fairmont, W. Va. Filed Apr. 11, 1921. Serial No. 460,340. 8 Claims. (Cl. 101—29.)



1. A multiple character stencil comprising a disk having a series of characters on its periphery, a centrally disposed pivot pin carried by said disk, a yoke disposed in straddling relation to said disk and having slots in the parallel members thereof, said pin being received in said slots, an impact head formed on said yoke, and a saddle plate carried by said yoke and adapted to seat on the periphery of said disk.

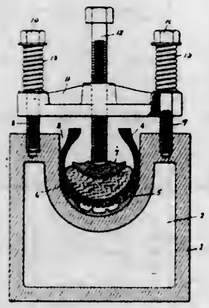
1,380,851. PROCESS OF SEPARATING HALOGEN FROM NATURAL BRINES. HENRI TOBLER, Hackensack, N. J. Filed Aug. 14, 1918. Serial No. 249,761. 11 Claims. (Cl. 23—13.)

1. In the process of separating halogen from natural brine, the steps which comprise the oxidation of brine to liberate elementary halogen and the extraction of said liberated halogen from the brine by means of a pure saturated light hydrocarbon oil having a distribution coefficient for elementary halogen with respect to said brine greater than about 6.



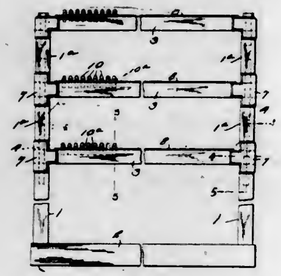
1,380,852. ELECTROLYTIC APPARATUS. HENRI TOBLER, Hackensack, N. J., assignor to American Bromine Company, Maywood, N. J., a Corporation of New Jersey. Filed June 19, 1918. Serial No. 240,781. Renewed July 29, 1920. Serial No. 399,883. 10 Claims. (Cl. 204—5.)

6. Electrolytic apparatus comprising a series of metal containers adapted to serve as cathodes, an insulating fitting surmounting each container, an insulating pipe for circulating brine by a tortuous path from the lower part of one container into the insulating fitting which surmounts the next container, a carbon electrode in each container to form therewith an electrolytic cell, and means electrically connecting said cells in series to progressively electrolyze the brine as it passes through the series of containers.



1,380,853. ELECTROLYTIC APPARATUS. HENRI TOBLER, Hackensack, N. J., assignor to American Bromine Company, Maywood, N. J., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,431. 8 Claims. (Cl. 204—58.)

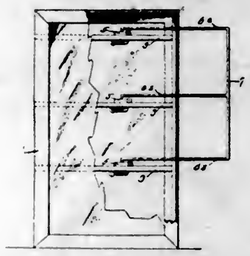
1. Electrolytic apparatus comprising a series of metal containers adapted to serve as cathodes at different elec-



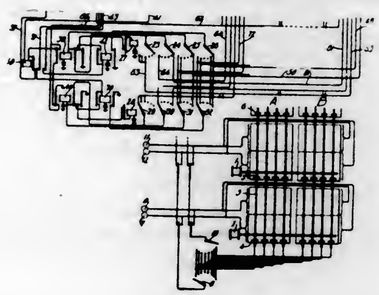
trical potentials, means for circulating brine by a tortuous path from one container to another, a carbon anode positioned in each container and about which said brine circulates during electrolysis, each of said containers having an integral extension with a clean-out opening through which sediment deposited from the brine may be flushed out.

1,380,854. CLAMP FOR VULCANIZING-MOLDS. WILLIAM VANDERPOOL, Springfield, Ohio. Filed Jan. 17, 1920. Serial No. 352,161. 4 Claims. (Cl. 18—43.)

1. In a clamp of the character described, the combination of a vulcanizing mold, a pair of posts having an engagement with the walls of said mold at points opposite each other, a cross-bar loosely mounted on said posts, springs between said cross-bar and abutments on the posts, and a clamping screw threaded in said cross-bar.



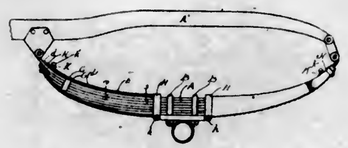
1,380,855. DISPLAY-RACK. MILTON H. WALLERSTEIN, Paducah, Ky. Filed Jan. 9, 1920. Serial No. 350,340. 1 Claim. (Cl. 211—14.)



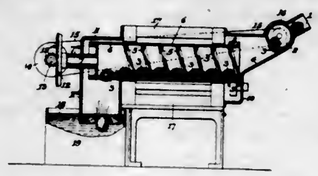
A device of the type described, including end and transverse members, the transverse member being received between the end-members, said end-members having bores in opposed ends and said transverse member having an orifice in each end alining with the bores of said end-members, dowels received within the bores of said end-members and passed through the orifices of said transverse member, and means adapted to receive said opposed ends of the end-members and the orificed end of said transverse member.

1,380,856. DISPLAY-RACK. MILTON H. WALLERSTEIN, Paducah, Ky. Filed Feb. 18, 1920. Serial No. 359,528. 1 Claim. (Cl. 211—16.)

A device of the type described, including a plurality of transverse traveling members each provided with a plurality of hanger-members, means adapted to allow of the movement of said traveling members comprising trucks carrying the latter and adapted to provide for the attachment thereto of the said traveling-member, a hanger-member of each plurality thereof being connected together by a common member.



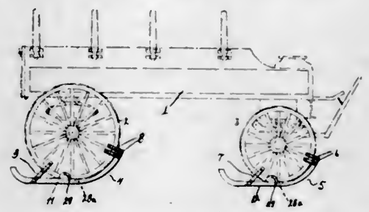
1,380,857. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,510. 10 Claims. (Cl. 179—18.)



1. In a telephone exchange system, calling lines arranged in groups, the lines of each group being arranged in a fixed order, a contact bank comprising a plurality of sections, multiple contact sets in said bank, said lines terminating in said contact sets, a plurality of line finder switches arranged for coöperation with each of said sections, the various groups being so arranged in the various sections that a different group appears as a first choice in each of said sections, and means operative upon the initiation of a call for putting into operation an idle one of the switches which serve a section of said contact bank in which the group containing the contact set of the calling line appears as a first choice.

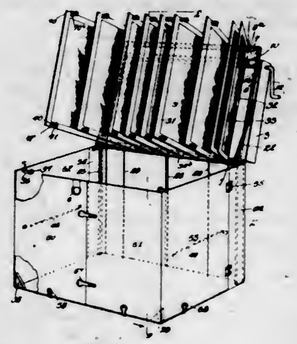
1,380,858. SPRING-COVER. CHARLES B. WOODWORTH, Niagara Falls, N. Y., assignor to Woodworth Manufacturing Corporation, Binghamton, N. Y. Filed Mar. 6, 1920. Serial No. 363,863. 17 Claims. (Cl. 267—37.)

6. A spring cover having an outer casing of impervious material and a pad of absorbent material, the ends of said casing and one of the longitudinal edges thereof being folded over the adjacent portions of said pad, and fastening devices secured to said longitudinal edge of the casing and adapted to engage with any portion of the casing when said cover is arranged around the spring, said folded longitudinal edge overlapping said other edge, whereby no portion of the pad is exposed.

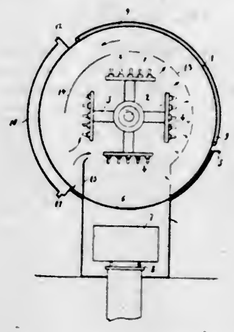


1,380,859. PROCESS OF REMOVING SHELLS FROM COCOANUTS. FRANKLIN BAKER, Jr., Philadelphia, Pa., and Simon Cooper, New York, N. Y., assignors to the Franklin Baker Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1917, Serial No. 187,351. Renewed Aug. 30, 1918. Serial No. 252,121. 17 Claims. (Cl. 146—14.)

9. The process of removing cocoanut shells, which comprises heating whole cocoanuts to render the shell brittle, suddenly arresting the heating action upon the shell, without otherwise impairing their integrity, and then breaking said shell.



1,380,860. SLED ATTACHMENT FOR VEHICLES. JAN BARTUZEL, Youngstown, Ohio. Filed July 21, 1920. Serial No. 397,817. 1 Claim. (Cl. 280—13.)



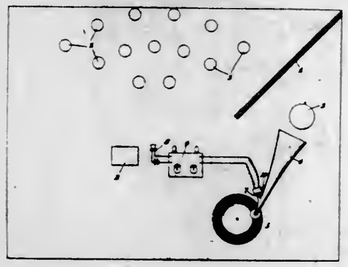
A wheel runner attachment comprising a single unitary element bent upwardly at its front end and to a lesser extent at the rear, said element having a central channel receptive of a portion of the rim of a single wheel, a brace riveted to said element at the rear thereof, forks formed with said brace engaging the wheel rim, two distinct pairs of forks riveted to the front bent end of said runner element also engageable with the wheel rim and manually operable spring impelled devices carried by each of said forks for detachably engaging the runner to the rim, said devices being arranged in opposed paired relation.

1,380,861. COMMERCIAL TRAVELER'S DISPLAY-TRUNK. THOMAS BELAIR, Montreal, Quebec, Canada. Filed July 15, 1919. Serial No. 311,071. 17 Claims. (Cl. 190—16.)

4. In combination, a trunk, a stand located within the trunk and including a series of relatively movable sample supporting members, mechanism for moving the stand into and out of the interior of the trunk and means for automatically moving the sample supporting members toward each other when the stand is moved into the trunk.

1,380,862. APPARATUS FOR MANUFACTURING SEAMLESS ARTICLES OF RUBBER. ALBERT BOECLER, Malmö, Sweden. Filed Sept. 13, 1920. Serial No. 409,970. 6 Claims. (Cl. 18—24.)

1. Apparatus for manufacturing seamless articles of rubber, consisting of dipping means and solvent recovering means, a casing for the recovering means, a mold carrier journaled within the said casing, cooling means and heating means so arranged on the solvent recovering means that different temperatures will be obtained on the two sides of the mold carrier.



1,380,863. TREATMENT OF CRUDE PETROLEUM FOR PURIFICATION. JOSEPH WALLACE BOSTICK and CHARLES H. HOMER, Houston, Tex. Filed July 29, 1919. Serial No. 314,138. 5 Claims. (Cl. 196—25.)

1. A process of treating crude petroleum oil, which comprises gently flowing the same in a relatively quiescent state through a series of shallow tanks in which the oil is heated at its upper part to a substantially higher temperature than at its lower part, allowing sedimentation in each of said tanks, drawing off separately from each

of said bodies of oil the impurities which settle out, allowing oil from the surface portions only of said shallow bodies of oil to progress to the succeeding bodies, and drawing off and condensing the vapors evolved in such heating operation.

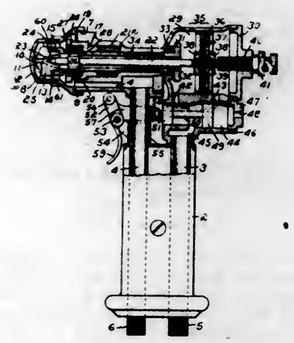
1,380,864. METHOD OF RECORDING SOUND. WILLIAM H. BRISTOL, Waterbury, Conn. Filed Jan. 13, 1920. Serial No. 351,146. 5 Claims. (Cl. 274—46.)

1. The method of effecting upon a suitable record surface, a phonographic record of a selection with accompaniment, which consists in individualizing the selection, separately collecting the accompaniment, amplifying same, and simultaneously recording both upon the same record surface.

1,380,865. BOOT AND SHOE AND PROCESS OF MAKING SAME. ALBERT L. CLAPP, Marblehead, Mass., assignor, by mesne assignments, to Fibreboard Company, Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1917. Serial No. 180,478. 17 Claims. (Cl. 12—142.)

1. That step in the process of manufacturing a boot or shoe, which is characterized by treating the counter or other stiffening material with a solution for preventing shrinkage thereof.

2. That step in the process of manufacturing a boot or shoe, which is characterized by treating the counter or other stiffening material with a solution of alum or aluminum sulfate for preventing shrinkage thereof.



3. That a step in the process of making boots and shoes comprising a counter or other stiffening material composed of a leather substitute, which is characterized by treating the counter or other stiffening material with a 15% solution of alum or aluminum sulfate, by immersing it in said solution until it is impregnated therewith to prevent shrinkage thereof.

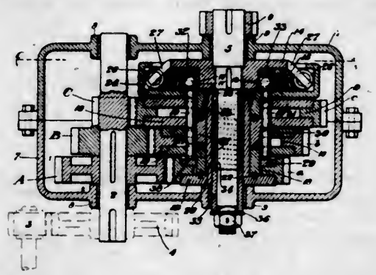
4. That step in the process of making a turn-shoe, which is characterized by tempering the counter or other stiffening material before turning the shoe with a solution adapted to prevent it from shrinking in drying.

5. That step in the process of making a turn-shoe, which is characterized by tempering the counter or other stiffening material before turning the shoe with a tempering solution of alum or aluminum sulfate to prevent shrinkage thereof.

1,380,866. TOOL FOR APPLYING COATING. HERBERT W. DAY, Wollaston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed July 9, 1919. Serial No. 309,691. 31 Claims. (Cl. 91—45.)

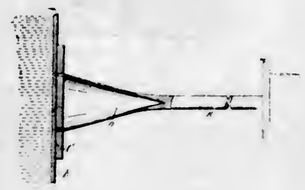
1. Means for applying coating comprising means including two coating surfaces for maintaining therebetween a film of coating material, said surfaces having film discharge openings, means whereby a motive agent may break through said film and discharge it through said openings, said means including a valve controlling the flow of motive agent through said openings, and means for providing first a flow of motive agent through said openings by movement of said valve and then for producing,

through the motive agent and by relative movement of said surfaces, a free movement of the coating material for film formation and maintenance.



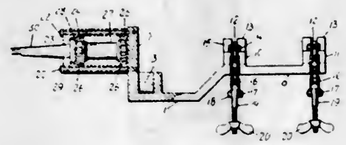
1,380,867. VALVE. SERGE VINCENT DE BOLOTOFF, Roehampton, London, England. Filed Feb. 24, 1920. Serial No. 360,914. 2 Claims. (Cl. 251—41.)

1. The combination with a reciprocating valve, a guide by which it is guided in its reciprocation, a shaft, a crank on the shaft, a connecting rod, said crank and connecting rod constituting a toggle which forms the operative connection between the shaft and the valve, an operating arm connected to the shaft, two fixed stops against one of which the operating arm abuts in the closing of the valve and against the other of which said arm abuts in the opening of the valve, the arm and toggle being so arranged in relation to each other that the toggle will be stopped by one stop after the valve is shut in a position wherein the links of the toggle are to that side of a line beyond which the fluid pressure acting on the valve tends to keep them in its tendency to reopen the valve, and which will also be stopped by the other stop after the valve is open, wherein the links of the toggle are to the same side of the said line beyond which fluid pressure acting on the valve tends to keep them if the pressure should tend to reclose the valve.



1,380,868. VARIABLE-SPEED POWER-TRANSMITTING MECHANISM. HANS ENARD, Pittsburgh, Pa., assignor of one-half to William J. Heyl, Pittsburgh, Pa. Filed June 10, 1920. Serial No. 387,867. 20 Claims. (Cl. 74—59.)

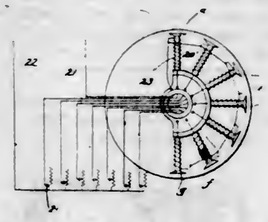
20. In power transmitting mechanism embodying a driving shaft, a driven shaft having a fixedly attached pressing member, a series of gears secured to the driving shaft, and a series of floating gears surrounding the driven shaft; a series of individual locking pins for successively connecting the floating gears to the driven shaft, and a rolling ball mounted in and laterally movable with the pressing member of the driven shaft adapted to be carried



thereby into operative engagement with the several locking pins in the order described.

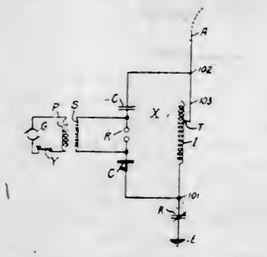
1,380,869. SUBMARINE SIGNALING. RICHARD D. FAY, Nahant, Mass., assignor to Hammond V. Hayes, Boston, Mass. Filed Mar. 26, 1920. Serial No. 369,064. 7 Claims. (Cl. 181—0.5.)

1. A device of the kind described comprising two members and a rod connecting said members, said rod being made of elastic material whereby the motion of one of said members, when transmitted longitudinally through said rod to the other member, will have its amplitude changed.



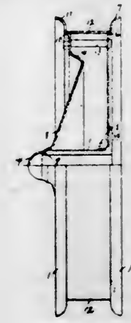
1,380,870. EMERGENCY-AXLE FOR AUTOMOBILES. FREDERICK O. LEWIS, Dayton, Ohio. Filed Mar. 3, 1921. Serial No. 449,523. 4 Claims. (Cl. 301—130.)

1. A device of the type described, comprising an elongated member, a bearing secured to the front end of the latter, an axle shaft journaled in said bearing, and clamping means on the rear end of said elongated member for securing it firmly to the axle of an automobile.



1,380,871. APPARATUS FOR MAGNETIC SIZING AND GRADING OF ORE. WALTER G. SWART, FRED A. JORDAN, EDWARD W. DAVIS, and THEODORE B. COUNSELMAN, Duluth, Minn. Filed Sept. 11, 1917. Serial No. 190,719. 5 Claims. (Cl. 83—71.)

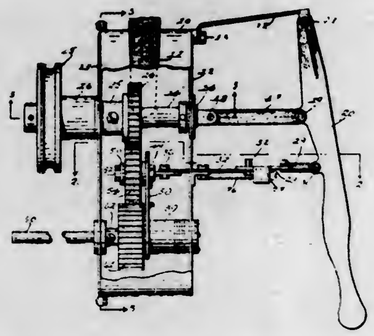
1. In apparatus of the class described a rotatable drum and a series of electro-magnets distributed in arcuate form within and adjacent the periphery of said drum and coacting therewith to attract magnetically susceptible particles carried thereto some of said magnets being of relatively strong excitation and other magnets being of rela



tively weak excitation to produce substantially distinct areas of variable magnetic potency and means for changing the location of said areas.

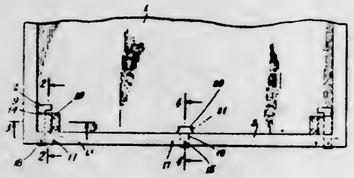
1,380,872. RADIO-COMMUNICATION TRANSMITTER. ROY E. THOMPSON, New York, N. Y. Filed Sept. 24, 1917. Serial No. 192,883. 1 Claim. (Cl. 250—17.)

In a radio transmitting apparatus, a combination with an exciting circuit of non-persistent oscillatory character, of a radiating circuit of a persistently oscillating character, and means for coupling said circuits and having a coupling value sufficient to cause the transfer of energy from the exciting circuit to the radiating circuit when said circuits are not tuned to the same period; and a multiplicity of spark gaps equally adjustable from a single control in the exciting circuit for preventing the transfer of energy from the radiating circuit to the exciting circuit while permitting transfer of energy from the exciting circuit to the radiating circuit, substantially as described.



1,380,873. DISK VEHICLE-WHEEL. RUSSELL J. TURNER, Youngstown, Ohio, assignor of one-half to C. T. Gaither, Youngstown, Ohio. Filed July 16, 1920. Serial No. 396,851. 2 Claims. (Cl. 301—63.)

1. In a device of the class described, the combination of a hub, an inner flange on said hub, a rear disk secured

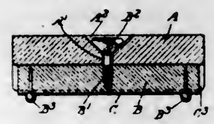


to said flange, a collar formed on said disk and fitting around said hub, a front disk without a central opening, a boss centrally located on said front disk, said boss wedging securely over the outer end of said hub, bolts passing through disks, substantially as described for the purpose set forth.

1,380,874. GEAR-SHIFTING DEVICE. JOHAN VALENT, West Hoboken, N. J. Filed June 5, 1920. Serial No. 386,665. 5 Claims. (Cl. 74—58.)

1. A gear shifting device of the character described comprising a train of gears, a hand lever, and means for operating said gears to rotate the pulley, to run in one or the other direction, said means comprising a sliding plate having a central zig-zag slot, a link pivotally connecting said plate to said hand lever, a two-armed lever pivotally supported in its center, a pin in one of said arms engaging the slot in said plate, a T-plate pivotally connected to the other of said arms, a train of gears adapted to be operated by said hand lever and T-plate for rotating the pulley to run in one or the other direction upon the operation of said lever, and means for moving said gears in and out of their neutral position.

1,380,875. LOCKING DEVICE FOR COLLAPSIBLE CONTAINERS. ALEXANDER L. WARD, New York, N. Y. Filed Aug. 5, 1918. Serial No. 248,312. 3 Claims. (Cl. 217—56.)



1. In a container, the combination of vertical sections, a cover section having edge flanges bent to form an inverted U-shape thereabout, into which the upper edges of the vertical sections extend when the container is assembled, horizontal bolts adjacent the corners of the cover section, mounted to slide on the cover section against the inner vertical edge flanges of the ends and to extend through openings in the side sections and outer side vertical cover flanges in alinement therewith, flanged cover plates extending transversely across said bolts, having upwardly extending shoulders at one side and abutting against said inner vertical edge flanges at the other side, said bolts having side offset portions thereon adapted to slidably engage said shoulders and to abut against the inner vertical side flanges of the cover, to stop the bolts in shot position.

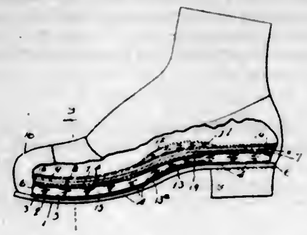
1,380,876. ARTIFICIAL FISH-BAIT. WILLIAM S. WARDEN, New York, N. Y., assignor to Baker, Murray & Imbrie, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1919. Serial No. 320,908. 1 Claim. (Cl. 43—44.)

An artificial bait, comprising an elongated body of transparent material having a water-tight chamber, a luminous substance contained in said chamber, head and tail members having annular flanged portions fitted to the opposite ends of said body, a strip connecting said members for holding them in position on the body and formed with loops adjacent its opposite ends and hooks loosely connected with said loops of the strip.

1,380,877. RECORD-SLIP SUPPORT. JOHN WILLY, Chicago, Ill. Filed July 16, 1919. Serial No. 311,134. 2 Claims. (Cl. 40—20.)

1. The combination with a record slip of a support therefor, comprising a plurality of face projections, a plurality of separate perforations in said slip to engage said projections, each of said perforations inwardly slit toward and short of the other.

1,380,878. AIR-PUMP. GEORGE W. WRIGHT, Lapel, and RAYMOND W. NICHOLS, Kokomo, Ind. Filed June 21, 1920. Serial No. 390,385. 4 Claims. (Cl. 230—27.)

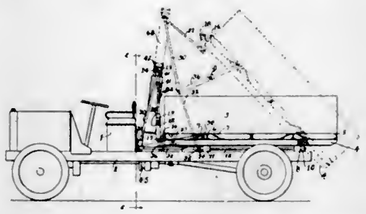


1. A pump including a hollow cylinder, a piston head in the cylinder, a pump rod in the cylinder having a hollow portion extending through and rigidly secured to the piston head, the end of the hollow portion being open, a packing ring on the piston head in connection with the cylinder, a valve removably arranged on the packing ring and the open end of the pump rod, and a spring having connection with the valve and the pump rod and tensioned to yieldingly hold the valve in place.

1,380,879. SHOE. CARL YOUNG, Chicago, Ill. Filed May 19, 1913, Serial No. 768,500. Renewed Nov. 3, 1920. Serial No. 421,599. 10 Claims. (Cl. 36—28.)

1. A shoe comprising a sole made up of separated sections having a space between them extending substantially

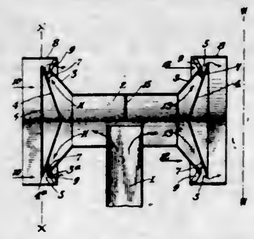
the entire length of the shoe, and a separate elastic sole piece comprising a series of spiral springs in the bottom of



the shoe, and flexible inclosing pieces between which said springs are held, said separate sole piece fitting in said space and extending substantially the length thereof.

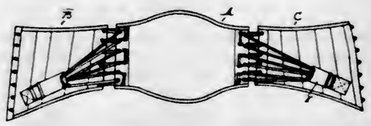
1,380,880. COLLAPSIBLE CONTAINER. ALBERT L. AUSTIN, Cleveland, Ohio. Filed June 18, 1919. Serial No. 305,129. 8 Claims. (Cl. 229—41.)

1. A container, comprising separate side and bottom walls having opposite inwardly and upwardly foldable coincident gussets, respectively.



1,380,881. DUMPING-TRUCK. PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 21, 1920. Serial No. 390,412. 17 Claims. (Cl. 298—21.)

1. A dumping apparatus comprising a supporting frame, a dumping body pivotally carried by said frame and lifting mechanism comprising an elevating member and sets of links secured to the body and to said elevating member and arranged to independently control the position of the body at different stages of tilt.



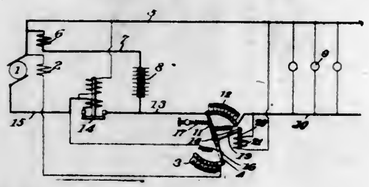
1,380,882. CHIMNEY CAP OR VENTILATOR. ARTHUR F. BRASSINGTON, Port Richmond, N. Y. Filed May 24, 1920. Serial No. 383,696. 7 Claims. (Cl. 98—4.)

7. In a chimney cap or ventilator, the combination with a vertically disposed delivery pipe closed at its upper end and provided with a plurality of horizontally disposed eduction passages communicating therewith, provided with outwardly flaring ends terminating in eduction apertures of greater area than the main portions of said passages, said passages extending in different directions radially with respect to the longitudinal axis of the delivery pipe, a deflector permanently and rigidly supported across each of said eduction apertures, said deflectors having at least as great an area as said flaring apertures, and being spaced uniformly from the edges of said apertures to form a discharge slit of an area substantially equal to that of the adjacent eduction passage, and having convex portions projecting into said flaring apertures,

a sleeve surrounding the flared portions of each of said eduction passages, coaxial therewith and spaced uniformly from the edges of said deflector and eduction aperture, and a vertically disposed stationary partition in the upper portion of said eduction passages, and substantially in alinement with the longitudinal axis of the delivery pipe.

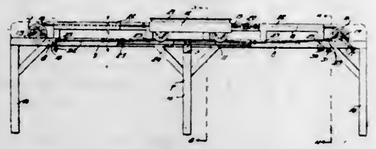
1,380,883. ABDOMINAL SUPPORT. SAMUEL H. CAMP, Jackson, Mich. Filed Mar. 18, 1916. Serial No. 85,025. 7 Claims. (Cl. 2—188.)

1. A support, comprising a main section and a tab section, one of which has one row of eyelets and the other of which has two rows of eyelets, adjustable connections between said sections comprising a lacing adapted to be looped through one row of eyelets on one of said sections and through two rows of eyelets on the other of said sections, and a fastening member positioned outside of said sections and secured to said lacing, said fastening member extending toward the front of the support and adapted when drawn forward to pull the tab section rearwardly toward the main section so as to exert pressure at predetermined portions of the support.



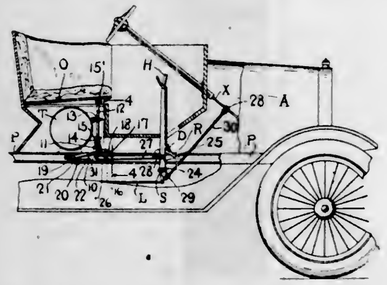
1,380,884. TOILET-POWDER RECEPTACLE AND BRUSH. GEORGE COSMOS, St. Louis, Mo. Filed Nov. 26, 1920. Serial No. 426,590. 3 Claims. (Cl. 132—79.)

1. A toilet-article including brush-bristles, in combination with a tubular handle for the bristles, the handle be-



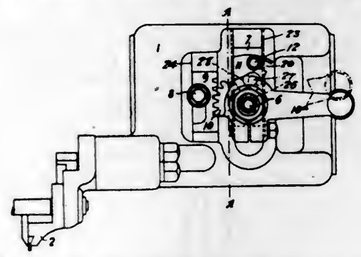
ing adapted to contain a toilet-preparation and having at its opposite ends separate discharge-outlets for the preparation, one of which outlets leads into the brush-bristles, and means for independently controlling the discharge of the toilet-preparation from the handle at said outlets.

1,380,885. ELECTRIC REGULATION. JOHN L. CREVELING, New York, N. Y., assignor to Safety Car Heating and Lighting Company, a Corporation of New Jersey. Filed Jan. 15, 1912, Serial No. 671,166. Renewed Aug. 15, 1918. Serial No. 250,080. 24 Claims. (Cl. 171—313.)



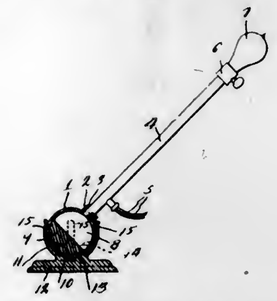
8. The combination with a generator, a storage battery, and a work circuit, of differential means responsive to battery-charging current and constantly operative for regulating the generator, and means operated by variations in voltage tending to hold the work circuit voltage constant and independently affect current regulation of the generator.

1,380,886. CONVEYING MEANS. EDWARD P. DANDRIDGE, Philadelphia, Pa. Filed Dec. 28, 1920. Serial No. 433,636. 3 Claims. (Cl. 186—1.)



1. A device of the character described including an elongated supporting structure having side rails spaced apart: a track below the tops of said rails; a carriage on said track and having a portion movable between said side rails; and a tray secured to said carriage and having projecting portions directly above the tops of the side rails: substantially as described.

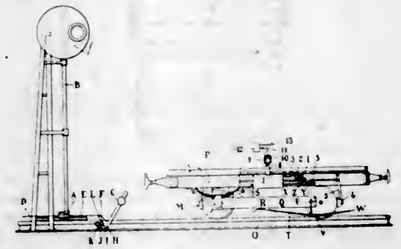
1,380,887. SAFETY AUTOMOBILE-LOCK. WALTER G. DAVIS, Miami, Fla. Filed June 16, 1919, Serial No. 304,669. Renewed Feb. 17, 1921. Serial No. 445,856. 2 Claims. (Cl. 180—82.)



1. In combination with an automobile, its seat and spark control rod, of means to pivotally hold said seat, a plunger rod ending in a lug held to said seat, a spring to normally force said rod upward, a bell crank 17 pivotally held adjacent to said lug, a pivotally held rocker arm, a link connecting said rocker arm and crank, said bell crank connected to said plunger rod, a crank arm extending from said control rod, and a link 30 connecting said crank arm to said rocker arm.

1,380,888. WORK-FEED MECHANISM OF SEWING-MACHINES. MARK THOMAS DENNE, Rushden, England. Original application filed Sept. 22, 1914, Serial No. 863,025. Divided and this application filed Sept. 30, 1918. Serial No. 256,212. 2 Claims. (Cl. 112—48.)

1. In a sewing machine, the combination with a frame, of an awl-carrying feed-slide slidably mounted thereon and provided with a vertical slot, a rock-shaft journaled in the frame and having at its end a crank provided with a slot, a plate slidably mounted in the slot of the slide, a pin carried by said plate and carrying at its end a block slidably mounted in the slot of the crank arm, a lever pivotally mounted on said pin, and an adjustable fulcrum for the lever mounted on the feed-slide.



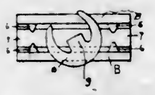
1,380,889. LIGHT-SUPPORT. CHARLES SHERWOOD FARRISS, De Land, Fla. Filed Mar. 24, 1919. Serial No. 284,740. 1 Claim. (Cl. 240—81.)

A light support comprising a base having a concave semi-spherical depression therein, integral spring arms spaced from each other and rising upwardly and extending outwardly and inwardly from the marginal edge of the semi-spherical depression in the base, a spherical member disposed within the depression and frictionally held by the spring arms, a light bracket carried by said spherical member, the spring arms extending upwardly beyond the horizontal center of the spherical member and being spaced apart a greater distance than the width of the light bracket, thereby allowing the light bracket to be horizontally positioned.

1,380,890. BLOCK-SIGNALING APPARATUS FOR RAILROADS. ERNEST FOURNIER and THEODULE TESTU, Nice, France. Filed Dec. 26, 1916. Serial No. 138,983. 3 Claims. (Cl. 246—185.)

1. In a railway safety appliance, the combination with the train pipe of a valve, the operation of which automatically causes the operation of the brakes, a bell-crank lever adapted to operate such valve and fulcrumed on a member supported at an unvarying distance above the track rail, one arm of such bell-crank lever being operatively connected to said valve and the other arm being in the form of a ramp having an extension in the form of a counter ramp, such ramp being adapted to be actuated by a movable tappet located by the side of the track, a cylinder in communication with the train pipe, a piston mounted in said cylinder and carrying a marking device, such piston being actuated on the operation of the aforesaid valve, and a recording drum coöperating with said marking device.

2. In a railway safety appliance, the combination with the train pipe of a valve, the operation of which automatically causes the operation of the brakes, a bell-crank lever adapted to operate such valve and fulcrumed on a member supported above the track rail, one arm of such bell-crank lever being operatively connected to said valve and the other arm being in the form of a ramp having an extension in the form of a counter ramp, such ramp being adapted to be actuated by a movable tappet located by the side of the track, a cylinder in communication with the train pipe, a piston mounted in said cylinder and carrying a marking device, such piston being actuated on the operation of the aforesaid valve, a recording drum coöperating with said marking device and a manually operated marking device also coöperating with said drum and designed to be disengaged from the drum during the actuation of the valve.

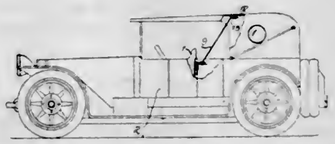


3. In a railway safety appliance, the combination with the train pipe of a valve, the operation of which automatically causes the operation of the brakes, and a bell-crank lever adapted to operate such valve and fulcrumed on a member supported by the axle boxes of the car and thus supported at a point located at an unvarying distance above the track rail, one arm of such bell-crank lever being pivotally connected to a rod which is operatively connected to said valve, the other arm of the said bell-crank lever being in the form of a ramp having an extension in the form of a counter ramp, a rod being fixed to the said ramp and slidably engaging with the member supported by the axle boxes of the car, such ramp being adapted to be actuated by a movable tappet located by the side of the track.

1,380,891. HOG-HOLDER. BERNARD C. GAINES, Burlington, Ky. Filed June 28, 1920. Serial No. 392,335. 1 Claim. (Cl. 119—153.)

In a hog holder, a snout block, a hollow handle having one end thereof fitted in the snout block, said handle having an offset portion, said handle having an opening formed in the wall thereof at a point in spaced relation with the offset portion, the opening being disposed laterally of the handle portion, a flexible band having one end thereof connnected to the snout block, the intermediate portion thereof adapted to pass through the hollow handle, the opposite end of said flexible band adapted to pass through the lateral opening, and a rod having connection with the flexible band for moving the band through the handle portion.

1,380,892. MEDAL-RIBBON BAR. WALTER F. GAUNT, Birmingham, England. Filed Feb. 10 1920. Serial No. 357,734. 1 Claim. (Cl. 40—1.5.)

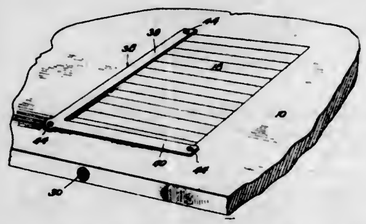


A combined medal ribbon bar and attachment means comprising a parallel-sided bar adapted to have a ribbon stretched thereon with the ends of the ribbon folded over the parallel sides thereof, a plate located at the back of said bar and adapted to clamp the ends of the ribbon thereon, the edges of the bar extending backwardly and clamping the said plate upon the bar, a second plate, backwardly projecting tongues upon the first plate and closed down over the edges of said second plate, and a backwardly projecting crescent-shaped attachment member upon said second plate.

1,380,893. AMUSEMENT DEVICE. CARL F. GEBERT, New York, N. Y. Filed Nov. 23, 1920. Serial No. 426,059. 6 Claims. (Cl. 208—33.)

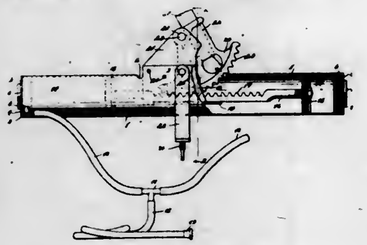
1. A device of the character described, comprising a chassis, wheels supporting the chassis, a board fulcrumed between its ends and supported on the chassis, said board adapted to receive operators on its respective ends and operate as a seesaw, propelling means operated by the movement of the board, and steering means on the board adjacent the respective ends thereof.

1,380,894. ROLLING WINDSHIELD. WILLIAM H. GERHARD, Austin, Tex. Filed Mar. 23, 1920. Serial No. 368,143. 3 Claims. (Cl. 296—85.)



1. An attachment for automobiles, comprising a bracket adapted to be pivoted to the rear of the front seat of an automobile and carrying a spring actuated roller and a curtain wound upon said roller and carrying at one end securing means adapted to be detachably secured to the automobile top, said curtain carrying at said end a rod, and said bracket being provided with recesses for supporting said rod when the curtain is fully wound upon said roller.

1,380,895. WRITING-PAPER SUPPORT. FRANK GILMAN, Gervais, Oreg. Filed Sept. 3, 1920. Serial No. 407,897. 1 Claim. (Cl. 240—2.)

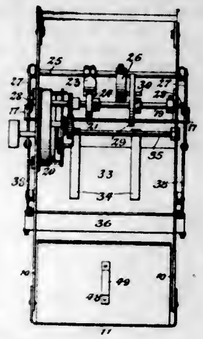


A device for the purpose set forth comprising a table top having a recess therein, one end wall of said recess having a socket therein and the top of the table top over-

hanging the said wall, an illuminator fitted in said socket and disposed below the overhanging portion, a transparent plate fitted in the table top and extending over the recess and provided with transverse marker lines, an inclined reflector disposed within the recess and extending upwardly from a point immediately below the illuminator to the opposite end of the recess at the top of the same, said reflector being provided with side walls bearing

against the sides of the recess and having an attaching flange at its higher end whereby it may be secured in place, a retainer comprising two arms disposed at a right angle and secured upon the table top and projecting over a side edge of the transparent plate to hold the same in place, each of said arms having an overhanging flange on its inner edge whereby to hold a paper sheet to the transparent plate.

1,380,896. PUMP. GEORGE F. GRAHAM, Cleveland, Ohio. Filed May 27, 1920. Serial No. 384,543. 4 Claims. (Cl. 230—27.)

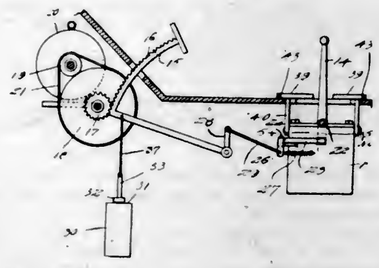


1. A double acting pump comprising a continuous tube having the opposite ends thereof closed to produce opposed cylinders, the metal at the central portion of such tube being split and bent outwardly to form a pair of spaced plates, a piston for each cylinder, a rod common to and connecting both pistons, and means supported from said plates for operating said rod.

1,380,897. SMOKING-PIPE CLEANER. ENOCH C. GUNNARSON, Brooklyn, N. Y. Filed Oct. 2, 1919. Serial No. 327,884. 1 Claim. (Cl. 131—13.)

In a device of the class set forth, a rigid annular chamber having at one side an opening bounded by two walls arranged at an angle to each other, one of the walls being approximately radial to the chamber and the other being approximately tangential thereto, said chamber constituting a housing for a flexible cleaner having a head adapted to be stopped by said radial wall.

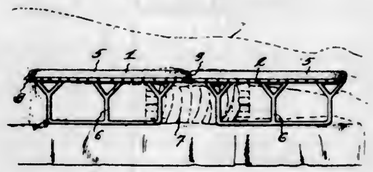
1,380,898. CARD-SHUFFLER. CHARLES TRACY HALL, Buffalo, N. Y. Filed Jan. 22, 1920. Serial No. 353,380. 5 Claims. (Cl. 46—55.)



2. A card shuffler comprising a pocket having an inlet and an outlet, a sliding gate controlling said outlet, a rock shaft having a rock arm and a cam arm, a link connecting said rock arm and gate, and a rotary cam engaging said cam arm.

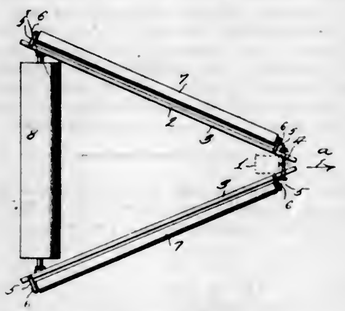
1,380,899. BOAT. CLEMMET HANSEN, Brooklyn, N. Y. Filed Feb. 5, 1920. Serial No. 356,509. 2 Claims. (Cl. 9—2.)

1. A boat having a complete hull and a fixed seat, auxiliary sides for said hull, hinges at one edge of each auxiliary side and hull whereby said sides may be folded compactly within the boat, an auxiliary movable seat adapted to extend between said auxiliary sides and retain said sides from swinging inwardly, and a crank for supporting said auxiliary seat, said crank having a portion extending longitudinally of the seat substantially the length thereof and a portion transverse to the seat near each end thereof, said crank being hingedly connected to both the fixed seat and the auxiliary seat, whereby the auxiliary seat may be swung upwardly between the auxiliary sides or may be swung downwardly and permit said sides to collapse inwardly.



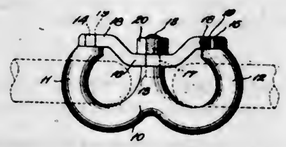
1,380,900. DEVICE FOR SYNCHRONIZING CLUTCH AND GEAR SETS ON MOTOR-VEHICLES. DONALD P. HARRIS, Jersey Shore, Pa. Filed Mar. 9, 1920. Serial No. 364,552. 6 Claims. (Cl. 74—83.)

1. A structure of the character described comprising a gear shifting lever, a clutch shifting treadle, movably



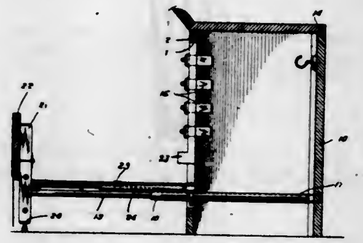
mounted locking dogs for the gear shifting lever having operative connection with the clutch operating treadle, a dash pot having a flexible connection with the treadle for retarding movement of the treadle in one direction, electrically operated means for imparting movement to the treadle in one direction, and an energizing circuit for the electrically operated means including switches positioned in operative relation to the gear shifting lever and moved to an open position to break the circuit when the lever is moved to shift the gears.

1,380,901. LEG PROTECTOR AND SUPPORT. LEXIA HARRIS, Provo, Utah. Filed Feb. 11, 1921. Serial No. 444,173. 3 Claims. (Cl. 155—169.)



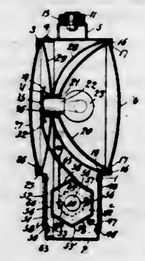
1. A leg protector for protecting an injured leg of a patient in a bed from the weight of an uninjured leg, said protector comprising a member disposed between the legs on which member the uninjured leg rests and downwardly extending members engaging the bed on each side of the leg for supporting the member disposed between the leg.

1,380,902. BOLL-WEEVIL DESTROYER. CIM L. HARRISON, Antlers, Okla. Filed Nov. 10, 1920. Serial No. 423,033. 3 Claims. (Cl. 43—132.)



1. A boll weevil destroyer comprising a pair of spaced scraper members having their forward ends connected to a plow foot, said scraper members extending rearwardly and outwardly, rollers carried by said scraper members and disposed outwardly, and a transversely disposed roller extending between the rear ends of the scraper members.

1,380,903. CHAIN-CONNECTING LINK. WILLIAM AUSTIN HAIGHWOUT, Fortyfort, Pa. Filed July 21, 1920. Serial No. 398,005. 1 Claim. (Cl. 59—85.)

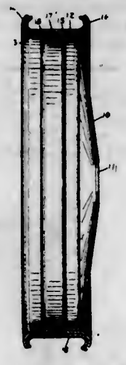


In a chain connecting link, a body portion, hook portions formed on said body portion, dowels projecting from said hook portions, a bridle post having a threaded end carried by said body portion, a bridle connecting the ends of said hook portions and adapted to fit over said bridle post said bridle being provided with openings to receive said dowels, and means adapted to fasten said bridle securely in place, comprising a nut adapted to engage the threaded ends of said bridle post, as described.

1,380,904. COMBINATION FURNITURE. SIDOR HAWRESCH, MIKE ROCK, and BILL DWORSKI, Montreal, Quebec, Canada. Filed Aug. 2, 1919. Serial No. 314,941. Renewed Mar. 24, 1921. Serial No. 455,331. 2 Claims. (Cl. 5—34.)

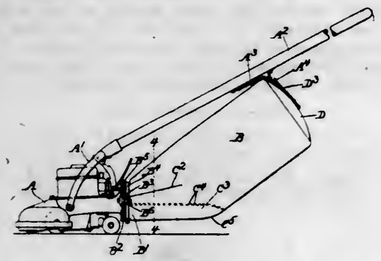
1. In a device of the class described, a cabinet, doors for closing the front of the cabinet, guides in the lower end of the cabinet, guide rails slidable on the guides, a foot piece connecting the outer ends of said guide rails, a section hinged to said foot piece and carrying a shelf adapted to rest against the lower edges of said doors, and a bed spring carried by said guides and rails.

1,380,905. COMBINED VEHICLE SIGNAL AND SEARCHLIGHT. ROBERT E. HINES, WILLIAM J. DELLERT, and JOSEPH A. STAEHLE, New York, N. Y. Filed Oct. 19, 1920. Serial No. 418,025. 6 Claims. (Cl. 240—7.)



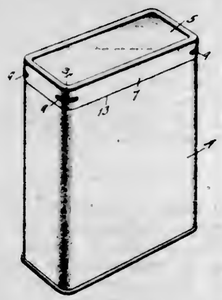
3. In a device of the character described, a housing, a searchlight mounted in said housing, a rotatable casing having signals thereon pivotally mounted in said housing, a lamp within said casing, means for rotating said casing to display the signals and to simultaneously energize said lamp and a switch electrically connected with said searchlight and said lamp for energizing said searchlight and adapted to permit said lamp to be energized independently of said searchlight upon rotation of said casing and to maintain the connection to and through said lamp.

1,380,906. PROCESS OF FORMING DISK WHEELS. ROSCOE C. HOFFMAN, Indianapolis, Ind. Filed June 21, 1920. Serial No. 390,609. 5 Claims. (Cl. 29—159.)



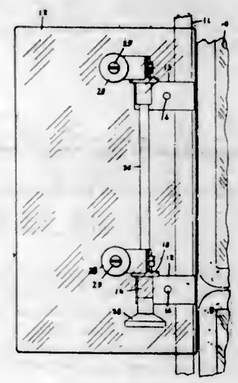
1. The process of forming a disk wheel composed of stamping out the disk portion of said wheel from sheet metal, stamping said disk portion into the shape of a flanged wheel having a shoulder thereon, mounting a complementary flanged rim portion having an enlarged

edge on said wheel so as to abut said shoulder and rolling the periphery of said disk radially outward so as to clamp



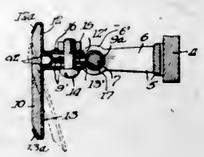
said enlarged edge between said rolled portion and shoulder for forming the rim of said wheel.

1,380,907. BAG FOR SUCTION-SWEEPERS. HOWARD EARL HOOVER, Chicago, Ill., assignor to The Hoover Suction Sweeper Company, New Berlin, Ohio, a Corporation of Ohio. Filed Apr. 27, 1918. Serial No. 231,245. 2 Claims. (Cl. 183—51.)



1. As a new article of manufacture, a dust bag for suction sweepers having a substantially straight or untapered upper margin and a tapered lower margin, the cross section of the bag near the mouth being much smaller than the cross section of the bag near the other end whereby the necessary expansion of air near the mouth is provided for and the solid materials carried by the air are deposited on the inner lower surface of the bag adjacent the mouth, and a patch lining for reinforcing the bag on such lower surface.

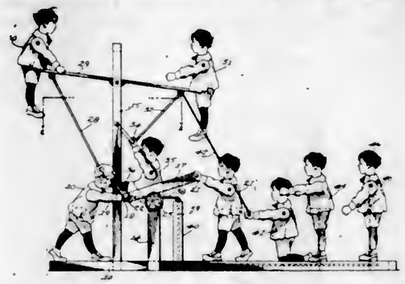
1,380,908. BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1915. Serial No. 42,898. 2 Claims. (Cl. 220—42.)



1. A box comprising a rectangular body formed with rounded corners, and a similarly shaped and rounded flanged slip cover, the body being necked-in for a slight distance substantially equal to the thickness of the cover flange; the cover flange having short inward depressions in its rounded corners, where the flange is of maximum stiffness, for abutting against the top edge of the body walls at the corners only.

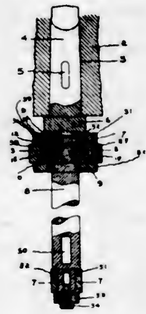
1,380,909. WINDSHIELD-WING. BURTT J. HUBBARD, Kokomo, Ind. Filed Feb. 14, 1920. Serial No. 358,798. 3 Claims. (Cl. 296—84.)

1. In a wind shield the combination with a supporting member and a wing shield, of an elongated hinge rod, a plurality of brackets secured to said shield and supported upon said rod, and a plurality of brackets secured to said vehicle supporting member and supporting said rod, each of said brackets being provided with a plurality of radially extending and registering slots upon a bearing surface transversely of the hinged rod, the adjacent bracket surfaces including a tongue portion, and a single means associated with said rod to seat the bracket tongues and unseat the same in the registering radial slots.



1,380,910. MIRROR FOR AUTOMOBILES. BURTT J. HUBBARD, Kokomo, Ind. Filed Sept. 7, 1920. Serial No. 408,543. 5 Claims. (Cl. 45—97.)

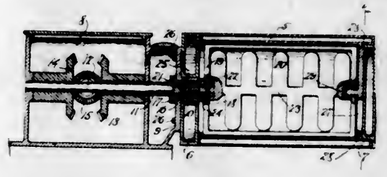
5. In a device of the class described a supporting bracket, a shaft carried thereby, an adjusting band engaging said shaft and having its end spaced apart, a mirror, laterally adjusting members engaging said mirror and overlying said ends and frictionally engaging said band adjacent said shaft, and means for tightening said laterally adjusting members on said band and said band on said shaft.



1,380,911. TOY. FRED HUBIC, Pelly, Saskatchewan, Canada. Filed July 31, 1920. Serial No. 400,463. 4 Claims. (Cl. 46—40.)

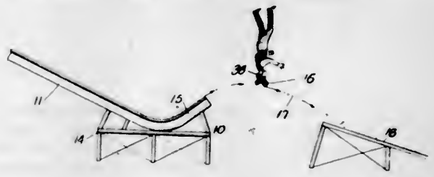
1. A toy of the character described comprising in combination, a base, a gallows at one end of said base, a see-saw near the top end of said gallows, a saw mounted upon a separate support near the foot of said gallows, two toy figures on said see-saw, and two figures operating said saw, means for operating said see-saw and said saw from a common operating handle, and a plurality of toy figures

in rear of said gallows adapted to be operated by the operation of said first named operating means to execute various movements.



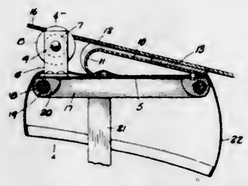
1,380,912. DRILL-PRESS. ALFRED JOSEPH JACQUES, Montreal, Quebec, Canada. Filed May 10, 1920. Serial No. 380,388. 3 Claims. (Cl. 279—71.)

1. In a drill press the combination with a tool having a notched shank, of a chuck for holding said tool, said chuck consisting of a body of circular cross-section and containing a socket at one end adapted to receive the notched tool shank, the wall of said socket having diametrically oppositely disposed openings therein, a jaw mounted in each of said openings and movable to and from engagement with the notches in said tool, means guiding said jaws in their movement to and from the tool, an annulus encircling said body and presenting a cam surface in operative engagement with said jaws, means retaining said annulus in position upon the body, said means consisting of a circumferential flange formed integrally with the body and in bearing relation with one side of said annulus and a ring encircling said body and bearing against the opposite side of said annulus, means detachably securing said ring upon the body, means for limiting the extent of movement of said annulus, the said means consisting of a pair of abutments upon said ring, and a pin upon the annulus and movable between the abutments, means for locking said annulus in position with the jaws in engagement with the tool, said last-mentioned means consisting of a pin slidably mounted in said ring with its outer end in bearing relation with the adjacent side of the annulus, a spring adapted to yieldingly maintain the pin in engagement with said annulus and a socket in the annulus adapted to accommodate the pin.



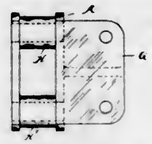
1,380,913. ICE-CREAM FREEZER. ALBERT T. LIGHT, New York, N. Y. Filed July 25, 1919. Serial No. 313,400. 4 Claims. (Cl. 259—105.)

1. An ice cream freezer comprising a freezing vessel provided at one end with a removable head, a beater supported on a bearing at the opposite end of such vessel, driving gearing connected with said supported end of the beater, and a bearing for the opposite outer end of the



beater non-rotatably mounted in the vessel inside the removable head and supporting the beater independently of said head, whereby said beater may be operated with the head removed and while the vessel is open.

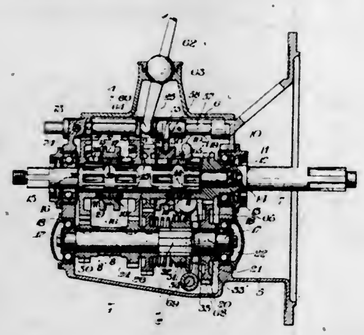
1,380,914. SKATE DEVICE. HILLARY C. LONG, New York, N. Y. Filed May 8, 1920. Serial No. 379,740. 11 Claims. (Cl. 46—70.)



1. A device of the class described comprising a suitable frame member, two pairs of anti-friction rollers rotatably mounted in connection with the frame member, and means whereby said frame member is adapted to be connected with the head of a user.

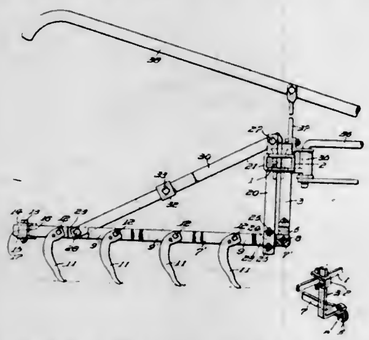
1,380,915. RUNNER DEVICE. HILLARY C. LONG, New York, N. Y. Filed May 8, 1920. Serial No. 379,741. 7 Claims. (Cl. 46—70.)

1. A runner device for use upon a cable comprising a frame, a roller mounted in connection with said frame and adapted to operate upon said cable, and an elongated channel-shaped drag and brake device on said frame and adapted to coöperate with said cable.



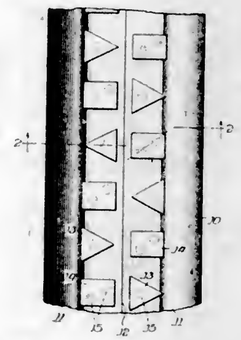
1,380,916. CHAIN CONSTRUCTION. JESSE E. MCBRIDE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 29, 1917. Serial No. 194,063. 2 Claims. (Cl. 193—2.)

1. In a conveyer chain construction, an attachment link comprising a side, a laterally extending attachment flange



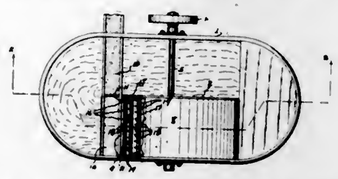
projecting from one edge of said side, and a brace for said attachment flange, said brace having a portion extending beyond the edge of said side opposite to that from which said attachment flange projects.

1,380,917. TRANSMISSION-CLUTCH. WILLIAM A. MCCARRELL, Milwaukee, Wis. Filed Apr. 25, 1919. Serial No. 292,644. 4 Claims. (Cl. 192—71.)



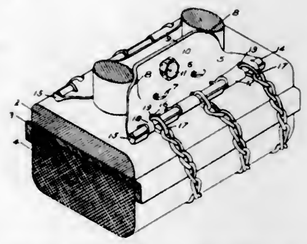
1. In a transmission mechanism, the combination of a shaft having radially disposed recesses therein, a member loosely mounted thereon and having a hub provided with radially disposed slots and radially disposed recesses in the ends of said slots, rollers disposed in said slots and having reduced end portions disposed in said recesses in said hub, and means for moving said rollers into said recesses to lock said member to said shaft.

1,380,918. CULTIVATOR. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Aug. 2, 1920. Serial No. 400,701. 8 Claims. (Cl. 97—42.)



5. A cultivating implement comprising a transversely extending gang bar, a pair of vertically and longitudinally adjustable supports carried by said gang bar, a tool-carrying side bar vertically pivoted adjacent the lower extremity of each of said supports and extending rearwardly therefrom, each of said bars comprising a plurality of tool seats and diagonally disposed portions connecting said seats, means hingedly connecting the rearmost extremities of said tool-carrying bars, a vertically adjustable bar carried by said gang bar, a center bar disposed between said tool bars and extending between said vertically adjustable bar and said connecting means, means for securing said center bar adjacent its forward end to said vertically adjustable bar, a strut extending from adjacent the upper extremity of said vertically adjustable bar to said center bar and means for adjusting the length of said strut.

1,380,919. MATRIX FOR VULCANIZERS. FRED MAIER, Los Angeles, Calif., assignor to Western Vulcanizer Manufacturing Company, Chicago, Ill., a Copartnership consisting of Herbert K. Wheelock, Frank A. Weller, and Walter R. Fontaine. Filed May 14, 1919. Serial No. 296,985. 7 Claims. (Cl. 18—44.)

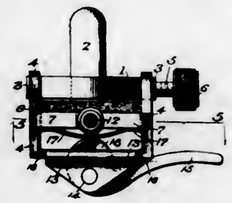


1. A matrix for vulcanizers, consisting of a main body portion having an anchoring surface thereon, and a configuration cast on to said body portion and engaging the said anchoring surface.

1,380,920. CONTINUOUS PULP-BEATER. SIDNEY MITCHELL, New York, N. Y. Filed Aug. 23, 1919. Serial No. 319,347. 5 Claims. (Cl. 92—23.)

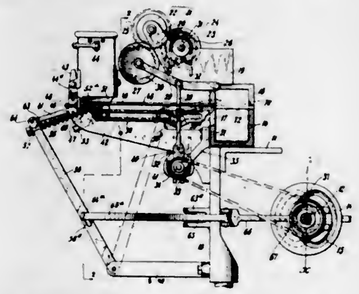
1. In a device of the kind described, a tub; a beater roll therein; a hood inclosing said beater roll having a discharge opening therein, a grating comprised of closely spaced rods interposed between said discharge opening and said beater roll, and a discharge trough exteriorly arranged relative to said discharge opening to receive pulp discharged through said grating by centrifugal force from said beater roll.

1,380,921. CHAIN-ATTACHING DEVICE. FRANK P. MURPHEY and CLIFFORD E. BICKEL, Butler, Pa. Filed Apr. 3, 1920. Serial No. 371,012. 5 Claims. (Cl. 152—2.)



1. A chain-attaching device, comprising a plate having spoke-engaging portions, a plurality of bearings formed therein, bracing guards coöperating with certain of said bearings, and a chain-attaching rod in said bearings, substantially as described.

1,380,922. FILLER FOR CAVITIES IN TREES. JOSEPH J. NICHOLAS, Philadelphia, Pa., assignor to Albert F. W. Vick Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 30, 1920. Serial No. 369,878. 4 Claims. (Cl. 106—8.)



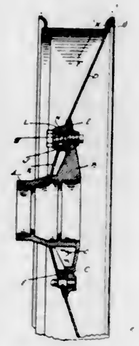
4. A composition for filling cavities in trees comprising finely divided wood and a cementitious binding therefor, the wood being present in predominating quantity.

1,380,923. FAUCET-CLAMP. ANTONIO PAPINI, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1920. Serial No. 363,992. 5 Claims. (Cl. 285—107.)

4. In a clamp of the character stated, a yoke attachable to a fluid discharge member, a frame depending from said yoke, a screw-like securing device mounted on said yoke and adapted to engage said member, an eccentric lever mounted on said frame, a movable bed on said frame, a gasket adapted to be supported on said bed and engage the mouth of said discharge member, the head of said lever being adapted to operate said bed to tighten said gasket in fluid tight position on said member, and a resilient member interposed between said bed and the head of said lever.

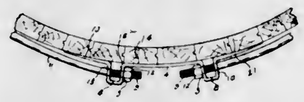
1,380,924. MACHINE FOR APPLYING LABELS, SEALS, AND THE LIKE. FRANK M. PETERS, New York, N. Y., and WARREN H. HUNGERFORD, Chicago, Ill.; said Hungerford assignor to said Peters. Filed Nov. 4, 1918. Serial No. 260,998. 7 Claims. (Cl. 216—55.)

1. A machine of the character described comprising package supporting means, a label magazine, means for transferring a label from said magazine, and means for rendering said label adhesive; said transfer means comprising a support, a foldable member, means for actuating said support to carry the label into engagement with one wall of a package, and means for actuating said foldable member to carry the remainder of said label into engagement with another wall of said package, substantially as specified.



1,380,925. VEHICLE-WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 27, 1919. Serial No. 285,490. 6 Claims. (Cl. 301—63.)

1. In a vehicle wheel, the combination with a rim and hub, of a main dished disk extending between said rim and hub, an oppositely dished reinforcing disk spaced from the first mentioned disk at the hub and secured to the main disk at a point remote from the rim thereof, a spacer be-

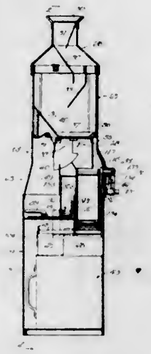


tween said disks having concentric inner and outer portions, and means for securing the disk to the hub passing through apertures in said disks intermediate the concentric portions of said spacer.

1,380,926. VEHICLE-WHEEL. ALDEN L. PUTNAM, DETROIT, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 27, 1919. Serial No. 285,500. 4 Claims. (Cl. 301—63.)

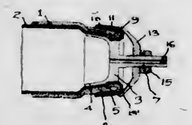
1. In a vehicle wheel, the combination with a rim and hub, of a dished disk secured to said rim and extending part way to the hub, an oppositely dished flange on the hub, and a clamping member for securing said disk to said flange having a portion extending inward to the hub forming an extension of the dish of the disk.

1,380,927. HOOP-COUPLING. WILLIAM ROSS, Cleveland, Ohio. Filed June 28, 1920. Serial No. 392,411. 15 Claims. (Cl. 217—95.)



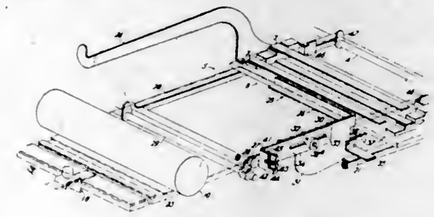
1. The combination with a circular wall and a hoop therefor, of a coupling comprising a forged metallic member, U-shaped shoulders bent therein, with opposing faces and holes in said shoulders through which the threaded ends of the hoop pass, said hoop ends being engaged by nuts which bear upon said shoulder faces.

1,380,928. BARB-WIRE ATTACHMENT FOR GATES. ALVIN V. ROWE, Galesburg, Ill. Filed Sept. 7, 1918. Serial No. 253,083. 4 Claims. (Cl. 256—11.)



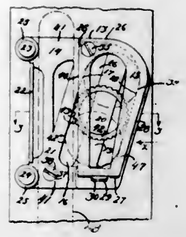
1. In a gate, in combination, a series of panels or boards, a plurality of pairs of uprights connecting said boards, bolts connecting said uprights to said boards, a plurality of barb-wire attachment members, connected to and upstanding from each pair of uprights, each member being of substantially inverted V shape and having alined openings therethrough near the arcuate ends and provided with longitudinal slots opening out of their lower ends and straddling certain of said bolts, a stringer of barb-wire, the end connected to the end attachments and passing through and between the legs of the intermediate attachments, and means passing through the openings in the intermediate attachments for holding the wire up in the arcuate ends of said attachments.

1,380,929. COLLECTING DEVICE. ALBERT RUEBSAMEN, Decatur, Ill. Filed Apr. 21, 1920. Serial No. 375,460. 7 Claims. (Cl. 232—7.)



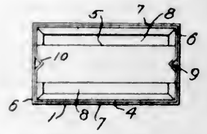
1. A device of the character described including in combination, a main casing having a hopper provided with an opening leading into an intermediate part; a dumping closure for said hopper; a receiving till, adapted to be inserted in said casing below the intermediate part, said till having a sliding cover; a lock to hold the cover closed; means in the casing movable to a position below the cover, while the cover is closed and in the path of the till to prevent removal thereof; a handle to move said means and means movable into the till opening, upon further movement of the handle, after the till cover has been moved to open position.

1,380,930. VULCANIZING AIR-BAG. GEORGE EMORY SAPP, Sacramento, Calif. Filed Oct. 19, 1920. Serial No. 417,000½. 5 Claims. (Cl. 18—45.)



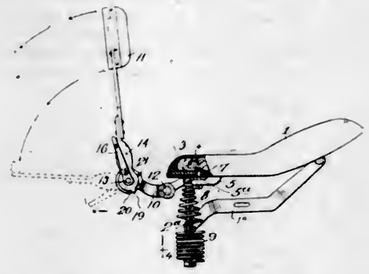
1. An air bag comprising, a plug; a ferrule encircling said plug; a cap; a separable tube within said bag body, the ends of said bag and said tube being compressible between said plug, ferrule and cap.

1,380,931. TYPEWRITING-MACHINE. JEREMIAH JOHN SHEEHY, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 27, 1920. Serial No. 376,905. 20 Claims. (Cl. 197—126.)



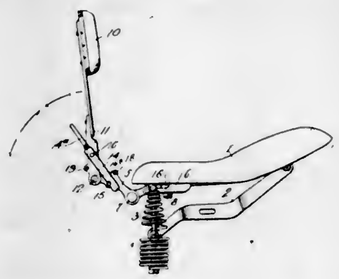
1. In a typewriting machine, the combination with a carriage and a revolnble platen therein, of a carbon-paper holder behind the platen adapted to move with the advancing carbons, a gage behind the platen adapted to hold a card, and connections whereby the advancing holder moves the gage out of its path.

1,380,932. ARTICLE-HOLDER. EPHRAIM G. SHREVE, Atlantic City, N. J. Filed Feb. 27, 1920. Serial No. 361,885. 3 Claims. (Cl. 24—244.)



1. A holder of the character described comprising a frame providing a channel and including portions spaced apart at one side of said channel; a hollow securing ring open at opposite ends and positioned between said portions; and inclined guiding means for engagement with the peripheral surface of said securing ring for permitting the latter to move downwardly at an incline toward said channel without the inclusion of an axle in said hollow ring, said channel having portions opposite said securing ring whereby an article inserted between said channel portions and the ring will be secured within said channel due to the downward movement of said ring between its guiding means; substantially as described.

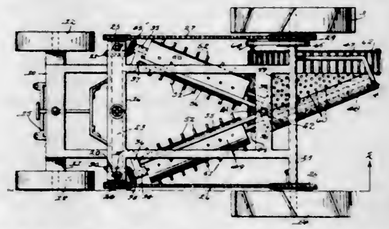
1,380,933. METHOD OF ICE-MAKING. ARTHUR D. SMITH, Brooklyn, N. Y., assignor to Frank H. Czeslik, Brooklyn, N. Y. Filed Apr. 1, 1920. Serial No. 370,484. 3 Claims. (Cl. 62—172.)



1. A process of making ice which consists in placing a body of water in a can, applying a freezing medium to the exterior of the can, removing the ice cake so formed, placing said cake in a second can having substantially the same configuration as the first can, and substantially the same dimensions, except that the second can is of greater thickness, so that spaces will be left between the opposite faces of the cake and the interior of the second can, filling said spaces with water, and applying a freezing medium to the exterior of said second can until all said water and said ice cake are frozen into a single mass.

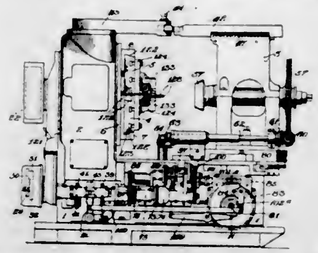
1,380,934. BACK-REST. HORACE N. SPEER, Scarsdale, N. Y. Filed July 5, 1919. Serial No. 308,704. 6 Claims. (Cl. 208—138.)

1. The combination of a back rest, braces, a pivot connecting the rest and braces, the back rest and the braces having notches, a locking member having a projection adapted to enter said notches to lock the back rest in operative position on the braces, said pivot being provided with a projection and an operative handle, said locking member having a recess receiving said pivot and projection, whereby the projection of said member may be set in both of said notches to retain the back rest in operative position on the braces and may be withdrawn from one of the notches to permit the back rest to be lowered, and means to secure said braces to a seat.



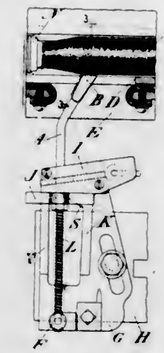
1,380,935. BACK-REST. HORACE N. SPEER, Scarsdale, N. Y. Filed July 5, 1919. Serial No. 308,705. 2 Claims. (Cl. 208—138.)

1. The combination of a back rest, braces pivotally connected thereto, means to secure the braces to a seat, a rod carried by the back rest, and latches secured to the rod, said braces having projections, the latches having notches coöperative with said projections to retain the back rest in elevated position, and a spring coöperative with said rod and with the back rest to cause the notches of the latches to remain in coöperation with said projections when the back rest is elevated.



1,380,936. STONE DIGGING AND COLLECTING MACHINE. GEORGE STEFFAN, New York, N. Y. Filed July 31, 1920. Serial No. 400,394. 4 Claims. (Cl. 55—17.)

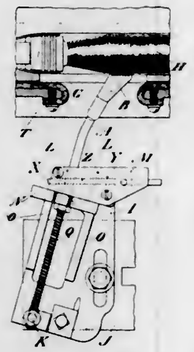
1. A machine of the character described comprising a wheeled truck, converging rollers adapted to rotate during the travel of the truck over the ground, stone digging means on said rollers, a stone collecting platform in rear of said truck, a conveyer and a means for brushing the



stones dug by said digging means onto said conveyer after they have been freed of the adhering soil.

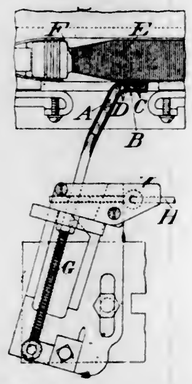
1,380,937. GEAR-CUTTING MACHINE. ARTHUR L. STEWART, EDWARD W. BULLOCK, and SCHUYLER H. EARL, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Oct. 24, 1919. Serial No. 333,014. 23 Claims. (Cl. 90—9.)

1. In a gear cutting machine, the combination with a blank carrier and cutter support, one movable toward and from the other, of a reciprocating cutter on the cutter support, and bracing members secured to the blank carrier and cutter support and connected with each other so as to permit relative movement, said bracing members being located above the blank and cutter.



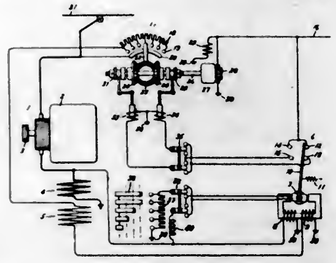
1,380,938. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 31, 1919. Serial No. 300,953. 1 Claim. (Cl. 139—85.)

A feeler mechanism for looms having a side slipping feeler arm with its rear portion laterally inclined with respect to its forward portion, said rear portion having teeth at its rear end, in combination with guides for the forward portion of the feeler arm at the front and rear thereof, both guides being forward of the laterally in-



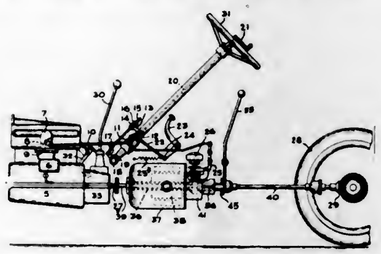
clined rear tip portion and disposed one directly behind the other so that the forward portion of the feeler arm is normally maintained in such a position that a vertical plane extending lengthwise along its middle is at right angles to the axis on which the lay swings and to the longitudinal axis of the bobbin and shuttle, said rear guide being stationary and laterally elongated to permit the side slip of the feeler arm when the bobbin is bared at the place where it contacts with the feeler teeth.

1,380,939. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 26, 1919. Serial No. 347,322. 7 Claims. (Cl. 139—85.)



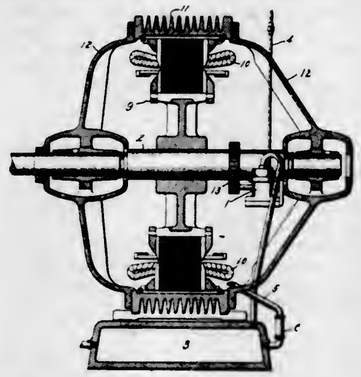
1. A feeler arm having a plurality of recesses near its rear end and a longitudinally extending groove connecting said recesses and terminating at the rear end of the arm, said groove increasing in depth and width from the foremost recess to the rear end of the arm, in combination with a feeler tip consisting of resilient metal bent to form two legs straddling the rear end of the feeler arm and resiliently gripping the upper and lower faces thereof, one of said legs having on its inner face a plurality of inwardly projecting studs corresponding in position to the recesses in the feeler arm and interlocking therewith, said studs being adapted to slide lengthwise along said groove in the feeler arm in attaching the tip to the arm.

1,380,940. WEFT FEELER-TIP FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 7, 1920. Serial No. 401,943. 4 Claims. (Cl. 139—85.)



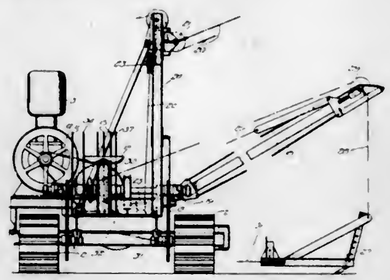
1. A feeler having its weft contacting end convex toward the bobbin both vertically and horizontally, said weft contacting end having a plurality of integral teeth arranged in a horizontally extending curve, said teeth being constituted by slits in the weft contacting end of the feeler extending diagonally from the top to the bottom of the feeler whereby teeth are formed integral with the feeler and having blunt rear and square edges and extending diagonally from the top to the bottom of the feeler.

1,380,941. ELECTRICAL SYSTEM OF POWER TRANSMISSION AND REGENERATIVE BRAKING. CLINTON J. AXTELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 4, 1918. Serial No. 215,280. 9 Claims. (Cl. 172—179.)



2. The combination with a dynamo-electric machine provided with a field winding, of means for controlling the excitation of said field winding to maintain the torque developed by said dynamo-electric machine approximately constant, said means comprising a torque relay connected and designed to develop a torque approximately proportional to the torque developed by said dynamo-electric machine, and means for varying the torque of the relay to vary the value of torque of the dynamo electric machine which is to be maintained approximately constant.

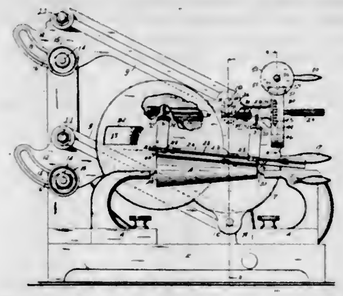
1,380,942. MOBILE GENERATOR OUTFIT. HENRY S. BALDWIN, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 2, 1918. Serial No. 264,969. 4 Claims. (Cl. 290—1.)



4. In combination, an engine, vehicle wheels, a transmission shaft comprising a forward section and a rear section for transmitting power from the engine to said wheels, said rear section having an enlarged counterbored end in which the adjacent end of said forward section is journaled, clutch teeth on said enlarged end, a generator the armature of which is provided with a quill shaft through which said forward shaft section extends, the same terminating just beyond the end of the quill shaft, a clutch member splined on such end of said forward shaft section, a part on the end of said quill shaft having clutch teeth and gear teeth thereon, said clutch member when in one position engaging said first named clutch teeth and when in another position engaging said second named clutch teeth, a speed governor driven by said gear teeth, a throttle valve for the engine, and means connecting said governor to said throttle valve.

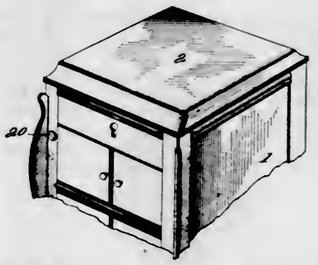
1,380,943. SUBMERSIBLE MOTOR. WILLIAM BAUM, Milwaukee, Wis., assignor to General Electric Company, a Corporation of New York. Filed Sept. 27, 1917. Serial No. 193,576. 6 Claims. (Cl. 172—36.)

1. The combination with a submersible motor having a shaft and provided with an inclosing casing, of means for preventing water from entering said motor when said motor is submerged comprising an air-pump, gearing connecting the pump to the motor shaft, a tank receiving compressed-air from said pump and arranged to discharge compressed-air into the interior of the motor, and adapted to maintain therein the proper pressure to counterbalance the water pressure outside said motor, and a suction pipe extending from the pump to the outer atmosphere.



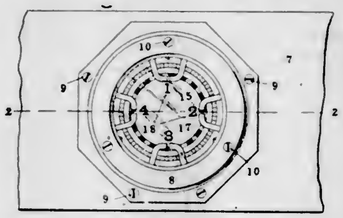
1,380,944. BACK-FILLER. HANS J. BENTSON, Winthrop Harbor, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Nov. 2, 1918. Serial No. 260,827. 5 Claims. (Cl. 37—39.)

1. In an excavator, a body frame, a boom projecting laterally from one side thereof, an excavating device supported by said boom, means on the body to operate and control said device, traction means at the outer side of the body, traction means disposed at the inner side of the body and below the boom, and power-transmitting connections for driving said traction means independently of each other, either backward or forward, thereby to swing the boom laterally in either direction.



1,380,945. PRECISION-GAGE. LEVI BROWN, Milwaukee, Wis., assignor of one-half to Lloyd McElwain, Walworth, Wis. Filed June 21, 1919. Serial No. 305,835. 16 Claims. (Cl. 33—174.)

1. A precision gage including the combination of a gage bar, supported for oscillation about a transverse axis, and provided with projections adapted for contact with the work at a plurality of points, a manually rotatable shaft adapted to oscillate the bar about the said axis, and scale members operatively associated with said shaft and

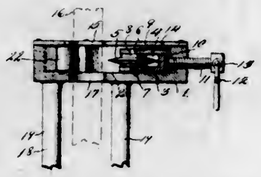


adapted to indicate the inclination of the bar from a normal horizontal position.

1,380,946. DOME-SUPPORT. NIXON L. CARTER, Newport News, Va. Filed Feb. 1, 1921. Serial No. 441,583. 4 Claims. (Cl. 217—60.)

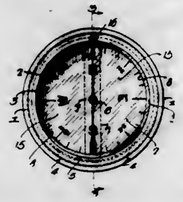
1. In a lid support and lock, the combination with a receptacle and its cover, of a link pivotally connected to the cover and having notches in its rear edge, a plate having a guide for said link, a spring pressed rod extending from the front of the receptacle and having a hooked end extending through the plate and adapted to enter the notches in the link.

1,380,947. SPARK-INTENSIFIER. ARTHUR B. CHRISTOPHER, St. Louis, Mo. Filed Oct. 11, 1920. Serial No. 416,171. 5 Claims. (Cl. 175—183.)



1. In a device of the class described, the combination with a receptacle, of an auxiliary spark gap situated therein, a reflector arranged behind said spark gap, and a second reflector arranged in front of said gap and having its surface angularly disposed with respect to said first named reflector.

1,380,948. PIPE-CUTTER. JOHN EDWARD DONNELLY, Branford, and ANTHONY JOSEPH GRIESER, New Haven, Conn. Filed Mar. 19, 1920. Serial No. 367,096. 1 Claim. (Cl. 81—191.)



A pipe and rod cutter comprising a cutter head having a rectangular shaped chamber therein, a removable cover

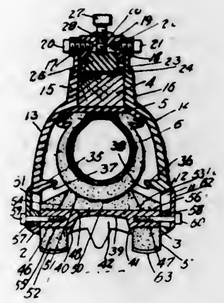
for said chamber, pipe receiving apertures extending through the cutter head and its cover, rollers disposed in the chamber of the cutter head and having bearings in the bottom of the chamber and in the cover and adapted to engage a pipe during a cutting operation, a slidable rectangular shaped cutter carrier disposed in the chamber,

a cutter wheel pivoted in a chamber of the carrier, said chamber being provided with a detachable cover in which the cutter has a bearing, a threaded adjusting screw threaded through the end wall of the cutter head and pivoted to the cutter carrier, said adjusting screw being radially disposed in relation to the cutter and in the same plane as the cutter.

1,380,949. MAGNETIC COMPASS. CARL W. EISENMANN, Nebraska City, Nebr. Filed Apr. 19, 1920. Serial No. 374,909. 5 Claims. (Cl. 33—222.)

1. The combination in a magnetic compass of an opaque casing having a side window opening; a transparent closure for said opening; a magnetic element rotatably mounted in the casing; with indicating elements projecting at right angles to the plane of and movable with said magnetic element, said indicating elements being angularly adjustable relative to the magnetic element and separably visible through the closure of the window opening.

1,380,950. PAINTING DEVICE. FRANKLIN E. FORNWALT, Harrisburg, Pa. Filed Feb. 9, 1920. Serial No. 357,143. 5 Claims. (Cl. 251—115.)

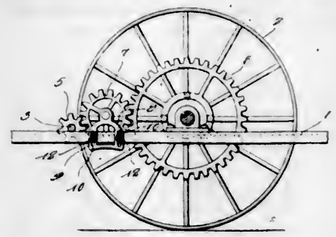


1. In a painting apparatus the combination of a casing interiorly threaded at its lower end, an outlet formed in its upper end, a conduit arranged in the outlet, a tube having orifices arranged therein within casing and having a closed end adapted to close said outlet, a nut threaded on the lower interior threads of the casing and secured to and movable with the casing, a gland nut secured to the first named nut and slidably arranged on the tube, jam-nuts on the tube spaced below the last named nut, and a handle having a portion disposed between the jam-nuts and the gland nut for movement of the gland nut, first named nut and casing relative to the tube.

1,380,951. PROCESS FOR THE PREPARATION OF HYDRIODIC ACID. GEORGE B. FRANKFORTER, U. S. Army. Filed June 4, 1919. Serial No. 301,802. 17 Claims. (Cl. 23—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

14. A process of making hydriodic acid by placing an unsaturated oxy-compound in a receptacle, adding iodin, removing the impurities from the resulting gas and collecting the gas given off.

1,380,952. TRACTION-TREAD FOR PNEUMATIC TIRES. JOHN JOSEPH GILLIVN, Oshawa, Ontario, Canada. Filed May 3, 1920. Serial No. 378,642. 6 Claims. (Cl. 152—16.)



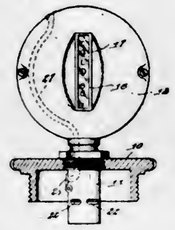
6. A traction tread for pneumatic tires, comprising a carrier member provided with arms extending at each side of the pneumatic tire and having slots therein, tread sections arranged end to end annularly around the tire and between the arms of the carrier, each comprising a tread plate, an inner tread piece carried by the tread plate in contact with the tread of the tire, and outer tread pieces carried by the tread plate at each side of the inner tread piece, blocks slidable within the slots of the carrier arms and screws extending through the block into the tread plate, a cap swung between the inner arms of the carrier, a plate adapted to bear against the inner periphery of the felly and having a projection extending into the cap member and having guiding recesses into which the arms of the carrier slidably fit, and a setscrew extending through the cap member against the projection of the plate.

1,380,953. DRIVING CONNECTION. JOSEPH P. HAGAMAN, Lancaster, Wash. Filed Mar. 1, 1920. Serial No. 362,486. 1 Claim. (Cl. 74—7.)

In a driving connection, the combination of a frame portion, a ground drive wheel, a spur gear fixed with respect to said wheel, a speeding shaft bearing a spur pinion alined with and spaced from said gear wheel, an idler spur gear of greater diameter than the width of said space imposed between and intermeshed with the gear and pinion, an inverted U-shaped bracket carrying and containing

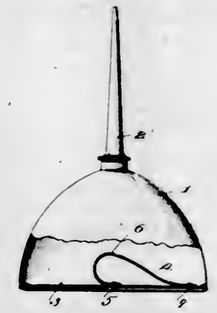
said idler gear and having a corrugated face and also having upright slots, corrugated filler means, and bolts ex-

tending through said slots and the frame portion and adjustably fixing the bracket to said frame portion



---

1,380,954. MEANS FOR CONTROLLING THE DIRECTION OF CUTTING DRILL-HOLES IN ROCK. OLIVER HALL and VICTOR PUTNAM ROW, Coniston, Ontario, Canada. Filed June 1, 1920. Serial No. 385,703. 7 Claims. (Cl. 255—1.)



1. Means for controlling the direction of cutting drill-holes in rock, comprising, a longitudinally tapered member adapted to be inserted into the drill-hole with the thin end uppermost, and means adapted to be inserted into and definitely located in the drill hole for locating and securing said tapered member in a definite position in relation to the direction of the drill-hole.

1,380,955. MOTOR-METER. BENJAMIN HARRIS, East Akron, Ohio, assignor of twenty-four per cent. to Michael Lurie and twenty-five per cent. to Edward Lurie. Filed Feb. 2, 1920. Serial No. 355,613. 3 Claims. (Cl. 73—52.)

1. A motor meter comprising a casing having a sight opening, a rotatable element arranged within the casing and having indicia thereon, means for rotating said element, and a valve controlled exhaust port normally closed by said valve and adapted to be uncovered at a predetermined temperature, and means for automatically operating said valve to uncover said port.

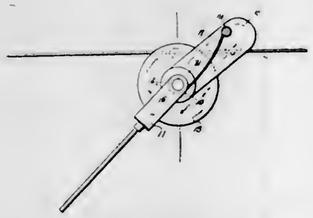
1,380,956. OIL-CAN. FREDERICK A. HASSE and RICHARD MORRIS, Benton Harbor, Mich. Filed Oct. 20, 1920. Serial No. 418,151. 1 Claim. (Cl. 221—34.)

In an oil can comprising a container having a spring bottom and side walls, and a discharge spout therefor, a spring having one end fixedly secured to the spring bottom at about its center, said spring having an upwardly extending looped portion, and its other end fixedly secured to the spring bottom adjacent the edge of such bottom.

1,380,957. HEAD-FRAME FOR SUPPORTING EYE-GLASSES. FRANK W. HAVILAND, New York, N. Y. Filed May 18, 1920. Serial No. 382,441. 9 Claims. (Cl. 88—51.)

1. In a device for supporting eye glasses, a bridge, a head frame, means for connecting said head frame to a person's ears, and means for securing a lens to said bridge and said frame, said head frame being adapted to support the weight of the eye glasses.

1,380,958. FOLDING BED. JOSEPH I. HIGGINS, New York, N. Y. Filed May 21, 1920. Serial No. 383,202. 3 Claims. (Cl. 5—18.)

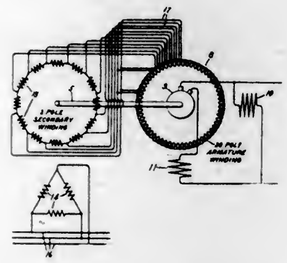


1. A folding bed comprising, a spring frame, having front and rear side bars, stationary leg members, one side bar being pivotally connected to the stationary leg members, a shelf rigidly connected to the free edge of the bed

adjacent and parallel to the other side bar, brackets fixed to the shelf, said brackets including arms terminating in semi-circular toothed gripping portions, curved clamping members pivoted to the arms and coöperating with the

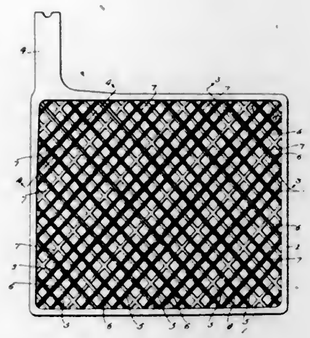
gripping portions thereof to encircle the last mentioned side bars, extensions on the brackets having openings therein, legs slidable through the openings, and means carried by each end of the legs for limiting their sliding movement.

1,380,959. TROLLEY-WHEEL ATTACHMENT. WILLIAM T. HILL, Baltimore, Md. Filed June 28, 1919. Serial No. 307,263. 1 Claim. (Cl. 191—73.)



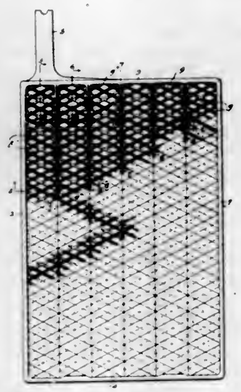
A trolley wheel attachment comprising in combination with a yoke, and an axle thereon, of a pair of elongated members mounted upon the axle at the opposite sides of the wheel and extended beyond the periphery thereof, a stud projecting laterally from the outer side of each member, disks loosely mounted upon the axle and arranged at opposite sides of said elongated members, a coiled spring surrounding said axle at each side of the wheel, said springs exerting pressure against said disks whereby said elongated members are frictionally maintained in position upon the axle, and the final convolution of each spring being extended to provide a resilient arm which is connected with the adjacent stud, whereby said elongated members are yieldably held above the wheel and closely associated for the purpose specified.

1,380,960. RUBBER THIMBLE. VERONICA HIMENIA, Klein, Mont. Filed Mar. 23, 1920. Serial No. 368,132. 1 Claim. (Cl. 223—51.)



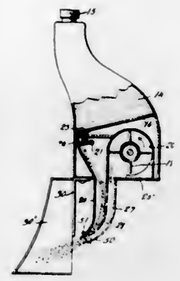
A rubber crochet thimble having a thin flexible tip and thickened side walls with a laterally extending handle on the outer face of one of said side walls intermediate the ends thereof to facilitate removal of the thimble from the finger.

1,380,961. ELECTRICITY TRANSFORMING AND CONVERTING APPARATUS. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 4, 1917. Serial No. 189,505. 2 Claims. (Cl. 171—123.)



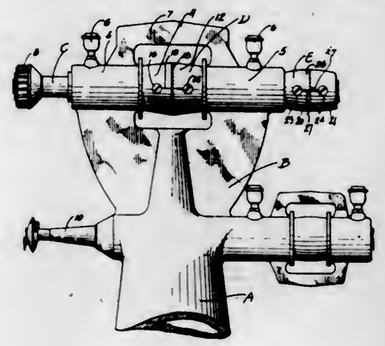
1. An electricity transforming and converting apparatus comprising in combination an induction machine having a stationary polyphase primary winding and a rotatable polyphase secondary winding of a relatively small number of poles so that said induction machine functions substantially as a pure transformer, a synchronous apparatus including a rotatable armature and commutator for converting polyphase alternating current energy into direct current energy and having a relatively large number of poles so that said synchronous apparatus functions substantially as a pure synchronous converter, means for mechanically connecting said armature of said synchronous apparatus and said secondary winding of said induction machine, and means electrically connecting the polyphase secondary winding of said induction machine to the armature winding of said synchronous apparatus in such a manner that said secondary winding is rotated in a direction opposite to the direction of rotation of the magnetic field produced by said primary winding, thereby causing the armature current of said synchronous apparatus to have a component in a direction to neutralize the armature reaction of said synchronous apparatus and improve its commutating characteristics.

1,380,962. STORAGE-BATTERY GRID. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 8, 1918. Serial No. 243,748. 11 Claims. (Cl. 204—29.)



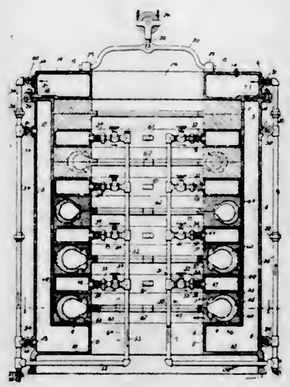
1. A grid having a marginal frame; with two sets of ribs lying respectively in parallel planes and inclosed by said frame, each of said sets consisting of a number of groups of parallel ribs of which adjacent groups are separated by spaces greater than the distance between the ribs comprising them and are intersected by a series of ribs extending in lines running at other than at an angle of 90° to the elements of the marginal frame.

1,380,963. STORAGE-BATTERY GRID. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1919. Serial No. 339,854. 9 Claims. (Cl. 204—29.)



1. A battery grid consisting of a substantially rectangular marginal frame having side top and bottom members; a terminal lug projecting from the top frame member; substantially parallel ribs connecting the top and bottom members and defining panels; and two series of auxiliary ribs in each of the panels, arranged in parallel planes with a chamber between them, the top frame member being longitudinally split in the form of two substantially parallel parts connected at their ends, and the bottom frame member being solid.

1,380,964. ANTISKID DEVICE. NEVIL MONROE HOPKINS, Washington, D. C. Filed Feb. 7, 1920. Serial No. 356,972. 21 Claims. (Cl. 291—31.)

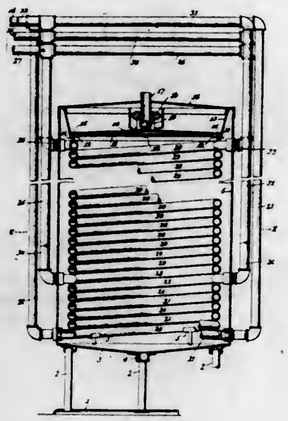


1. In an anti-skid device, the combination of a casing containing a reservoir for abrasive material, and a fan, a feed pipe leading from the reservoir out of the casing, an air-outlet pipe for the fan positioned to direct the air against the material passing out of the feed tube, in the direction of flow.

1,380,965. BALANCE PULLEY AND COLLAR. CHARLES F. HOWES, Brockton, Mass. Filed Dec. 6, 1919. Serial No. 342,876. 14 Claims. (Cl. 74—6.)

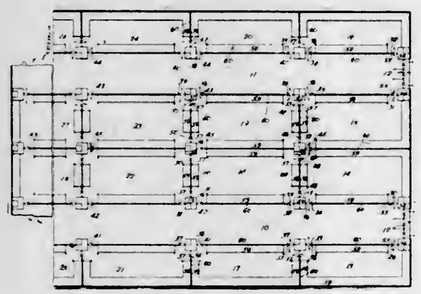
1. A device for balancing shafts comprising a pair of weighted annular members, and means for adjusting said members.

1,380,966. TIRE-VULCANIZING APPARATUS. ARGE LEO JACOBSON, New York, N. Y., assignor to Leo A. Kearney, New York, N. Y. Filed July 19, 1919, Serial No. 312,029. Renewed Dec. 20, 1920. Serial No. 432,137. 11 Claims. (Cl. 18—17.)



1. In a device of the character described, the combination of a steam jacketed receptacle, a plurality of molds therein, and a heating means interposed between adjacent molds.

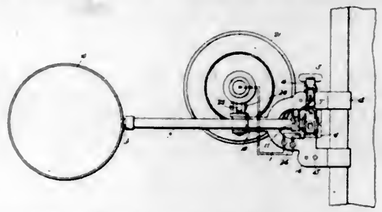
1,380,967. LIQUID HEATING OR COOLING APPARATUS. AAGE JENSEN, Portland, Oreg., assignor to Jensen Creamery Machinery Company, Inc., a Corporation of New York. Filed Jan. 22, 1920. Serial No. 353,281. 5 Claims. (Cl. 257—180.)



3. An apparatus of the character described, comprising helical coils divided horizontally into independent sections, each of said sections being subdivided into sepa-

rate sets of coils alternately disposed, means for supplying heating or cooling fluids separately to said sections and

sets, and means for feeding the liquid to be treated upon the topmost coil.

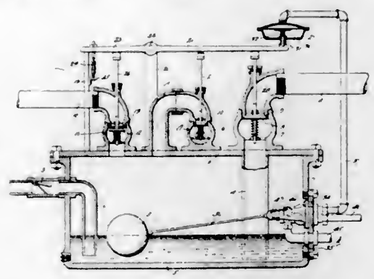


1,380,968. SELF-SERVICE STORE. ALVA W. B. JOHNSON, Birmingham, Ala. Filed Apr. 8, 1918. Serial No. 227,280. 10 Claims. (Cl. 211—8.)

2. In an apparatus for vending merchandise, two compartments disposed end to end, the compartments having side entrances at their forward ends, and side exits at their rear ends, the exit at the rear of the forward compartment being disposed at the entrance to the rear compartment, and there being another exit at the rear of the forward compartment into the rear compartment disposed at the junction of the exit of the forward compartment and the entrance of the rear compartment, and watcher stations at the entrance of the forward compartment, at the exit of the rear compartment and at the junction of the exit of the forward compartment, the entrance of the rear compartment and the exit from the forward to the rear compartment.

1,380,969. SIGNAL. AXEL W. JOHNSON, Portland, Oreg. Filed Aug. 16, 1919. Serial No. 317,938. 2 Claims. (Cl. 116—43.)

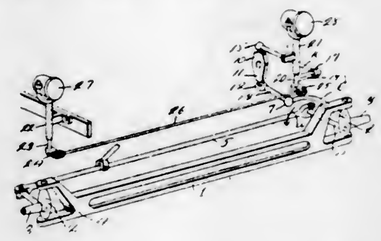
1. A bracket for supporting a spot light and directional signal of an automobile comprising adjustable clamping means for clamping the same to the wind shield frame, horizontally arranged bearings arranged on one face of the bracket and adapted to receive the supporting shaft of the signal, an extension at the end of the bracket having



horizontally arranged bearings at one face of said shaft and a vertically arranged bearing at its end for receiving the supporting post of the spot light.

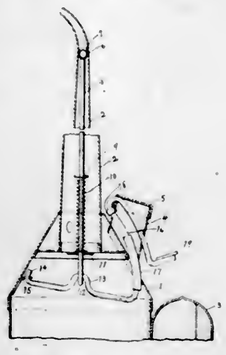
1,380,970. DEVICE FOR MIXING LIQUIDS. HUBERT MEREDITH-JONES, New York, N. Y., assignor to The Air-O-Mix Corporation, New York, N. Y., a Corporation of New York. Filed June 26, 1919. Serial No. 306,951. 3 Claims. (Cl. 261—87.)

1. In combination in a mixer a rotary tube, radiating tubes at the lower end thereof, and communicating with the interim of the rotary tube for receiving air therefrom, said radiating tubes delivering air from their outer ends into the material to be mixed, and wires extending close to the ends of the tubes to divide up the material to receive the air.



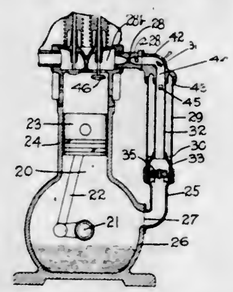
1,380,971. TRAP. HENRY W. JUSTUS, Napanoch, N. Y. Filed Mar. 15, 1920. Serial No. 365,983. 8 Claims. (Cl. 137—101.)

1. A trap of the character stated, comprising a casing, a water inlet pipe discharging into the casing, a check valve in said pipe, a water outlet pipe having its entrance end located adjacent the bottom of the casing and extending through the top of the casing, a valve normally closing the passage through said outlet pipe, a steam inlet pipe communicating with the casing, a normally



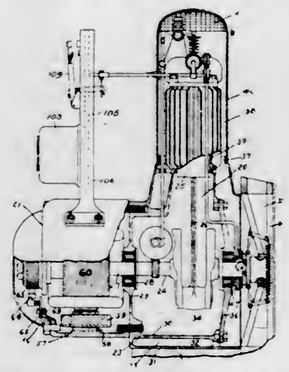
closed valve in said steam inlet pipe, a diaphragm casing, a diaphragm in said casing, means operatively connecting said diaphragm with the valves in the outlet pipe and the steam inlet pipe, means controlling the flow of fluid to the diaphragm chamber, and a float valve in the casing controlling the operation of said last-mentioned means.

1,380,972. DIRIGIBLE VEHICLE-LIGHT. JOHN F. KELLER, Pearl, Ill. Filed Aug. 5, 1920. Serial No. 401,550. 1 Claim. (Cl. 240—62.)



A dirigible headlight mechanism for automobiles comprising a vertically pivoted lamp bracket, the lower end of said bracket having a transversely disposed outwardly extending arm, a lever pivoted to the side of the automobile, said lever being pivoted at its central point forming an upwardly and downwardly extending arm, a connecting link between the upwardly extending arm of the lever and the outer end of the bracket arm of the lamp, the pivotal points of said connecting link being formed by universal joints, a rearwardly and inwardly extending arm carried by the axle spindle of the automobile, a connecting link universally connected to and extending rearwardly from said rearwardly and inwardly extending arm, the rear end of said last named connecting link being connected to the downwardly extending arm of the pivoted lever by means of a universal joint.

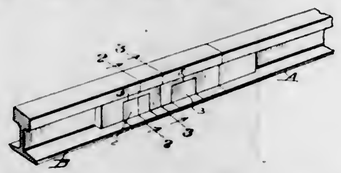
1,380,973. VALVE MECHANISM FOR OIL-CANS. CLARENCE HOLMES KELSEA, Belmont, Mass. Filed Sept. 30, 1918. Serial No. 256,339. 1 Claim. (Cl. 221—46.)



The combination with an oil can provided with a substantially long nozzle, of a valve located in said nozzle to close the same, a rod extended into said nozzle and coöperating with said valve to close the same and having its lower end extended into said can, a lever pivoted within the can at one side of said nozle and extended across said can and provided on the opposite side of said nozzle with an upwardly extended curved portion whose center is the pivot of said lever, a curved guide through which said curved portion is movable, means for connecting the valve closing rod with the said lever between the curved portion thereof and the pivot therefor to effect downward movement of the valve in said nozzle by downward movement of said curved portion, and a spring to move said rod upwardly to close said valve.

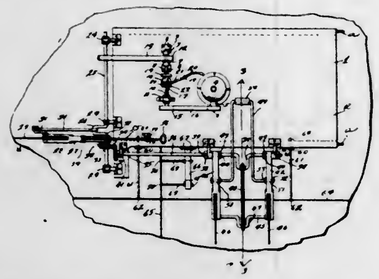
1,380,974. INTERNAL-COMBUSTION ENGINE. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 5, 1917. Serial No. 146,825. 23 Claims. (Cl. 123—119.)

1. In a device of the character described, the combination with a four cycle engine of the type wherein the flow through the engine intake is intermittent provided with a combustion chamber and a crank case chamber and having a piston operable relative to said chambers; of a breather tube connected to said engine and having provisions for permitting the gases displaced from the crank case chamber by the suction and explosion strokes of the piston to pass into said breather tube and to then pass from said breather tube to the combustion chamber on the suction stroke of the piston, said breather tube being provided with an opening to the atmosphere, whereby air will be taken through said breather tube to the combustion chamber along with said gases during the suction stroke of the piston, said opening being of such remoteness from the crank case chamber as to provide a storage space within said breather tube of sufficient capacity to retain, without escape to the atmosphere, all the gases received from said crank case chamber between successive suction strokes of the piston.



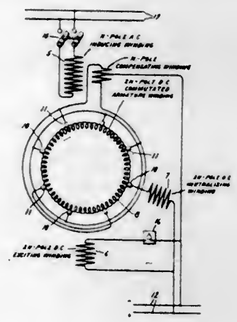
1,380,975. POWER PLANT. CHARLES F. KETTERING and WILLIAM A. CHRYST, Dayton, Ohio, assignors, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Oct. 27, 1915, Serial No. 58,207. Divided and this application filed Dec. 8, 1919. Serial No. 343,332. 9 Claims. (Cl. 290—46.)

5. A power plant having a prime mover and a dynamo electric machine adapted to be driven by the prime mover,



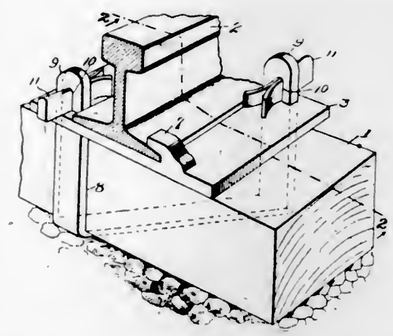
comprising, in combination, an internal combustion engine having a crank case, an engine crank shaft supported on but two bearings and having its ends extending beyond the bearings and the crank case, an engine flywheel mounted on one extended end of the crank shaft, and an armature of substantial weight fixedly mounted on the oppositely extended end of the crank shaft.

1,380,976. RAIL-JOINT. ISRAEL LEVI KING, Boston, Mass. Filed Oct. 7, 1920. Serial No. 415,312. 1 Claim. (Cl. 238—176.)



In a rail joint, the combination of two rail sections having interconnecting ends, the one section having a portion of its tread removed to provide a longitudinal base projection, the said base projection having lateral projections at its free end and further lateral projections at intermediate positions between the first said lateral projections and the body portion of the rail, the longitudinal base projection being relatively narrow as compared with the width of the base of the section, the other section being provided with a longitudinal slot opening through its base and being further provided with transverse slots across the longitudinal slot, whereby the longitudinal base projection may rest in the longitudinal slot and the lateral projections rest in the transverse slots.

1,380,977. ICE-CUTTING MACHINE. KARL KLINE, White River, S. D. Filed Mar. 29, 1917. Serial No. 158,262. 1 Claim. (Cl. 262—21.)



In an ice cutting machine, a portable frame work, a pair of crank shafts mounted in bearings of the frame work at right angles to each other and having their adjacent portions provided with beveled gear connections, two sets of arms, one set consisting of a pair of arms pivotally mounted upon one crank shaft, the other consisting of a single arm pivotally mounted on the other crank shaft, a stud crank shaft mounted in the free end of the single arm and provided with a revoluble cutting tool, a link connecting the crank arm of the stud crank and the crank of the shaft on which the single arm is pivotally mounted, a crank shaft mounted in the free ends of said pair of arms and provided with a revoluble cutting tool on each end, said revoluble cutting tools being mounted in bifurcations of the arms, a link connecting the crank of the last named crank shaft and the crank of the shaft on which said pair of arms is pivotally mounted, and means whereby revoluble movement may be imparted to one of the crank shafts for rotating the rotary cutting elements.

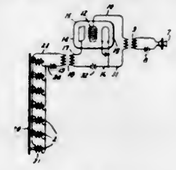
1,380,978. CONVERTER. WILLEM C. KORTHALS-ALTES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1917. Serial No. 208,508. 6 Claims. (Cl. 171—123.)

2. A combined alternating current and direct current dynamo electric machine comprising in combination, a slotted stator member having an alternating current inducing winding, a direct current exciting winding, a direct current neutralizing winding, and a compensating winding distributed in the slots so as to form when assembled a two-layer lap winding; a rotor member having a commuted winding, and coöperating short circuited brushes therefor having connections for completing the operating arrangements of both the alternating and direct current components of said machine.

1,380,979. COMBINATION RAIL-SEAT, TIE-PLATE, AND RAIL-TIE CLAMP. JOHN WILLIAM KUMMER, Seattle, Wash. Filed Dec. 7, 1920. Serial No. 428,933. 3 Claims. (Cl. 238—304.)

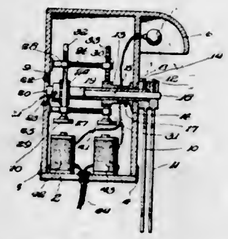
1. In an apparatus of the class described, the combination of a base plate provided at opposite sides and at opposite corners with lateral extensions, said lateral extensions provided with apertures, said base plate provided with rail-engaging means, an anchor member extending at its ends through the apertures of the lateral extensions, and locking means on the extended ends of said anchor member.

1,380,980. LOUVER OR SLAT WINDOW. LOUIS LANE, Habana, Cuba. Filed Apr. 27, 1920. Serial No. 377,033. 6 Claims. (Cl. 98—31.)



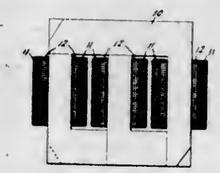
2. In a louver window, longitudinal corrugated louvers presenting an intermediate approximately plane portion,

portions adjacent to and above and below said intermediate portion and disposed in opposite oblique planes,



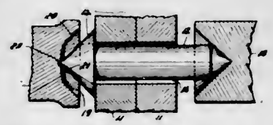
and upper and lower edges adjacent to said oblique portions.

1,380,981. TELEPHONE. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1917. Serial No. 163,730. 6 Claims. (Cl. 179—115.)



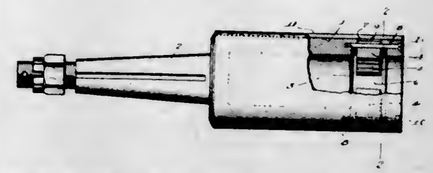
2. A telephone comprising a plurality of diaphragms each having such area as to vibrate substantially as a unit, said diaphragms being combined to constitute a surface having a diameter of the order of magnitude of at least about two feet, and means vibrating said members in unison in response to a telephonic current.

1,380,982. DIRECTION-INDICATOR FOR VEHICLES. ADAM LATSHAW, Dubois, Pa. Filed Dec. 5, 1919. Serial No. 342,704. 1 Claim. (Cl. 177—327.)



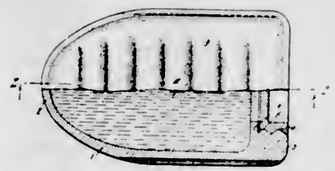
The combination of a casing, a hollow shaft journaled in and extending through one wall of the casing, a second shaft journaled at one end in the opposite wall of the casing and having its opposite end extending through and beyond the hollow shaft, said second shaft having an annular shoulder abutting the inner end of the hollow shaft, a collar secured on the hollow shaft and abutting the inner side of the wall of the casing, indicator arms secured on the outer ends of the shafts, a gear on each shaft within the casing, racks mounted in the casing at opposite sides of the shafts, each rack meshing with one of the gears, and means for actuating said racks.

1,380,983. CORE FOR ELECTRICAL APPARATUS. CORLISS E. LEE, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1920. Serial No. 417,714. 2 Claims. (Cl. 175—356.)



1. A core for electrical apparatus comprising yoke members and n legs, assembled solely from L-shaped elements, each lamination in the core having one element arranged to form one leg and one yoke, and $n-1$ other elements each arranged to form another leg and part of a second yoke.

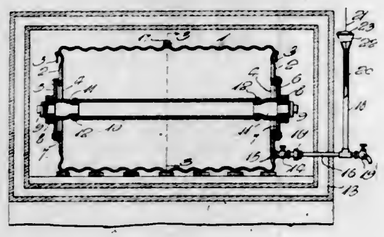
1,380,984. DIE. CHARLES F. LENHART, Philadelphia, Pa. Filed Mar. 14, 1919. Serial No. 282,529. 3 Claims. (Cl. 78—46.)



1. A die for setting a rivet in the rivet hole of a piece of work comprising a pressure applying head formed with a working surface whose greatest transverse distance is greater than the diameter of the shank of the rivet and less than the diameter of the rivet hole.

1,380,985. AXLE FOR FORD CARS. JOHN D. LEWIS, Tyrone, Okla. Filed Apr. 18, 1919. Serial No. 291,047. 1 Claim. (Cl. 301—130.)

A device of the class described comprising a cylindrical body provided with a bore and having an annular groove adjacent its open end, and a pair of openings communicating with said groove, a spindle connected with said body, a pair of dogs of crescent shape located in said openings with their ends engaging the groove, said dogs having oppositely arranged teeth on their inner faces and means for movably holding said dogs in place.



1,380,986. MASSAGE DEVICE. JOHN OLOV LINDEN, Albuquerque, N. Mex. Filed June 24, 1920. Serial No. 391,347. 4 Claims. (Cl. 128—60.)

1. A massage device, comprising a relatively wide and elongated hollow body having a flat end and a convexly

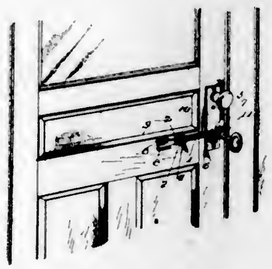
curved end, and a removable plug normally closing the entrance to said hollow body, said hollow body having transverse corrugations on one of its relatively wide surfaces.

1,380,987. PORTABLE REFRIGERANT-CONTAINER. JOHN W. LIPPINCOTT, Little Rock, Ark. Filed June 14, 1920. Serial No. 388,898. 6 Claims. (Cl. 62—1.)

2. A refrigerating appliance comprising a receptacle having heads, nipples passing through the heads and connected with the same, removable means for closing the outer ends of the nipples, and a tube extending longitudinally of the receptacle and connected with the inner ends of the nipples, the tube being formed of material permitting transverse compression of the tube to compensate for expansion when water is frozen in the receptacle.

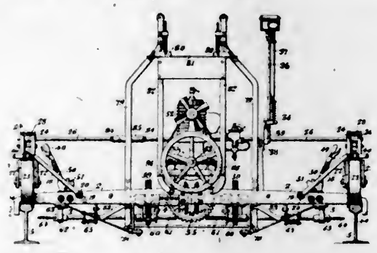
1,380,988. MEANS OF HANDLING, SORTING, AND DISTRIBUTING PARCELS, BALES, AND LOADS OF GOODS AND THE LIKE. GUY ERNEST LLOYD, Banstead, England. Filed Sept. 8, 1919. Serial No. 322,469. 11 Claims. (Cl. 104—25.)

1. Apparatus for handling, sorting and distributing parcels, bales and loads of goods and the like by truckers running on a track of varying inclination, wherein a frame carried by wheels follows the inclination of the track, a platform bearing the goods is mounted to turn on an axis on the frame, and means on the trucker cooperating with means on the track are provided whereby the platform is maintained level whatever the inclination of the frame.



1,380,989. CARPET-STIFFENER. ADOLPH F. LONK, Chicago, Ill. Filed May 12, 1920. Serial No. 380,864. 2 Claims. (Cl. 154—49.)

2. A carpet stiffener comprising a flat metallic body having one end portion provided with an attaching device, and a loop adapted to be permanently secured to a carpet and also adapted to be engaged by said attaching device.



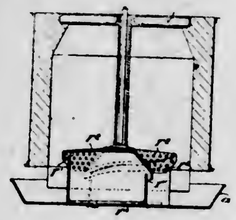
1,380,990. KEY-FASTENER. ADOLPH F. LONK, Chicago, Ill. Filed May 27, 1920. Serial No. 384,662. 2 Claims. (Cl. 70—7.)

2. A device for the purpose set forth comprising a shank provided with oppositely extending longitudinal flanges at one end and at its opposite end in one edge with a key-engaging notch and on the opposite edge

with a keyhole-covering lip, and pivot-receiving tongues extending from the opposite edges of the shank intermediate the ends thereof.

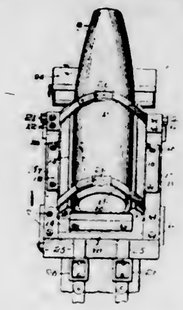
1,380,991. PORTABLE RAIL-DRILL. JOHN J. LONSWAY, Fostoria, Ohio. Filed Apr. 11, 1918. Serial No. 228,002. 10 Claims. (Cl. 77—9.)

1. A drilling machine for rails of tracks comprising drilling mechanism, a main supporting frame for the drilling mechanism, and end frame members at the ends of the main frame having track-engaging means for carrying the latter, said end frame members and main frame being constructed of separate elements connected together and electrically insulated one from the other at all their points of connection, the ends of said main frame where connected with the end frame members being spaced from the track rails, whereby short circuiting of signal currents is prevented.



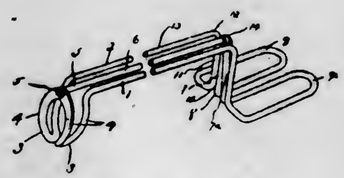
1,380,992. GRAFTING-VALVE. LEVI LUNDQUIST, Middletown, Calif. Filed July 12, 1920. Serial No. 395,478. 3 Claims. (Cl. 47—6.)

1. A grafting sap valve comprising a member having a cavity to receive a packing of absorbent material and provided with a passage for the entrance of the sap and communicating with the said cavity.



2. A grafting sap valve comprising a tubular member having an entering end cut diagonally whereby when the said end is driven into the stock for a portion of the length of the said end only, an opening will be left in the side of the valve through which sap may enter the valve.

1,380,993. GAS-PRODUCER. ARTHUR HENRY LYMN, London, England, LEWIS ADAMS RILEY, 2d, New York, N. Y., and NIELS EDWARD RAMBUSH, London, England. Filed Oct. 31, 1916. Serial No. 128,746. 6 Claims. (Cl. 48—66.)

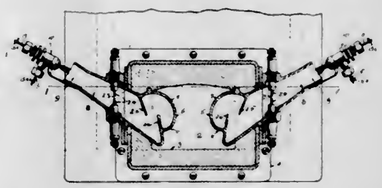


3. In a gas producer a stationary shell, a revoluble ash bowl, a grate fixed thereupon and surfaces on the upper side of said grate of spiral configuration symmetrically arranged around a center and having a very gradual rise terminated by abrupt shoulders of considerable depth and being widely separated angularly thereby providing only a few upwardly directed projections.

1,380,994. PACK-CARRIER FOR SHELLS AND PROJECTORS. JAMES E. MCNARY, U. S. Army. Filed Nov. 14, 1918. Serial No. 262,624. 2 Claims. (Cl. 224—43.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A shell carrier of the pannier type having an arched dorsal link, a pannier hinged to either side of the said link and provided with base and lateral supports for a shell, a back-pad, and straps and buckles for attaching the combined panniers to the back-pad, each pannier being provided with cushioned crossbars for supporting it upon the back-pad.

1,380,995. PIG-FORCEPS. JACOB MARKUS, Corsica, S. D. Filed July 8, 1920. Serial No. 394,656. 1 Claim. (Cl. 128—324.)

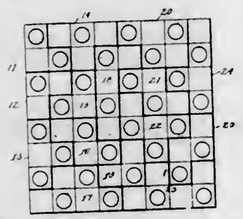


A device of the character described comprising a pair of longitudinally hingedly connected members, said members being formed from rods, the outer ends of which rods are bent so as to form engaging loops disposed at substantially a right angle to the body portion of each member, the rear ends of said members being bent at an angle to the body portions of the members and formed into loops adapted to be engaged by the hand, said loops being in a plane parallel to the bodies of the members, a longitudinally disposed portion carried by one of the members and disposed between the body members of the pivoted members, the outer end of the longitudinally disposed portion having pivoted thereto the ends of the outer vertical portions of the engaging loops, an arm extending upwardly from one handle member and an eye carried by said upwardly extending arm in which the longitudinally disposed portion is rockably mounted.

1,380,996. WINDOW-GLASS SILENCER. TRUMAN J. MARTIN, Allentown, Pa. Filed Nov. 10, 1920. Serial No. 423,200. 1 Claim. (Cl. 20—56.)

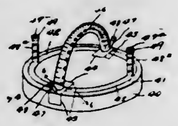
The combination with a channeled window frame having a glass disposed therein, of oppositely disposed bowed leaf springs secured to the sides of the channel, said leaf springs being centrally secured to the channel and extending outwardly on each side of the securing points and merging in flat engaging portions for engaging the glass and then extending outwardly from each other and merging into flat portions for engaging the sides of the channel.

1,380,997. METHOD OF AND APPARATUS FOR BURNING COMBUSTIBLE MIXTURES. ROBERT F. METCALFE, Erie, Pa. Filed Aug. 14, 1918. Serial No. 249,777. 21 Claims. (Cl. 158—4.)



15. In an apparatus for burning combustible mixtures the combination of a burner having a mixing chamber with flame discharge and a mixer throat; a spraying device delivering a cold combustible mixture to the mixing chamber through the throat; mechanism for controlling the spraying device pressure; and means igniting the mixture in the burner, the spraying device and discharge having a relation confining combustion to the mixture in the burner initially and transferring the flame to without the burner as the temperature of the burner is increased.

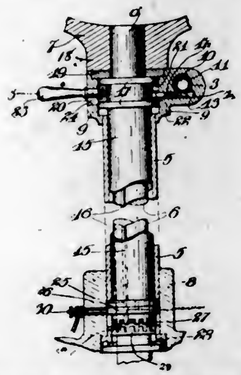
1,380,998. PUZZLE. ROBERT K. MILLARD, Pittsburgh, Pa. Filed May 1, 1920. Serial No. 378,279. 1 Claim. (Cl. 46—41.)



A sectional puzzle comprising fifteen elements each presenting a plurality of squares of equal size and defined jointly by surface lines and the marginal edges of

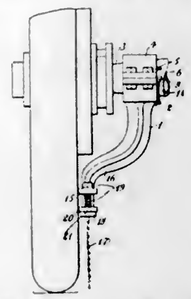
the respective elements, adjacent squares being distinguished, said elements presenting members and surface squares positioned to variously receive different members and squares of others of said elements in a variety of distinctive assemblages, said elements comprising the following to wit; four L-shaped elements each presenting three squares; three elements each presenting four squares disposed in two overlapping rows of two squares each; two elements of T-shape presenting four squares; one L-shaped element presenting five squares of which four are in line; one element presenting five squares of which four are disposed as a T and one at one end of the T-head

and at the opposite side from that square constituting the shank of the T; one element presenting four squares arranged as a square, and a fifth square at one side of one of the said four squares; one element presenting six squares of which four are in a row and two at one side of said row alongside the two intermediate squares in said row; one element presenting four squares in a row and a fifth square at a side of one of the squares disposed next to an end square in said row; and one element presenting four squares in a row and two squares at one side of the row, said two squares being spaced the distance of one square and one of the two being adjacent to an end of said row.



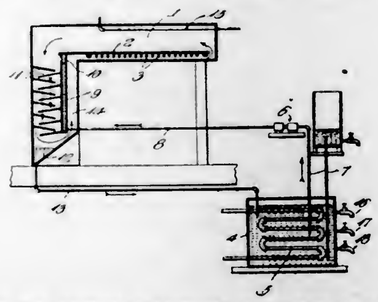
1,380,999. AERO ANGLE-METER OR LEVEL-REGISTER. WILLIAM CHRISTOPHER MOOR, Havilah, Ontario, Canada. Filed Dec. 9, 1918. Serial No. 265,862. 3 Claims. (Cl. 33—209.)

1. In an aero-angle meter, the combination with a casing having an annular non-freezing fluid containing chamber, of a marine compass carried by the casing, a semi-circular hollow transverse tube, having its opposite ends connected to the top wall of the chamber and in communication therewith at points adjacent the diametrically opposite east and west indications of the compass, said tube adjacent its ends having graduations indicating the level of the fluid as it rises and falls in either end of the tube, whereby the degree of angle of the craft to either side may be indicated, perpendicular hollow transparent tubes connected to the top wall of the chamber at points adjacent the north and south indications of the compass and being in communication with said chamber, said last named tubes having graduations for indicating the level of the fluid as it rises and falls, whereby the angle of tilt of the craft fore and aft may be indicated.



1,381,000. STEERING-GEAR LOCK FOR MOTOR-VEHICLES. MAX M. MUELLER, Chicago, Ill. Filed July 7, 1919. Serial No. 308,948. 7 Claims. (Cl. 70—127.)

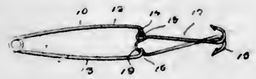
1. The combination of a steering gear having a clutch member, a rotatable steering post, a sleeve rotatable with and slidable on the steering post, a tube in which the post and the sleeve are housed, a clutch member on the sleeve adapted to engage the first-mentioned clutch member to establish a driving connection between the steering



post and the steering gear when the sleeve is slid in the direction of said first mentioned clutch member, means for sliding the sleeve, and means for locking the sleeve against a sliding movement.

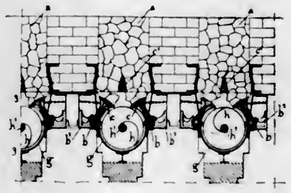
1,381,001. NON-SKID DEVICE FOR MOTOR AND OTHER VEHICLES. ASHLEY CHARLES NORMAN, Battersea Park, London, England. Filed Jan. 20, 1921. Serial No. 438,696. 6 Claims. (Cl. 188—4.)

1. A non-skid device comprising an arm, rotatively supported from an axle of a vehicle, a flexible mat carried by said arm, and means for turning the arm and thereby the mat in the steering of the vehicle.



1,381,002. PROCESS FOR SOLVENT RECOVERY. ARTHUR SAMUEL O'NEIL, Wilmington, Del. Filed Mar. 3, 1919. Serial No. 280,282. 6 Claims. (Cl. 252.)

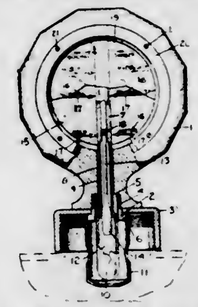
1. In the recovery of solvents, which when vaporized in a gas atmosphere, produce vapor mixtures substantially



heavier than the said gas atmosphere alone, the process of allowing a current of heated gas to pass in contact with material carrying such solvent to be recovered, and then allowing the solvent laden gas current to travel downwardly through a tortuous passage containing liquid solvent in a refrigerated condition, in direct contact with said solvent-vapor-laden gas current and allowing the gas to repeat the cycle of operations, the travel of the gas-vehicle being effected solely by the gas-heating operation and the contact with the refrigerated solvent.

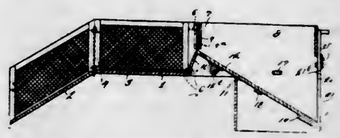
1,381,003. FISHHOOK. CHARLES E. PIERSON, Newcastle, Ind. Filed May 22, 1920. Serial No. 383,535. 3 Claims. (Cl. 43—36.)

1. A fish hook comprising a length of wire bent intermediate its ends and looped to provide normally divergent spring arms, an eye formed at the end of one arm, a loop formed intermediate the ends of the other arm, said second named arm having its terminal portion bent and formed as a fish hook, a hook having a loop engaging within the eye at the end of the first mentioned arm and formed with a hook-like terminal engaging within said second named loop whereby to hold the arms toward each other in contracted position.



1,381,004. AUTOMATIC DISCHARGING APPARATUS FOR CONTINUOUS VERTICAL OVENS. JULIEN PIETERS, Paris, France. Filed Jan. 23, 1918. Serial No. 213,369. 2 Claims. (Cl. 202—5.)

1. A discharge apparatus for continuous vertical coke ovens or the like, comprising a stationary bottom, constituting a part of the oven and closing horizontally the lower part thereof, two movable grates located opposite each other on either side of the oven, at a little distance but immediately above the said stationary bottom of the oven, said grates being normally drawn together so as to support the whole weight of the oven charge, means for temporarily moving said grates in opposite directions, so as to clear the lower part of the oven and allow the lowering of the whole oven charge a short distance to the stationary bottom, a conveyer upon the said stationary bottom between the movable grates, for horizontally removing the under part of the oven charge when the said grates have again been drawn together, and thus to separate the lower portion of the oven charge and remove the weight of the superposed charge of the oven from the material in the conveyer.



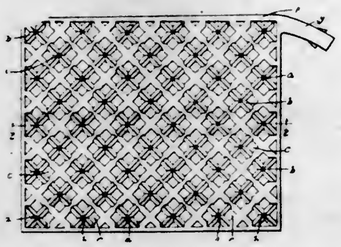
1,381,005. RADIATOR-THERMOMETER. GEORGE PHILO PITKIN, Bergenfield, N. J. Filed Aug. 22, 1919. Serial No. 319,172. 2 Claims. (Cl. 73—52.)

1. A device of the character described, comprising a casing, a cap, a tubular coupling connecting the casing and the cap, a tube projecting into the casing and having a bulb thereon outside of the casing, a perforated shield secured to the coupling and inclosing said bulb, a float in the tube having a mark at its upper end, an expansible liquid in the bulb for moving the float, a plate in the casing

having luminously exhibited indicia registering with the marked end of the float, and a transparent plate inclosing the casing.

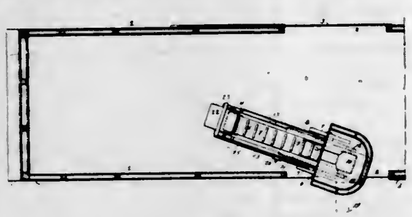
1,381,006. HOG-RESTRAINING DEVICE. CARL W. PITLICK, Oahe, S. D. Filed Sept. 19, 1919. Serial No. 324,802. 2 Claims. (Cl. 119—99.)

1. In a device of the character described comprising a gangway and a tilting platform section, the inner end of the gangway section being provided with a partition having an animal passage under the same, a tilting platform horizontally pivoted within the platform section and in horizontal alinement with the flooring of the gangway section, means whereby said tilting platform will tilt as the animal moves over the same thereby sliding the animal toward the lower end thereof when the same is inclined, an adjustable head engaging opening in the end of the tilting platform section and adapted to receive the animal's head, and a downwardly extending curved member concentric with the pivotal point of the tilting platform and carried by the rear end of the tilting platform and adapted to register with the passage under the partition at the end of the gangway section when the platform is tilted thereby preventing animals that may follow on the gangway section from entering the pivoted platform section after the platform has been tilted.



1,381,007. SELF-CLEANING CURRYCOMB. CARL W. PITLICK, Oahe, S. D. Filed Sept. 25, 1919. Serial No. 326,207. 1 Claim. (Cl. 119—88.)

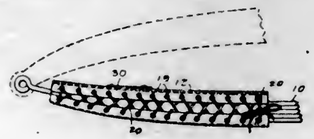
A tooth cleaner for curry-combs comprising a plate adapted to be held in engagement with the under face of the comb body member, elongated transversely disposed slots in said cleaner plate adapted to receive the toothed transverse bars of the curry-comb, the corners of said cleaner plate being provided with upwardly extending threaded lugs having nuts on their ends, said lugs extending upwardly through apertures in the corners of the comb body member, coil springs disposed between the lug nuts and the upper face of the body member for maintaining the cleaner plate in engagement with said body



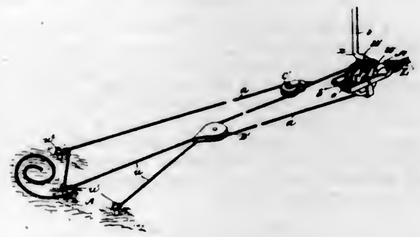
member, pivoted levers carried by brackets at the corners of the body member, one end of said pivoted levers being provided with rollers, said rollers being disposed in engagement with the upper face of the cleaner plate through elongated apertures in the body member, the upper ends of the links being connected together and means whereby said pivoted levers may be rocked in unison thereby forcing the cleaner plate downwardly for cleaning the toothed bars.

1,381,008. BATTERY-GRID. WILLIAM R. POLK, Atlanta, Ga. Filed June 16, 1920. Serial No. 389,405. 4 Claims. (Cl. 204—29.)

1. A grid comprising two latticed webs arranged with intersections of one opposite the openings in the other, said webs having their sides beveled inwardly and transverse posts intermediate the web intersections connecting adjacent portions of said webs and spacing the same.



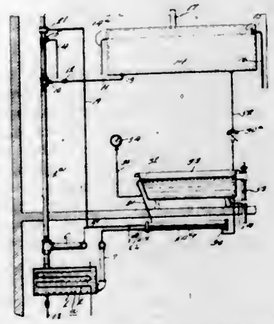
1,381,009. BOX-CAR LOADER. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1917. Serial No. 208,644. 1 Claim. (Cl. 193—19.)



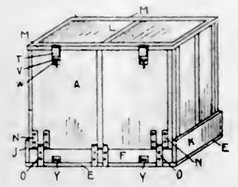
The combination of a portable car loaded adapted to be moved bodily into a car and of such length as to be turned within a car to discharge material into the ends thereof, and a platform, wheels supporting the platform, a frame carried by the platform and an inclined conveyer frame thereon having bearings at each end and a shaft mounted in each bearing, a wheel on each shaft, an endless belt conveyer passing around the wheels and arranged to carry the material, transverse slats on the belt, a hopper directly above the lowest portion of the belt and arranged to feed material to the belt, said hopper being of greater width than the belt so as to project beyond the car body to allow material to be discharged from a chute on the outside of the car into the hopper and a support under the belt and inclined deflectors on each side of the support to prevent the material from falling onto the lower run of the conveyer belt.

1,381,010. DEMOUNTABLE SPRING COVERING AND OILER. GEORGE BITHEL PRICE, Salt Lake City, Utah. Filed Apr. 17, 1920. Serial No. 374,779. 3 Claims. (Cl. 267—37.)

2. A spring boot formed of flexible material adapted to surround a spring, a relatively thick pad of absorbent material within the boot to provide a lubricant container or reservoir, said boot having an opening therein for supplying lubricant to the container and a cup-like receptacle secured around said opening and positioned within an opening in the absorbent pad.

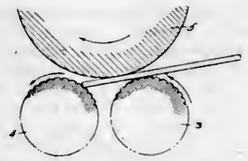


1,381,011. DEVICE FOR HAULAGE OR STRAINING PURPOSES. ALFRED ARTHUR QUICK, Melbourne, Victoria, Australia. Filed Jan. 31, 1919. Serial No. 274,204. 5 Claims. (Cl. 254—65.)



1. A hauling or straining device comprising a winch, a pair of snatch blocks, a rope having one end connected to the frame of one of the snatch blocks and its opposite end reeved around the winch through the second snatch block and through the first snatch block and means for adjustably securing the free end of the rope substantially as described.

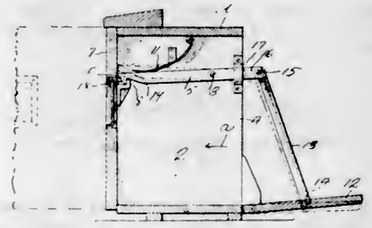
1,381,012. HYDROTEMPERATURE-CONTROL SYSTEM FOR BATHS AND LAVING PURPOSES. DENIS M. RAICHE, Kankakee, Ill. Filed Apr. 29, 1920. Serial No. 377,679. 2 Claims. (Cl. 126—344.)



1. A device for heating and maintaining at a constant temperature a continuous flow of water, said device comprising a casing, through which the water flows, a pipe disposed in said casing, said pipe having its ends in communication with a water heating tank, means for heating the water in the water heating tank, a static column rising upwardly from the water heating tank, a pipe connecting to the cold water supply tank and the static column below the overflow thereof, a check valve in said connecting pipe, means for maintaining a constant level of water in the tank and in the column for maintaining a predetermined water temperature in the water heating tank, said column forming means whereby as excess heat is generated in the column the water therein will be forced upwardly through the overflow creating a vacuum in the column which opens the check valve, thereby permitting cold water to flow from the water tank and into the water heating tank.

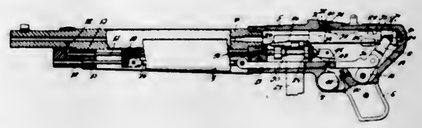
1,381,013. COLLAPSIBLE CRATE OR PACKING-CASE. CLARENCE FERDINAND RAINSFORD, Parkside, South Australia, Australia. Filed Nov. 18, 1920. Serial No. 424,959. 3 Claims. (Cl. 217—15.)

1. A collapsible crate or case comprising:—a tray formed of the bottom of the crate and low side and end pieces rigidly fastened thereto; ends hinged to the bottom of the tray adjacent to and within the end pieces thereof and adapted to fold down into the tray; sides hinged to the top of the side pieces of the tray and adapted to fold down into the tray and upon the ends; a lid having an external flange which fits over the outside of the ends and sides when erected and having a number of hinged tongues the outer ends of which are set inward and fit into sockets formed in the sides of the crate when erected and into sockets in the side pieces of the tray when collapsed, said tongues and sockets being provided with means whereby the tongues may be secured and sealed when erected and secured when collapsed.



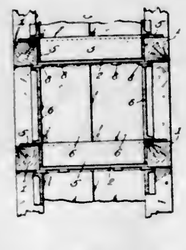
1,381,014. LEAF-SPRING AND PROCESS OF MAKING THE SAME. THEODORE L. R. D'ORVILLE, Sewickley, Pa., assignor to Standard Steel Spring Company, Coraopolis, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1920. Serial No. 352,746. 13 Claims. (Cl. 29—173.)

1. As a new article of manufacture, a steel leaf-spring having a curvature or camber produced by cold bending by means of rolls.



1,381,015. HENHOUSE-DOOR. HENRY REINCKE, Des Plaines, Ill. Filed Mar. 22, 1921. Serial No. 454,456. 1 Claim. (Cl. 119—22.)

A fowl operated closure for hen house openings, said closure being hinged to the hen house and positioned to register with the opening therein when closed, a leaf spring engaging said closure and forming means for forcing the same outwardly when released, a lever pivoted adjacent the closure and inwardly thereof, one end of said lever being provided with a hook, a lug carried by the door and adapted to be engaged by said hook for holding the closure in closed position, a leaf spring engaging the hook carrying end of the lever for normally holding the same in engagement with the hook, means for limiting the pivoted movement of the pivotal lever, a bar pivotally connected to said lever, a substantially horizontally disposed hinged tread member disposed inwardly of the closure, said bar being pivotally connected to said tread member and forming means whereby as the tread member



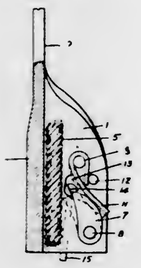
is forced downwardly by the weight of the fowl the pivoted member will be rocked against the action of its spring and the closure released, thereby allowing the closure to be forced to open position by the action of its spring.

1,381,016. FIREARM. EUGENE G. REISING, East Hartford, Conn., assignor to The Hartford Machine Gun Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 11, 1918. Serial No. 211,347. 13 Claims. (Cl. 89—2.)

1. A firearm including a receiver and firing mechanism located therein and including a movably mounted breech-bolt operative by the gases of explosion, means for locking the breech-bolt in its closed position, separate locking means movably mounted to support the breech-bolt and reduce results of the force applied to said locking means by firing action, said supporting means being positioned by the breech-bolt locking means to transmit said force from the breech-bolt to the receiver, and means for initially actuating one of said locks without actuating the breech-bolt.

1,381,017. AIR-SHAFT FOR MINES. ALLAN S. RICHARDSON, Butte, Mont. Filed Dec. 24, 1919. Serial No. 347,058. 5 Claims. (Cl. 61—41.)

1. The combination with the horizontal timbers of a mine shaft of angular pieces of fire-proof material adapted to rest upon the horizontal timbers and extend over the front surfaces thereof, means for securing the said pieces to the timbers, slabs of fire-proof material formed to ex-

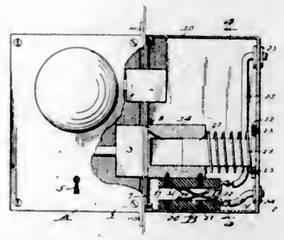


tend from the upper surfaces of the angular pieces on one set of horizontal timbers to the lower surfaces of the next higher set of horizontal timbers and means for securing the slabs in position.

1,381,018. WATCH-HOLDER. WILLIAM C. ROGERS, Fort Sheridan, Ill. Filed July 10, 1918. Serial No. 244,263. 4 Claims. (Cl. 224—4.)

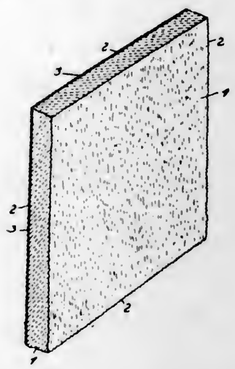
2. A watch holder having a body portion for positioning against one face of an article of wearing apparel, members carried by said body portion and penetrating said apparel at a plurality of points whereby the said body portion is precluded from a shifting of position, and means engageable with said members for holding a watch against the opposite side of said article of apparel.

1,381,019. CABLE-CUTTER. CARL R. SAMUELSON, Portland, Oreg. Filed Nov. 17, 1920. Serial No. 424,597. 1 Claim. (Cl. 255—34.)



A cable cutting tool comprising a body member, a stem offset from the center line of said member, a vertical drill cable groove in the body member of said tool, right and left handed coil springs to force the cutter toward the opposite side of said body member, a cutter dog in one side of the body member which is brought into engagement with said cutter to prevent the same from interfering with the drill cable when in use, and a plunger passing through the same side of the body member carrying the cutter dog and fastened to said cutter dog at one end, so that the cable cutting tool can be operated after said tool is dropped and the plunger is brought in contact with the top of the drill below, thus releasing the cutter, which engages with the drill cable and the tool is raised and the cable is cut at the desired point substantially as shown.

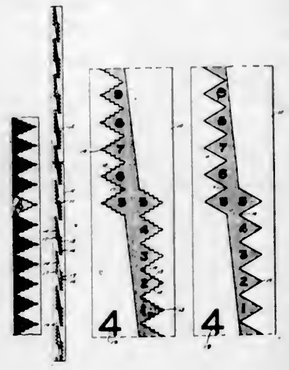
1,381,020. ELECTRIC SIGNALING APPARATUS FOR CARS, ON ELECTRIC AND OTHER RAILWAYS. HANS SCHAUB and CARL KÜNZLI, Zurich, Switzerland. Filed Apr. 14, 1919. Serial No. 289,796. 3 Claims. (Cl. 200—152.)



1. A three pole electric mercury switch, including a rotary horizontal axis, a plate mounted on said axis and provided with an angular chamber located in a plane perpendicular to the axis and about half filled with mercury, conducting plugs closing the ends of the chamber, means for connecting said plugs with an electric circuit, and a third plug provided at the apex of said chamber and being constantly connected with the mercury within the chamber.

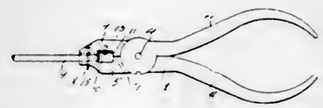
1,381,021. ELECTRIC-SWITCH LOCK. GUIDO F. SCHLOTE, Afton, Wyo. Filed May 15, 1918. Serial No. 234,646. 1 Claim. (Cl. 200—55.)

In a device of the kind set forth, a casing, a detachable plate closing the casing at one side and formed with an opening therein, a bar polygonal in cross section mounted in the casing at right angles to and on that side opposite the opening in the said plate, a block in surrounding relation to said bar and slidable longitudinally therealong, a spring in surrounding relation to the bar and bearing against one end of said block to force the opposite end of the latter against the removable plate, insulating blocks secured respectively on the bottom face of said block and on the top face of the bottom wall of said casing, bowed springs secured respectively on the bottom and top faces of said insulating blocks, and terminals secured to said springs, the opening in the detachable plate providing for the insertion of means to bear upon the first said block to move it against the pressure of said spring so that the bowed springs may be separated to effect the opening of the circuit.



1,381,022. OPTICAL PROJECTION-SCREEN. ARTHUR SCHULZE, Berlin, Germany, assignor of one-half to Deutsche Lichtbild-Gesellschaft E. V., Berlin, Germany. Filed Jan. 20, 1920. Serial No. 352,849. 3 Claims. (Cl. 88—24.)

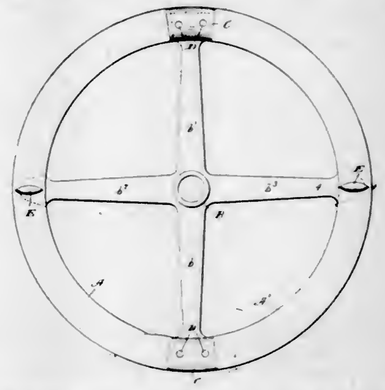
1. An optical projection screen consisting of a transparent sheet with both surfaces roughened and a layer



of fatty substance upon the one of the said surfaces that is turned toward the spectators, whereby a dark aspect of the screen is produced while its transparency is increased.

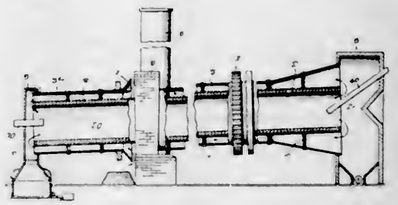
1,381,023. STADIA-ROD. EMMETT H. SCHWIER, Huntington, N. Y. Filed Jan. 21, 1920. Serial No. 353,120. 3 Claims. (Cl. 33—74.)

1. A stadia-rod having graduations consisting of a plurality of unit figures whose major axes are inclined at an angle to the longitudinal axis of said rod.



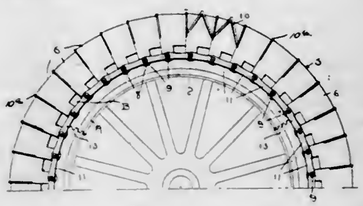
1,381,024. PUNCHING AND CUTTING PLIERS. CHARLES W. SHAUL, Grinnell, Iowa. Filed Aug. 5, 1920. Serial No. 401,404. 1 Claim. (Cl. 164—81.)

A belt cutting and punching tool comprising cross members, said members being pivoted together and provided at one of their ends with hand engaging members and their other ends with jaws, one of said jaws being provided with a longitudinally disposed cylindrical aperture, there being recesses in the jaws in communication with the rear end of the longitudinally disposed aperture, and vertically disposed apertures in one of said jaws and diametrically disposed in relation to the cylindrical apertures, a detachable punching element carried by the other jaw and so positioned that it will pass through the diametrically disposed apertures in the adjacent jaw when said jaws are closed, a right angled shaped knife plate disposed in the recess of the upper jaw, one of the flanges of said right angled knife plate being provided with means for securing and adjusting the same in the recess of the upper jaw and a knife edge carried by the lower end of the other right angled flange and adapted to shear off the end of the belt simultaneously with the punching and piercing operation.



1,381,025. STEERING-WHEEL. O K SNYDER and CHARLES H. KENRICH, Onaway, Mich., assignors to The American Wood Rim Company, Onaway, Mich., a Corporation of West Virginia. Filed Oct. 7, 1918. Serial No. 257,308. 6 Claims. (Cl. 74—33.)

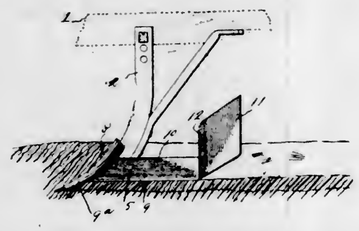
1. A steering wheel comprising a rim formed of two, substantially semi-circular, members, and a spider or frame having diametrically opposite arms terminating in



sleeves that receive and surround the adjacent ends of the rim members.

1,381,026. PROCESS OF AND APPARATUS FOR BURNING CEMENTS. WILLOUGHBY ELWOOD SNYDER, Allentown, Pa. Filed May 25, 1920. Serial No. 384,055. 5 Claims. (Cl. 222—7.)

1. The fuel economizing process described which consists in supplying preheated air, at an intermediate point in the length of a kiln, to a chamber about the kiln and which chamber is in communication with one end of the kiln, and conducting the gases discharged at the opposite end of the kiln through a chamber about the kiln, to a discharge located adjacent to the first-named point.



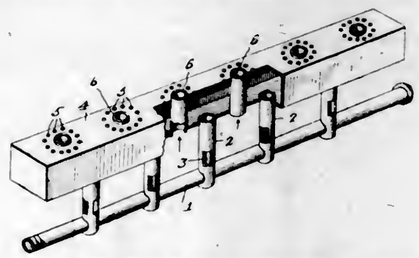
1,381,027. PNEUMATIC-TIRE ARMOR. JOHN STASSE, Laporte, Ind. Filed Nov. 24, 1919. Serial No. 340,112. 1 Claim. (Cl. 152—16.)

A tire armor comprising a plurality of overlapping curved T-shaped sections, the head of each of said sections being provided at its terminals with apertures and having the opposite end thereof reduced, said reduced end underlying the head of the adjacent section to permit movement of the latter relative thereto in conforming to the contour of the tire, external ribs formed on each of said sections, and links connecting said sections at the

opposite terminals of the head thereof, one of the ribs of each section being arranged transversely intermediate the ends thereof to maintain the curvature of the section and to provide an abutment for the overlying head portion of the adjacent section whereby to limit the contracting movement of the several armor sections.

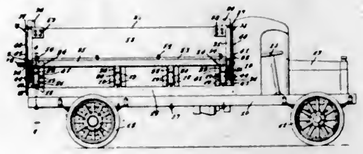
1,381,028. COTTON-CHOPPER. MOSES H. STEVENSON, Rayville, La. Filed Sept. 19, 1919. Serial No. 324,840. 1 Claim. (Cl. 97—9.)

A cotton chopper formed from a single piece of material, said chopper comprising outwardly and rearwardly extending blades, said blades being inclined downwardly and forwardly, a forwardly offset portion U-shaped in horizontal cross section, disposed centrally between the blades, said forwardly offset portion being adapted to receive a sweep stock and engage said stock on each side thereof, an aperture in said forwardly offset U-shaped portion for the reception of a bolt passing through said sweep stock, the ends of the outwardly and rearwardly extending blades being bent upwardly so as to form vertically disposed portions parallel to each other and longitudinally disposed in parallel relation to the longitudinal center line of the plow, and center of the cotton chopper blades, the edges of the vertically disposed portions being provided with vertically disposed cutters which merge into the cutting edges of the outwardly and rearwardly extending blades.



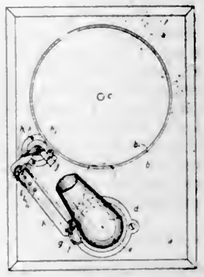
1,381,029. CLIP. ALVAH P. THOMPSON, Salem, and WILLIAM L. BAXTER, Beverly, Mass.; said Thompson assignor of his right to Helburn Thompson Company, Salem, Mass., a Corporation of Massachusetts. Filed Dec. 22, 1920. Serial No. 432,395. 4 Claims. (Cl. 24—258.)

1. A clip comprising relatively movable jaws, a jaw actuating member, an attaching spur and a mount for said actuating member loosely engaging the other elements of the clip.



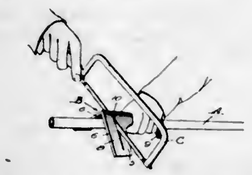
1,381,030. GAS-BURNER. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed Sept. 27, 1920. Serial No. 412,941. 1 Claim. (Cl. 158—104.)

A gas burner comprising a horizontally-disposed and closed mixing-chamber provided at intervals in its top-wall with a series of sets of jet perforations, a plurality of mixing-tubes discharging into and through the bottom-wall of said mixing-chamber at points staggered with relation to the sets of jet perforations, each of said mixing-tubes being provided with one or more air-intake-openings, a gas-supply-pipe connected successively to the lower ends of the mixing-tubes below the air-intake-openings, and a series of air-supply tubes each being mounted in the top and bottom walls of the mixing-chamber and arranged con-



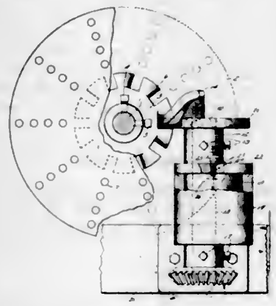
centrically with a set of the perforations and open only at its ends to supply air from beneath the mixing-chamber to the middle of each set of jet perforations.

1,381,031. DUMPING-WAGON. JAMES THOMPSON, Greeley, Colo. Filed Jan. 19, 1920. Serial No. 352,281. 3 Claims. (Cl. 298—13.)



1. A dumping body attachment for vehicles, including longitudinal bed pieces, transverse segmental supports mounted thereon, guard straps connected to the supports and forming arcuate slots, antifriction rollers between the supports, a body, depending extensions on the body and extending transversely thereof, said extensions having arcuate recesses in the lower portions thereof and bearing on the antifriction rollers, a longitudinal shaft carried by the body and extending through the arcuate slots, gears thereon, rack teeth upon the segmental supports and engaged by the gears, means for rotating the shaft and gears to swing the body laterally to dumping position, a hingedly mounted yoke carried by one of the supports and movable into engagement with the shaft to hold the body against lateral movement.

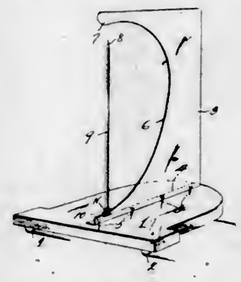
1,381,032. AUTOMATIC BRAKE FOR TALKING-MACHINES. HERMANN THORENS, Sainte-Croix, Switzerland. Filed Apr. 25, 1917. Serial No. 164,334. 1 Claim. (Cl. 192—116.)



An automatic brake for talking machines comprising a curved stem on the shank of the tone arm having a portion thereof concentric with the axis of rotation of the tone arm, a two armed lever fulcrumed at the junction of its arms, a brake pad mounted on the end of one of such arms, a roller mounted at the end of the other arm and a spring acting upon such lever and causing the roller to bear against the aforesaid stem such that immediately the end of the groove on the record is reached the tone arm is caused to swing toward the center of the record and the brake brought into operation, the said lever being made in two parts adapted to be connected together in such manner that the length of the said other arm may be adjusted so that the mechanism may be used with machines having different sized boxes.

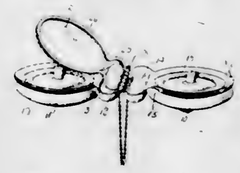
1,381,033. MITER-BOX. JOHN HOWARD THORNTON, Nashville, Tenn. Filed Nov. 1, 1919. Serial No. 334,928. 3 Claims. (Cl. 29—75.)

1. A miter box of the character described, comprising a substantially V-shaped frame adapted to be inverted for bridging a piece of work and having a kerf therein for guiding a hack saw operated for severing the piece of work opposite portions of the frame being cut away to permit the simultaneous gripping of said frame and the piece of work.



1,381,034. JACQUARD MECHANISM. GEORGE CHRISTIAN LOUIS TISCH, Elizabeth, N. J., assignor to Tisch Machine Tool and Die Works, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 29, 1920. Serial No. 377,628. 3 Claims. (Cl. 66—12.)

1. The combination with a jacquard mechanism having a plurality of radiating rows of pin receiving openings, of a toothed wheel removably connected with said jacquard mechanism formed with a tooth for each row of pin receiving openings in said jacquard mechanism, a worm member for driving said toothed wheel, a driving shaft for said worm member, means for removably connecting said worm member to said shaft and means for adjusting said shaft toward and from said toothed wheel.



1,381,035. SPINDLE-FILE. ARTHUR URBAN, Sheboygan Falls, Wis. Filed May 25, 1920. Serial No. 384,031. 1 Claim. (Cl. 129—23.)

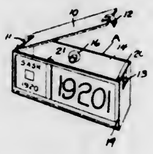
A file comprising a base, a spindle guard plate carried by the base, a right angle integral flange carried by said plate and secured to the base, said flange having an upwardly struck annular flange adjacent its forward end, a spindle file having its lower end secured within the annular flange of the base and rising upwardly from said flange, the front edge of the guard plate being cut away so as to provide a rigid guard member disposed

substantially above the upper end of the spindle file, said cutaway portion also providing space whereby papers being filed may be received by the file spindle.

1,381,036. VANITY-BOX. ANTOINE VERICEL, New York, N. Y., assignor to Vericel, Inc., New York, N. Y., a Corporation of New York. Filed July 8, 1919, Serial No. 309,314. Renewed Apr. 5, 1921. Serial No. 458,696. 1 Claim. (Cl. 132—83.)

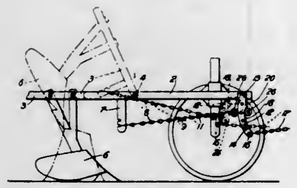
A device of the character described comprising a pair of covers, each of which is formed with a substantially circular receptacle, and an elongated receptacle exteriorly arranged with respect to the circular receptacle, means carried by said elongated receptacle for hingedly securing said covers together, and a mirror hingedly secured between said covers.

1,381,037. CAN-OPENER. WILLIAM VOGEL, New York, N. Y. Filed Aug. 17, 1920. Serial No. 404,124. 2 Claims. (Cl. 220—52.)



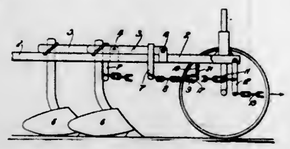
2. A can-opener comprising a stamped sheet-metal blade having a flat relatively broad shank tapering forwardly at its operating end and having a central rectangular perforation in said shank; a stamped sheet-metal jaw member having a butt portion centrally overlying said shank with the butt portion provided with a boss fitting through said perforation and riveted therein and having a jaw forwardly tapered, offset from said operating end extending forwardly and adjusted thereto and providing an open ended slot for the entrance of the lip of a can to be opened.

1,381,038. LICENSE-NUMBER PLATE AND TAIL LIGHT. LAURENCE JOSEPH WALSHE, Saskatoon, Saskatchewan, Canada. Filed Mar. 17, 1920. Serial No. 366,584. 1 Claim. (Cl. 40—63.)



A device of the class described comprising a rectangular casing having brackets on the back wall, a cover hinged to the case, the front wall of the case being formed in skele-

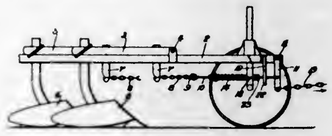
ton formation, end guides on the front wall, the said guides being in the same plane, a removable number plate engaging with the guide, a removable year, province,



county, or town plate engaging with the guide, the plates being formed with the numbers or letters cut therein by stencil, a sheet of transparent material provided in the back of the plates, and illuminating means in the case.

1,381,039. DRAFT ATTACHMENT FOR STUMP-JUMP PLOWS AND THE LIKE. JOSEPH H. WARNER, Nhill, Victoria, Australia. Filed Nov. 16, 1920. Serial No. 424,548. 6 Claims. (Cl. 97—69.)

1. Improvements in draft attachments for stump jump plows and the like consisting in the combination of an implement frame, pivoted share carriers mounted thereon, a depending draft lever pivoted on the front portion of the frame and having a curved face or track and a free connection or coupling for connecting the pivoted share carriers to said draft lever, said free connection being adapted to move freely along said curved track on the rising of a share or shares through encountering an obstruction, for the purpose set forth.



1,381,040. STUMP-JUMP PLOW AND THE LIKE. JOSEPH H. WARNER, Nhill, Victoria, Australia. Filed Nov. 16, 1920. Serial No. 424,549. 7 Claims. (Cl. 97—69.)

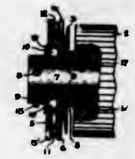
1. Improvements in stump jump plows and the like consisting in the combination with an implement frame having a pivoted jump arm or share carrier mounted thereon and connections for transmitting the draft tension to said share carrier, of means for automatically releasing the share carrier from the draft in the event of an abnormal draft tension thereon.

1,381,041. SHOCK-ABSORBING DEVICE FOR STUMP-JUMP PLOWS AND THE LIKE. JOSEPH HARVEY WARNER, Nhill, Victoria, Australia. Filed Nov. 16, 1920. Serial No. 424,550. 8 Claims. (Cl. 97—69.)

1. In a stump-jump plow or the like the combination with an implement frame and a pivoted jump arm or share carrier mounted thereon, of a spring through which the tension of the draft is transmitted to the share carrier, and means whereby the draft tension is automatically removed from the share carrier and transferred direct to

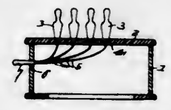
the implement frame when the draft tension exceeds a certain limit, through the share striking an obstruction, for the purpose set forth.

1,381,042. AUTO-TOWING DEVICE. THOMAS J. WEAVER, Denver, Colo. Filed May 25, 1920. Serial No. 384,050. 2 Claims. (Cl. 280—33.5.)



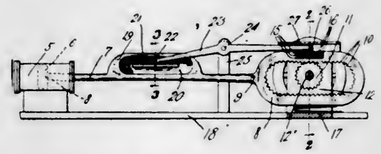
1. A towing device for automobiles comprising a beam formed from telescopically engaging members, means for adjusting said members in relation to each other, one of said sections being provided with a yoke adapted to be secured to the rear axle of an automobile, a channel iron secured to the axle of the towed automobile, downwardly and rearwardly extending arms carried by the under face of the channel iron, lugs carried by the rear section of the beam and resting on the horizontal portions of the downwardly and rearwardly extending arms and adapted to slide thereon according to the direction of turn of the towing vehicle, a yoke having its arms pivoted to the outer ends of the lugs, said yoke being provided with a rearwardly extending arm, and a clamp connected to the connecting rod of the steering mechanism and provided with an aperture for the reception of the rearwardly extending arm of the yoke.

1,381,043. UMBRELLA-COVER. ISAAC H. WEINBERG and CHARLES F. BISBING, New York, N. Y. Filed July 6, 1920. Serial No. 394,142. 3 Claims. (Cl. 135—33.)



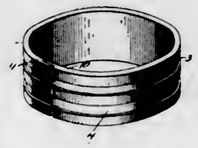
3. As a new article of manufacture, an umbrella cover having an opening or placket in its side at one end, and a triangular shaped elastic gusset secured to the cover at the inner end of the placket, and secured to the edges of the placket, said gusset located at the end of the longitudinal seam of the cover.

1,381,044. SHORT-CIRCUITING DEVICE. ALFRED F. WELCH, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1917. Serial No. 190,436. 4 Claims. (Cl. 172—120.)



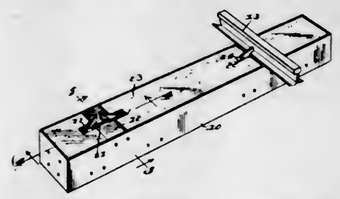
1. The combination with the armature of an alternating current motor provided with a commutator, of an automatic controlling device therefor comprising two opposing disks, one of said disks being fixedly mounted on the motor shaft, a short circuiting ring carried by one of said disks adjacent the commutator, centrifugally acting means causing relative rotation of said disks, means causing relative axial movement of the disks comprising a plurality of opposing cam shaped pockets in the opposing faces of the two disks, a steel ball for each set of pockets, and a spring interposed between the movable disk and the commutator, the ends of the spring being anchored respectively in the disk and in the commutator.

1,381,045. GAME APPARATUS. WILFORD L. WHITE, Boulder, Colo. Filed May 24, 1919. Serial No. 299,438. 1 Claim. (Cl. 46—59.)



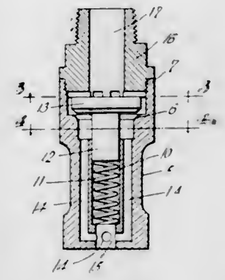
A game apparatus comprising a hollow element the top of which constitutes a platform, a plurality of objects mounted on the platform so that they may be knocked down from upstanding positions, an upstanding support disposed at the side of the platform, a ball, a flexible member supporting the ball above the objects and above the center of the platform, a handle frictionally engageable in so as to be disengageable from a hole formed in the side of the hollow element, and a plurality of cords connecting one end to the handle and the remaining ends one each to one of the objects through holes formed in the platform, whereby the objects may be brought to upstanding positions after having been knocked down, the handle being engaged in the hole except when operating to raise said objects.

1,381,046. MECHANICAL MOVEMENT. AREY V. WINEGARDEN, Wichita, Kans. Filed May 14, 1920. Serial No. 381,338. 3 Claims. (Cl. 74—27.)



2. In combination with a reciprocating piston rod, a yoke having connection with one end of the piston rod, said yoke having a rack, a pinion in mesh with the rack for receiving motion therefrom, a standard supported adjacent the yoke, an arm pivotally supported by the standard, a bracket on the piston rod, said bracket having track-ways formed therein, a roller on one end of the arm operating in the track-way, the opposite end of said arm having connection with the yoke for moving the yoke vertically when the roller moves in the track-way, and means for supporting the yoke.

1,381,047. PISTON. BERT L. WOODLAND, Muskegon, Mich. Filed Nov. 4, 1919. Serial No. 335,640. 2 Claims. (Cl. 74—108.)



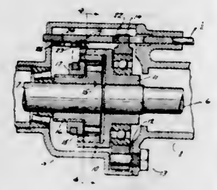
2. In a piston construction, a cylindrical body having a reduced portion adjacent one end thereof, a split spring collar mounted on said reduced portion and having piston ring grooves in the outer face thereof, the ends of the webs between the piston ring grooves being oppositely cut out on their inner and outer faces to overlap to effect a positive closure.

1,381,048. CONCRETE TIE. THOMAS D. WRIGHT, Springville, Ala. Filed July 29, 1920. Serial No. 399,942. 4 Claims. (Cl. 238—89.)

1. A rail tie consisting of a metallic shell having parallel side walls and provided with a filler of concrete, longitudinal reinforcing bars arranged in parallel relation with the side walls of the shell, transverse bottom braces connecting the side walls beneath the lower edges of said reinforcing bars, transverse rest bars disposed adjacent to the upper edge of the shell in the planes of the rails supported by the tie, and clamping means for securing the rails in position, and consisting of relatively movable jaws pivotally mounted upon said longitudinal reinforcing bars.

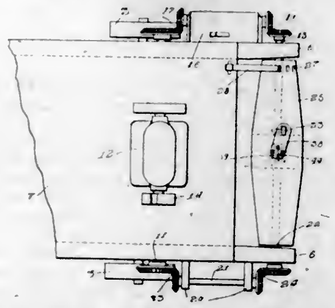
1,381,049. VALVE. ANTISTENE ABBAMONTE, Pocatello, Idaho. Filed Aug. 7, 1919. Serial No. 315,925. 1 Claim. (Cl. 251—144.)

A drain valve including a casing having a central longitudinal recess provided at its inner end with a duct opening through the adjacent end of the casing, the other



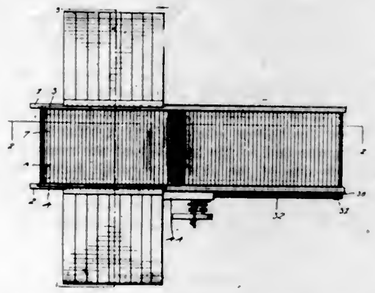
end of the recess opening into a bore in the casing, there being a counterbore in the outer end of said bore provided with interior threads, the junction between the bore and the counterbore constituting a valve seat, a valve loosely mounted in the counterbore, a stem projecting therefrom and slidable within the central recess, a spring seated within the recess and engaging the end of the stem, there being ducts extending longitudinally within the casing from the inner end of the bore and opening into the duct extending from the recess, and a screw plug engaging the threaded portion of the wall of the counterbore and having a central opening therethrough and radial recesses in the inner face of the plug and extending from said passage to the periphery of the plug, the recessed end of the plug constituting an abutment for the spring pressed valve.

1,381,050. RACKET. GEORGE AGUTTER, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,840. 7 Claims. (Cl. 46—24.)



1. A tennis racket comprising a wood body formed with a head merging into a handle, an encircling head of metal fitting against said wood head, strings carried by said wood head extending through said metal head, and means for connecting the metal head with the wood handle, said means including an adjustable member for varying the tension of the connection between the wood handle and the head.

1,381,051. DUAL-SPEED TRANSMISSION. KARL E. AHLBERG, Los Angeles, Calif. Filed Dec. 12, 1919. Serial No. 344,447. 1 Claim. (Cl. 74—58.)



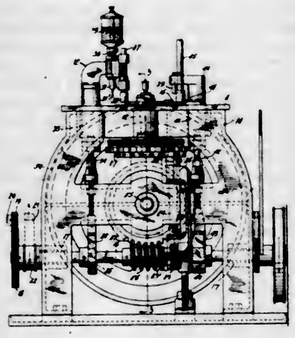
A transmission comprising the combination of a drive shaft and a driven shaft, said drive shaft being mounted to swing through an angle, an internal gear fixedly mounted on said drive shaft, a pinion for meshing with said gear fixedly mounted on said driven shaft, whereby the gear may be swung laterally into mesh with said pinion, an independent clutch splined to rotate with said driven shaft for directly coupling said shafts when said gear and said pinion are out of driving engagement, and means to shift said gear relative to said pinion and simultaneously shift said clutch.

1,381,052. POSTHOLE-DIGGING MACHINE. AMOS A. AMSTUTZ, Bluffton, Ohio. Filed May 5, 1920. Serial No. 379,069. 3 Claims. (Cl. 255—22.)

1. In a device of the class described, a frame; a boring shaft; means for mounting the boring shaft on the frame for rotation and for raising and lowering; means for rotating the shaft; a support mounted to slide in the first specified means; means for operating the support; interengaging elements on the shaft and the support whereby the shaft will be raised when the support is operated; an auger on the shaft; and a casing on the support ond coöperating with the auger.

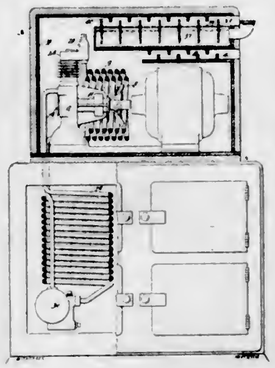
1,381,053. LOADER. ALGOTH N. ANDERSON, Leal, N. D. Filed May 18, 1916. Serial No. 98,358. 4 Claims. (Cl. 193—14.)

1. In a loader, a constantly moving member serving as a conveyer and as a tread means for a draft animal hauling material to the member, and approach means associated with the member permitting travel of the animal directly on and across the member while the latter is in motion.



1,381,054. DRYING PLANT. PILADE BARDUCCI, Naples, Italy. Filed Aug. 16, 1919. Serial No. 317,900. 20 Claims. (Cl. 34—19.)

16. In a plant for drying materials, a room intended to contain the material to be dried; a casing adapted to



reciprocate in said room and having top and front mouths; means for operating said casing; means for propelling air through said top and front mouths; means for controlling the air flow through said mouths; horizontal stationary plates intersecting said front mouths; movable plates each pivoted adjacent the edge of one of said stationary plates; toothed quadrants fixed to said movable plates; screws meshing with said quadrants; spindles fixed to said screws; and means for operating said spindles for imparting the required direction to the air streams flowing through said mouths.

1,381,055. MACHINE FOR THE MANUFACTURE OF BOTTLE-CLOSURES. JOHN BINDER, New York, N. Y., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,479. 8 Claims. (Cl. 113—80.)

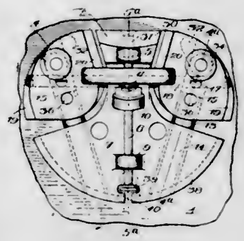
1. In a machine for the manufacture of bottle closures of the cap variety, a rotary body adapted to receive assembled closures, spring-pressed plungers slidably arranged on said body for applying pressure to the closures, and means carried by said plungers for entering the closures in relation to said plungers before the latter are moved toward the closures.

1,381,056. DOMESTIC REFRIGERATING APPARATUS. RICHARD MATHEW BLAKELY, Dayton, Ohio. Filed Dec. 21, 1917. Serial No. 208,256. Renewed June 28, 1920. Serial No. 392,517. 8 Claims. (Cl. 62—116.)

1. A refrigerating apparatus comprising in combination, a motor, a compressor having its shaft coupled directly to the motor, a condenser coil coaxial with the shaft of the compressor, a fan on the compressor shaft for circulating air about the condenser coil, and an absorber coil interposed between the condenser coil and the compressor.

2. A refrigerating apparatus comprising in combination, a housing, a motor in said housing, a compressor in the housing having its driving shaft coupled directly to the shaft of the motor, a condenser coil within the housing coaxial with the compressor shaft, a fan on the compressor shaft, said housing having an inlet and an outlet for the air, means in said housing for supplying moisture to the air coming into the housing, and an absorber coil interposed between the condenser coil and the compressor.

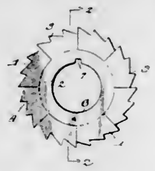
3. A refrigerating apparatus comprising in combination, a housing, a motor in the housing, a compressor in the housing coupled directly to the motor, a condenser coil, a fan between the compresser and motor for circulating air about the coil, said housing having an air inlet and an air outlet, means in the housing associated with the air inlet for supplying moisture to the air as it enters the housing, and an absorber coil interposed between the condenser coil and the compressor.



4. A refrigerating apparatus comprising in combination, a housing having an air inlet and an air outlet, a motor in the housing, a compressor in the housing coupled to the motor, a condenser coil in the housing, a fan for circulating the air through the inlet and the outlet of the housing and about the coil, baffles associated with the inlet and outlet to deaden the noise produced in the housing by the moving parts, and an absorber coil interposed between the condenser coil and the compressor.

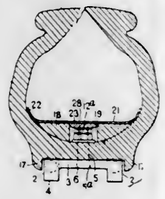
5. A refrigerating apparatus comprising in combination, a housing lined interiorly with sound insulating means, said housing having an air inlet and an air outlet, baffles in said air inlet and air outlet, a motor in the housing, a compressor in the housing coupled to the motor, a condenser coil, a fan for circulating the air through the inlet and outlet of the housing and about the condenser coil, and an absorber coil interposed between the condenser coil and the compressor.

1,381,057. PROCESS FOR THE PRODUCTION OF A CRYSTALLIZED ESTER OF THE STEARO-RICINATE-DIIODID. FRIEDRICH BOEDECKER, Britz, near Berlin, Prussia, Germany. Filed July 9, 1920. Serial No. 395,138. 2 Claims. (Cl. 23—24.)



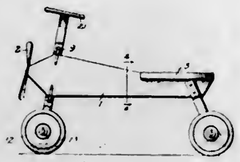
1. A crystalline ester of stearo-ricinate-diiodid having valuable therapeutic qualities, the ester being the ethyl-ester of stearo-ricinate-diiodid.

1,381,058. NECKBAND-EXPANDING DEVICE. CHARLES L. BRALEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 20, 1915, Serial No. 3,210. Renewed Apr. 17, 1917. Serial No. 162,754. 10 Claims. (Cl. 68—1.)



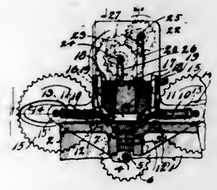
10. The combination with a neckband expanding device, of means carried thereby and movable beneath a portion of a shirt adjacent to the neckband for smoothing the surface of the shirt.

1,381,059. MILLING-CUTTER. AXEL BRASEN, Astoria, N. Y. Filed Apr. 5, 1920. Serial No. 371,359. 1 Claim. (Cl. 29—104.)



A milling cutter comprising a plurality of sections, each provided with cutting teeth and constructed so as to interlock with each other and to be adjustable with relation to each other for taking different width cuts and each provided with an aperture having a keyway and with one substantially flat face, and means adapted to be inserted betwen the interlocking faces of said sections for maintaining said sections in predetermined spaced relation.

1,381,060. ANTISKID DEVICE. JAMES BRIGGS, Hollings Hill, Esholt, England. Filed Aug. 17, 1920. Serial No. 404,225. 2 Claims. (Cl. 152—16.)

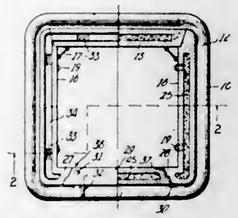


1. An anti-skid pneumatic tire, comprising, in combination, a tire casing, a plurality of metallic tread members located on the tread surface of said casing, bolts paasing through said tread members and the wall of the casing for securing the tread members to the casing, a protecting strip of flexible material within the casing secured along one edge thereof to the wall of said casing and extending circumferentially and transversely thereof thereby to cover the inner ends of said bolts, cushioning means between said strip and the bolts, and cushioning means for supporting said strip circumferentially of the casing and at each side of said bolts.

1,381,061. TOY CAR. ARTHUR C. BROWN and SIDNEY P. SMITH, Norwich, Conn. Filed May 20, 1920. Serial No. 382,955. 5 Claims. (Cl. 208—165.)

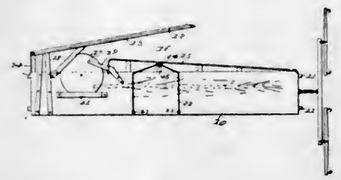
1. A toy car comprising a body, four traction wheels, a comparatively rigid frame carrying two of said traction wheels adjacent the front of said body, a single lower pivotal pin connecting said body with said frame, a movable connection between the upper part of the body in said frame, said movable connection permitting the frame to swing laterally and means for connecting two of said traction wheels to said body near the rear thereof.

1,381,062. SHEET-METAL-SEAMING MACHINE. JOHN W. BROWN and WILLIAM HESS, Philadelphia, Pa., assignors, by direct and mesne assignments, to Benjamin P. Obdyke, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed July 10, 1918. Serial No. 244,202. Renewed Mar. 22, 1921. Serial No. 454,418. 2 Claims. (Cl. 113—54.)



1. In sheet metal seaming machines, the combination with a frame having a slotted supporting table, of a plunger reciprocally-mounted in the slot and adapted to have its upper end move upward beyond the plane of the table and to be sustained in the elevated position in timed relation to movements of other parts, reciprocating folders movably mounted at opposite sides of the plunger when elevated, laterally-disposed tuckers arranged when elevated in the planes of the lower ends of the folders when elevated, and means for moving the tuckers laterally inward toward each other and simultaneously moving the inner portions of the tuckers downward substantially to the plane of the table upon withdrawal of the plunger and folders.

1,381,063. LIVE AXLE AND COUNTERSHAFT FOR MOTOR-VEHICLES. JAMES FRANK BUCKINGHAM, Coventry, England. Filed June 29, 1920. Serial No. 392,615. 2 Claims. (Cl. 74—7.)



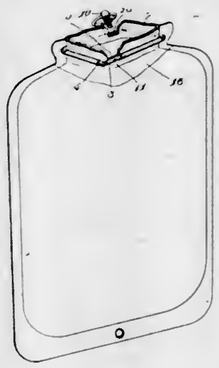
1. In an axle or countershaft, a tubular driving shaft, driving and driven elements attached thereto, said driving shaft being continuous between driven elements, a load carrying shaft frictionally engaging and inclosed within said tubular driving shaft, so that the said shafts revolve as a unit substantially as set forth.

1,381,064. SELF-COOLING SAFE FOR VIANDS. MARIE DIXON, Neutral Bay, near Sydney, New South Wales, Australia. Filed Feb. 18, 1920. Serial No. 359,612. 2 Claims. (Cl. 45—71.)

1. A viand safe constructed of knockdown slabs of concrete with interfitting joints, having cellular cavities packed with absorbent material in the lateral slabs, a marginal water gutter in the bottom slab, and a top vented water reservoir chamber packed with porous material in the cover slab.

1,381,065. SORGHUM-CUTTER. CHARLES DRGAC, Port Lavaca, Tex. Filed Dec. 16, 1919. Serial No. 345,221. 2 Claims. (Cl. 56—100.)

2. A sorghum harvesting apparatus having a platform for movement parallel with a row of stalks and provided at one side with coöperative elements forming a rearwardly contracted throat, cutting mechanism located in the throat, and an ejector having its extremities pivotally connected with the platform on the opposite side from said throat and having an upturned loop, whereby stalks severed by the cutting mechanism may drop on the ejector so that after a sufficient accumulation of the same upon the platform the ejector may be swung laterally of the machine to dump the stalks in bundles.

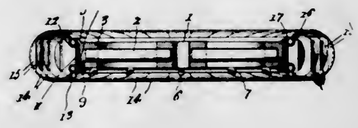


1,381,066. UNION GARMENT. LEO THOMAS DWYER, Fairfield, Ill., assignor to Sexton Mfg. Co., Fairfield, Ill. Filed May 18, 1920. Serial No. 382,494. 2 Claims. (Cl. 2—144.)

1. In a union undergarment, comprising a front, legs, an upper back portion and a sanitary flap forming side openings with the said legs, said front having button holes adjacent the openings, tabs attached to the said front at the waist line thereof adjacent the said side openings and extending over the button holes of the front, each tab being adapted to support a garter attaching means and each tab having a buttonhole registering with the buttonhole in the said front for the passage of a hose supporter from within the garment to be fastened to the tab by the said garter attaching means.

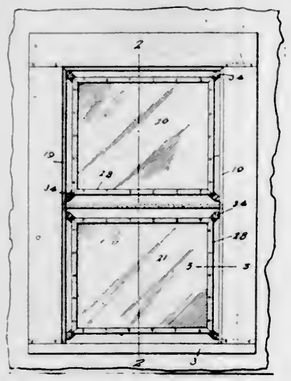
1,381,067. WATER-PILLOW. IWAO EGUCHI, Tokyo, Japan. Filed Dec. 27, 1917. Serial No. 209,199. 1 Claim. (Cl. 150—6.)

The combination with a flexible receptacle having a flexible neck with a plurality of notches provided in the mouth of the same, of a series of links surrounding said neck and having their ends pivotally connected together and forming a parallelogram, a locking member pivotally mounted on one of said links and provided with a locking screw adapted to engage another one of said links, and



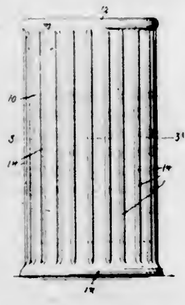
means provided on the last named link for receiving the end of said screw, said locking member in locked position resting in the notches in the mouth of said receptacle.

1,381,068. IRONING-BOARD. JOHN D. EICHELBERGER, St. Louis, Mo., assignor of one-fourth to Edward J. Damm, St. Louis, Mo. Filed Oct. 2, 1919. Serial No. 328,039. 2 Claims. (Cl. 68—10.)



1. An ironing board having foldable and extensible legs at one end thereof and having longitudinally disposed grooved strips on the under side thereof and foldable and extensible legs at the other end thereof, said legs having portions engaging the grooves in said strips whereby said legs are slidably held, and means for clamping said ironing board to a table or the like.

1,381,069. RESILIENT METAL TIRE. ERNEST ENOS, Tampa, Fla. Filed Jan. 5, 1920. Serial No. 349,517. 1 Claim. (Cl. 152—8.)

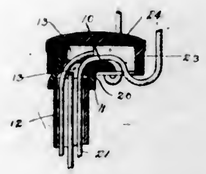


A spring wheel comprising a felly, a rim detachably mounted on said felly and provided with a channel at each side thereof, and a series of abutting spring plates each bent substantially in the form of a horseshoe in transverse section, and each plate provided with enlarged ends adapted to engage in said channels, and with inwardly projecting ribs formed on each side of and integral with the central portion of the plate, the outer faces of said ribs bearing against the corresponding faces of the ribs on the adjacent plates, whereby the tread portion of the plates is reinforced and stiffened, and the spring effect of said plates is secured by the sides thereof, substantially as described.

1,381,070. WINDOW. HENRY FERR, Mason City, Iowa. Filed May 8, 1920. Serial No. 379,893. 6 Claims. (Cl. 189—75.)

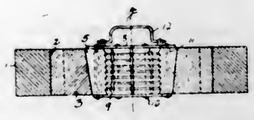
1. The combination; a metal casing and metal sashes slidable therein, integral beads on the casing, said sashes having certain of their outer edges bent upon themselves to provide grooves to receive certain of the beads, angle plates on the meeting rails of the sashes, and interengaging means between said plates designed for coengagement when the plates are brought together.

1,381,071. BOTTLE-HOLDER. CATHERINE FLANNERY, Hornell, N. Y. Filed Aug. 4, 1920. Serial No. 401,138. 2 Claims. (Cl. 215—12.)



2. A bottle holder comprising an envelop of flexible material open at one end and having an enlarged reinforcing rim encompassing the open end and a flange extending in advance of the closed end, the sides of the envelop being irregular in outline to prevent rolling when laid on the side.

1,381,072. ADJUSTABLE HINGE. JOHN H. KERSTETTER, State College, Pa. Filed Nov. 5, 1920. Serial No. 422,067. 1 Claim. (Cl. 16—112.)

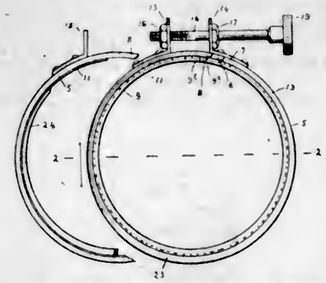


The combination with a door frame and a door, of a supporting hinge for said door, said hinge comprising a pair of hingedly connected leaves, one of said leaves having threaded therein spaced adjusting screws, a plate disposed between the door frame leaf and the frame and engaged by the adjusting screws, securing screws passing through the adjusting screw leaf and the adjusting screw plate, said adjusting screw extending a substantial distance above the leaf carried by the frame, the door leaf of the hinge being provided with apertures registering with apertures in the edge of the door, said apertures being so positioned that when the door is closed they will receive the outer end of the adjusting screws, said apertures in the edge of the door forming means whereby the outer ends of the adjusting screws may project through and beyond the inner face of the door carried leaf and also forming means whereby a maximum range of adjustability of the adjusting screws may be obtained.

1,381,073. CONDUIT-END PROTECTOR. FREDERICK I. JOHNSON, Warren, R. I. Filed Oct. 16, 1917. Serial No. 196,936. 1 Claim. (Cl. 247—6.)

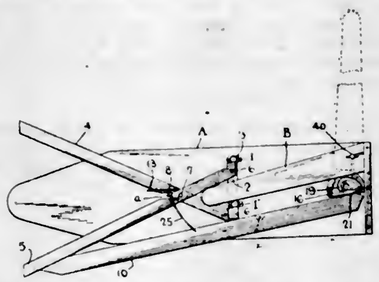
A conduit-end protector comprising a substantially disk-shaped body member having a conduit-receiving neck through which the wires are led, said neck being offset to one side of the center of said body, the diameter of the opening in said neck beyond the end of the conduit being substantially equal to the inner diameter of the conduit, said body being of a substantial thickness and provided with one or more radially disposed wire-receiving grooves in its upper face communicating with said opening, and the edge of said body at the outer end of said grooves being notched to permit the wires to be led out downwardly therethrough, the periphery of said body about the notched edge being threaded, and a cap having its outer wall internally threaded to be screwed onto the said threaded edge of said body member after the wires have been positioned therein.

1,381,074. PIPE-ENGAGING SLIP FOR ROTARIES. GERALD R. LIVERGOOD, Houston, Tex., assignor of one-half to Charles Snell, Houston, Tex. Filed Sept. 20, 1920. Serial No. 411,605. 10 Claims. (Cl. 24—263.)



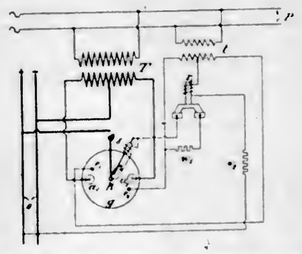
1. A pipe engaging slip, including a cage composed of upper and lower arcuate plates, arcuate pipe engaging jaws between said plates and bearing rods passing through said jaws and anchored at their respective ends to the corresponding plates.

1,381,075. PISTON-RING GAGE. JAMES R. LOUDEN, Utica, N. Y. Filed July 17, 1919. Serial No. 311,569. 7 Claims. (Cl. 33—179.)



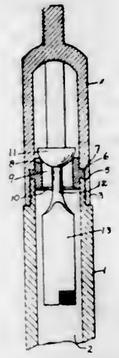
1. A piston ring gage comprising a split ring adapted to be contracted circumferentially and maintain its circularity and adjusting means connected to the ends of the ring to so contract the ring and positively hold it at

desired size, the interior face of said ring being adapted to receive a split piston ring and temporarily contract the



same to the diameter of the measuring inner surface of the gage whereby the space between the ends of the piston ring may be accurately measured.

1,381,076. IRONING-BOARD. RAY BURDETTE PALMER, Norwich, N. Y. Filed Mar. 29, 1917. Serial No. 158,401. 5 Claims. (Cl. 68—10.)

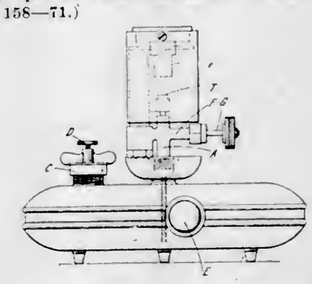


1. The combination with an ironing board, of a supporting frame comprising two members secured crosswise, said members having a seat formed in the under crotch, means for pivotally connecting said crosswise secured members at their upper ends to said ironing board, a supporting bar arranged to rest in said seat, a pin for pivotally securing said bar to said frame, a disk pivotally secured to the under face of said ironing board having an arcuate slot, a guide stem held below said plate, and a member slidably held on said guide stem, and guided within said slot and secured to said bar whereby on turning said plate said member is carried backward or forward to raise or lower said ironing board, as and in the manner set forth.

1,381,077. AUTOMATIC-STARTING APPARATUS FOR METAL-VAPOR RECTIFIERS. BÉLA BENÖ SCHÄFER, Baden, Switzerland, assignor to Gleichrichter-Aktiengesellschaft, Glarus, Switzerland. Filed July 14, 1920. Serial No. 396,297. 2 Claims. (Cl. 175—354.)

1. A metal vapor rectifier including a fixed metal container, an anode, a cathode, a movable ignition anode and a solenoid operated by alternating current to move said ignition anode relatively to the said container, and means for automatically opening the circuit of the energizing coil, of said solenoid subsequently to the closure of the primary alternating circuit and automatically closing said energizing coil circuit subsequently to the opening of the primary alternating circuit.

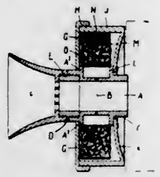
1,381,078. VALVE FOR PUMPS. MILES SHEVLIN, Houston, Tex., assignor to W. L. Drake, Des Moines, Iowa. Filed June 10, 1920. Serial No. 388,023. 2 Claims. (Cl. 251—129.)



1. In a pump, the combination of a pump plunger, a valve seat therein, an upwardly opening valve thereon, said valve having its top flat and its lower face shaped to fit within said seat, a stem secured centrally to said lower face, a blade thereon within said plunger, the said blade being straight and balanced and having its lower end beveled in opposite directions to cause the rotation thereof.

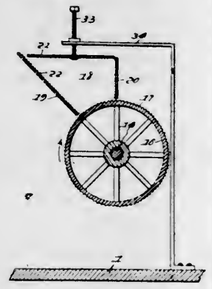
1,381,079. PROCESS FOR TREATING MEAL OR FLOUR AND MILLING PRODUCTS. EGBERT CORNELIS SUTHERLAND, Deventer, Netherlands, assignor to Naamlooze Vennootschap Industrieele Maatschappij voorheen Noury & van der Lande, Deventer, Netherlands, a Corporation of the Netherlands. Filed Mar. 25, 1918. Serial No. 224,680. 5 Claims. (Cl. 83—42.)

2. In the process of treating flour, meal and other milling products, the improvement which comprises subjecting the said material to the action of chlorin in amount sufficient to react upon the enzyms present, thereafter treating such material with a peroxid compound, and finally subjecting the mass to conditions capable of decomposing said peroxid compound.



1,381,080. BURNER FOR BURNING OIL AND OTHER LIQUID FUEL. EDWIN CLEARY, London, England. Filed Apr. 15, 1920. Serial No. 374,138. 4 Claims. (Cl. 158—71.)

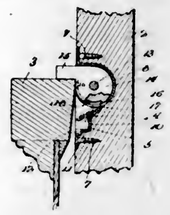
1. A burner for liquid fuel, comprising an annular metal plate, a vertical tubular conduit or vessel thermally



connected at its upper end to said plate and having an inlet for liquid fuel at its lower end, metal packing in the middle and lower parts of said vessel, a substantially horizontal unpacked conduit thermally connected to said annular plate and communicating at one end with the upper end of the vertical conduit, a second vertical conduit extending down from said annular plate and communicating at its upper end with the other end of said horizontal conduit, a nozzle connected to the lower end of the second vertical conduit, an injector tube removably arranged in opening of said annular plate and having its lower open end in register with said nozzle, a mixing box mounted on and communicating with the upper end of said injector tube and having flame-apertures in its upper part, the lower wall of said mixing box being arranged at a short distance above the annular plate and being provided with flame-apertures directed toward said plate, and a valve arranged in the heating conduit formed by the two vertical conduits and the horizontal conduit connecting their upper ends.

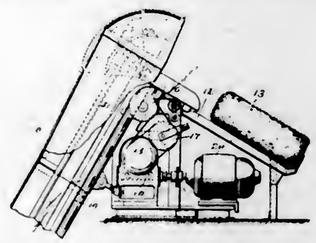
1,381,081. DEVICE FOR USE IN DISINFECTING TELEPHONE INSTRUMENTS. ROBERT COOPER, London, England. Filed Nov. 16, 1920. Serial No. 424,410. 3 Claims. (Cl. 179—185.)

1. A device for disinfecting telephones, comprising an annular casing formed of separable members, an annular absorbent pad in said casing, said pad comprising concentric perforated tubes having absorbent material in the annular space between them, means for supporting said pad concentrically in said casing, and means for securing the device to a mouthpiece and to a telephone instrument.



1,381,082. METHOD AND APPARATUS FOR BLANCHING PEANUTS. GEORGE J. CORPORON, Amesbury, Mass. Filed Nov. 13, 1920. Serial No. 423,816. 11 Claims. (Cl. 146—14.)

1. A method of blanching nuts consisting in utilizing centrifugal force to repeatedly throw the nuts against roughened surfaces which cause the skins to be separated from the nuts, and simultaneously moving the nuts along an inclined plane.



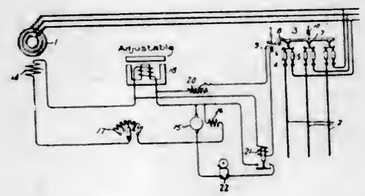
1,381,083. WINDOW-STOP. EDWARD E. CRAWFORD, Bremerton, Wash. Filed May 27, 1920. Serial No. 384,675. 1 Claim. (Cl. 292—209.)

A device for the purpose set forth comprising a casing having an upper circular chamber with an upper tangential wall extending to the front face of the casing and a lower inclined tangential wall terminating short of the face of the casing, the casing being constructed to present a recess extending downwardly from the terminal of the lower tangential wall, a transverse shoulder at the upper terminal of the lower tangential wall, a stop pivotally mounted in the upper portion of the casing and comprising a circular body concentric with the pivot, and a tooth projecting tangentially from said circular body and

adapted to impinge against the upper tangential wall of the casing or to be housed within the downwardly extending recess, the circular body of the stop being provided with a peripheral recess, and a resilient detent secured at one end in the said recess and having its other end free to engage the transverse shoulder on the lower tangential wall of the casing or to be housed within said peripheral recess and frictionally engage the rear arcuate wall of the casing.

1,381,084. AMMUNITION-HOIST. ELMER D. CUMMINGS, Washington, D. C. Filed Aug. 31, 1920. Serial No. 407,266. 10 Claims. (Cl. 187—13.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A hoist including an endless cable, a grip car, a grip for engagement with the cable, means operable to automatically release the grip, a brake, and means operable to engage the brake with the cable to move the car in an opposite direction.



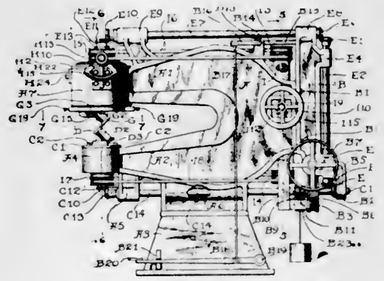
1,381,085. COATING METALS. CHRISTIAN DANTSIZEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1919. Serial No. 335,090. 8 Claims. (Cl. 91—70.2.)

1. The process of treating metals to render them inoxidizable at high temperatures which consists in thoroughly cleaning the surfaces of the article to be treated, coating the surface with metal having a relatively low fusing point, then dipping in molten aluminum and firing at a relatively high temperature.

1,381,086. APPARATUS FOR PROTECTING THE FIELD STRUCTURE AND WINDINGS OF DYNAMO-ELECTRIC MACHINES. WILLIAM F. DAWSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 16, 1919. Serial No. 304,718. 7 Claims. (Cl. 175—294.)

2. In combination, a polyphase distribution circuit, a polyphase generator supplying electrical energy thereto,

and means responsive to the current produced by the voltage induced in the field windings of said machine by a

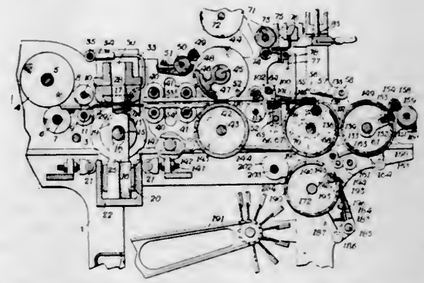


predetermined unbalancing of the phases for disconnecting said generator from said distribution circuit.

1,381,087. PRODUCTION OF PACKAGES. HILARION DE ESCOBALES, Staten Island, N. Y., assignor to H. Escobales Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1918. Serial No. 250,924. 21 Claims. (Cl. 229—87.)

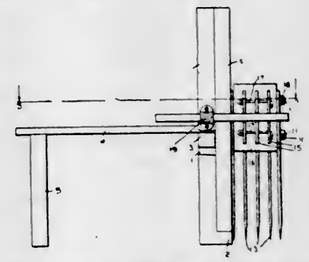
1. Commodity packaging means comprising a wrapping consisting of inner and outer flexible wrapping elements and an interposed stiffening element, the portions of the inner wrapping element located at the sides of the package being entirely within the outer wrapping element, said stiffening and inner wrapping elements being fixedly positioned against relative movement by the application of the outer wrapping element.

1,381,088. MACHINE FOR CUTTING SHEET-FORM MATERIAL. CHARLES B. GRAY, Knoxville, Tenn. Filed Mar. 26, 1919, Serial No. 285,341. Renewed Feb. 5, 1921. Serial No. 442,887. 21 Claims. (Cl. 164—63.)



1. In a machine of the nature described, the combination of an upper and lower rotary turret structure, located on a common axial line, a pair of rotary cutters having their edges meeting in said axial line, an oblique shaft supported on the lower turret structure and supporting one of said cutters, and an oblique shaft supported on the upper turret structure and supporting the other of said cutters, and means for driving one of said shafts, substantially as described.

1,381,089. RADIO RECEIVING SYSTEM. HAROLD H. BEVERAGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 10, 1920. Serial No. 372,933. 14 Claims. (Cl. 250—33.)



1. A horizontal receiving antenna having distributed constants of such values that electric waves produced therein by desired signaling waves will be propagated along its length at substantially the same velocity as that at which the desired signaling waves travel along its length in the ether.

1,381,090. MACHINE FOR MAKING WINDOW-ENVELOPS. SAMUEL FURMAN, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Continuation of application Serial No. 45,506, filed Aug. 14, 1915. This application filed Aug. 24, 1917. Serial No. 187,980. 26 Claims. (Cl. 93—61.)

1. A machine for making window envelops, comprising a support for an envelop blank, a suction member adapted to apply a patch of transparent paper to said blank on said support, a stripping plate adapted to strip said patch from said suction member and to deposit said patch on said blank, a pair of folding plates adapted to fold the side flaps of the blank over said stripping plate, and means for actuating said suction member, said stripping plate and said folding plates.

1,381,091. SLICING-MACHINE. GUSTAF E. SANDBECK, New York, N. Y. Filed Aug. 18, 1920. Serial No. 404,385. 4 Claims. (Cl. 146—12.)

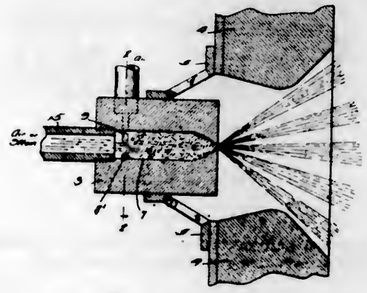
1. A slicing device comprising a food supporting means, a knife frame slidably mounted on said means, supporting rods carried by said frame, a plurality of substantially triangular shaped knife blades mounted on said rods, spacing elements having relatively spaced slots receiving the knives to hold said knives in spaced relation, and tie means for said knives.

1,381,092. GAS-DEFLECTOR. WILLIAM T. KOLVA, Vineland, N. J. Filed May 1, 1920. Serial No. 378,048. 1 Claim. (Cl. 158—113.)

A burner attachment comprising a cone-shaped plate provided at its center and at the apex of the cone with a stellaform opening and provided at its under side with radially disposed ribs which are located between the outer ends of the points of the opening.

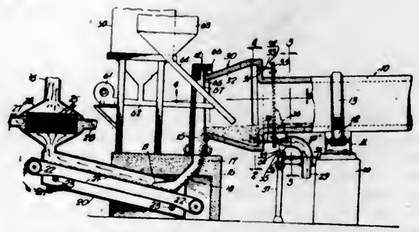
1,381,093. RHEOSTAT. CHESTER H. TEEGARDEN, Washington, D. C. Filed Oct. 18, 1918. Serial No. 258,752. 8 Claims. (Cl. 219—48.)

1. A rheostat comprising a U-shaped frame, a pair of impedance elements supported side by side across the open end of said frame, a lever pivoted in said frame at the base thereof, two contact arms carried by said lever on opposite sides thereof, each contact arm being positioned to make wiping contact over the outer side of one of said impedance elements, and an insulating segment interposed in each impedance element to insulate that element from the arm at that point.



1,381,094. TIRE. ALBERT L. AUSTIN, Cleveland, Ohio, assignor to The Standard Tire Protector Company, Cleveland, Ohio, a Corporation of Delaware. Filed July 21, 1919. Serial No. 312,412. 9 Claims. (Cl. 152—17.)

9. In a protective device for pneumatic tires, a supplemental sectional rim provided with a hook-shaped flange curved to engage a tire heel member of a tire casing, said flange terminating in spaced projections adapted to engage the heel portion of a casing of the straight side type.



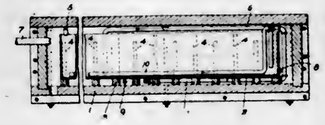
1,381,095. FUEL-OIL BURNER. FLETCHER C. STARR, Philadelphia, Pa. Filed Mar. 27, 1920. Serial No. 369,321. 6 Claims. (Cl. 158—73.)

2. An oil atomizing burner, comprising a body or casing having an axially disposed atomizing and mixing chamber, alternately arranged tangential oil and air inlet ports entering said chamber and so disposed that the air jets will impinge directly upon the entering oil and an axially disposed inlet in the rear of said ports through which a

stream of air or steam may be injected to exert an impelling pressure upon the rotating mixture of air and oil issuing from said ports.

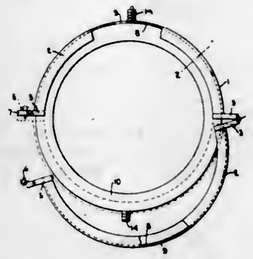
1,381,096. ROTARY FURNACE OR KILN. GEORGE F. DOWNS, Buffalo, N. Y. Filed June 19, 1920. Serial No. 390,242. 29 Claims. (Cl. 263—33.)

1. In a furnace of the kind described, a rotating cylinder, said cylinder being enlarged in the twyer area to provide a sintering chamber of diameter greater than the diameter of the rest of the furnace chamber.



REISSUES.

15,118. TICKET-CASE. JOHN J. CARR, Yonkers, N. Y. Filed Apr. 16, 1921. Serial No. 462,049. Original No. 1,373,797, dated Apr. 5, 1921, Serial No. 189,976, filed Sept. 6, 1917. 8 Claims. (Cl. 211—31.)



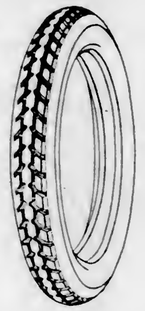
3. A device of the character described comprising, a holder for a strip of tickets, said strip being provided with slots intermediate the successive tickets, said slots being elongated and spaced from the side edges of the ticket strip, a dispenser for the tickets, and a spring-actuated finger located behind the dispenser and having a relatively wide nose normally passing through one of said slots for arresting the movement of the strip and facilitating the removal of a ticket therefrom, the said nose normally projecting in front of the dispenser so that, in the natural act of placing the operator's thumb upon the ticket to withdraw it from the dispenser, the thumb will engage the said nose and temporarily depress it for permitting the withdrawal of a ticket.

15,119. METHOD OF AND APPARATUS FOR RECLAIMING SPENT PICKLING SOLUTIONS. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio. Filed Mar. 28, 1921. Serial No. 456,205. Original No. 1,369,451, dated Feb. 22, 1921, Serial No. 350,383, filed Jan. 9, 1920. 14 Claims. (Cl. 23—1.)

14. The method herein described of treating a solution which consists in causing the solution to flow counter current in loop form, the branches of the loop in heat interchanging relation one to the other, and cooling the stream at the turn of the loop.

15,120. TIRE-VULCANIZING DEVICE. FRED BROWN PFEIFFER, Akron, Ohio. Filed Apr. 21, 1921. Serial No. 463,361. Original No. 1,327,841, dated Jan. 13, 1920, Serial No. 233,496, filed May 9, 1918. 5 Claims. (Cl. 18—38.)

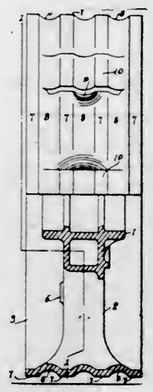
1. In a device of the class described, an annular mold; a flexible hollow annular casing disposed within the mold, the casing being trough-shaped in cross section to receive a tire, and being made partly of metal to conduct heat; means for supplying a fluid under pressure to the interior of the casing, and means for heating the fluid prior to its introduction into the casing.



2. In a device of the class described, a rigid outer sheath, surrounding a tire but spaced therefrom, a flexible hollow casing between the sheath and the tire, means to supply fluid under pressure to the casing and means to heat the tire while under pressure.

3. In a device of the character described, a rigid outer sheath substantially trough-shaped in cross-section, a flexible hollow casing within the sheath adapted to receive a tire, a support for the interior of the tire, means to supply fluid under pressure to the casing and means to heat the tire while under pressure.

4. In a device of the character set forth, an outer sheath, the interior surface of which is substantially trough-shaped in cross section, a flexible hollow casing within the sheath adapted to receive a tire, a support for the interior of the tire, means to supply fluid under pressure to the casing and means to heat the tire while under pressure.



5. In an apparatus for vulcanizing tires, a rigid core for supporting the interior of the tire, a flexible and expansible casing on the outside of the tire, means for expanding the said casing to hold the tire under pressure and means for heating the tire while so held.

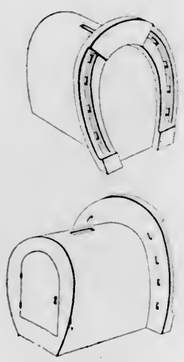
15,121. DESIGN FOR A VEHICLE-TIRE. BENJAMIN H. PRATT, Milwaukee, Wis., assignor to The Federal Rubber Company, Cudahy, Wis., a Corporation of Massachusetts. Filed Feb. 5, 1921. Serial No. 442,940. Term of patent 14 years. Original No. 52,116, dated June 18, 1918, Serial No. 208,525, filed Dec. 22, 1917, for 3½ years.

The ornamental design for a vehicle tire substantially as shown.

15,122. CAST-METAL WHEEL. GEORGE WALTHER, Dayton, Ohio. Filed Nov. 3, 1920. Serial No. 421,596. Original No. 1,283,995, dated Nov. 5, 1918, Serial No. 144,101, filed Jan. 24, 1917. 5 Claims. (Cl. 301—65.)

1. A metal wheel, the hub, spokes and rim of which consist of one integral casting and the hub and spokes thereof being hollow, the rim being of a single thickness of metal and provided with annular corrugations throughout its circumference, substantially as described.

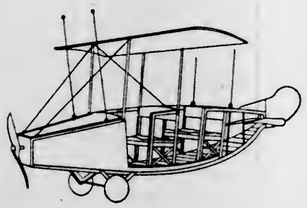
2. In a metal wheel, hub, spokes and a rim, spaced bridges on said rim, separated by apertures communicating with the spoke ends, said bridges having portions of their surfaces depressed below the general level of the rim.



3. In a metal wheel, a rim with portions thereof below the surface of the rim and portions level with the surface of the rim.

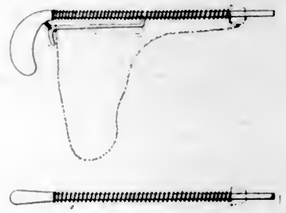
4. In a metal wheel, a hub, spokes and a rim, spaced bridges on said rim separated by apertures communicating with the spoke ends, said bridges having a portion of their surface level with the outer surface of the rim and a portion of their surface below said rim surface, the bridges being supported by the side walls only of the rim.

5. In a metal wheel, a hub, spokes and a rim, spaced bridges on said rim separated by apertures communicating with the spoke ends, said bridges having a plurality of corrugations disposed circumferentially parallel to one another with portions of said corrugations below the general surface of the periphery of the rim.



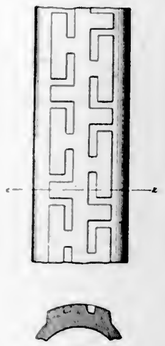
DESIGNS.

58,055. CHILD'S BANK. GEORGE W. ALEXANDER, Brooten, Minn. Filed Mar. 8, 1921. Serial No. 450,641. Term of patent 14 years.



The ornamental design for a child's bank as shown.

58,056. AMUSEMENT AEROPLANE. REUBEN N. ANDERSON, Youngstown, Ohio. Filed Feb. 21, 1921. Serial No. 446,962. Term of patent 7 years.



The design for an amusement aeroplane, as shown.

58,057. TOY SMALL-ARM. CHARLES WILLIAM BEISER, Brooklyn, N. Y., assignor to American Soldier Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 17, 1920. Serial No. 424,794. Term of patent 14 years.

The ornamental design for a toy small arm, as shown.

58,058. VEHICLE-TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Dec. 15, 1920. Serial No. 430,974. Term of patent 7 years.

The ornamental design for a vehicle tire, as shown.

58,059. PEDESTAL. MANUEL BLICKMAN, New York, N. Y., assignor to Sophia Blickman, Brooklyn, N. Y. Filed June 4, 1920. Serial No. 386,601. Term of patent 14 years.

The ornamental design for a pedestal as shown.

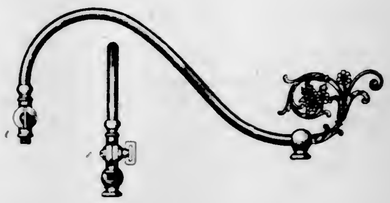
58,060. PEDESTAL. MANUEL BLICKMAN, New York, N. Y., assignor to Sophia Blickman, Brooklyn, N. Y. Filed June 4, 1920. Serial No. 386,602. Term of patent 14 years.

The ornamental design for a pedestal as shown.

58,061. ARM FOR A PORTABLE LIGHTING-FIXTURE. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,560. Term of patent 7 years.

The ornamental design for an arm for a portable lighting fixture, as shown.

58,062. ARM FOR A PORTABLE LIGHTING-FIXTURE. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,561. Term of patent 7 years.



The ornamental design for an arm for a portable lighting fixture, as shown.

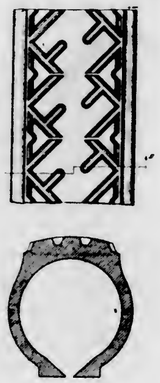
58,063. ARM FOR A PORTABLE LIGHTING-FIXTURE. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,562. Term of patent 7 years.

The ornamental design for an arm for a portable lighting fixture, as shown.

58,064. ARM FOR A PORTABLE LIGHTING-FIXTURE. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,563. Term of patent 7 years.

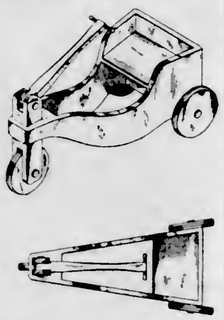
The ornamental design for an arm for a portable lighting fixture, as shown.

58,065. SEAT-BODY FOR CHILDREN'S VEHICLES. HARRISON D. BOYER, Philadelphia, Pa. Filed Nov. 6, 1920. Serial No. 422,404. Term of patent 14 years.



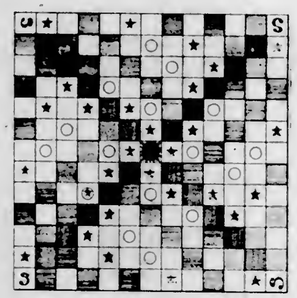
The ornamental design for seat-body for children's vehicles, as shown.

58,066. ELECTRICAL ADAPTER. RUDOLF P. BRIESEMEISTER, New York, N. Y. Filed Dec. 31, 1920. Serial No. 434,372. Term of patent 3½ years.



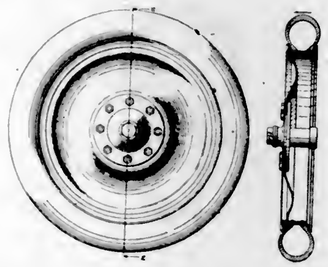
The ornamental design for an electrical adapter as shown.

58,067. TIRE. ABRAHAM K. BRILL, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,499. Term of patent 14 years.



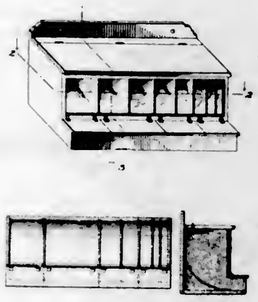
The ornamental design for a tire as shown.

58,068. FOOT-PROPELLED CAR FOR CHILDREN. THEODORE CANNAVARO, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,497. Term of patent 7 years.



The ornamental design for a foot propelled car for children as shown.

58,069. GAME-BOARD. WALTER C. CARTER, Pittsburgh, Pa. Filed Oct. 11, 1920. Serial No. 416,333. Term of patent 7 years.

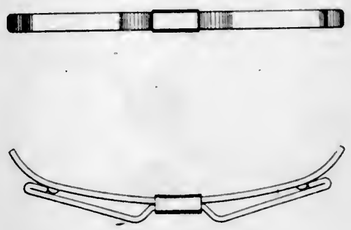


The ornamental design for a game board, as shown.

58,070. AUTOMOBILE DISK WHEEL. FRED S. CARVER, East Orange, N. J. Filed Sept. 15, 1920. Serial No. 410,555. Term of patent 14 years.

The ornamental design for an automobile disk wheel, as shown.

58,071. CORK-CABINET. HARRY COPELAND, Columbus, Nebr. Filed Oct. 26, 1920. Serial No. 419,740. Term of patent 7 years.

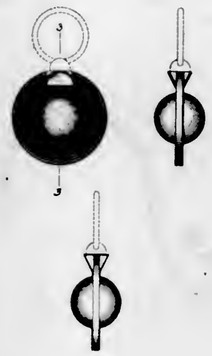


The ornamental design for a cork cabinet, as shown.

58,072. TALCUM-POWDER BOX. HARRY R. COREY, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 30, 1919. Serial No. 307,854. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,073. COLLAR-HOLDER. ALFRED D. CROSBY, Attleboro, Mass. Filed Jan. 17, 1921. Serial No. 438,026. Term of patent 3½ years.



The ornamental design for a collar holder, as shown.

58,074. LEG FOR CANDLESTICKS OR OTHER PORTABLE LAMPS. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Oct. 23, 1920. Serial No. 419,099. Term of patent 3½ years.

The ornamental design for a leg for candlesticks or other portable lamps, as shown.

58,075. TEETHING-RATTLE. JOSEPH DAVIS, Newark, N. J., assignor to The Insel Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 9, 1921. Serial No. 450,972. Term of patent 7 years.

The ornamental design for a teething rattle, as shown.

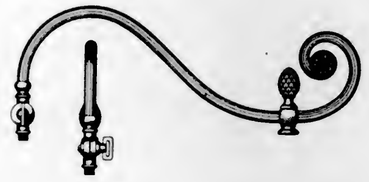
The ornamental design for a top, as shown.

58,080. NON-SKID TREAD FOR AUTOMOBILE-TIRES. ALFRED A. GLIDDEN, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Mar. 15, 1920. Serial No. 366,122. Term of patent 14 years.

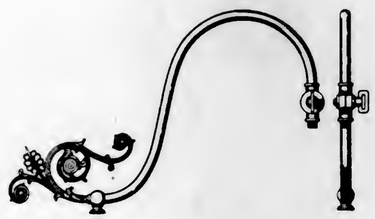
The ornamental design for a non-skid tread for automobile tires as shown.

58,081. TIRE-TREAD. ALFRED A. GLIDDEN and GLYNN G. BUELL, Watertown, and ELUE O. FRITCH, Belmont, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1920. Serial No. 433,657. Term of patent 14 years.



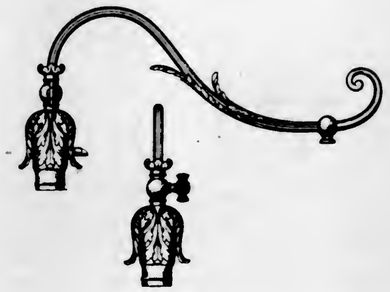
The ornamental design for a tire tread, as shown.

58,082. FACE OF AN ELECTRICAL ATTACHMENT-PLUG DEVICE. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 17, 1920. Serial No. 431,492. Term of patent 14 years.



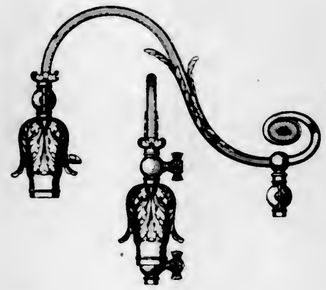
The ornamental design for the face of an electrical attachment plug device, substantially as shown.

58,083. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,564. Term of patent 7 years.



The ornamental design for an arm for a portable lighting fixture, as shown.

58,084. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,565. Term of patent 7 years.



The ornamental design for an arm for a portable lighting fixture, as shown.

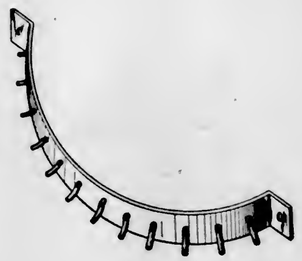
58,085. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,566. Term of patent 7 years.

The ornamental design for an arm for a portable lighting fixture, as shown.

58,086. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,567. Term of patent 7 years.

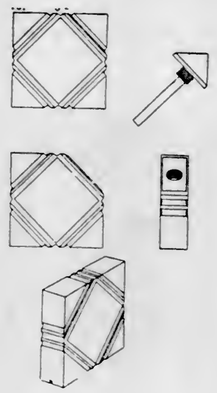
The ornamental design for an arm for a portable lighting fixture, as shown.

58,087. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,568. Term of patent 7 years.



The ornamental design for an arm for a portable lighting fixture, as shown.

58,088. ARM FOR A PORTABLE LIGHTING-FIXTURE. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,569. Term of patent 7 years.



The ornamental design for an arm for a portable lighting fixture, as shown.

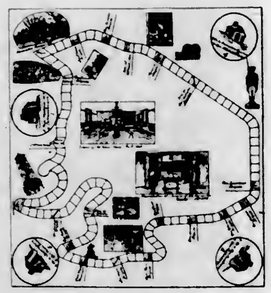
58,089. RACK. LAURENCE S. GULICK, Philadelphia, Pa. Filed July 16, 1920. Serial No. 396,846. Term of patent 7 years.

The ornamental design for a rack, as shown.

58,090. BOTTLE OR CONTAINER. MARIE OCTAVIE HAWORTH-BOOTH, London, England. Filed Oct. 13, 1920. Serial No. 416,772. Term of patent 7 years.

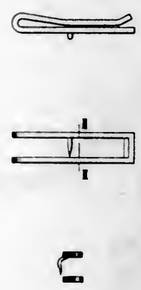
The ornamental design for a bottle or container, as shown.

58,091. VACUUM-JACKETED CARAFE. HENRY L. HEISLER, Chicago, Ill. Filed Oct. 1, 1920. Serial No. 414,125. Term of patent 7 years.



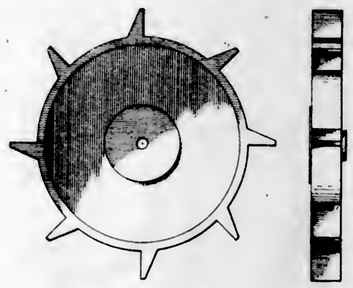
The ornamental design for a vacuum jacketed carafe, as shown.

58,092. ELECTRIC-LIGHTING DEVICE. ADOLPH A. HENKEL, Chicago, Ill., assignor of one-half to Harry A. Best, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 423,738. Term of patent 3½ years.



The ornamental design for an electric lighting device as shown.

58,093. GAME-BOARD. FLORENCE DE G. JENKINS, Philadelphia, Pa. Filed Oct. 15, 1920. Serial No. 417,248. Term of patent 7 years.

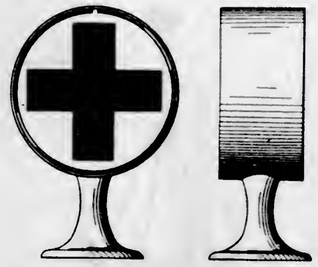


The ornamental design for a game board, as shown.

58,094. CRAVAT-HOLDER. JOSEPH A. MARINER, Chicago, Ill. Filed Aug. 28, 1919. Serial No. 320,538. Term of patent 3½ years.

The ornamental design for a cravat holder, as shown.

58,095. SPARK-GAP ROTOR. RALPH H. G. MATHEWS, Chicago, Ill. Filed July 14, 1920. Serial No. 396,322. Term of patent 7 years.

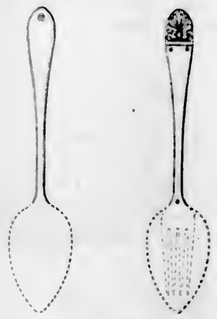


The ornamental design for a spark gap rotor, as herein shown.

58,096. HIGHWAY-SIGNAL. ELOF H. MEDÉN, Short Hills, N. J., assignor to American Gas-Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 24, 1920. Serial No. 426,302. Term of patent 14 years.

The ornamental design for a highway signal, as shown.

58,097. PHYSICIAN'S TRAFFIC-SIGNAL. JESSE B. MCAFEE, Dallas, Tex. Filed Jan. 3, 1921. Serial No. 434,819. Term of patent 3½ years.



The ornamental design for a physician's traffic signal as shown.

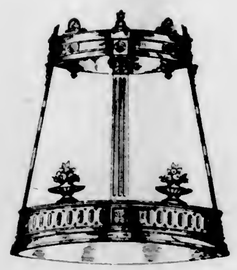
58,098. DISPLAY-FIXTURE. GERTRUDE M. MORRILL, San Francisco, Calif. Filed Mar. 1, 1920. Serial No. 362,566. Term of patent 3½ years.

The ornamental design for a display fixture, as shown and described.

58,099. HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. LIONEL MOSES, Providence, R. I., assignor to Gorham Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 10, 1920. Serial No. 357,685. Term of patent 14 years.

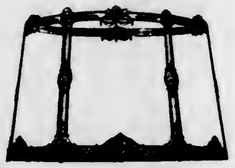
The ornamental design for a handle for spoons, forks, or similar articles, as shown.

58,100. COLLAR-HOLDER. ALFRED J. NEWTON, Providence, R. I. Filed Jan. 3, 1921. Serial No. 434,807. Term of patent 14 years.



The ornamental design for a collar holder, as shown.

58,101. ADVERTISING-DISK. HOMER HARDCASTLE PENNOCK, New York, N. Y. Filed July 25, 1919. Serial No. 313,314. Term of patent 14 years.



The ornamental design for an advertising disk, as shown.

58,102. LAMP-SHADE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,928. Term of patent 7 years.

The ornamental design for a lamp shade substantially as shown and described.

58,103. LAMP-SHADE. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,929. Term of patent 7 years.

The ornamental design for a lamp shade substantially as shown and described.

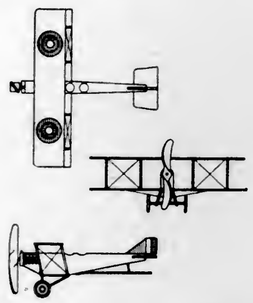
58,104. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,930. Term of patent 3½ years.

The ornamental design for a chandelier substantially as shown and described.

58,105. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,931. Term of patent 3½ years.

The ornamental design for a chandelier substantially as shown and described.

58,106. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,932. Term of patent 3½ years.

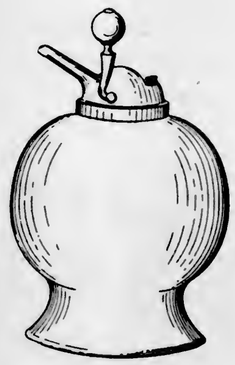


The ornamental design for a chandelier substantially as shown and described.

58,107. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, New York, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,933. Term of patent 3½ years.

The ornamental design for a chandelier substantially as shown and described.

58,108. TOY AEROPLANE. GEORGE A. PURCELL, Baltimore, Md. Filed Nov. 23, 1920. Serial No. 426,091. Term of patent 3½ years.

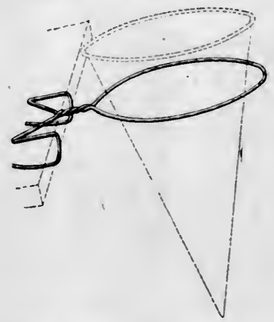


The ornamental design for a toy aeroplane as shown.

58,109. TOY BALLOON. EMMANUEL T. RICHERT, Canton, Ohio. Filed Jan. 31, 1921. Serial No. 441,438. Term of patent 14 years.

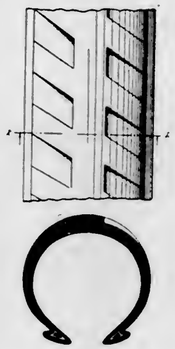
The ornamental design for a toy balloon as shown.

58,110. LIQUID-DISPENSER. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed July 10, 1920. Serial No. 395,398. Term of patent 14 years.



The ornamental design for a liquid dispenser, as shown.

58,111. LIQUID-DISPENSER. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed July 10, 1920. Serial No. 395,399. Term of patent 14 years.

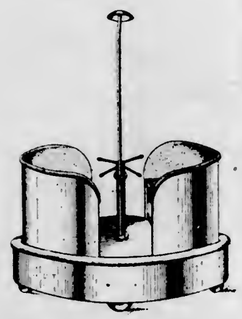


The ornamental design for a liquid dispenser, as shown.

58,112. STRAINER-HOLDER. CHARLES SCHAUMBURG, Park Ridge, Ill. Filed Mar. 29, 1919. Serial No. 286,175. Term of patent 7 years.

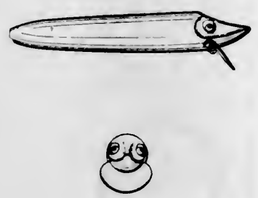
The ornamental design for a strainer holder as shown.

58,113. RUBBER-TIRE TREAD. JULES E. SCHNEIDER, Dallas, Tex., assignor to Beach-Wagstaff Rubber Corporation, Dallas, Tex. Filed Feb. 10, 1920. Serial No. 357,686. Term of patent 3½ years.



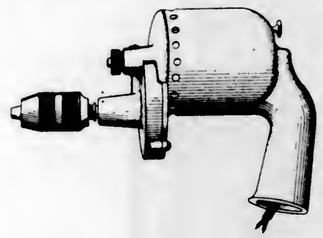
The ornamental design for a rubber tire tread as shown.

58,114. LIGHTING-FIXTURE. WILMER S. SNOW, Chicago, Ill., assignor to National X-Ray Reflector Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1919. Serial No. 316,877. Term of patent 7 years.



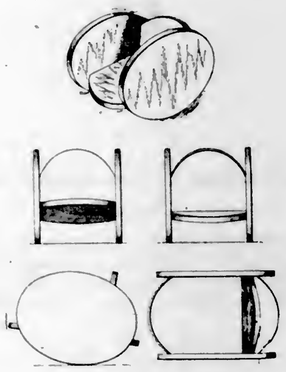
The ornamental design for a lighting fixture, as shown.

58,115. AMUSEMENT-CAR. JOHN J. STOCK, Erdenheim, Pa. Filed Apr. 4, 1921. Serial No. 458,549. Term of patent 14 years.



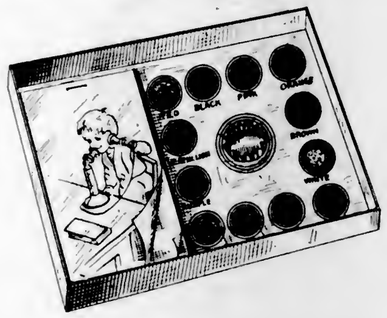
The ornamental design for an amusement car as shown.

58,116. FISH-BAIT BODY. WILLIAM A. STOLLEY, Dowagiac, Mich. Filed Dec. 27, 1920. Serial No. 433,510. Term of patent 14 years.



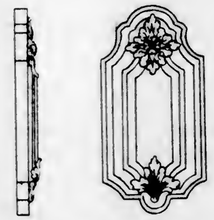
The ornamental design for a fish bait body, as shown.

58,117. ELECTRICALLY-OPERATED HAND-DRILL. ARTHUR H. SWEETLAND, Long Beach, Calif. Filed June 1, 1920. Serial No. 385,838. Term of patent 14 years.



The ornamental design for an electrically operated hand drill, as shown.

58,118. TOY. LAURA TOWNSEND, Boston, Mass. Filed Mar. 21, 1921. Serial No. 454,293. Term of patent 3½ years.

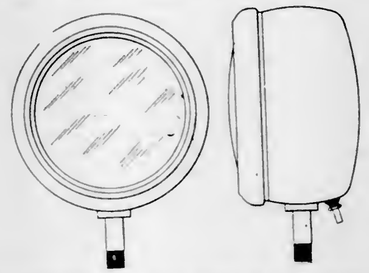


The ornamental design for a toy, as shown.

58,119. TOY PAINTING OUTFIT. NATHAN ULLMAN, New York, N. Y. Filed Mar. 16, 1921. Serial No. 452,768. Term of patent 7 years.

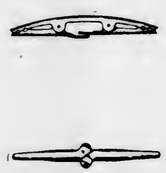
The ornamental design for a toy painting outfit, as shown.

58,120. PLATE FOR LIGHTING-FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to Arteraft Fixture Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 12, 1920. Serial No. 416,566. Term of patent 7 years.



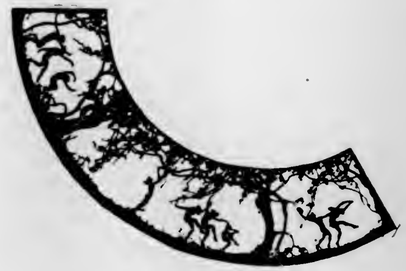
The ornamental design for a plate for lighting fixtures, as shown.

58,121. BOTTLE. THEODORE C. WHEATON, Jr., Washington, D. C., assignor to S. Sternau & Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1918. Serial No. 257,072. Term of patent 7 years.



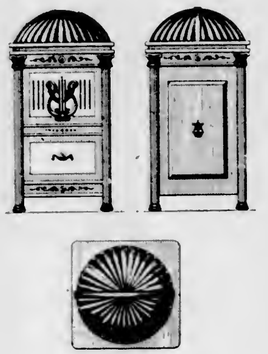
The ornamental design for a bottle, substantially as shown.

58,122. HEADLIGHT. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, Indianapolis, Ind., a Corporation. Filed Jan. 23, 1920. Serial No. 353,579. Term of patent 7 years.



The ornamental design for a headlight, as shown.

58,123. COLLAR-CLASP OR SIMILAR ARTICLE. PETER E. WIBERG, Glen Ridge, N. J. Filed Nov. 26, 1920. Serial No. 426,652. Term of patent 14 years.



The ornamental design for a collar clasp or similar article, as shown.

58,124. LAMP-SHADE. CLARA ELSENE WILLIAMS, New York, N. Y. Filed Oct. 25, 1920. Serial No. 419,547. Term of patent 14 years.

The ornamental design for a lamp shade, as shown.

58,125. PHONOGRAPH-CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Nov. 13, 1920. Serial No. 424,000. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 7, 1921.

[PUBLISHED JUNE 18, 1921.]

Particular description of goods.—Wheat-Flour.
Claims use since about Mar. 1, 1920.

143,799. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. AND J. W. ELSWORTH CO., New York, N. Y. Filed Dec. 17, 1920. Serial No. 141,220.

"SELECTS"

Particular description of goods.—Fresh Oysters and Clams.
Claims use since Nov. 7, 1914.

143,800. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) T. C. ESSER COMPANY, Milwaukee, Wis. Filed Nov. 3, 1920. Serial No. 139,117.

GOLDEN

Particular description of goods.—Varnishes and Japans and Oil-Paints and Paint-Oils.
Claims use since June 27, 1916.

143,801. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FIRSTADE LABORATORIES, INC., Tulsa, Okla. Filed Dec. 27, 1919. Serial No. 126,509.

FIRSTADE

Particular description of goods.—Antiseptic Mentholated Cream for Soothing and Healing the Skin and Mucous Membranes.
Claims use since Oct. 7, 1919.

143,802. (CLASS 39. CLOTHING.) THE FOX BROS. MFG. CO., Peru, Ind., and New York, N. Y. Filed Dec. 22, 1920. Serial No. 141,421.

STYLISH STOUT

Particular description of goods.—Undershirts, Drawers, Chemises, Nightgowns, and Petticoats, All of Silk, Cotton, or Wool.
Claims use since Mar. 15, 1917.

143,803. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif. Filed Jan. 12, 1921. Serial No. 142,145.

Particular description of goods.—Vegetable, Flower, Field, and Tree Seeds, Bulbs, and Nursery-Stock.
Claims use since 1911.

143,804. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY, INC., New York, N. Y. Filed Mar. 5, 1921. Serial No. 144,327.

Lovelee

Particular description of goods.—Hair-Nets.
Claims use since May 1, 1917.

143,805. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BERT GRANTIER, Esperance, N. Y. Filed Nov. 5, 1920. Serial No. 139,205.

GRANTIER MILLS

Particular description of goods.—Buckwheat-Flour.
Claims use since July 10, 1905.

143,806. (CLASS 39. CLOTHING.) HARRIS-POLK HAT COMPANY, St. Louis, Mo. Filed Dec. 17, 1920. Serial No. 141,227.

Quality

Particular description of goods.—Straw Hats.
Claims use since June, 1917.

143,807. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE HOLMES AUTOMOBILE COMPANY, Canton, Ohio. Filed Apr. 7, 1921. Serial No. 145,829.

HOLMES

Particular description of goods.—Automobiles.
Claims use since March, 1918.

143,808. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE KEENER SAND & CLAY CO., Columbus, Ohio. Filed Nov. 22, 1920. Serial No. 139,961.

GALLIA

Particular description of goods.—Molding-Sand.
Claims use since about Nov. 1, 1908.

143,809. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) C. EDWARD KENDEL, Cleveland, Ohio. Filed Apr. 1, 1921. Serial No. 145,568.

SHADILAWN

Particular description of goods.—Lawn-Seeds.
Claims use since Feb. 1, 1917.

143,810. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) C. EDWARD KENDEL, Cleveland, Ohio. Filed Apr. 1, 1921. Serial No. 145,570.

SUNNILAWN

Particular description of goods.—Lawn-Seed.
Claims use since Feb. 1, 1917.

143,811. (CLASS 17. TOBACCO PRODUCTS.) LOUIS KING CIGAR COMPANY, Hartford, Conn. Filed Sept. 22, 1920. Serial No. 137,478.

KING PERFECTOS

Particular description of goods.—Cigars.
Claims use since Aug. 1, 1910.

143,812. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LONG HANDKERCHIEF CO. INC., Passaic, N. J., and New York, N. Y. Filed Apr. 2, 1921. Serial No. 145,634.

LIMERICK

Particular description of goods.—Handkerchiefs.
Claims use since about January, 1906.

143,813. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LOS ANGELES SOAP CO., Los Angeles, Calif. Filed Mar. 28, 1921. Serial No. 145,347.

WHITE BORAX SOAP

Particular description of goods.—Soap.
Claims use since 1918.

143,814. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920. Serial No. 140,287.

Service

Particular description of goods.—Sheets and Pillow-Cases.
Claims use since 1912.

143,815. (CLASS 12. CONSTRUCTION MATERIALS.) METALOID COMPANY, Bayonne, N. J. Filed Jan. 10, 1921. Serial No. 142,023.

"METALOID"

Particular description of goods.—A Dry Powder and a Liquid to be Used Together in Repairing Leaks or Cracks in Lead or Iron Pipes, Water-Backs, Boilers, Radiators, Castings, Stone Washtubs, Sinks, Automobile Cylinders and Radiators, Ammonia-Pipes.
Claims use since Nov. 10, 1917.

143,816. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) MICHALITSCHKE BROS. & CO. INC., San Francisco, Calif. Filed Dec. 8, 1920. Serial No. 140,799.

PERFECTION MAIS

Particular description of goods.—Cigarette-Papers.
Claims use since Aug. 30, 1913.

143,817. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) F. S. MILLS CO., INC., Gloversville, N. Y. Filed Oct. 21, 1920. Serial No. 138,635.

"Locktite"

Particular description of goods.—Tobacco-Pouches.
Claims use since January, 1918.

143,818. (CLASS 32. FURNITURE AND UPHOLSTERY.) NEWARK TORTOISE SHELL NOVELTY CO., Newark, N. J. Filed July 28, 1920. Serial No. 135,524.

LA PARISIENNE

Particular description of goods.—Hand-Mirrors and Picture-Frames.
Claims use since Jan. 1, 1920.

143,819. (CLASS 39. CLOTHING.) MORGAN KNITTING MILLS, INC., Newark, N. J., and New York, N. Y. Filed Jan. 20, 1920. Serial No. 127,386.

Roxburgh

Particular description of goods.—Knit Jackets, Sweaters, and Coats.
Claims use since 1907.

143,820. (CLASS 39. CLOTHING.) MORGAN KNITTING MILLS, INC., Newark, N. J., and New York, N. Y. Filed Jan. 31, 1920. Serial No. 127,825.

Teviotdale

Particular description of goods.—Knit Jackets.
Claims use since May 10, 1907.

143,821. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NORTHAM WARREN CORPORATION, New York, N. Y. Filed Sept. 29, 1920. Serial No. 137,744.

DE LUXE

Particular description of goods.—Cuticle-Remover, Nail-Polish in Cake and Paste Form, Rouge, Nail-White, and Cuticle-Salve.
Claims use since 1914.

143,822. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) O'BANNON CORPORATION, Boston, Mass. Filed June 23, 1920. Serial No. 134,087.

NONLEEK DOUBLE TEXTURE TOP FABRIC

Consists of the words "Nonleek Double-Texture Top Fabric," with an underscoring-paraph extending from the serif of the "N" to the serif of the "K" in the word "Nonleek," the lining in the drawing merely representing shading.
Particular description of goods.—Cotton Piece Goods with Rubberized Coating.
Claims use since Feb. 23, 1917.

143,823. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,645.

GRENOBLE

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since May, 1906.

143,824. (CLASS 42. KNITTED NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,646.

MONTAUK

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since December, 1915.

143,825. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,648.

PANAMA

The lining of the drawing is not intended to indicate any particular color.
Particular description of goods.—Cotton Piece Goods.
Claims use since December, 1915.

143,826. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,652.

WESTPHALIA

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since October, 1910.

143,827. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,656.

KILDARE

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since Apr. 13, 1917.

143,828. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,657.

Westmoreland

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since March, 1917.

143,829. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,659.

MELBOURNE

Particular description of goods.—Cotton Piece Goods.
Claims use since Oct. 27, 1916.

143,830. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,661.

Clachan

The lining of the drawing is to indicate shading and the appearance of the trade-mark.
Particular description of goods.—Cotton Piece Goods.
Claims use since 1911.

143,831. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,666.

ANTRIM

Particular description of goods.—Cotton Piece Goods.
Claims use since Oct. 15, 1902.

143,832. (CLASS 12. CONSTRUCTION MATERIALS.) THE PRASSE LUMBER COMPANY, Cleveland, Ohio. Filed Feb. 2, 1921. Serial No. 143,102.

"WOOD THAT'S GOOD"

Particular description of goods.—Lumber.
Claims use since about January, 1913.

143,833. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) PUFFER-HUBBARD MANUFACTURING COMPANY, Minneapolis, Minn. Filed Feb. 7, 1921. Serial No. 143,292.

EASY GRIP

Particular description of goods.—Wheelbarrows.
Claims use since Sept. 1, 1915.

143,834. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) SIMPLEX STEEL STAMPING AND MANUFACTURING COMPANY, St. Louis, Mo. Filed June 18, 1920. Serial No. 133,901.

PLA-KAR

Particular description of goods.—Toy Velocipedes.
Claims use since Feb. 16, 1920.

143,835. (CLASS 39. CLOTHING.) TEXTILE PRODUCTS MANUFACTURING COMPANY, St. Louis, Mo. Filed Dec. 27, 1920. Serial No. 141,537.

BETTER BUILT

Particular description of goods.—Overalls, Work-Shirts, Coats, and Work-Pants.
Claims use since May 15, 1919.

143,836. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TILLAMOOK COUNTY CREAMERY ASSOCIATION, Tillamook, Oreg. Filed July 31, 1920. Serial No. 135,672.

Tillamook

Particular description of goods.—Cheese.
Claims use since the middle of April, 1918.

143,837. (CLASS 12. CONSTRUCTION MATERIALS.) THE TRAITEL MARBLE CO., Long Island City, N. Y. Filed Sept. 25, 1920. Serial No. 137,647.

Particular description of goods.—Metal Strips Used in Laying Floors, Walls, or Ceilings of Crushed Stone or other Similar Material.
Claims use since Mar. 1, 1920.

143,838. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) UNITED STATES TIRE COMPANY, New York, N. Y. Filed Feb. 15, 1921. Serial No. 143,629.

'Never Creep'

Particular description of goods.—Tire-Patches Made of Fabric and Rubber.
Claims use since September, 1918.

143,839. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WHITALL TATUM COMPANY, New York, N. Y. Filed Oct. 25, 1920. Serial No. 138,798.

SPECIAL

Particular description of goods.—Druggists' Sundries, as Follows: Hot-Water Bottles, Hot-Water Bags, Douche-Bags, Fountain-Syringes, Invalid-Cushions, and Ice-Bags.
Claims use since February, 1900.

143,840. (CLASS 37. PAPER AND STATIONERY.) EDWARD W. WILSON, New York, N. Y. Filed Sept. 29, 1919. Serial No. 123,271.

TELEPHONE ROOM DIRECTORY

Particular description of goods.—The Title of a Blank Publication.
Claims use since Aug. 2, 1915.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

SMITH *v.* WARNOCK. WARNOCK *v.* SMITH.

Decided March 7, 1921.

PATENTS—REDUCTION TO PRACTICE—DATE OF TEST CONTROLLING.

It is the date of the actual test of a machine which determines the date of actual reduction to practice. Therefore, although an inventor may have completed his machine prior to a reduction to practice by his rival, where he did not also subject it to successful test before such reduction to practice he is not entitled to prevail.

Mr. F. L. Chappell and *Mr. Otis A. Earl* for Smith.
Mr. J. H. Milans and *Mr. C. T. Milans* for Warnock.

PATENT appeals Nos. 1,363 and 1,365.

VAN ORSDEL, *J.*:

This is an interference proceeding between an application filed by the party Warnock January 8, 1916, and the application of Smith, filed September 7, 1917. The invention relates to an air-pump. The issue is in seven counts, of which the following are illustrative:

1. In a structure of the class described, the combination of a cylinder, a cylinder head comprising an inner head member having an annular inlet valve seat on its outer face and a plurality of inlet passages opening into said valve seat, and a plurality of cylinder ports, an intermediate head member having an annular discharge valve seat on its outer face and discharge ports opening into said discharge valve seat, said inner and intermediate head members being formed to inclose between them an annular inlet valve chamber into which said cylinder ports open, an outer head member having a recess in its inner face constituting a discharge valve chamber, said chamber being provided with a discharge opening, annular disk-like valves arranged in said valve chambers to coact with said valve seats, and coiled seating springs for said valves, said intermediate and outer head members being provided with bore-like seats for said springs alined with said valves.

2. In a structure of the class described, the combination of a cylinder, a cylinder head comprising an inner head member having an annular inlet valve seat on its outer face and a plurality of inlet passages opening into said valve seat, and a plurality of cylinder ports, an intermediate head member having an annular discharge valve seat on its outer face and discharge ports opening into said discharge valve seat, said inner and intermediate head members being formed to inclose between them an annular inlet valve chamber into which said cylinder ports open, an outer head member having a recess in its inner face constituting a discharge valve chamber, said chamber being provided with a discharge opening and annular disk-like valves arranged in said valve chambers to coact with said valve seats.

3. In a structure of the class described, the combination with a cylinder, of a head therefor comprising a pair of superimposed head members, the inner head member having a valve seat on its outer face, a plurality of inlet ports, said head members being formed to inclose between them an inlet valve chamber into which the cylinder ports open, the superimposed member being provided with a discharge port opening into said inlet valve chamber, a valve for said discharge port, and a disk-like inlet valve.

4. In a structure of the class described, the combination of a cylinder, a cylinder head comprising a pair of superimposed head members formed to inclose between them an annular inlet valve chamber, the inner head member having an annular inlet valve seat in its outer face and a plurality of inlet passages opening into said inlet valve chamber, the superimposed head member being provided with an annular discharge valve seat and discharge ports opening into said valve seat and to said inlet valve chamber, annular disk-like valves arranged to coact with said valve seats, and seating springs for said valves.

The Examiner of Interferences awarded priority as to all of the counts to the party Smith. The Board of Examiners-in-Chief affirmed the Examiner, except as to count 2, which was awarded to Warnock. The Commissioner affirmed the board. From his decision both parties have appealed.

This case turns largely upon the single question of whether the making of certain pumps by Smith amounted to reduction to practice. In 1913 Smith made a pump, known as Exhibit 3, which was found by the tribunals below to contain all the elements set out in counts 3, 5 and 7. Smith contends that the tests made of this machine amounted to a reduction to practice, but it was held below to establish only conception. In December, 1914, Smith built another pump, known as Exhibit 7, which, like Exhibit 3, failed to meet counts 1, 2, 4 and 6. This was followed by the construction and reduction to practice of what is known as Exhibit 13, which failed to meet any of the counts, since they call for annular disklike valves, and this pump contained a flap-valve.

The Board of Examiners-in-Chief, in its opinion holding that Smith had failed to reduce Exhibits 3 and 7 to practice, said:

Smith's Exhibit 7 was built and tested in December, 1914. Like Exhibit 3, it fails to satisfy counts 1, 2, 4 or 6, nor does the testimony to the successful testing of Exhibit 7 in 1914, establish reduction to practice. As in the case of Exhibit 3, the testimony does not bring out with sufficient particularity what the tests showed and the failure to follow up this form of pump at that time and the pushing of Exhibit 13 which does not satisfy any count are more significant than the assertions of the witnesses that the tests were successful.

To this point, we agree with the Commissioner that Smith had failed to reduce to practice the invention in issue. We now come to a pump constructed by Smith in August, 1915, as shown in Blue-Print Exhibits 15 and 17, which meet counts 2, 3, 5 and 7. It did not contain springs and "bore-like seats" called for in count 1, or the springs of counts 4 and 6. This pump was sent by the Union Steam Pump Company, of which Smith was assist-.

ant superintendent, to the Empire Cream Separator Company, where Warnock was employed. We agree with all the tribunals below that the tests made of this pump amounted to a reduction to practice. We think this conclusion is amply supported by the testimony and especially the circumstances of the test. Smith, therefore, is entitled to a date for reduction to practice for a pump as disclosed in Blue-Print 15 as of August, 1915.

The earliest date of conception that can be accorded Warnock is August, 1914. We agree with the Commissioner that what he did in 1914 toward developing a pump did not constitute reduction to practice. Like Smith's Exhibits 3 and 7, it amounted merely to an experiment. Warnock, however, accomplished reduction to practice in September, 1915. He contends that this test was begun in August, but his proof limits him to his Exhibit S, dated September 10, 1915. While it may well be that he had his machine, which was tested out in September, completed in August, it is the actual test that is essential to establish reduction to practice. The patent law recognizes no such thing as reduction to practice *nunc pro tunc*.

Count 2 is limited to inner, intermediate and outer head members, the outer one of which has a recess in its inner face constituting a valve-chamber with a valve located therein. It is also limited to a "plurality of cylinder ports." These features first appeared in exhibits introduced by Warnock and proved to have been made in March, 1915. Smith is not in position to claim conception of these features earlier than his filing date, September 7, 1915. Warnock, therefore, though the last to reduce to practice, was the first to conceive, and, being diligent, he is entitled, as held by the Commissioner, to priority as to count 2.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

SMITH *v.* WARNOCK. WARNOCK *v.* SMITH.

Decided March 7, 1921.

PATENTS—PRIORITY—EVIDENCE.

Evidence considered and priority of invention awarded to Warnock on counts 1 and 2 and to Smith on count 3.

Mr. F. L. Chappell and *Mr. Otis A. Earl* for Smith.

Mr. J. H. Milans and *Mr. C. T. Milans* for Warnock.

PATENT appeals Nos. 1,364 and 1,366.

VAN ORSDEL, *J.*:

This is a companion interference to Nos. 1,363 and 1,365 this day decided. As in that case, it relates to a vacuum-pump. The testimony is in a single record, and applies to both interferences. The issue in the present interference is in three counts, of which the following will serve our present purpose:

1. In a structure of the class described, the combination with a cylinder, of a head therefor comprising a pair of superimposed head members, the inner head member having an annular inlet chamber, an annular valve seat on its outer face, a plurality of inlet ports opening into said valve seat, and a plurality of cylinder ports, said head members being formed to inclose between them an annular inlet valve chamber into which the cylinder ports open, the superimposed member being provided with an annular discharge valve seat and a plurality of discharge ports opening into said discharge valve seat and to said inlet valve chamber, and annular disk-like valves disposed on said seats.

3. In a structure of the class described, the combination with an open ended cylinder, of a head detachably secured thereto and provided with three superimposed chambers, the lower chamber constituting an inlet chamber, the upper chamber constituting a discharge valve chamber, and the intermediate chamber constituting an inlet valve chamber, said head being provided with inlet, outlet, and cylinder ports establishing communication between said inlet valve chamber and said inlet chamber, discharge chamber, and cylinder, respectively, and valves for closing the upper ends of said inlet ports and said discharge ports.

Counts 1 and 2 include a head member with an annular inlet-chamber. It, therefore, appears that Smith's Exhibit 7 machine embodied these counts, but it was not reduced to practice; hence, it merely fixes a date of conception by Smith. Smith's Exhibit 13, which we held was reduced to practice but did not embody any of the counts of the companion interference, since it had a flap-valve, embodies count 3, which is not limited to the annular disk valve, but is broad enough to read upon the Exhibit 13 machine.

It, therefore, follows that, since Smith's machine, as reduced to practice in August, 1915, and his application in the companion case, failed to disclose the annular inlet-chamber as part of the head, he is held to his filing date, March 6, 1917, for constructive reduction to practice of counts 1 and 2. While he may be accorded conception as of the date of the Exhibit 7 machine—December, 1914—he was first to conceive and last to reduce to practice, and, lacking diligence at the time Warnock came into the field, he cannot prevail as to these counts.

Count 3, however, was embodied in the Exhibit 3 and Exhibit 13 machines of Smith. He, therefore, is entitled to the date of the Exhibit 3 device—1913—for conception, and the date of the Exhibit 13 machine—December, 1914—for reduction to practice. Being, therefore, the first to conceive and the first to reduce to practice, he must prevail as to count 3.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

SOLOMON *v.* ROUSSO, (No. 1,403.) SAME *v.* SAME, (No. 1,404.)

Decided April 4, 1921.

1. PATENTS—INTERFERENCE—REDUCTION TO PRACTICE OF TOWEL-RACK—SIMPLE DEVICE.

Proof of the manufacture of a towel-rack *Held* sufficient to establish actual reduction to practice.

2. SAME—COSTS—UNNECESSARY PARTS OF RECORD CARRIED UP FOR REVIEW.

Where the parts of a record sent to the court of appeals by the Patent Office in an interference proceeding in response to a writ of certiorari sued out by appellee have no bearing on the issues presented, all costs on the writ will be taxed against appellee.

Mr. Wm. F. Hall for Solomon.

Mr. J. H. R. Potts for Rousso.

SMYTH, *C. J.*:

These appeals from decisions of the Commissioner of Patents involve the question of priority with respect to an invention defined by the following counts:

Count 1. In a device of the class described, a towel support and a retaining member extending upwardly from said support and then downwardly sufficiently to constitute a suitable guide for a towel while in use, substantially as described.

Count 2. In a device of the class described, a towel support and a retaining member extending upwardly from adjacent the outer edge of said support and then downwardly sufficiently to constitute a suitable guide for a towel while in use, substantially as described.

There were originally four parties—Fetherolf, Solomon, Rousso, and Brigham. Brigham was successful before the Examiner of Interferences, Solomon before the Examiners-in-Chief, and Rousso before the Assistant Commissioner. Solomon alone appeals. We have, therefore, to consider only the controversy between him and Rousso.

The Examiner of Interferences refused to give Solomon any date for conception earlier than December 31, 1912, and held that Rousso was not entitled to a date prior to December 13, 1911. The Examiners-in-Chief held that Rousso had no right to a date earlier than December 22, 1911. Thus they and the Examiner of Interferences are in accord in holding that Rousso is not entitled to any date earlier than December 13, 1911. But the Examiners-in-Chief, differing from the Examiner of Interferences, gave Solomon March, 1911, for reduction to practice. When the Assistant Commissioner came to dispose of the matter he confined Rousso to his filing date, January 12, 1912, but gave him priority over Solomon, saying:

I have hesitatingly reached the conclusion that Solomon's proof should be accepted as establishing that he had the device known as his Exhibit No. 2 in March, 1911, but I do not think that this construction, simple as the invention is, is shown by the proofs to have been actually reduced to practice.

It is not denied that Exhibit 2 embodies the invention. We have seen it at the bar and cannot doubt that it constitutes a full reduction to practice of the device of the issue. When was it manufactured?

Prior to March, 1911, Solomon had a towel-rack similar to Exhibit 2. Davidson testified to this, describing the rack, and then identified Exhibit 2 as the device to which he referred. Jamieson, general manager of the Jamieson Machine Company, testified that he had done considerable work for Solomon and that the latter brought him a towel-rack, which he was unable to describe accurately. Upon being shown Exhibits 1 and 2 he said it was more like the latter. While he could not fix the date on which he saw it, he knew that he bent some rods like the one in Exhibit 2 for Solomon before January, 1911. The witness Lehr said that he saw racks similar to Exhibits 1 and 2 early in 1911, and Ames testified that Solomon disclosed to him a towel-rack which he thought was Exhibit 2, and that this was done a year or two after March 31, 1909, when Solomon signed a contract to furnish towels to a concern with which he was connected. Other witnesses testified to the same effect. Their testimony is set out quite fully and commented upon in the opinion of the Examiners-in-Chief. It establishes to our satisfaction that Solomon manufactured Exhibit 2 as early as March, 1911, and as it constitutes a reduction to practice we feel constrained to reverse the decision of the Assistant Commissioner and award priority to Solomon in both appeals.

Being of the opinion that the parts of the record sent to this court by the Patent Office in response to a writ of certiorari sued out by Rousso have no bearing on the issues presented, we tax all costs on the writ against Rousso.

Reversed.

Mr. Justice HITZ, of the Supreme Court of the District, sat in the place of Mr. Justice ROBB.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Barber patent, No. 781,802, for valves and valve-gear for explosive-engines, claims 8 and 9, covering inlet and exhaust valves so constructed as to be readily removable for cleaning and repair, which is the sole purpose of the invention, *Held* void for anticipation. *Barber* v. *Otis Motor Sales Co.*, 271 Fed. Rep., 171.

(U. S. C. C. A. Pa.) The Luellen patent, No. 1,043,854, claims 1–3 and 6, for a cup-dispensing device, as limited by the prior art, *Held* not infringed. *Sanitary Products Corporation* v. *Individual Drinking Cup Co.*, 271 Fed. Rep., 241.

(U. S. C. C. A. N. Y.) The Treat patent, No. 1,188,024, for an electrical attachment-plug, *Held* void for lack of invention. *Treat* v. *Redtop Electric Co., Inc.*, 271 Fed. Rep., 307.

(U. S. D. C. Ill.) The Nielsen patents, No. 1,268,601, claims 6, 7, and 12–15, and No. 1,268,602, for improvements in means for agitating the contents of a tank by an agitator resembling an ordinary screw-propeller, *Held* invalid, considering the state of the prior art. *Nielsen et al.* v. *Libby, McNeill & Libby*, 271 Fed. Rep., 317.

(U. S. D. C. Pa.) The White patent, No. 1,176,413, for an improvement in terminals for electric wires, *Held* valid when restricted to a construction having a preformed notch or recess, which served the double purpose of effecting a tight connection and permitting more compact construction, but, as so restricted, *Held* not infringed by defendant's device, in which the recess was formed only by tightening the nut on plastic metal. *White* v. *Goodrich-Lenhart Mfg. Co.*, 271 Fed. Rep., 336.

(U. S. D. C. Pa.) The Conrad patent, No. 822,723, for improvement in ball-bearings, *Held* not anticipated and valid, but not infringed by the regrinding of the grooves of old bearings and, where

required, substituting new balls to fit the grooves enlarged by the regrinding which is within the right to make repairs. *Hess-Bright Mfg. Co.* v. *Bearings Co. of Pennsylvania et al.*, 271 Fed. Rep., 350.

(U. S. C. C. A. Mass.) The Gaulin patent, No. 756,953, claim 7, for an apparatus for intimately mixing milk and other liquids, *Held* not invalid as unsupported by the specification, but also *Held* not infringed. *Manton-Gaulin Mfg. Co.* v. *Wright-Ziegler Co. et al.*, 271 Fed. Rep., 391.

(U. S. D. C. N. Y.) The Jakobson patent, No. 919,019, for a safety-cock for gas-burners, *Held* void for lack of invention. *National Safety Gas Cock Co., Inc.*, v. *Consolidated Gas Co. of New York*, 271 Fed Rep., 539.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 27, 1921.

The United States Phonograph Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Pittsburgh Iron Folding Bed Co., 1106 Reedsdale street, Pittsburgh, Pa.; W. P. Mertens Co., Inc., 107 West Main street, Charlottesville, Va., and the Operaphone Co., Inc., Creek and Meadow streets, New York, N. Y., for registration of trade-marks and trade-mark registered May 6, 1913, No. 91,527, to The United States Phonograph Co., and a notice of such declaration sent by registered mail to said The United States Phonograph Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The United States Phonograph Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

Matienzo-Sainz Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of John H. Schroeder, 465 Jackson street, Oshkosh, Wis., and The Cleveland Fruit Juice Company, 1394 West Ninth street, Cleveland, Ohio, for registration of trade-marks and trade-mark registered May 21, 1912, No. 86,607, to Matienzo-Sainz Company, 333 North Water street, Newburgh, N. Y., and a notice of such declaration sent by registered mail to said Matienzo-Sainz Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Matienzo-Sainz Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Globe Soap Company, Third and Walnut streets, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered June 5, 1900, No. 34,749, to The Weaver Brothers and Mott Company of Baltimore City, Baltimore, Md., and a notice of such declaration sent by registered mail to said The Weaver Brothers and Mott Company of Baltimore City at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Weaver Brothers and Mott Company of Baltimore City, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 28, 1921.

The United States Phonograph Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Federal Phonograph Co., Inc., 653 West Fifty-First street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 11, 1911, No. 81,488, to The United States Phonograph Co., 235 The Arcade, Cleveland, Ohio, and a notice of such declaration sent by registered mail to said The United States Phonograph Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The United States Phonograph Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 31, 1921.

Godinez-Marshall Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the General Lamp & Motor Company, Inc., 87 Nassau street, New York, N. Y., for registration of a trade-mark and trade-mark registered December 26, 1911, No. 84,619, to Godinez-Marshall Company, 257 Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Godinez-Marshall Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Godinez-Marshall Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,381,097 to 1,381,896.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 287—No. 2. TUESDAY, JUNE 14, 1921. Price—$5 per year.
[PUBLISHED JUNE 24, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Changes in Classification.

(ORDER NO. 2,661.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., May 27, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 1, Nailing and Stapling, (Division XI,) establish the following subclasses and definitions:

Machines—
Box—
8.1. Blank-assembling—
8.2. Wire-bound—
8.3. Tables,
Shoe—
Heel-nailing—
Nail-feeding—
39.1. Single source, gang-delivery.

8.1. MACHINES, BOX, BLANK-ASSEMBLING. Machines which assemble blanks to be used in making boxes and fasten them together.

Search Class—
144—WOODWORKING, subclasses 288, Work-holding stands, and 295, Clamps, End and partition, for devices to facilitate the assembling of boxes for hand-nailing.

8.2. MACHINES, BOX, BLANK-ASSEMBLING, WIRE-BOUND. Assembling and fastening wire-bound-box blanks.

8.3. MACHINES, BOX, BLANK-ASSEMBLING, WIRE-BOUND, TABLES. Tables for machines which assemble and fasten wire-bound-box blanks.

39.1. MACHINES, SHOE, HEEL-NAILING, NAIL-FEEDING, SINGLE SOURCE, GANG-DELIVERY. Feeding mechanisms for heel-nailing machines which feed a gang of nails from a single source at each operation of the machine.

The patents contained in subclasses 8.1, 8.2, and 8.3 above have been taken for the most part from class 1, Nailing and Stapling, subclasses 2, Machines, Staple forming and setting; 14, Machines, Box, Assembling and nailing, and 15, Machines, Box, Nail-Driving, Tables, and those contained in subclass 39.1 have been taken for the most part from class 1, Nailing and Stapling, subclass 39, Machines; Shoe, Heel-nailing, Nail-feeding.

In class 10, Bolt, Nail, Nut, Rivet, and Screw Making, (Division XIII,) subclass 44, Nail-making, Wire nails, Making and distributing, add to the definition, at the end of the existing search note, the following:

and 39.1, Machines, Shoe, Heel-nailing, Nail-feeding, Single source, gang-delivery.

THOMAS E. ROBERTSON,
Commissioner.

Patent Office Publications.

The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Index—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Supplements:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1912, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28 and 29, (now out of print,) published since 1912, each	.10

Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly held for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should not be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Certification by the Secretary of the Interior.

By authority of an act of Congress approved August 24, 1912, (183 O. G., 597,) providing uniform charges for furnishing copies of records of the Department of the Interior and its several Bureaus, a fee of twenty-five cents will be charged by the Secretary of the Interior for every certificate of authentication of official character of the officials of the Patent Office. The fee thus provided should be paid to the Secretary of the Interior, and not to the Patent Office. Attorneys and inventors desiring such certificates are requested to remit the necessary fee to the Secretary of the Interior at the time of filing in the Patent Office an order for the copies desired.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business June 4, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Jan. 26	Jan. 8	669
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 6	Nov. 11	1,503
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 13	Oct. 8	726
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	July 19	Mar. 7	1,452
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 3	Nov. 6	687
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Dec. 20	Mch. 1	252
312	7. Games and Toys; Optics; Photography; Velocipedes	Jan. 5	Feb. 18	1,417
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Mar. 2	Apr. 28	574
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 13	Apr. 20	727
235	10. Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Dec. 10	Feb. 17	1,064
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Feb. 25	Mar. 21	368
222	12. Machine Elements	Oct. 30	Mar. 9	988
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Aug. 4	Feb. 24	1,509
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Sept. 9	Apr. 20	866
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 1	Oct. 8	1,571
111	16. Radiant Energy; Telegraphy; Telephony	Aug. 7	Nov. 5	1,430
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 16	Feb. 24	780
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Sept. 2	Dec. 6	1,472
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Sept. 20	Jan. 3	865
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Feb. 2	Feb. 4	1,096
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 20	Mar. 11	483
349	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Mar. 1	Apr. 14	390
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Oct. 16	Mar. 31	771
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Nov. 22	Mar. 12	876
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Apr. 15	Apr. 7	251
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 13	Jan. 4	761
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Jan. 19	Mar. 11	1,030
225	28. Internal-Combustion Engines	Nov. 15	Jan. 3	1,169
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Nov. 11	Mar. 21	669
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 19	Apr. 12	959
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	July 24	Oct. 11	1,084
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Sept. 1	Mar. 1	1,069
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Nov. 26	Feb. 12	748
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Apr. 19	May 4	299
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Apr. 15	Apr. 23	483
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Jan. 17	Jan. 7	1,463
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Dec. 11	Dec. 11	1,759
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Jan. 8	Jan. 24	982
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	July 13	Sept. 17	1,634
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Nov. 11	Jan. 21	1,746
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Oct. 29	Feb. 9	816
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Oct. 1	Oct. 26	1,946
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Aug. 14	Sept. 20	1,290
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Sept. 7	Mar. 9	476
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Oct. 27	Jan. 26	1,025
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 8	Feb. 4	762
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Oct. 6	Dec. 21	1,041

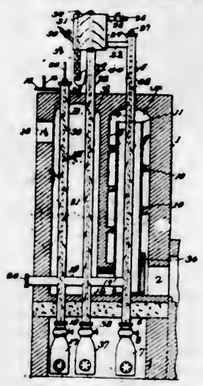
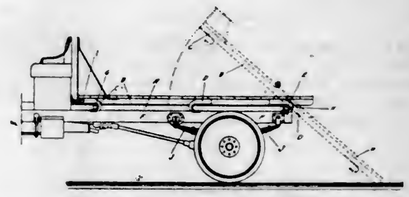
PATENTS



GRANTED JUNE 14, 1921.

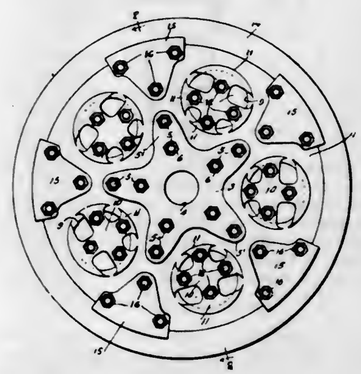
1,381,097. METHOD OF MAKING BOXES. ALLAN A. ADAMSON, Brooklyn, N. Y., and WILLIAM F. GRUPE, North Bergen, N. J. Filed Dec. 1, 1916. Serial No. 134,306. 13 Claims. (Cl. 93—39.)

1. The process of making a paper box formed of a tray having a neck formed separately from and inserted within the body of the tray and cover telescoping on said neck, comprising separately forming substantially simultaneously the parts of said cover and the parts of said tray, including the application of adhesives as desired, definitely progressing said cover and said tray simultaneously and effecting substantially without delay the closure of the box by positioning said cover on said tray.



1,381,098. PROCESS OF CATALYZING OIL AND APPARATUS THEREFOR. CLIVE M. ALEXANDER, Port Arthur, Tex., and GEORGE H. TABER, Jr., Pittsburgh, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1916. Serial No. 84,210. 16 Claims. (Cl. 196—26.)

1. The process of converting high boiling hydrocarbon oils into lower boiling hydrocarbon oils which comprises applying heat to and heating a mixture of vapors of a reactive metal halid and vapors of such high boiling oil.

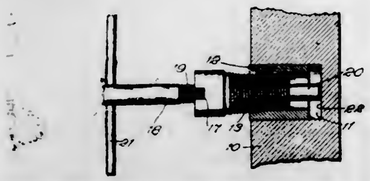


1,381,099. DUMPING-BODY. CLARENCE H. ALKER, New Orleans, La. Filed Mar. 29, 1920. Serial No. 369,819. 1 Claim. (Cl. 298—15.)

The combination with a chassis having side members normally supported at their front ends on the front axle, of a rear truck mounted beneath the said side members near their rear ends, springs supporting said side members and adapted to normally tilt said side members downward and forward, but adapted to yield and reverse the angle of tilt of said side members when subjected to the weight of the load on the wagon when the wagon is loaded, a wagon body slidably mounted on said side members and provided with a pivot to the rear of the center of gravity of said wagon body when empty with means for limiting the forward travel of the wagon body

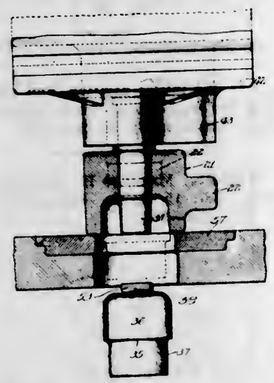
as it returns to the initial position, and means for normally holding the wagon body when located in the forward position, substantially as described.

1,381,100. WHEEL. MANFRED H. AMBROSE, Springfield, Ohio. Filed Oct. 15, 1920. Serial No. 417,185. 5 Claims. (Cl. 152—29.)



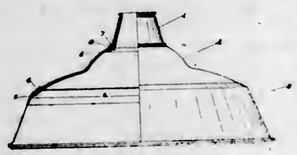
4. In an automobile cushion wheel comprising a disk of resilient material, an aperture through the center thereof, a hub plate on each side with an aperture corresponding to the aperture in the disk and having radial strengthening fingers, other apertures equidistantly located between the radial strengthening fingers of the hub plates and the periphery of the disk, coöperating reinforcing plates fastened over said last mentioned apertures and a tread portion fastened to the disk by tire clamping members.

1,381,101. BUSHING-REMOVER. FRANS O. ALBERTSON, Sioux City, Iowa, assignor to Albertson & Company, Sioux City, Iowa, a Corporation of Iowa. Original application filed June 20, 1918, Serial No. 240,977. Divided and this application filed Sept. 30, 1918. Serial No. 256,294. 2 Claims. (Cl. 29—88.2.)



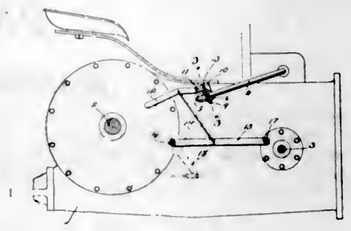
1. A bushing remover comprising a threaded tap member having a screwthreaded bore and an open-ended slot at one end intersected by said bore, and a co-acting member having screwthreads for co-acting with the threaded

bore and provided at one end with an impact surface, and a cross bar secured to the other end of said co-acting



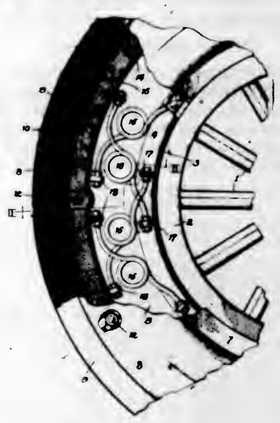
member and adapted to engage said slot without removal from said member.

1,381,102. PROCESS OF FORGING AND DIES THEREFOR. FRANK B. BELL, Pittsburgh, Pa., assignor to Edgewater Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1918. Serial No. 254,575. 19 Claims. (Cl. 78—81.)



1. A process of die forging metal, comprising bringing the metal to substantially the form desired in a die by pressure exerted over the entire face of the blank or ingot, and bringing the thus nearly completed forging to accurate final shape through concentrating substantially the entire force of forging upon a penetrating member smaller than a face of said forging and movable within said die.

1,381,103. REFLECTOR. WILLIAM THOMAS BLACKWELL, Verona, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 27, 1919. Serial No. 285,463. 4 Claims. (Cl. 240—104.)

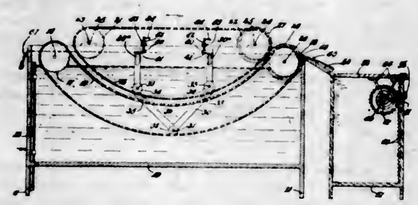


1. A composite reflector comprising a porcelain enameled steel portion, an opal glass portion adjacent thereto, and a supporting means for the reflector, the shape and quality of the glass constituting the glass portion being such that the distribution and intensity of the light in the lower hemisphere is substantially equal to the distribution and intensity of the light obtained from an entirely opaque reflector having a similar configuration, while the light cast in the upper hemisphere is an appreciable percentage of the total lighting efficiency of the reflector.

1,381,104. TRACTOR-CLUTCH CONTROL. PAUL BLUMBERG and OTTO MEILI, New Holstein, Wis. Filed Oct. 11, 1920. Serial No. 416,231. 3 Claims. (Cl. 74—39.)

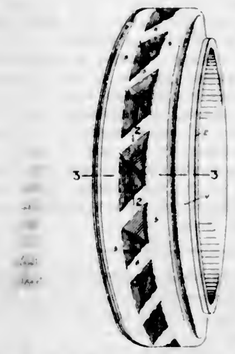
1. The combination with a control lever, of means for holding the control lever in either one of two positions, comprising a member pivoted to the lever, said member being disposed on one side of the center line of its fulcrum when the lever is in one position and on the opposite side when the latter is in its other position.

1,381,105. TIRE. GEORGE E. BULLOCK, Detroit, Mich. Filed Nov. 25, 1918. Serial No. 264,122. 9 Claims. (Cl. 152—37.)



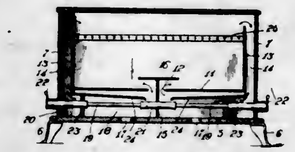
1. The combination with a wheel having a rigid rim formation, a resilient tire therefor, and a tire-supporting formation adapted to maintain the tire in spaced relation to the rim formation, of means for yieldingly connecting the rim and tire-supporting formations, said means including a plurality of independent coil springs each having its axis transverse to the direction of traction, the ends of each coil being elongated to project beyond the coil in directions approximately transverse to the coil axis, one of such ends extending in a direction opposite that of the other end, said ends being secured respectively to the several formations.

1,381,106. HYDRATE OF LIME. HARRY WILLIAMS CHARLTON, Jones Point, N. Y., assignor to American Potash Corporation, a Corporation of Virginia. Filed June 6, 1917. Serial No. 173,104. 12 Claims. (Cl. 222—4.)



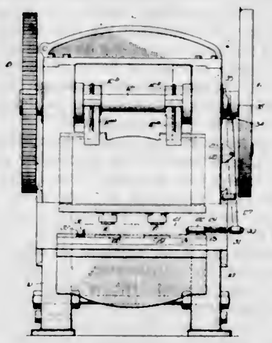
12. The method of making a new hydrate of lime containing less water of hydration than the normal hydrate, which comprises digesting slaked lime with an excess of water at a pressure of about two hundred and twenty-five to two hundred and seventy pounds per square inch and at a corresponding temperature.

1,381,107. DISH-WASHING MACHINE. KAZIMIR CWIRKO, New York, N. Y. Filed Dec. 30, 1919. Serial No. 348,327. 3 Claims. (Cl. 141—9.)



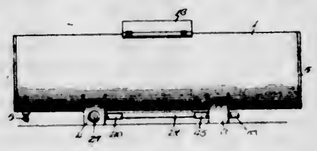
1. A dishwashing machine comprising a tank, a traveling conveyer extending through said tank, and means for causing the dishes passing from the said conveyer to be delivered, said means including a chute, and a baffle bar pivoted to said chute midway between opposite sides of the machine.

1,381,108. TRUCK-TIRE. LAURENCE R. DAVIS, Providence, R. I., assignor to Revere Rubber Company, a Corporation of Rhode Island. Substitute for application Serial No. 381,633, filed May 15, 1920. This application filed Mar. 3, 1921. Serial No. 449,392. 3 Claims. (Cl. 152—1.)



3. A solid tire for heavy load carrying vehicles broader at the base of its cushioning mass than at the tread and much wider than deep having a substantially flat tread surface provided centrally only with a row of cavities of a depth and volume permitting substantially uniform vulcanization, and having transversely inclined cross bars between the cavities affording a smooth running traction grip on the roadway as well as radiating surfaces for heat generated in service, said cross bars also augmenting the load carrying capacities of the portions of the tire flanking the row of cavities.

1,381,109. ELECTRICALLY-HEATED INCUBATOR. ACHILLES DE KHOTINSKY, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1918. Serial No. 236,084. 3 Claims. (Cl. 126—275.)



1. In a heating apparatus, the combination of a heating chamber having a floor, an air heating compartment beneath said floor, heating means in said compartment, flues at the ends of said chamber and compartment and communicating therewith to permit circulation of air therebetween, a flue at the top of said chamber communicating therewith, a flue at the back of the chamber and compartment communicating with said top flue, a pan secured to the floor on the under side thereof and providing an air space beneath the floor communicating with said back flue, and a flue at the front of said compartment communicating therewith and with an air space between the pan and the floor, there being an opening in the floor forming a communication between the compartment and the air space below the floor.

1,381,110. SLOTTING-MACHINE FOR SPLICE-BARS. JULIUS A. DYBLIE, Joliet, Ill. Filed Oct. 13, 1919. Serial No. 330,425. 8 Claims. (Cl. 164—51.)

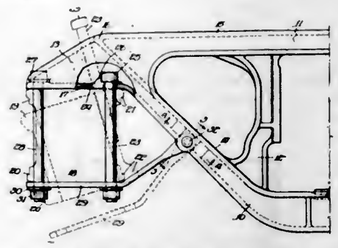
1. In combination with a punch press, of a pivotally mounted member thereon, means at the upper end of said press and connected with the operating mechanism of the punch press whereby the member is actuated, and means at the lower end of said lever for pushing a work piece into position under the punching dies.

1,381,111. PULSATOR FOR MILKING-MACHINES. AARON D. ELLINGTON, Springfield, Ill. Filed Apr. 29, 1920. Serial No. 377,661. 7 Claims. (Cl. 31—100.)

1. A pulsator for a milking machine comprising a cylindrical casing, a piston valve mounted for reciprocation therein, means for conducting compressed air alternately to opposite ends of the piston valve, thereby causing the reciprocation of the latter, means for permitting the exhaust of compressed air from the cylindrical casing at the end of each stroke of the piston valve, means for conducting compressed air to a coöperating portion of a milking machine when the piston valve is being moved in one direction, thereby transmitting a compressive action to the coöperating portion of the milking machine, means for establishing communication between a vacuum pump and a coöperating portion of the milking machine when the piston valve is being moved in the direction opposite to that first named, thereby transmitting a sucking action to the last named coöperating portion of the milking machine, and means for regulating the rate of travel of the piston valve in its reciprocation, thereby regulating the duration of the compressive action and of the sucking action.

3. A pulsator for a milking machine comprising a cylindrical casing, a piston valve mounted for reciprocation therein, a pipe adapted for connection with an air compressor, a pair of branch pipes arranged to lead from said first named pipe into the cylindrical casing, means for permitting compressed air to pass alternately from each of said branch pipes into the casing adjacent each end thereof, thereby causing the piston valve to be reciprocated, means for permitting the exhaust of compressed air from the cylindrical casing at the end of each stroke of the piston valve, means for conducting compressed air to a coöperating portion of a milking machine when the piston valve is being moved in one direction, thereby transmitting a compressive action to the coöperating portion of the milking machine, means for establishing communication between a vacuum pump and a coöperating portion of the milking machine when the piston valve is being moved in the direction opposite to that first named, thereby transmitting a sucking action to the last named coöperating portion of the milking machine, and means for regulating the rate of travel of the piston valve in its movement in one direction and for regulating independently the rate of travel of the piston valve in its movement in the opposite direction, whereby the duration of the compressive action and the duration of the sucking action can be regulated at will.

5. A pulsator for a milking machine comprising a cylindrical casing, a pipe adapted for connection with an air compressor, a branch pipe arranged to lead from said first named pipe to said casing and to communicate with the latter adjacent one end, a second branch pipe arranged to lead from said first named pipe to said casing and to communicate with the latter adjacent its other end, a piston valve mounted for reciprocation in said casing, said piston valve being formed with a central longitudinal passage extending inwardly from each end thereof, the inner ends of said pistons being spaced apart, each central passage being connected adjacent its outer end by a radially extending passage with the outer end of a longitudinally extending groove provided in the surface of the piston valve, said longitudinal grooves being positioned at different points on the surfaces of the piston valve, means for guiding the piston valve whereby one of said grooves is maintained in connection with the open end of one of said branch air pipes, thus causing a movement of the piston valve in one direction, means for rotatably shifting the piston valve at the end of its movement in one direction, thereby moving the other of said longitudinal grooves in communication with the opening of the other of said branch pipes, thereby causing a movement of the piston valve in the direction opposite to that first named, means for permitting the exhaust of compressed air of the cylindrical casing at the end of each stroke of the piston valve, means for conducting compressed air to a coöperating portion of the milking machine when the piston valve is being moved in one direction, thereby transmitting a compressive action to the coöperating portion of the milking machine, means for establishing communication between the vacuum pump and the coöperating portion of the milking machine when the piston valve is being moved in the direction opposite to that first named, thereby transmitting a sucking action to the last named coöperating portion of the milking machine, and a valve disposed in each of said branch pipes for regulating the flow of compressed air therethrough, thereby permitting the regulation of the duration of the compressive action of the sucking action independently of each other.



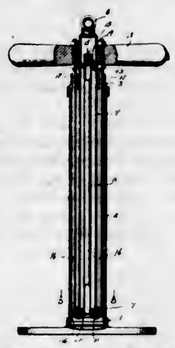
6. A pulsator for a milking machine, comprising a cylindrical casing, a support therefor, a piston valve mounted for reciprocation therein, means for conducting compressed air alternately to opposite ends of the piston valve, thereby causing a reciprocation of the latter, means for permitting the exhaust of compressed air from the cylindrical casing at the end of each stroke of the piston valve, an outlet pipe arranged to communicate with said casing adjacent one end thereof, said outlet pipe being adapted for connection with a coöperating portion of the milking machine, whereby a compressive action is transmitted to the latter when the piston valve is being moved in one direction, means for establishing communication between a vacuum pump and a coöperating portion of the milking machine when the piston valve is being moved in the direction opposite to that first named, thereby transmitting a sucking action to the last named coöperating portion of the milking machine, and means for regulating the rate of travel of the piston valve in its movement in one direction and for regulating independently the rate of travel of the piston valve in its movement in the opposite direction, whereby the duration of the compressive action and the duration of the sucking action can be regulated at will.

7. A pulsator for a milking machine comprising a cylindrical casing, a piston valve mounted for reciprocation therein, said piston valve being provided with a longitudinal groove in its surface, the outer end of said groove being spaced from the end of the piston, means for conducting compressed air alternately to opposite ends of the piston valve, thereby causing a reciprocation of the latter, means for permitting the exhaust of compressed air from the cylindrical casing at the end of each stroke of the piston valve, means for conducting compressed air to a coöperating portion of the milking machine when the piston valve is being moved in one direction, thereby transmitting the compressive action to the coöperating portion of the milking machine, an inlet pipe arranged to communicate with the longitudinal groove in said piston when the latter is being moved in the direction opposite to that first named, a second pipe arranged to also communicate with said groove when the piston is being moved in the last named direction, said last named pipe being adapted for connection with a coöperating portion of the milking machine, whereby a sucking action is transmitted to the last named coöperating portion of the milking machine when the piston valve is being moved in the last mentioned direction, means for regulating the rate of travel of the piston valve in its movement in one direction, and other means for regulating the rate of travel of the piston valve in its movement in the opposite direction, whereby the duration of the compressive action and the duration of the sucking action can be regulated at will independently of each other.

1,381,112. RUST-PROOFING COMPOSITION. WALTER R. EMIG, Toledo, Ohio, assignor of one-half to Harry S. Bergen, Toledo, Ohio. Filed Aug. 5, 1918. Serial No. 248,456. 2 Claims. (Cl. 134—51.)

1. A rust proofing compound comprising a solution of gilsonite and kauri nubs mixed with asbestine, lamp black, lithopone, black oxid of manganese and a mixture of phosphoric acid and iron filings.

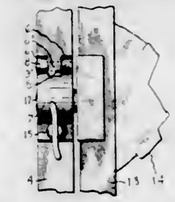
1,381,113. SIDE-FRAME ARRANGEMENT. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,222. 10 Claims. (Cl. 105—221.)



4. In combination, a truck side frame having tension and compression members joined to each other, a journal box receiving flange with an elongated slot therein below the connection between said tension and compression members whereby the securing bolt may be passed through said opening at an inclined angle to avoid the point of connection between said tension and compression members, and a journal box receiving said bolt in an inclined position, after which the bolt and box may be moved into normal position.

1,381,114. MEMORANDUM ATTACHMENT FOR ALBUMS. ULYSSES VICTORIA GARRED, Louisa, Ky. Filed Oct. 7, 1919. Serial No. 329,133. 3 Claims. (Cl. 40—18.)

3. In a device of the type described, a photograph and its mount, a memorandum-tablet inserted therebetween and having a transversely creased member in a continuous piece therewith, whereby as said tablet is moved inwardly, said transversely creased member will fold upon itself intermediate said mount and said memorandum-tablet and wedge said tablet in secured position.



1,381,115. PUMP. ALOIS GASSENHUBER, Jr., South Milwaukee, Wis. Filed Oct. 19, 1920. Serial No. 417,895. 2 Claims. (Cl. 230—27.)

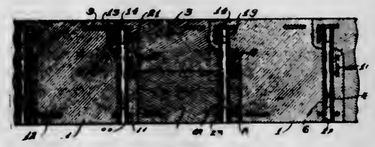
1. A compound pump comprising an air intake cylinder having upper and lower heads, a compression open ended cylinder in telescopic union with the intake cylinder, the same having one end extended through the cylinder head, means for locking the compression cylinder in its distended working position with relation to the intake cylinder, a hollow reciprocative piston rod mounted in the compression cylinder, a valve head at its lower end engageable with the intake cylinder walls, a check valve control head carried at its upper end engageable with the compression cylinder walls, longitudinally disposed tie rods carried by the lower piston rod head, the same extending through the upper head of the intake cylinder and actuating means connecting the rods.

1,381,116. ADJUSTABLE WINDSHIELD-SUPPORT. EDWARD W. GOODWIN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 17, 1919. Serial No. 304,971. 3 Claims. (Cl. 296—92.)

3. In a wind shield supporting device for motor vehicles, an upright supporting stanchion having a seat formed therein and extending transversely from one side to the other thereof, oppositely located recesses formed in the sides of said stanchion at the rear side thereof and which recesses are arranged above said seat, and a lug located between said recesses; a latch member having lugs at one end spaced apart from one another and adapted to lie within the recesses aforesaid, and a seat so disposed as to register with the seat in said stanchion; a screw extending through said lugs and whereby said latch member is pivotally secured to said stanchion; a clamping screw in

engagement with said latch member adjacent the free end thereof and whereby said free end may be drawn toward said stanchion; a frame member; and a trunnion carried by said frame member and having an enlarged circular head, and which head is adapted to lie within the seats aforesaid in said stanchion and latch member.

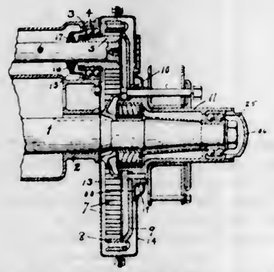
1,381,117. LICENSE-INDICATOR FOR MOTOR-VEHICLES. MATTHEW J. GORMAN, Ottawa, Ontario, Canada. Filed Nov. 3, 1920. Serial No. 421,515. 3 Claims. (Cl. 40—132.)



1. As a new article of manufacture, the herein described vehicle license indicator, comprising a casing formed with top, base and side walls, said walls having their edge portions bent over to form channels, a number bearing plate disposed in one of said channels, a closure plate detachably connected to the rear part of the casing, angle members secured to the bottom of the casing, angle members connected to said casing for holding the back plate in position thereon and means for connecting said angle members to said casing.

1,381,118. METHOD OF MAKING INSULATING COMPOSITION. OSCAR GERLACH, Danville, Ill. Filed June 22, 1917. Serial No. 176,277. 4 Claims. (Cl. 106—18.)

4. The method of making an insulating composition including mixing infusorial earth with water to form a paste, incorporating a binder therewith, then adding separately solutions of a carbonate and a weakly dissociated acid to generate gas through the mass.



1,381,119. REINFORCED BLOCKS AND INTERLOCKING MEANS THEREFOR. CORNELIUS G. HASTINGS, Glendale, Calif. Filed June 24, 1918. Serial No. 241,515. 5 Claims. (Cl. 61—45.)

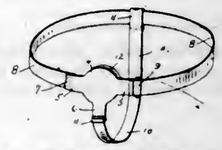
1. In a sectional structure the combination of a pair of adjoining blocks having overlapped end portions, an-

other block arranged in staggered relation at the side of said pair of blocks and having a portion thereof overlapping the overlapped portions of the pair of blocks, and a locking member connecting the overlapped portions of the pair of blocks and said other block.

1,381,120. OIL-RETAINER. ROGER W. HASTINGS and CLARK W. PARKER, New York, N. Y.; said Hastings assignor to said Parker. Filed Sept. 22, 1920. Serial No. 411,893. 6 Claims. (Cl. 74—7.)

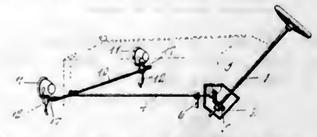
2. In combination, a wheel hub having a circumferential rib, an annular oil receptacle surrounding the hub, a ring secured to the inner side of one wall of the receptacle concentric with the hub, and a metal finger mounted on said ring and engaging said rib.

1,381,121. BELT-BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn. Filed Nov. 22, 1920. Serial No. 425,753. 2 Claims. (Cl. 24—194.)



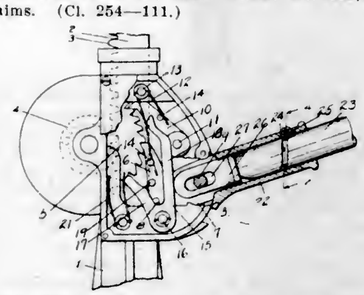
1. A belt buckle, comprising a main body portion including two downturned side bars, each of said bars having a longitudinal slot toward its rear end, two transverse cross bars connecting the downturned side bars at their front and rear ends, a gripping slide having a slot near its forward end, two oppositely positioned substantially flat ears near the rear end and at opposite edges of said gripping slide, the length of said ears being less than the length of said slots, said ears standing in said slots and supported by the upper and lower edges thereof to hold said gripping slide in position at the underside of the main body, said slide having a gripping portion arranged to co-act with the transverse bar at the forward edge of the main body to hold a strap therebetween.

1,381,122. BELT-BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn. Filed Mar. 28, 1921. Serial No. 456,079. 1 Claim. (Cl. 24—191.)



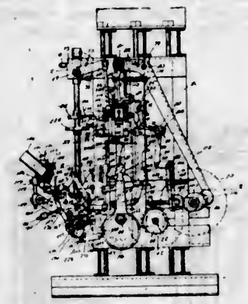
A belt buckle comprising an elongated front plate, two rearwardly directed flanges extending longitudinally of the same at the upper and lower edge thereof and forming a belt passage between them, a belt gripping plate pivoted at one end to said flanges near one end of the front plate and at the back of the belt passage, a lever having a cam shoulder coacting with the free end of the gripping plate, said lever being pivoted to said flanges near the opposite end of the front plate, and means for securing a belt to said lever whereby the strain of a belt thereon will hold the lever in the belt gripping position.

1,381,123. TRUSS. EDWARD G. HUTTERER, Sanborn, Iowa. Filed Jan. 24, 1920. Serial No. 353,678. 1 Claim. (Cl. 128—118.)



A trusspad including an elastic sheet, an elastic ring, circular in cross-section and adjacent the sheet, a thin circular web securing the sheet to the adjacent side of the ring whereby the ring may be rolled inwardly, a circular soft pad encircled by the ring and including inner and outer walls having their edges secured together to provide a pad which is thin at its periphery, the pad being so constructed and related to the ring that the intermediate portion of the pad extends approximately to the plane of the outer side of the ring, and the peripheral edge of the pad is positioned substantially midway between the sides of the ring, to permit inward rolling of the ring.

1,381,124. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. MANEY JACKSON, Emmett, Idaho. Filed Nov. 25, 1919. Serial No. 340,527. 1 Claim. (Cl. 240—62.)



In a dirigible headlight, a casing, a reflector pivotally mounted with relation thereto, an operating arm connected with one of the pivots of said reflector, an operating bar connected to said arm, a steering rod, a shaft operatively connected therewith, and a loose connection between said shaft and rod, said loose connection embodying slotted lugs rising from said shaft and lateral members on the bar loosely engaged in the slots of the lugs.

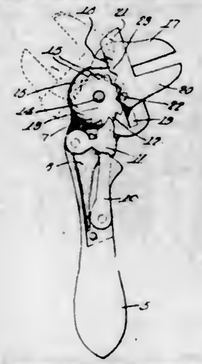
1,381,125. LIFTING-JACK. ALFRED H. JOHNSON, Niles, Mich., assignor to National-Standard Company, Niles, Mich. Filed Dec. 11, 1920. Serial No. 429,993. 5 Claims. (Cl. 254—111.)

1. In a lifting jack comprising a frame and lifting bar, the combination of a pair of alternately acting pawls provided with engaging springs, a pivotally mounted reversing member adapted to coact with said pawls, a spring arranged to actuate said reversing member, said spring being of greater strength than the engaging spring of said pawls, an actuating lever, one of said pawls being mounted on said lever, said lever comprising a hollow shank portion pivoted on said frame and a handle portion rotatively mounted in said shank, said handle being provided with a spirally disposed groove and said shank having a pin engaging said groove, whereby when the handle is rotated it is moved longitudinally within the shank, and a control member for said reversing member disposed in said shank for sliding adjustment therein to coact with said handle.

1,381,126. COUNTER-FORMING MACHINE. ALBERT F. JONES, Salem, Mass. Filed Feb. 27, 1918. Serial No. 219,353. 19 Claims. (Cl. 12—66.)

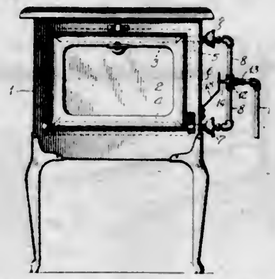
1. In a counter forming machine, male and female dies to shape the counter, and a wiper slidably arranged with respect to said female dies to form a flange on the counter, said female dies and wiper being movable as a unit to compress the flange between the wiper and male die.

14. In a counter forming machine a male die and a female die, the male die being movable into and out of the female die, means for delivering a blank in position to be acted on by the dies, means to move the male die into the female die to form the body of a counter between said dies, said means having provisions for rigidly supporting the male die in its forming position, and female die-moving means to subsequently move the female die toward the male die to compress the formed counter body.



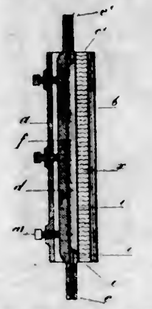
1,381,127. MAGAZINE FOR GUNS. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed May 23, 1919. Serial No. 299,193. 2 Claims. (Cl. 124—11.)

1. In a gun, the combination with a barrel, of a frame to which said barrel is attached, and a U-shaped strap secured upon one of said members, of a magazine communicating with the interior of said barrel and arranged outside said frame adjacent thereto, the forward end of said magazine slidably engaging between said U-shaped strap and said member to which said strap is secured.



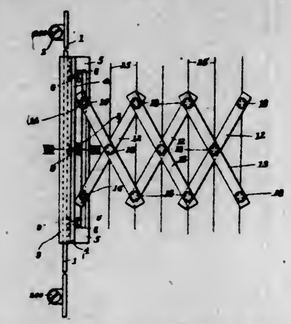
1,381,128. WRENCH. THURSTON MATHENY, The Plains, Ohio, assignor of one-half to O. F. Sarson and C. L. Orr. Filed Mar. 2, 1920. Serial No. 362,850. 1 Claim. (Cl. 81—127.)

A wrench including a body having a slotted end, a pin mounted therein, a member carrying a fixed jaw mounted upon said pin for oscillatory movement, said member being provided with a guideway and a slot, an L-shaped sliding jaw having its guiding terminal mounted in the guide of the fixed jaw to limit the movement of the sliding jaw, a disk mounted for limited rotation and provided with gear teeth on a portion of its periphery for engaging the sliding jaw whereby when the oscillatory member is moved the sliding jaw will be moved to and from the fixed jaw, ratchet teeth formed upon the remaining periphery of said disk, a pivoted locking detent mounted in the body and adapted to engage one of the ratchet teeth to lock the teeth against movement and in adjusted position, and a spring actuated thumb-piece also mounted



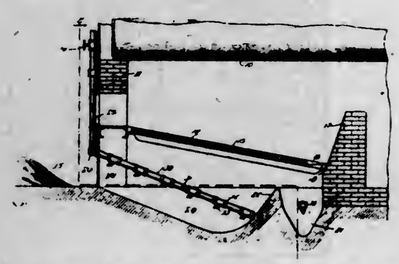
in the body for controlling the movement of the locking detent.

1,381,129. VALVE FOR OVENS. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1917. Serial No. 207,542. 1 Claim. (Cl. 251—109.)



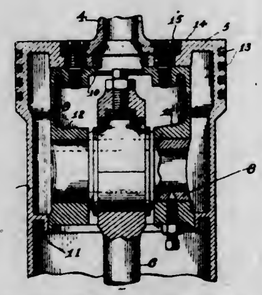
Means for preventing accidental actuation of a valve having more than one adjustment relative to a stove, comprising a resilient member, adapted to have one end thereof fixed to the stove adjacent said valve and its opposite end free to be frictionally engaged, and a valve member in alinement with and opposed to the usual handle of the valve and movable therewith, said resilient member having its free end disposed at a tangent to the arc in which the valve member moves so that said valve member may engage said resilient member from two directions and retain said valve handle in adjusted position.

1,381,130. CASE FOR STEAM-BOILER LEVELS. LEONARDO MOSMIERI, Florence, Italy. Filed Feb. 14, 1918. Serial No. 217,281. 3 Claims. (Cl. 73—54.)



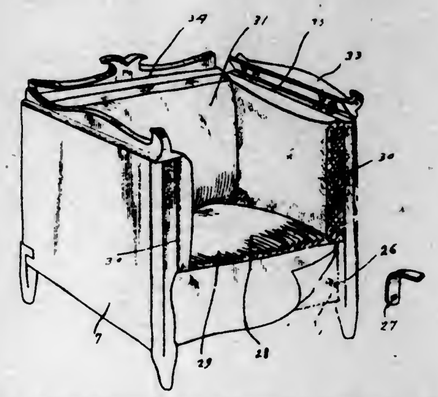
1. A water gage comprising a conduit, a glass plate, and a casing provided with means for supporting said glass plate only along its longitudinal edges.

1,381,131. MARKING-TOOL. BENJAMIN MOSS, New York, N. Y. Filed July 26, 1920. Serial No. 398,876. 13 Claims. (Cl. 33—192.)



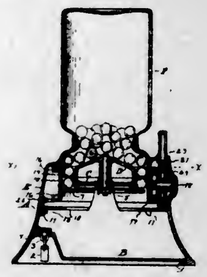
1. In a marking tool, the combination with a guide rail, of a carriage mounted to slide on said rail, lazy-tongs carried by said carriage and extensible in a direction transverse to the guide rail, and marking devices on said lazy-tongs.

1,381,132. ASH-REMOVER. SAMUEL B. MOTT, Noblesville, Ind. Filed Oct. 22, 1919. Serial No. 332,537. 5 Claims. (Cl. 110—165.)



3. A furnace having a pit, a pipe parallel to the floor of said pit and having nipples inclined toward one end of said pit and toward and at an oblique angle to the bottom thereof, and means to admit steam under pressure to said pipe and nipples to blow out the material in said pit.

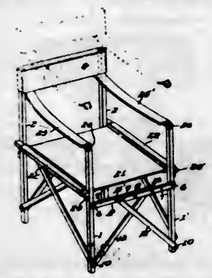
1,381,133. ENGINE AIR-COMPRESSOR. JAKOB MÜLLER, Veltheim, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 18, 1917. Serial No. 207,767. 7 Claims. (Cl. 74—108.)



1. In an air compressor, the combination with a stepped trunk piston and the operating connecting rod thereof, of a connection member located centrally of the piston structure at the junction of the large and small diameters thereof and forming the support for the piston pin, and means accessible from the cylinder head side of said trunk piston for detachably securing said connection member thereto.

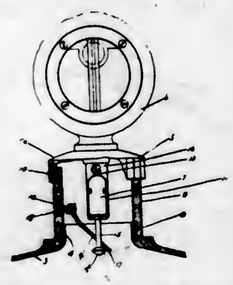
1,381,134. COMBINATION ARTICLE OF FURNITURE. IWAN OSTAFIJCHUK, Fort William, Ontario, Canada. Filed Aug. 9, 1920. Serial No. 402,500. 3 Claims. (Cl. 155—46.)

1. A combination article of furniture comprising a side frame, side members, a sectional back hinged to the side members, the bottoms of said side members being telescopic, bars slidably mounted in the transverse member of the frame and connected to said telescopic members, and means for simultaneously moving the side members and the transverse member to form a bed frame.



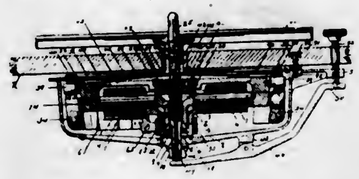
1,381,135. VENDING-MACHINE. VICTOR E. RANDALL, Battle Creek, Mich., assignor to Silas A. Miller, Battle Creek, Mich. Filed June 5, 1919. Serial No. 302,051. 5 Claims. (Cl. 211—8.)

1. In a vending machine, the combination of a base having an inturned rim partially about its lower edge, a hasp eyelet above said lower edge on the opposite side of said base, a removable bottom conforming in outline to the inside of said base adapted to rest on said inturned rim, an opposite side of said bottom curving upwardly and having an aperture engaging over said eyelet, and a padlock engaging said eyelet within the open space between the base and the upwardly-curving portion of said bottom.



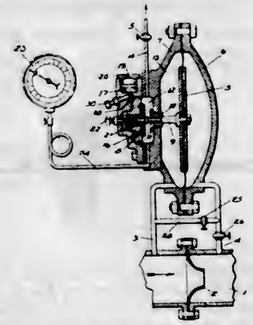
1,381,136. FOLDING CHAIR. ALBERTO LEITE RIBEIRO, Camden, N. J. Filed Jan. 3, 1921. Serial No. 434,413. 8 Claims. (Cl. 155—140.)

1. A device of the class described comprising when in unfolded condition a plurality of vertically extending uprights located at the corners of the device, cross members extending horizontally in opposite directions between each pair of adjacent uprights, each of said members being pivoted adjacent its outer end to one of said uprights and having its inner end beveled diagonally downward, a pivot connecting said members, and a pair of struts, each member of the pair being pivoted near its lower end to



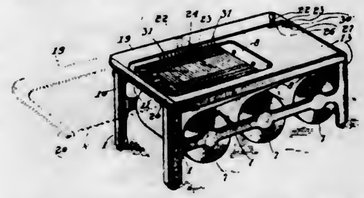
one of said uprights and near its upper end to one of said cross members and each strut being in coöperative engagement with the beveled end of another of said members to support said member in horizontal position.

1,381,137. CONTAINER-CLOSURE. EDWIN G. RUST, Sioux City, Iowa. Filed Sept. 14, 1920. Serial No. 410,304. 3 Claims. (Cl. 220—39.)



3. An attachment for a container having a threaded neck, and a closure adapted to be screwed on to the neck and having a central depending part, comprising a tube adapted to be screwed onto the neck, and threaded to receive the closure, a clamp to be secured to said part and having a central depending bolt, a slotted arm pivoted to the tube to oscillate vertically, and through which the bolt passes and a stop on the bolt below the arm.

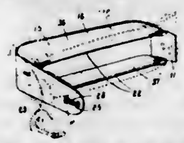
1,381,138. ELECTRIC MOTOR FOR TALKING-MACHINES. JAMES T. SIBLEY, Newark, N. J. Filed June 19, 1917. Serial No. 175,565. 13 Claims. (Cl. 171—222.)



9. In an electric motor, the combination of a rotor and a stator, said stator comprising two pairs of field magnets, each pair being diametrically opposite, and both pairs radially arranged from a common center, an annular sectional circuit interrupter having its alternate sections connnected respectively to said pairs of magnets, a brush carried by said rotor in contact with said interrupter, and two separate sources of electrical energy, each source connnected in circuit with a pair of said magnets the corresponding section of said interrupter and said brush.

1,381,139. ELASTIC-FLUID-PRESSURE MULTIPLIER. CHARLES H. SMOOT, South Orange, N. J., assignor to Rateau Battu Smoot Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed June 22, 1920. Serial No. 390,919. 6 Claims. (Cl. 137—78.)

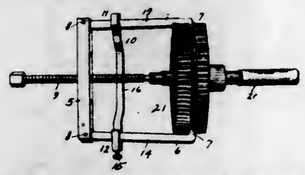
4. In an elastic fluid pressure multiplier two diaphragms interconnected the first diaphragm being subjected to the difference of pressure of the flow of fluid passing through an orifice interposed in the path of its travel and the second diaphragm subjected to the pressure of a fluid controlled by a valve operated by the first diaphragm.



1,381,140. AUTOGRAPHIC REGISTER. WILLIAM C. SMITH, Chicago, Ill. Filed Dec. 15, 1919. Serial No. 344,897. 25 Claims. (Cl. 281—11.)

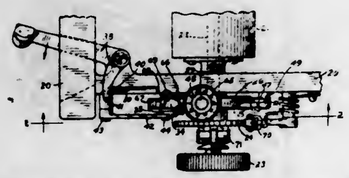
1. An autographic register employing perforated form strips comprising a reciprocating severing blade and operating means therefor, and means carried by said blade for engaging holes and feeding out forms.

18. In an autographic register employing perforated form strips, teeth in normal engagement with form holes and means for moving the same forwardly for feeding engaged forms, bearings for form rolls from which said strips are unwound, upwardly and rearwardly extending surfaces leading from said bearings, roll journals normally resting in said bearings adapted to roll up said surfaces when undue tension is brought to bear on said strips, and journal guideways leading to said bearings from the rear of the register to facilitate insertion and removal of the rolls.



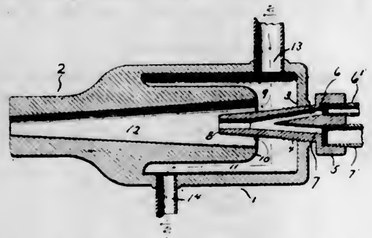
1,381,141. SLIP-COVER FOR MOTOR-VEHICLE TOPS. LYLE K. SNELL, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 2, 1917. Serial No. 151,887. 8 Claims. (Cl. 296—136.)

1. A slip cover for vehicle tops or the like comprising a band forming an end and side portions, top and bottom portions secured entirely around three side edges thereof



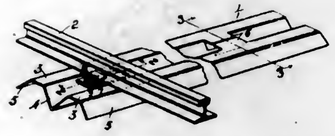
to said band and each of which top and bottom portions is formed full along its free edge, and means for gathering the fullness of said top and bottom portions toward said band at the sides adjacent the free edges thereof whereby said band portion may be regularly arranged therearound.

1,381,142. GEAR-PULLER. JOSEPH H. STALEY, Columbus, Ind. Filed July 28, 1920. Serial No. 399,505. 2 Claims. (Cl. 29—85.)



1. In a device for the purposes specified, a head, a pair of jaw-bars pivoted to the ends of the head, said jaw-bars having inturned end hooks, a screw-bolt passing through a threaded hole in the head intermediate of the jaw-bars, and a clamp-bar having end hooks in which the respective jaw-bars are received and a set-screw terminating outside of the clamp-bar and passing through one of the hooks into contact with a jaw-bar to draw the jaw-bars together against the work.

1,381,143. MICROMETER LINE-SPACING ADJUSTMENT FOR WRITING-MACHINES. PHILO B. TINGLEY, New York, N. Y. Filed Feb. 2, 1920. Serial No. 355,884. 12 Claims. (Cl. 197—114.)

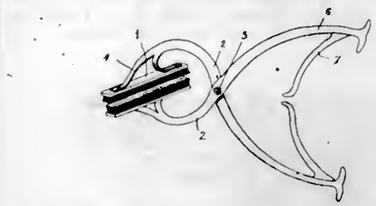


1. A micrometer line spacing adjustment for writing machines comprising a pinten, a shaft therefor, a spacing device thereon, clamping means uniting the shaft and spacing device, a spacing lever, means for setting the spacing device for a regular space or a multiple thereof and a scroll wheel thereon for altering said regular space after setting and capable of setting an irregular space in said setting device.

1,381,144. BURNER FOR GAS AND OIL. CORNELIUS P. VALLELY, Bradford, Pa. Filed June 3, 1919. Serial No. 301,469. 3 Claims. (Cl. 158—73.)

2. In a device of the character described a combined oil and gas burner, comprising a cylindrical formed outer shell having an air-chamber therein, an internally passaged boss formed integral with one end of said shell extending into said air-chamber forming an annular space intermediate of said shell, a lateral ingress port adapted to admit air to said annular space, a single discharge two feed nozzle extending through said air space with its discharge end disposed within the passaged boss, arranged to project therethrough a plurality of fluids by the discharge from said nozzle.

1,381,145. RAIL TIE AND CLAMP. ORSON R. VAN SICKLE, Toledo, Ohio. Filed Mar. 14, 1921. Serial No 452,052. 5 Claims. (Cl. 238—82.)

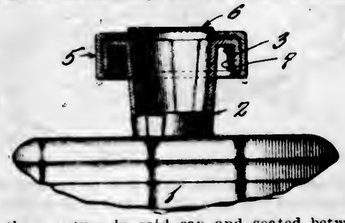


1. A railway tie having transversely spaced rail supporting portions, a depressed V-portion connecting the rail supporting portions, flanges depending from the outer edges of the rail supporting portions, and a wing projecting over the V-portion from the inner edge of one of the top portions.

1,381,146. BELT-BUCKLE. OEL E. WARDNER, New Britain, Conn., assignor to Traut & Hine Mfg. Co., New Britain, Conn., a Corporation of Connecticut. Filed Nov. 22, 1920. Serial No. 425,733. 1 Claim. (Cl. 24—191.)

In a belt buckle, the combination of a front plate having rearwardly extending flanges along two opposite edges, a belt gripping roller having pivot pins fixed at opposite ends thereof, and located eccentrically thereto, and projecting into openings in said opposite flanges, a belt attaching lever having ears at its opposite edges located between the ends of said roller and the adjacent flanges and freely pivoted on said pivot pins, the belt engaging face of the roller being roughened, a shoulder on the roller arranged to be engaged by the belt attaching lever when the latter is swung back to positively rotate said roller to its belt freeing position.

1,381,147. HAIR-BRUSH. EDWARD WELLINGTON, Port Coquitlam, British Columbia, Canada. Filed Aug. 9, 1920. Serial No. 402,480. 2 Claims. (Cl. 15—29.)

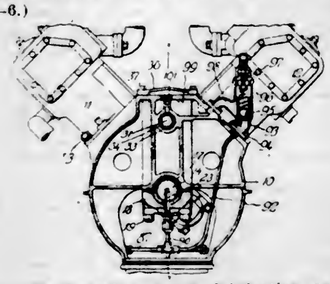


1. A hair brush comprising a pair of ogee levers pivoted intermediate their ends, the shorter arms of the levers each having two prongs lying in a single plane in the general direction of the levers, brushes connected to said prongs, and spring members carried by the longer arms of the levers and converging toward each other.

1,381,148. CONTAINER. FREDERICK WESTERBECK, St. Louis, Mo. Filed Sept. 25, 1916. Serial No. 121,999. 3 Claims. (Cl. 220—27.)

1. A container comprising a sheet metal neck having an outwardly jutting horizontal top flange and an annular

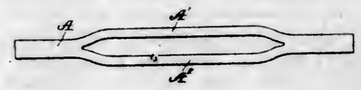
externally screw threaded lip extending downwardly from said top flange, an apertured cap comprising an annular top flange overlying the horizontal top flange of said neck and an internally screw threaded flange fitted to said externally screw threaded lip, and a soft metal sealing disk



closing the aperture in said cap and seated between the horizontal top flange of said neck and the top flange of said cap, one of said top flanges having a circular groove therein and the other top flange having a circular projection for forcing a portion of said soft metal sealing disk into said groove.

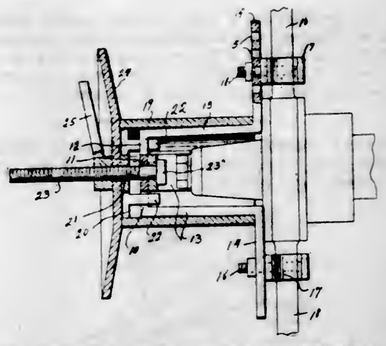
1,381,149. REINFORCED TRUNK-EDGE CONSTRUCTION. GEORGE HENRY WHEARY, Racine, Wis. Filed June 23, 1919. Serial No. 306,021. 3 Claims. (Cl. 190—37.)

1. The combination with a trunk edge strip of material having a medial portion with inwardly extending spaced apart leg portions and outer terminal securing portions forming an elongated space of angular shape in cross section, of a reinforcing means therefor, consisting of a strip of material extending lengthwise into the space and having in cross section a medial resilient portion and inwardly extending spaced apart leg portions which closely engage corresponding parts of the trunk edge strip.



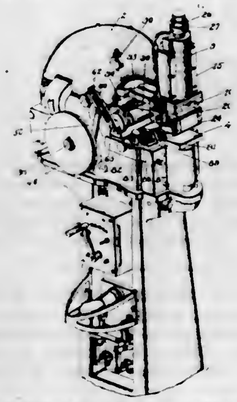
1,381,150. HYDROCARBON-MOTOR. D'ORSAY MCCALL WHITE, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 26, 1915. Serial No. 63,469. 8 Claims. (Cl. 184—6.)

5. In a hydrocarbon motor lubricating system, the combination with a common supply of lubricant under pressure, of a plurality of lubricant reservoirs or ducts, means for successively regulating the quantity and pressure fed to each reservoir or duct, and means for feeding said lubricant from said reservoirs or ducts to the various parts of the motor to be lubricated.



1,381,151. AUTOMOBILE-BUMPER. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 2, 1920. Serial No. 414,298. 1 Claim. (Cl. 293—55.)

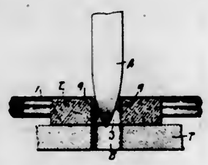
An automobile bumper impact member consisting of an integral flat bar, longitudinally rifted at the middle part of its length and spaced apart at the rift to form an upper and a lower impact bar; end portions beyond the



rifted and spread parts being reflexed rearwardly and extended inwardly behind the under part to form resilient end loops.

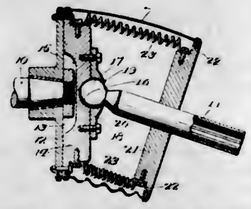
1,381,152. DETACHABLE CABLE-DRUM FOR SPOKED WHEELS. MONROE W. WILSON, Temple, Okla. Filed Aug. 7, 1920. Serial No. 401,942. 4 Claims. (Cl. 242—95.)

2. In a detachable cable drum for spoked wheels, a yoke embodying radial arms provided with resilient angularly disposed diverging portions, the ends of said diverging portions being provided with radially disposed feet each provided with a longitudinally adjustable portion adapted to engage intermediate the spokes of the wheel and interlock therewith, a cuff adapted when shifted longitudinally of said angular portions to contract the same to cause said spoke engaging portions to wedge intermediate the spokes, and means connecting said yoke and said cuff for causing said member to shift longitudinally of said yoke.



1,381,153. STAMPING-MACHINE. HENRY W. WINTER, Methuen, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1917. Serial No. 157,037. 12 Claims. (Cl. 41—7.)

1. A stamping machine, having, in combination, a movable die having strip guiding means, a supply reel and a feed roller rotatable about fixed axes located at one side



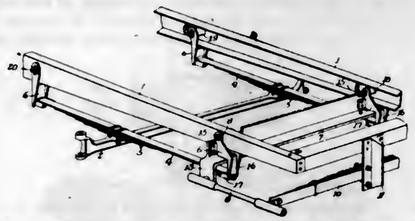
of the path of the die, whereby a strip of stamping medium may be looped about the die between the reel and feed roller.

1,381,154. MEANS FOR FASTENING SOFT MATERIAL TO SHEET METAL. EDWARD L. WOOD, Detroit, Mich. Filed May 9, 1919. Serial No. 296,015. 2 Claims. (Cl. 91—62.5.)

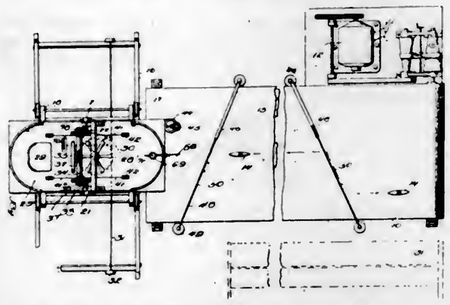
1. In combination, a sheet of metal and a perforated swab of relatively soft compressed material, said sheet of metal having a series of integral tongues struck up within the limits of the perforation in the swab and bent over in hook-like form into the body of the swab.

1,381,155. UNIVERSAL JOINT. JOSEPH P. WOOD, Columbus, Ga. Filed Nov. 8, 1920. Serial No. 422,652. 2 Claims. (Cl. 64—96.)

1. A universal joint comprising a socket member adapted for attachment to a shaft section, a shaft section having a ball head engaged in the socket of the socket member, a retaining member secured to the socket member and engaging with said ball head, a disk secured to the second-named shaft section, coil springs secured to and extending between the periphery of the disk and the socket member, and a flexible oil retaining sleeve secured to and extending between the disk and the socket member and inclosing the joint.



1,381,156. INKING-PAD. ALONZO WOODRUFF, Auburn, N. Y. Filed Sept. 29, 1920. Serial No. 413,554. 5 Claims. (Cl. 91—54.5.)



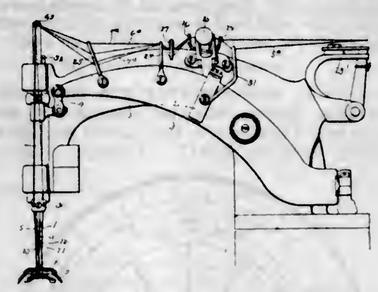
1. An inking pad comprising a base block, an ink-saturated body resting on said block, a relatively thin ink-impervious layer on the upper face of the ink-saturated body, and a fabric covering across the upper face of the impervious layer and attached to the base block.

1,381,157. MOTOR-VEHICLE SPRING SUSPENSION. HENRY A. BABCOCK, Evanston, Ill., assignor, by direct and mesne assignments, to The Babcock-Gallagher Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 18, 1917. Serial No. 143,160. 19 Claims. (Cl. 267—19.)

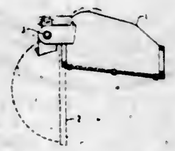
3. An automobile chassis comprising a frame, having a transverse member, a pair of links on each side of said frame, a pair of longitudinally disposed springs each connected at opposite ends to a pair of said links, a transverse spring connected at its middle portion to said transverse member leaving its ends free to be deflected, and links connecting said free ends to said first springs.

1,381,158. BOMBER'S TRAINING DEVICE. EDWARD H. BARRY, Newton, Mass., assignor to The Government of the United States. Filed Feb. 18, 1919. Serial No. 277,735. 8 Claims. (Cl. 244—1.)

1. In an aviator's training device, the combination of means for moving the same, an aviator's support mounted thereon, and means for causing the support to simulate airplane movements with a moving target, means for moving the target toward the device, and means on the support for controlling the dropping of bombs onto the target.



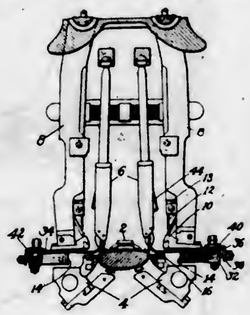
1,381,159. AMALGAMATING SLUICE-BOX. JOHN P. BEAUPRE, Butte, Mont., assignor of one-half to George E. Smiley, La Junta, Colo. Filed Sept. 22, 1920. Serial No. 412,046. 4 Claims. (Cl. 83—67.)



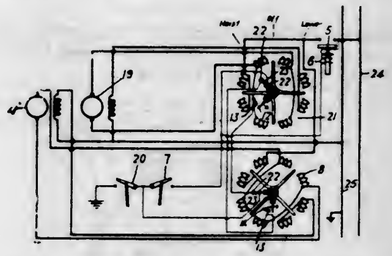
1. An amalgamating device including a sluice box, transversely arranged amalgamating plates disposed in the box, at suitable intervals, a plurality of series of diagonally arranged deflector ribs, said series being disposed between the amalgamating plates, the sluice box having a plurality of transversely extending series of mercury pits between the plates and ribs, the ribs of one series extending in a direction opposite to the ribs of the adjacent series, and tangentially to one side of the pits, and rotating deflectors floatable on the mercury in said pits.

1,381,160. THREAD-CONTROLLING MECHANISM FOR SEWING-MACHINES. JOSEPH BERGER, Jr., Utica, N. Y., assignor to Union Special Machine Company, Utica, N. Y., a Corporation of New York. Filed Dec. 30, 1916. Serial No. 139,825. 2 Claims. (Cl. 112—242.)

1. The combination of a needle bar, a plurality of needles carried thereby, a needle lever, thread eyes carried by the needle lever, a fixed thread arm having thread eyes for the needle threads, said arm being inclined to the plane of the needle lever whereby the movable thread eyes carried by the needle lever will pull off and give up different amounts in the respective threads.

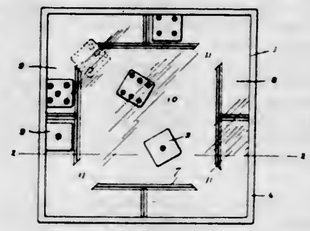


1,381,161. HEADLIGHT-REFLECTOR. JOSEPH BESCH, Albany, N. Y. Filed July 15, 1919. Serial No. 310,960. 2 Claims. (Cl. 240—41.)



1. In a device of the character described, a body or hood curved to conform to the shape of the headlight, projecting forward from said headlight and secured thereto by means of adjustable clamps in such a manner as to permit varying the angle which said hood makes with the horizontal; a light mounted inside said hood; the inside of said hood being a reflecting surface and said hood being so shaped that the light rays, either from said light or from the headlight, will be reflected backward downward and sidewise; and a plane of glass curved to fit the lower rim of said hood and closing the device.

1,381,162. MACHINE FOR WORKING UPPERS OVER LASTS. URBAIN J. BOUCHARD, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 18, 1918. Serial No. 263,031. 19 Claims. (Cl. 12—4.)

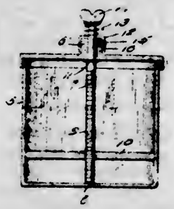


1. In a machine of the class described, the combination with a shoe positioning means, of a wiper support mounted for operative movement toward the shoe, a wiper so mounted on said support as to permit it to move relatively to the support in directions transverse to the plane of the shoe bottom and also to permit the support to move relatively to the wiper in the direction of the shoe if the wiper is held back by the shoe materials, yieldable means on the support to force the wiper forwardly toward the shoe and also to depress its overwiping portion in a normal initial relation to the plane of the shoe bottom, and means constructed for use at the will of the operator to position the wiper in such different relation to the plane of the shoe bottom as to decrease the resistance to operative movement of the wiper over the shoe.

1,381,163. MOTOR-CONTROL SYSTEM. ADDISON E. BOGGS, Pittsburgh, and AUGUST HECKMAN, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 6, 1915. Serial No. 26,319. 13 Claims. (Cl. 172—152.)

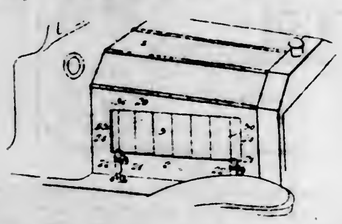
1. In a motor-control system, the combination with a pair of electric motors and a controller for each of said motors, of electrical means for connecting said controllers, whereby each of said controllers is inoperative when the other controller is in an operative position, and means for permitting reversal only of either motor when the other motor's controller is in an inoperative position.

1,381,164. GAME. EDWARD G. BRADBURY, Columbus, Ohio. Filed Aug. 3, 1920. Serial No. 400,962. 3 Claims. (Cl. 46—41.)



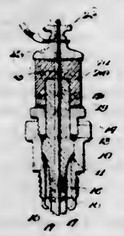
3. In a game apparatus of the class described, a relatively shallow receptacle, ribs provided in the bottom of said receptacle, said ribs serving to divide the receptacle into inner and outer spaces, counter members of cubical form arranged to be transferred from one of said spaces to the other against the operation furnished by said ridges, and said counter members being capable of passing through gaps formed between adjacent ends of said ridges.

1,381,165. CONTAINER. ARTHUR S. BRONSON, El Paso, Tex. Filed Mar. 6, 1920. Serial No. 363,908. 1 Claim. (Cl. 221—79.)



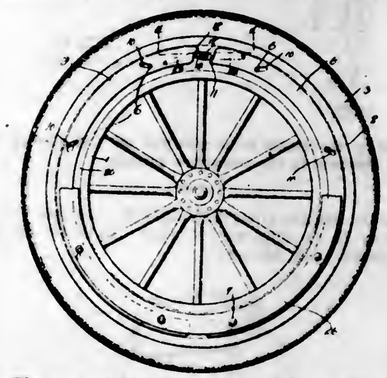
In a device of the character described, the combination with a container, a neck extension thereon, a cap slidably mounted upon said neck extension, a threaded stem controllable from the exterior of the receptacle, a spring acting upon said closure cap and normally tending to close the same, a follower, there being a port leading from the interior of the receptacle through the neck extension of the underside of the closure cap and a port opening at the

side of said neck extension and adapted to be uncovered by the movement of the closure cap under the action of the



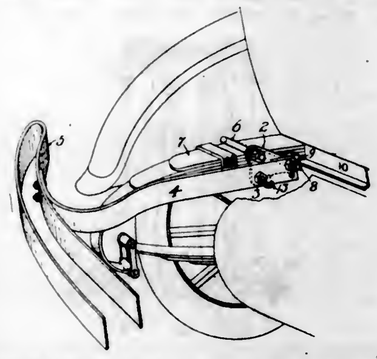
pressure created within the container by the movement of the follower.

1,381,166. AUTOMOBILE-HOOD. CHRIST T. CHRISTIANSON, Brooklyn, Md. Filed July 9, 1920. Serial No. 395,067. 1 Claim. (Cl. 180—69.)



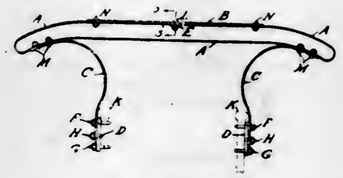
In an air control for automobile hoods, a hood member having an elongated air passage, a series of shutter blades pivotally mounted on the inside of the hood crosswise of the opening therein and to fold flatwise upon one another, a control lever to which all of the blades are individually pivoted, the said control lever including an inwardly projected angle member; in combination with means for adjusting the shutter blades to their partially or wholly closed positions, the said means comprising a horizontal bearing plate having a sleeve-like head portion adapted for being fitted through the vehicle dash and having ratchet teeth, and a pull lever slidably mounted on the bearing plate to work through the sleeve-like head thereof, the said lever including a crank-like member with which the angle member on the control lever slidably interlocks, the said pull lever having a ratcheted edge for interlocksably engaging the ratchet teeth on the bearing member whereby to lock the control lever to the adjusted position.

1,381,167. SPARK-PLUG. ADOLFO DE CLAIRMONT, Toledo, Ohio, assignor to The Carbo-Gas Company, Toledo, Ohio. Filed Sept. 13, 1919. Serial No. 323,630. 1 Claim. (Cl. 123—169.)



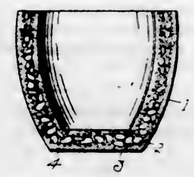
In a spark plug, the combination of a shell having a ground electrode depending from the lower end thereof, an insulator fitting through the shell, a main electrode carried by the insulator, and a metallic band snugly fitting around the lower end portion of the insulator wholly within the lines of the shell and next to the inner wall thereof in spaced relation to said wall to define an intermediate air gap between the band and the shell throughout the length of the band, there being an intermediate electrode depending from said band to coöperate with the main and ground electrodes below the lower end of the shell.

1,381,168. DEMOUNTABLE RIM FOR VEHICLE-WHEELS. EDWARD O. COATS, Postoak, Mo., assignor of one-half to Griffin Leroy Hall, Leeton, Mo. Filed Nov. 5, 1917. Serial No. 200,417. 4 Claims. (Cl. 301—27.)



1. The combination with a wheel, and a demountable rim mounted upon the wheel felly, of a retaining element comprising a pair of substantially semi-circular sections, two of the proximate ends of said sections containing projections and being spaced apart, and adapted to be moved toward and away from each other for contraction and expansion, a spreader pivotally mounted intermediate said ends, and projecting laterally from the wheel, links pivotally connecting said spreader with each of said proximate ends, said spreader adapted to abut against the proximate ends to be rotated, to force said ends apart to expand the rim, said rim when expanded in such position having the pivoted links connected to said spreader past dead center, and the ends of the spreader abutting the projections on the sections.

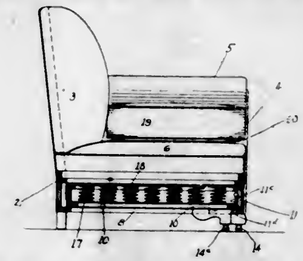
1,381,169. ATTACHING DEVICE FOR AUTOMOBILE-BUFFERS. THEODORE M. COX, Albany, N. Y. Filed Feb. 15, 1921. Serial No. 445,080. 1 Claim. (Cl. 293—55.)



An attaching device for automobile buffers comprising a plate adapted to be interposed between the supporting member of the buffer and a spring of the automobile, said plate having a projection on the end thereof adapted to contact with a ledge on the automobile frame, and a projection carrying a set screw formed on the side thereof, said screw so positioned that it is adapted to contact with the underside of the automobile spring when the plate is in position; a bolt adapted to fasten said plate to said buffer supporting member at a point intermediate the ends thereof; and a U bolt adapted to embrace said spring and fasten said plate and the end of said supporting member securely against said spring.

1,381,170. AUTOMOBILE-BUFFER. THEODORE M. COX, Albany, N. Y., assignor to Cox Brass Manufacturing Company, Albany, N. Y. Filed June 11, 1920, Serial No. 388,321. Renewed Mar. 3, 1921. Serial No. 449,501. 6 Claims. (Cl. 293—55.)

5. In an automobile buffer, an impact receiving member comprising a single piece of flat spring material formed into an elongated loop having rounded ends slightly curved in the plane of the loop sides, and a reinforcing strap joining the free ends of said loop; curved rearwardly extending resilient supporting members adjustably attached to said impact receiving member, attachment plates adjustably attached to the ends of said supporting members; a hook bolt extending through said supporting member and one end of said attachment plate, the hook end thereof adapted to engage with one of the flanges on a channeled side bar of an automobile frame; a hook-bolt extending through the other end of said attachment plate the hook end thereof adapted to engage with the other flange on said side bar; and nuts co-acting with said hook-bolts to clamp said attachment plates and said supporting members securely to the side bar of an automobile frame.

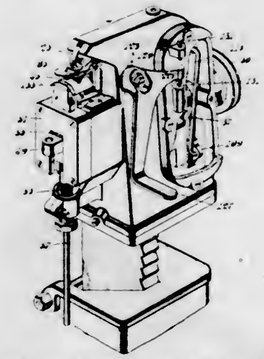


1,381,171. CRUCIBLE AND METHOD OF MANUFACTURE. WILLIAM A. DARRAH, Mansfield, Ohio. Filed Jan. 3, 1918. Serial No. 210,124. 6 Claims. (Cl. 25—156.)

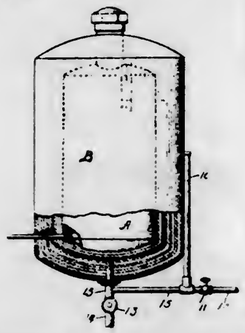
1. The process of making crucibles which consists in mixing finely ground inert refractory, coarsely ground inert refractory and a colloidal binder, adding fluid until the mixture is liquid, pouring into a porous mold capable of absorbing said fluid and, after removing the mold, baking the product.

1,381,172. DAVENPORT-BED. ABRAHAM DAVIS and NATHAN B. HELFMAN, Minneapolis, Minn. Filed Apr. 12, 1920. Serial No. 373,254. 6 Claims. (Cl. 5—46.)

3. The combination, with a frame, of a forwardly slidable bed extension therefor, a seat cushion for said frame, an extension cushion normally supported by said seat cushion and connected therewith to form a continuous upper bed surface when said extension cushion is tilted over upon said extension, said connection normally providing a gap between the forward portions of said cushions, for the purpose specified.

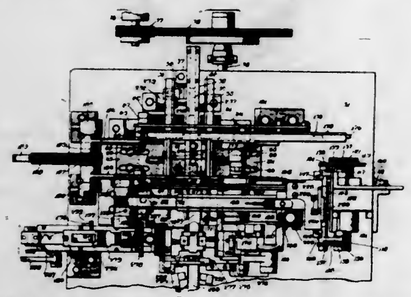


1,381,173. INLAID-TREAD TIRE. JOSEPH H. DWORK, Newark, N. J. Filed Mar. 14, 1919. Serial No. 282,681. 2 Claims. (Cl. 152—13.)



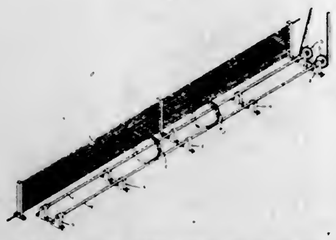
2. A tire casing including a fabric structure thickened toward the outer periphery, spaced circumferential ribs included in said thickened structure, with reinforcing means running longitudinally of the ribs; a covering of rubber or the like applied to the casing and thickened toward said ribs to include and conceal them, breaker strips applied to the casing between said ribs, and a tread structure applied to the breaker strips.

1,381,174. CHANNEL-FLAP-TURNING MACHINE. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 18, 1918. Serial No. 217,934. 18 Claims. (Cl. 12—30.)



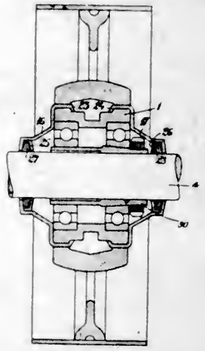
1. A machine of the class described, having, in combination, a support for a channeled sole, a hammer, a flap turner, means for moving the flap turner backward along the channel to raise and turn the flap, and means for moving the flap turner and the sole forward to present the turned flap to the hammer.

1,381,175. ANTIEXPLOSIVE AND NON-INFLAMMABLE GASOLENE-TANK. HERMAN C. ERICSSON, U. S. Army. Filed Feb. 14, 1919. Serial No. 277,119. 11 Claims. (Cl. 220—63.)



1. An expansible elastic packing tightly confined between two rigid metallic shells consisting of layers of puncture-closing rubber and bullet-wiping fibrous material, for the purpose set forth.

1,381,176. BOX-SLIDE-MAKING MACHINE. ARTHUR J. EVERS and HERBERT J. SAUVAGE, Chicago, Ill., assignors to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 25, 1920. Serial No. 412,779. 14 Claims. (Cl. 93—40.)

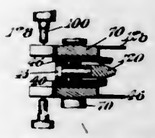


1. In a box-making machine of the character described, the combination of two forms, means to partially construct a duplex box member composed of a foundation strip and a cover strip on one of said forms, means to transfer such partially-completed member to the second form, and means to complete the construction of the member on said second form, substantially as described.

1,381,177. RIM-FINISHING MACHINE. GEORGE F. FISHER, Providence, R. I., assignor to The Revere Rubber Company, a Corporation of Rhode Island. Filed July 9, 1920. Serial No. 395,094. 3 Claims. (Cl. 91—60.)

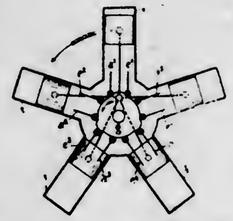
1. Apparatus of the class described comprising, spaced parallel driven shafts, bearings supporting said shafts at the ends and intermediately, said shafts being adapted to support and turn annular rims between their bearings, and having their entire length substantially free and unobstructed upwardly for the reception of a plurality of the rims.

1,381,178. BEARING FOR LOOSE PULLEYS. BENGT WIKTOR FJELLMAN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Aug. 28, 1919. Serial No. 320,427. 6 Claims. (Cl. 64—17.)



1. A bearing construction for loose pulleys, comprising roller bearings, a sleeve adapted to surround said bearings, and two housing caps each surrounding one end of the said sleeve and in turn adapted to be surrounded by the loose pulley.

1,381,179. APPARATUS FOR AND METHOD OF MAKING RECEPTACLES. MORRIS GERSON, Duluth, Minn. Filed Jan. 31, 1920. Serial No. 355,434. 4 Claims. (Cl. 18—56.)

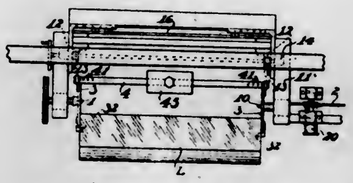


4. The herein described method of making a receptacle composed of a plurality of parts built up of material susceptible of subsequent shaping and fixing, embodying first, the shaping of the parts upon a form, placing the shapes thus formed into a mold, placing an expansive bag within the combined parts of the receptacle applying heat to the interior of the bag and subsequent pressure for the final shaping and fixing of the receptacle.

1,381,180. DUPLEX FASTENER-SETTING MACHINE. PERLEY R. GLASS, Brookline, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 24, 1916. Serial No. 99,556. 40 Claims. (Cl. 218—15.)

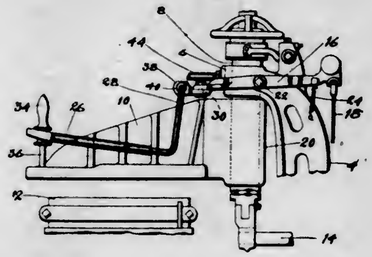
5. A duplex fastener setting machine having, in combination, a pair of punching plates having extended transverse surfaces and being arranged for movement in alined paths, a transversely movable punch holder disposed between the punching plates, a double ended tubular punch in the holder, and coöperating fastener inserting devices.

1,381,181. OPERATING MECHANISM FOR EXPLOSION-ENGINES. FRITZ GOCKERELL, Munich, Bavaria, Germany. Filed Feb. 26, 1920. Serial No. 361,482. 1 Claim. (Cl. 123—44.)



Control device for explosive motors with an uneven number of cylinders arranged in star formation, characterized thereby that the adjacently arranged inlet and outlet valves are provided in the same plane of rotation and are successively controlled by a single cam disk with successively provided singly stepped cams whose drive takes place with a decreasing number of revolutions.

1,381,182. AUTOMOBILE-BUMPER. OSCAR H. GOETZ, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 6, 1920. Serial No. 422,143. 5 Claims. (Cl. 293—55.)



1. In an automobile bumper designed for mounting laterally against the side bar of the vehicle to be served, in combination with an impact member, supporting arms each having longitudinally separated from each other a bolt hole and a longitudinally-extended slot; a mounting bracket adapted to be engaged with the spring shackle bolt of the vehicle, and having a slot corresponding to the slot of the supporting arm, and a second slot extending up and down at a distance from the first slot substantially agreeing with the distance between the bolt hole and the slot of the supporting arm; a bolt for taking through the corresponding slots of the arm and bracket respectively, to clamp said parts against the vehicle side bar, and a second bolt taking through the bolt hole of the arm and the second slot of the bracket for clamping said parts together.

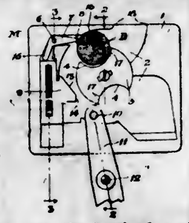
1,381,183. AUXILIARY LOG-SUPPORTING MEANS FOR CLAPBOARD-SAWING MACHINES. EDWIN M. GRAY, Everett, Wash. Filed Sept. 20, 1920. Serial No. 411,460. 7 Claims. (Cl. 143—125.)

1. An auxiliary dog for use with clapboard sawing machines comprising a member having centering means therein, a set of bolt-engaging members at one end thereof, and having means at its opposite end for the engagement of a spacing bar.

1,381,184. CUTTING-MACHINE. HENRY B. GREENOUGH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,374. 7 Claims. (Cl. 164—23.)

1. In a machine of the class described, a work supporting bed, a presser member movable over the bed and also toward and from the bed in pressure applying operations, a post for supporting the presser member, a machine frame having a bearing for said post, power means for moving the presser member, and a single manually controllable means for moving the presser member over the bed and for controlling said power means comprising a lever pivoted on the bearing for the post, and a handle member pivoted to said lever on a vertical axis at one side of the bearing and in such manner that it may move with the presser member.

1,381,185. MANUFACTURING OF INDIA-RUBBER SUCKERS PROVIDED WITH VALVE-PROJECTURES. HERMANN GRIMELMANN, Wallisellen, Switzerland. Filed Aug. 26, 1920. Serial No. 406,163. 2 Claims. (Cl. 18—58.)

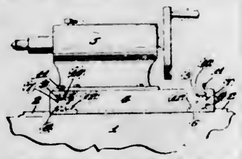


1. A method of manufacturing india rubber nipples provided with a valve projection consisting in repeatedly dipping a suitable core into a solution of india rubber until a hollow nipple with a valve projection is formed thereon, preliminarily vulcanizing the rubber upon the core after a suitable number of dippings, removing the nipple thus formed from the core, turning the nipple inside out, turning the valve projection inwardly, placing a suitable mold into the valve projection, vulcanizing the entire nipple, and finally cutting an aperture in the valve projection.

1,381,186. COIN-TESTING DEVICE FOR COIN-CONTROLLED MACHINES. ALBERT D. GROVER, New York, N. Y., assignor, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed Aug. 20, 1917. Serial No. 187,207. 8 Claims. (Cl. 194—100.)

1. In a coin-controlled machine, a casing provided with a coin-entrance slot and a coin-passage leading therefrom, a rotatable disk provided with a recess for receiving the deposited coin and carrying the same through said passage, and a pivoted pawl having a pointed end extending into said passage to enter the edge of a soft check in said coin disk and cause said check to be jammed between the coin disk and the opposite wall of said pas-

sage, said coin disk being reversely rotatable to bring the intercepted check back through the coin-entrance



slot, said pawl riding over the hard edge of a proper coin to allow the same to be carried into the machine.

1,381,187. BRIDGE FOR MUSICAL STRINGED INSTRUMENTS. ALBERT D. GROVER, New York, N. Y. Filed Aug. 14, 1918. Serial No. 249,788. 18 Claims (Cl. 84—308.)

1. A bridge for musical stringed instruments, consisting of a bar and a pair of end supports separate therefrom, said bar and said supports being provided with interlocking slotted portions, whereby said supports are locked against movement along said bar and against lateral tipping, certain of the slots in said slotted portions being of different depths to enable said bar to be supported at different heights.

1,381,188. MEANS FOR REDUCING FRICTION. JOHN B. GURY, St. Louis, Mo. Filed May 10, 1919. Serial No. 296,155. 6 Claims. (Cl. 74—87.)

1. The combination of a body having a slidable contact with a support, and a resilient antifriction bearing carrying the preponderance of the weight of said body to relieve the pressure thereof from said support.

1,381,189. ELECTRIC INSULATOR. EMIL HAEFELY, Basel, Switzerland. Filed Dec. 22, 1919. Serial No. 346,609. 3 Claims. (Cl. 173—318.)

2. An electrical insulator comprising a core of insulating material, metal caps at the ends thereof, said core being provided with a coarse screw thread, a number of insulating units provided with a corresponding internal coarse screw thread and screwed upon the screw thread of the core, smooth metal bushings at the ends of the insulating units for tight insertion into one another, substantially as described.

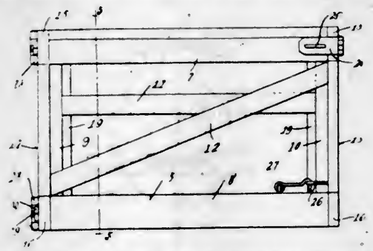
1,381,190. SAVINGS-BANK. CHARLES D. HENNINGER, Williamsport, Pa. Filed June 25, 1920. Serial No. 391,684. 1 Claim. (Cl. 232—4.)

A device of the class described consisting of a substantially flat elongated body having measurement indications on the exterior thereof, said body being hollow to receive and retain coins in edge to edge relation and said body having a slot through which the coins may be viewed to determine their combined length with the aid of said indications, the device thus functioning as both a ruler and as a bank, a closure for the body having measurement indications thereon to coöperate with those of the body, and means to insure application of the closure to a position with the said indications in coöperative relation.

1,381,191. ROLLER-BEARING. ALBERT J. HIGSON, Jersey City, N. J., assignor to The J. G. Wilson Corporation, a Corporation of Virginia. Filed Nov. 6, 1917. Serial No. 200,612. 4 Claims. (Cl. 74—87.)

1. A bearing of the class described comprising a body portion substantially T-shaped in cross-section and roller bearings pivotally secured in the web of said body portion.

1,381,192. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. WILLIAM J. HISS, New York, N. Y., assignor to Diamond Expansion Bolt Company, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1920. Serial No. 414,188. 1 Claim. (Cl. 248—36.)

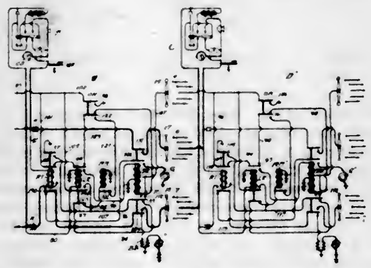


A new article of manufacture comprising an open bridle ring having one of its ends unsupported, its other end being bifurcated and provided with means to coöperate with a conduit or cable clamp.

1,381,193. SHIPPING-CRATE. LOUIS H. HOCKSPEIER, New Hampton, Iowa. Filed June 15, 1920. Serial No. 389,170. 2 Claims. (Cl. 217—48.)

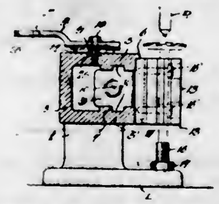
1. In a folding crate, side walls and end walls, each of the end walls having an inwardly extending frame contacting with the side walls, means for hingedly connecting one of the end walls to one of the side walls, bolts

carried by the opposite side wall, and adapted to extend through openings formed in the hinged end wall for securing the end wall thereto, and a removable end wall disposed within the opposite end of the crate.



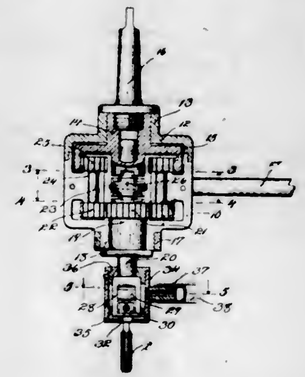
1,381,194. DILATOR. JOHN G. HOMAN, Steubenville, Ohio, assignor to Electrothermal Company, Steubenville, Ohio, a Firm composed of said John G. Homan, Steubenville, Ohio, and William J. Kirk, Follansbee, W. Va. Filed Jan. 17, 1920. Serial No. 352,058. 8 Claims. (Cl. 174—89.)

1. A dilator comprising a hollow casing having a transparent portion, means therein for emitting light, other means therein for emitting heat, and separate controlling means including separate circuits for each of said means.



1,381,195. TELEPHONE SYSTEM. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,244. 26 Claims. (Cl. 179—16.)

1. A telephone system including a subscriber's line, an automatic adding-type connector switch individual to said subscriber's line controlled over the two sides of the subscriber's line in series, a single row or level of bank contacts for said automatic switch, other subscribers' lines terminating in said bank contacts, subscriber-controlled means for said switch for connecting said first subscriber's line to any one of said other subscribers' lines, subscriber-controlled means for ringing the called substation, and automatic means for moving said switch to normal position.

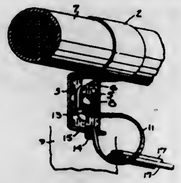


1,381,196. CHUCK. WILLIAM N. JOHN, Milwaukee, Wis. Filed Aug. 8, 1919. Serial No. 316,202. 1 Claim. (Cl. 77—62.)

A universal chuck comprising a supporting base, a normally vertical standard rising from the base, a normally horizontal elongated screw housing mounted on the standard and comprising parallel upper and lower plates, a side plate connecting the longitudinal edges of the upper and lower plates on one side thereof, the opposite side of the housing being open, and end plates connecting the ends of the upper and lower and side plates, a feed screw disposed in the housing parallel with the upper and lower plates and having its end portions journaled in said end plates, the free ends of the screw being projected beyond said end plates to form wrench or handle receiving portions, the feed screw on each side of its center being screw threaded in opposite directions, jaw carrying screw blocks

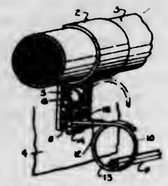
disposed one on each of said oppositely threaded sections of the feed screw and having portions extended through said open side of the screw housing and to one side thereof, said extended portions being in sliding engagement with the adjacent longitudinal edges of said upper and lower plates, and interchangeable jaws detachably secured to the said extended portions of the screw blocks, the upper surface of said upper plate being plane and adapted to adjustably support a drill guide and to hold the same out of the way of and in parallelism with said jaws.

1,381,197. REVERSIBLE TAPPING-CHUCK. WILLIAM N. JOHN, Milwaukee, Wis. Filed Jan. 19, 1920. Serial No. 352,455. 4 Claims. (Cl. 10—138.)



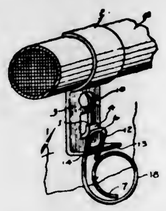
4. A chuck device of the class described, a drive shaft, a head portion on said drive shaft provided with a transverse slot, a tool member having a rounded shank portion terminating in a squared extremity and insertible in the slot of the head portion, a block transversely slidable in the slot of the head portion and provided with a squared aperture for loosely receiving the squared extremity of the tool shank, a collar loosely disposed in the slot of the head below said block and adapted to receive the tool shank, and means for binding the shank in the collar.

1,381,198. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,161. 4 Claims. (Cl. 248—36.)



1. A conduit or cable clamp provided with a hook portion and a base, the base being provided with a boss raised

above the surface of the base, the boss having an opening for the reception of a securing screw, the boss and

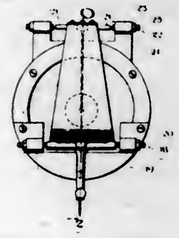


base being provided with means to coöperate with and hold both ends of a bridle ring.

1,381,199. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Oct. 14, 1920. Serial No. 416,980. 3 Claims. (Cl. 248—36.)

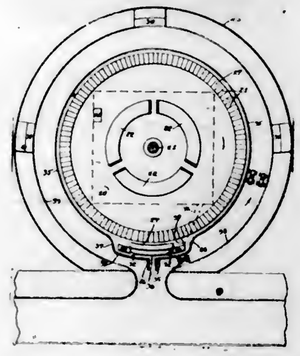
1. The combination of a conduit or cable clamp having a hook portion to support a conduit or cable and a base to lie against a wall or other suitable support, the base being provided with a flange having a plurality of non-alined openings, and a bridle ring having means to be threaded through said non-alined openings and bear on both the upper and lower surfaces of the flange to secure the bridle ring to the clamp.

1,381,200. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Oct. 14, 1920. Serial No. 416,981. 2 Claims. (Cl. 248—36.)



1. A conduit or cable clamp provided with a hook portion to support a cable and a base, the base being provided with another integral hook extending parallel with the longitudinal axis of the conduit or cable clamp to support a bridle ring.

1,381,201. REPRODUCER FOR TALKING-MACHINES. JOHN W. KAUFMANN, Baltimore, Md. Filed June 21, 1920. Serial No. 390,482. 6 Claims. (Cl. 274—35.)



3. In reproducers, the combination with the sound box, and the reproducer lever and the needle holder pivoted at opposite sides thereof, of a spring directly connected at its opposite ends to said lever and said needle holder and gradually decreasing in strength and resistance from the needle holder toward the reproducing lever.

6. In reproducers, the combination with the sound box, and the reproducer lever and the needle holder pivoted

at opposite sides thereof, of a plate spring connecting said lever and needle holder, said needle holder having a cross-shaped base for connection with the spring.

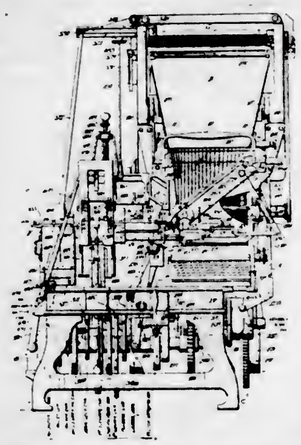
1,381,202. STORE CONSTRUCTION. JEWEL WARREN KING, Memphis, Tenn. Filed Nov. 13, 1920. Serial No. 423,906. 5 Claims. (Cl. 211—8.)

5. A store of the type described embodying a central rotatable structure provided at its periphery with display compartments, a stationary counter arranged adjacent the periphery of said central rotatable structure, a counter arranged adjacent each end of the first named counter, a partition extending intermediate the last named counters and in spaced relation to the first named counter and provided adjacent each of the last named counters with a one-way gate, an annular vehicle track formed about said rotatable structure and said counters, said track having portions thereof extending immediately adjacent the periphery of the central rotatable structure, said portions being of sufficient width to permit the passage of one vehicle by another, the portions of said track adjacent said counters being restricted and permitting the passage of but a single vehicle, a stationary outer wall arranged in spaced relation to said vehicle track and provided with an opening composing the first named counter and a roof supported by said stationary outer wall having its central portion supported by the upper end of said central rotatable structure.

1,381,203. FISH-TRAPPING NET. FRANK KUWIK, Blasdell, N. Y. Filed Jan. 13, 1921. Serial No. 436,933. 3 Claims. (Cl. 43—100.)

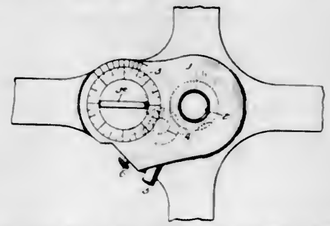
1. A fish net comprising an elongated cylindrical body made up of a netting secured upon a series of rings, entrance funnels leading into the said body from opposite

ends thereof, means connecting the inner ends of said funnels to one another, a flat web of netting connected



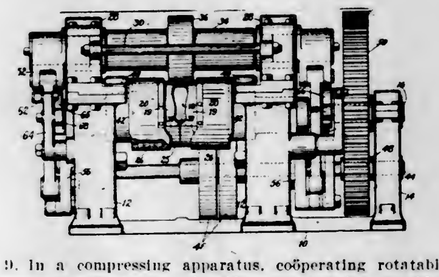
to one end of said body and diametrically intersecting the opening into the adjacent entrance funnel.

1,381,204. COMBINED SCREEN AND PICKING-TABLE. RAYMOND G. LAWRY, Chicago, Ill., assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 30, 1920. Serial No. 377,836. 16 Claims. (Cl. 83—56.)



1. A picking table having at both ends relatively wide conveying surfaces and intermediate such wide surfaces having a plurality of separate narrow conveying surfaces arranged in parallel, there being sufficient space between the narrow surfaces to permit an operator to stand and work between them.

1,381,205. TYPOGRAPHIC MACHINE. FREDERICK W. LETSCH, Baltimore, Md. Filed Mar. 15, 1918. Serial No. 222,760. 31 Claims. (Cl. 199—13.)

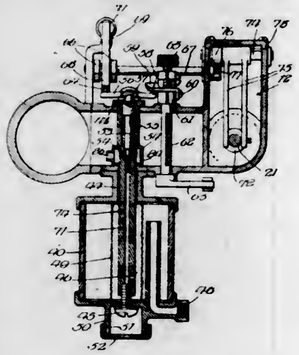


10. In a typographic machine having an assembling and casting mechanism, an assembler slide for receiving a line of matrices and transferring the same to the casting mechanism, in combination with a brake bearing on the assembler slide and adapted to control its forward movement during the assembling of a line of matrices, means for lifting and holding the brake out of contact with the slide during the movement of the slide after the line is assembled, and means on the slide for operating said lifting means.

1,381,206. STEERING-HEAD LOCK. THOMAS C. LONNEY, Chicago, Ill., assignor of one-half to Elgin D. Shupert, Chicago, Ill. Filed Mar. 11, 1920. Serial No. 364,885. 12 Claims. (Cl. 70—129.)

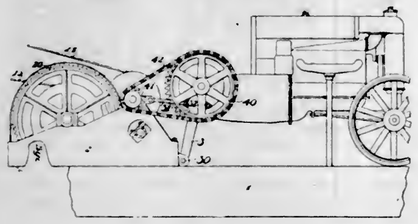
1. A permutation lock-control for a shaft and its wheel, comprising a rotary bolt carried by one of said members and adapted to control the driving connection between them, and a series of rotary tumblers each adapted to intersect the periphery of said rotary bolt and positively hold it in position to prevent drive of the shaft by the wheel.

1,381,207. COMPRESSING APPARATUS. THOMAS LUND, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 21, 1917. Serial No. 187,490. 25 Claims. (Cl. 12—21.)



9. In a compressing apparatus, coöperating rotatable pressure members, one of said members being provided with a recess to receive the article to be compressed, said members operating in contact with one another during the compressing operation, and means for permitting the discharge of the article which has been compressed, including means for separating the pressure members prior to the discharge of the article.

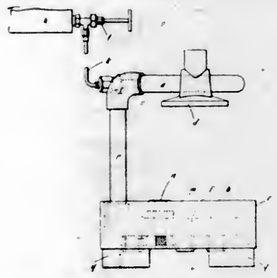
1,381,208. CARBURETER. EDWARD F. MCCARTHY, Chicago, Ill. Filed Sept. 18, 1918. Serial No. 254,559. 5 Claims. (Cl. 261—51.)



1. A carbureter embodying a fuel supply nozzle, a needle valve for controlling the nozzle, means tending normally to actuate the valve in one direction, a rocker arm detached from and supported intermediate its ends upon the end of and entirely by the needle valve, an air throttle valve, means for actuating the latter, a cam device connected with the air throttle valve to operate in unison therewith, the said cam device being detached from and engaging one end of the rocker arm to actuate the needle valve in opposition to the first recited means, an actuating member also detached from and operating upon the opposite end of the rocker arm to actuate the needle valve in opposition to the first recited means, and means for oper-

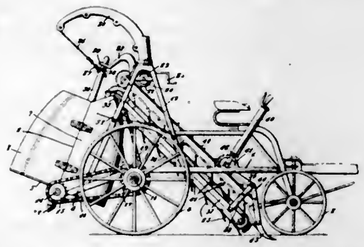
ating the said actuating member, the said actuating member and the cam device each serving as a fulcrum for the respective ends of the rocker arm.

5. A carbureter embodying a fuel supply nozzle, a needle valve for controlling the nozzle, means tending normally to actuate the valve in one direction, a rocker arm detached from but supported upon the end of the needle valve and entirely thereby, an air throttle valve, means for actuating the latter, a cam device pivotally connected with the air throttle valve and movable therewith, said cam device being detached from but engaging and resting upon one end of the rocker arm, an adjustable stop device carried with the air throttle valve and engaging the cam to vary the position of the cam with respect to the air throttle valve, said cam operating to actuate the needle valve, an actuating member detached from and operating upon the other end of the rocker arm to actuate the needle valve in the same direction as it is operated by the said cam, and means operating automatically to operate the said actuating member.



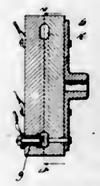
1,381,209. WINDING-ENGINE. SYDNEY S. MCINTYRE, Sedro Woolley, Wash. Filed Oct. 30, 1920. Serial No. 420,690. 6 Claims. (Cl. 254—166.)

1. A winding engine comprising a drum and its shaft, a second shaft, a power drive connecting the drum and said second shaft, a frame in which the aforesaid parts are journaled, tractor axle supporting members secured to one end of said frame and adapted to be adjusted toward and from the said second shaft, positive adjusting means connecting said axle-supporting members with the frame, and a power drive mechanism connecting each end of the tractor axle and the said second shaft.



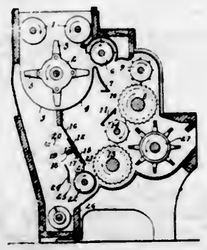
1,381,210. VAPOR-BURNER. ALEXANDER MACLENNAN, Clapham, London, England. Filed May 10, 1920. Serial No. 380,157. 5 Claims. (Cl. 158—63.)

1. In a vapor burner, the combination of a base, a doubly coiled pipe forming upper and lower horse-shoe shaped bends, the upper bend being in communication with a source of liquid fuel and the upper surface of the lower bend being perforated to form burner orifices, and a plurality of flame spreaders adjustable on the upper bends



above said burner orifices, and having their peripheries close together.

1,381,211. PEANUT HARVESTER AND SHOCKER. GILBERT O. MAULSBY, Birmingham, Ala. Filed Nov. 30, 1918. Serial No. 264,833. 3 Claims. (Cl. 56—104.)

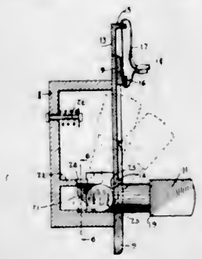


1. In a vine shocking machine the combination with an inclined casing open at the top and including hingedly connected sections, and a table mounted for rotation on the bottom of the casing, of a post removably mounted within and extending through the table and the bottom of the casing and adapted to be rotated by the table, said post having its lower end pointed, outwardly extending vine engaging members upon the post, a forked bearing for the upper end of the post, an arm mounted for lateral swinging movement and normally overhanging the casing, means supported by the arm for lifting the post out of the table and suspending it from the arm, means for rotating the arm with the post suspended therefrom, and means for lowering the post to direct the pointed end thereof into the ground.

1,381,212. LIQUID GAGE AND INDICATOR. JOHN W. MILLER, Seattle, Wash. Filed May 27, 1919. Serial No. 300,032. 3 Claims. (Cl. 200—152.)

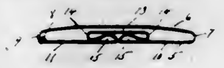
1. A circuit closer comprising a disk inclusive of two coacting sections having their opposed sides flatly in contact and provided with annular grooves forming an internal channel, pairs of contacts extending from said coacting sections into said channel from opposite sides of the same, a quantity of mercury arranged in said channel, and means to operate said disk.

1,381,213. COTTON SEPARATING AND CLEANING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Nov. 11, 1920. Serial No. 423,298. 3 Claims. (Cl. 19—9.)



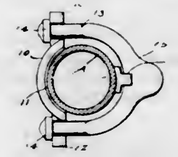
1. In a machine of the class described, in combination with cotton separating mechanism, a rotary member upon which cotton and hulls passing by the separating mechanism fall, said rotary member having an impact device and operating to move the cotton falling upon it into proximity to a member of said separating mechanism and to throw out hull particles, and a serrated member in the path of the particles thrown out by said rotary member for engaging any cotton thrown out along with the hulls and permitting its return to said rotary member.

1,381,214. UNIVERSAL CONNECTION. HENRY MOHR, Covington, Ky. Filed Mar. 13, 1920. Serial No. 365,580. 3 Claims. (Cl. 64—91.)



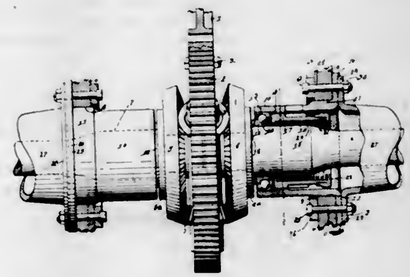
1. In a universal connection, a driving shaft section and a shaft section to be driven, a universal joint connecting said shaft sections, said joint comprising separable parts arranged in pairs, one pair connected to each shaft section and disposed in a plane at right angles to the other pair, a spherical member having grooves at right angles to each other, the bottoms of which have relatively narrow counter-grooves, the interior of the spherical member having intersecting ducts connecting with the counter-grooves and adapted to receive lubricant, the separable parts of each pair having arcuate shoes engaging the first grooves, whereby the shaft sections may relatively flex, means connecting the adjacent ends of the shoes of each pair of separable parts to prevent relative displacement of the ends, and circular felt rings engaging the counter-grooves for absorbing and supplying lubricant to the arcuate surfaces of said shoes.

1,381,215. FREIGHT-CAR-DOOR LOCK. JOHN F. MURPHY, Toledo, Ohio. Filed Oct. 7, 1920. Serial No. 415,253. 3 Claims. (Cl. 292—230.)



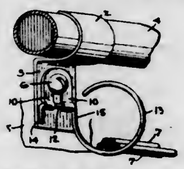
1. In a freight car door blocking means, a shell located substantially within the side surface of the car, and a pivoted block located in the shell and positioned so as to pivot into the path of the sliding door of the freight car, a sliding plate for releasing the block and closing the shell.

1,381,216. LINGERIE-CLASP. FAUSTO A. MUSCENTE, Providence, R. I. Filed Mar. 12, 1921. Serial No. 451,720. 4 Claims. (Cl. 24—259.)



1. In a lingerie clasp, clamping arms, a bend connecting the arms, and a bearing plate having looped ends intermediate the arms and supported by one arm.

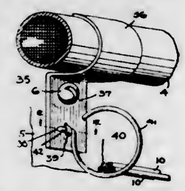
1,381,217. PIPE-CLAMP. JOHN MCCLELLAN NEELY, Lima, Ohio. Filed Nov. 23, 1920. Serial No. 426,072. 3 Claims. (Cl. 24—243.)



1. A pipe clamp comprising a saddle member having a curved face for conforming engagement with a pipe, a yoke straddlingly engaged upon the pipe and detachably connected with said saddle member, and a wedge member engaged between the bight portion of the yoke and the side of the pipe opposite the saddle member.

1,381,218. AXLE CONSTRUCTION. EDWARD C. NEWCOMB, Scituate, Mass., assignor to Standard Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed June 30, 1919. Serial No. 307,697. 8 Claims. (Cl. 74—7.)

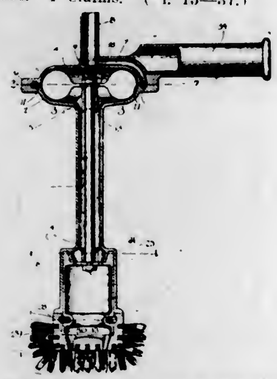
7. In an axle construction for automobiles, the combination of a pair of oppositely disposed frame members, a driving gear wheel disposed between the frame members, a bearing corresponding to each frame member, means for securing each bearing to its corresponding frame member in a plurality of angularly adjusted positions about an adjusting axis, an axle carrying a gear wheel meshing with said driving gear wheel and supported to rotate in said bearings on an axis, said adjusting axis being eccentric to the axis of rotation of said axle, whereby a rotation of said bearings on the axis of adjustment will adjust said axle toward or from the driving gear wheel, and an axle housing carried by each of said bearings and moved bodily toward or from the driving gear wheel when the bearings are adjusted.



1,381,219. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY B. NEWHALL, Plainfield, N. J. Filed July 14, 1920. Serial No. 396,137. 4 Claims. (Cl. 248—36.)

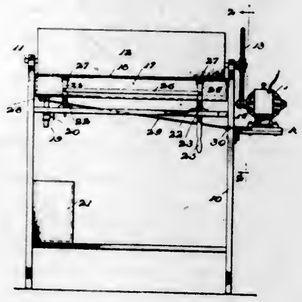
1. The combination of a conduit or cable clamp having a hook portion and a base, a securing screw, a removable securing member adapted to be held on the base by the securing screw, said member being provided with a groove, and a pigtail bridle ring having a shank mounted in said groove.

4. A removable securing member to be used with a conduit or cable clamp to support the shank of a pigtail bridle ring, having an open slot and two arms, each of the arms being provided with grooves to coöperate with the shank of a bridle ring.



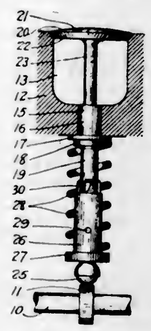
1,381,220. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY B. NEWHALL, Plainfield, N. J. Filed July 14, 1920. Serial No. 396,140. 5 Claims. (Cl. 248—36.)

1. A new article of manufacture comprising a conduit or cable clamp having a hook portion and a base, the base being provided with means to receive the end of a bridle ring and with additional means to coöperate with other portions of the bridle ring.



5. A new article of manufacture comprising a pigtail bridle ring having an open ring, a shank, and an arm at the end of the shank extending in a plane parallel to the open ring and adapted to fit into a hole in a coöperating conduit or cable clamp.

1,381,221. DISH-WASHING MACHINE. HENRY BUCHLER OVES, Erie, Pa. Filed Mar. 23, 1920. Serial No. 368,014. 4 Claims. (Cl. 15—37.)

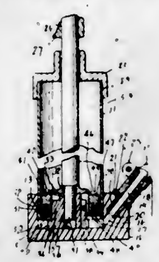


3. A dish washing machine, comprising a casing adapted for connection at one end with a source of water supply and to receive at the other end a soap chamber having ports through which the water may flow from the casing through the soap chamber, means controlled by the flow of the water for rotating said soap chamber within the casing, and a brush body detachably connected with the soap chamber.

1,381,222. DEVELOPING-MACHINE. SWEN PAULSON and ABRAM HATCH, Heber, Utah. Filed Feb. 20, 1920. Serial No. 360,192. 5 Claims. (Cl. 95—93.)

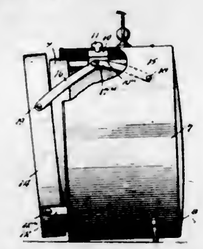
1. A developing machine including a supporting frame, a film receiving drum journaled thereon, pivoted tank supporting arms carried by the frame, a tank carried by said arms, and means holding the tank against swinging movement with the arms, the arms being operable for elevating the tank whereby a portion of the drum may be immersed.

1,381,223. VALVE. HENRY E. PELLETIER, Newark, N. J., assignor to Pelletier Products Mfg. Co., Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,475. 3 Claims. (Cl. 123—90.)



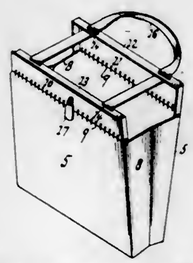
1. A valve of the class described comprising a disk, a seat receptive of the disk, a spindle on said disk, means for guiding said spindle, a sleeve fixed on the spindle, means for intermittently moving said spindle and disk in an axial plane and integral means formed on said sleeve coöperative with said spindle guiding means for partially rotating said valve and spindle at each axial movement thereof.

1,381,224. PUMP. SABATINO PETRICONE, Newport, Ky. Filed Aug. 23, 1920. Serial No. 405,290. 1 Claim. (Cl. 230—27.)



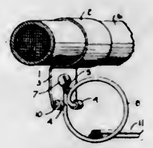
A pump comprising a cylinder, a piston-rod, the lower end of said piston-rod threaded and reduced in diameter to form an annular shoulder, a disk forming a valve-seat, received over said threaded end, a valve-guide having threaded connection with said threaded lower reduced

end to lock said disk to said valve-stem, said valve-guide provided with radial wings and with grooves between said wings to form passages, a sleeve about said wings, said sleeve provided with an upper annular valve-rib surrounding said passages and with an upper outer annular



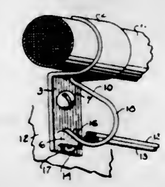
flange surrounding said valve-rib, and a depending cup-washer clamped to said flange and coacting with said cylinder, said wings provided with flanges to hold said sleeve to said valve-guide, and said sleeve arranged to reciprocate between said last named flanges and said disk.

1,381,225. ALARM-CLOCK. WILLIAM PFEIFER, Jr., Jersey City, N. J. Filed Oct. 28, 1919. Serial No. 334,100. 7 Claims. (Cl. 58—16.)



4. The combination with a clock having an alarm and mechanism for actuating said alarm, of means for rendering said mechanism inoperative, said means embodying a member located exteriorly of the clock and having spaced points of connection with the casing thereof whereby said member will be capable of movement relative to the clock casing, and means carried by said member adapted to render said actuating mechanism inoperative.

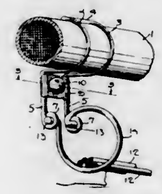
1,381,226. HANDBAG. HERMAN PICHEL, New York, N. Y. Filed July 14, 1920. Serial No. 396,209. 2 Claims. (Cl. 150—33.)



1. A hand bag having a pair of frames provided with angular jaw members to close one above the other, a pair of slots in each of the frames, one being above the other, a strap having its ends anchored in the slots of one of the frames, said strap movably coacting with the slots in the other frame to form a loop for holding the bag.

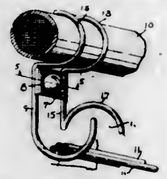
1,381,227. CABLE-CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, and JOHN KARITZKY, Garwood, N. J., assignors to Henry B. Newhall, Jr., executor of Henry B. Newhall, deceased. Filed Oct. 4, 1919. Serial No. 328,530. 4 Claims. (Cl. 248—36.)

1. A conduit and cable clamp having a hook portion and a heel portion, the heel portion being provided with bearings for a bridle ring and provided with a finger or stop.



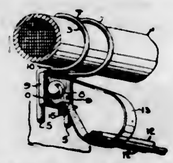
1,381,228. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Jr., executor of Henry B. Newhall, deceased. Original application filed Jan. 23, 1920, Serial No. 353,623. Divided and this application filed May 7, 1920. Serial No. 379,517. 4 Claims. (Cl. 248—36.)

2. The combination of a conduit or cable clamp formed out of sheet material having a hook portion, a base having a struck up portion forming an elongated socket or recess to receive one end of a bridle ring and provided with means to receive the other end of the bridle ring, and a wire bridle ring having one end bent to form a hook to engage in said pocket or recess its other end being held by the means carried by the clamp.



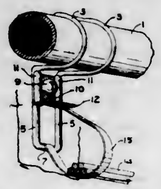
3. A new article of manufacture comprising a wire bridle ring having a bent hook at one end, and a compressible or yielding hook at the other end.

1,381,229. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,168. 3 Claims. (Cl. 248—36.)



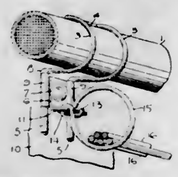
1. A wire conduit or cable clamp provided with a plurality of wire hooks and a plurality of wire bases, the wire bases being provided with means to coöperate with a bridle ring.

1,381,230. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,169. 2 Claims. (Cl. 248—36.)



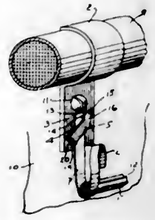
2. A wire conduit or cable clamp having two wire hooks to support a cable and two wire arms to form a base, both arms being extended and bent upon themselves to form an open bridle ring.

1,381,231. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,171. 13 Claims. (Cl. 248—36.)



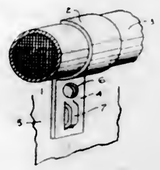
1. The combination of a wire conduit or cable clamp, and a saddle provided with means to support a sheet metal bridle ring.

1,381,232. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,172. 4 Claims. (Cl. 248—36.)



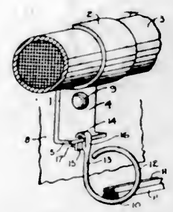
1. The combination of a wire conduit or cable clamp, means to secure it to a wall or other suitable support, and a bridle ring partly supported by said means and partly by the conduit or cable clamp.

1,381,233. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J., executor of Henry B. Newhall, Sr., deceased. Filed Aug. 17, 1920. Serial No. 404,175. 4 Claims. (Cl. 248—36.)



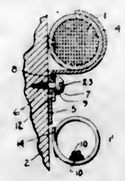
2. The combination of a wire conduit or cable clamp and a saddle, the saddle being provided with means to hold in the same horizontal plane both ends of a bridle ring.

1,381,234. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Oct. 14, 1920. Serial No. 416,954. 2 Claims. (Cl. 248—36.)



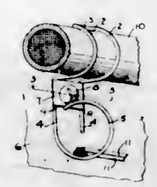
2. The combination of a conduit or cable clamp formed from sheet metal provided with a hook portion to support a conduit or cable, and a base to lie against a wall or other suitable support, the base being provided with a hole for a securing screw and with a single diagonal strap stamped up from the base, and a bridle ring having means to engage the upper and lower surfaces of said strap.

1,381,235. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Oct. 27, 1920. Serial No. 419,829. 6 Claims. (Cl. 248—36.)



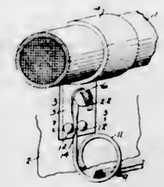
1. A new article of manufacture comprising a conduit or cable clamp provided with a hook portion to receive and hold a conduit or cable and with a base to lie against a wall or other suitable support, the base being provided with a vertical stirrup to coöperate with a locking hook of a bridle ring.

1,381,236. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Oct. 27, 1920. Serial No. 419,830. 1 Claim. (Cl. 248—36.)



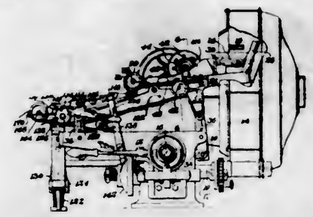
In a conduit or cable clamp the combination of a hook portion to engage and support a conduit or cable and a base to lie against a wall or other suitable support, a portion of the base being bent out to form a flange, the flange being provided with two parallel slots to coöperate with the shank of a bridle ring.

1,381,237. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Nov. 16, 1920. Serial No. 424,472. 6 Claims. (Cl. 248—36.)



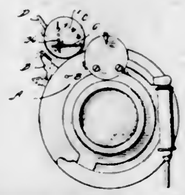
4. The combination in a conduit or cable clamp of a hook portion and a base, a screw for securing the base to a wall or other suitable support, a bridle ring, and means to hook the bridle ring under the head of the securing screw without operating the securing screw.

1,381,238. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Original application filed Aug. 17, 1920, Serial No. 404,169. Divided and this application filed Dec. 1, 1920. Serial No. 427,575. 1 Claim. (Cl. 248—36.)



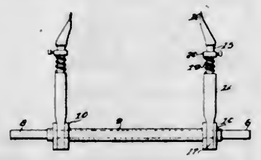
A new article of manufacture comprising a wire conduit or cable clamp having a plurality of wire hooks to support a cable and a plurality of arms to form a base, one of the arms being extended to form a complete bridle ring.

1,381,239. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall, executor of Henry B. Newhall, Sr., deceased. Filed Dec. 24, 1920. Serial No. 432,973. 5 Claims. (Cl. 248—36.)



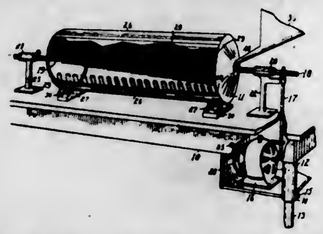
1. A conduit or cable clamp provided with a hook portion and a base having a hole for a securing screw, means to prevent the head of the securing screw contacting with the surface of the base, said means being of less diameter than the head of the securing screw, and means on the base to prevent the accidental or unauthorized swinging of a bridle ring with relation to the conduit or cable clamp.

1,381,240. NAIL-DISTRIBUTER. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 6, 1918. Serial No. 265,575. 78 Claims. (Cl. 83—92.)



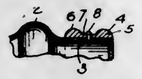
1. A nail distributer comprising a receptacle for holding mixed nails of different lengths, nail conduits, and means for conveying the nails of different lengths simultaneously from the receptacle to separate conduits individual to nails of predetermined lengths.

1,381,241. SHUTTER-OPERATING DEVICE. GARFIELD A. ROBERDS, Olathe, Kans. Filed July 18, 1919. Serial No. 311,754. 3 Claims. (Cl. 161—26.)



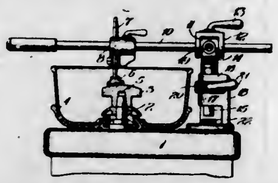
1. In combination with a camera shutter operating mechanism including an operating lever adapted to be manually operated, of a lug carried by said lever adjacent its free end portion and provided with a cam surface at one side, a lever movable in one direction to engage said lugs at a point opposite to said cam surface to actuate said first mentioned lever, and adapted to be guided past said first named lever by said cam surface in its movement in an opposite direction, and time controlled mechanism for actuating said lever in said first mentioned direction.

1,381,242. AUTOMATICALLY-ADJUSTABLE KNIVES FOR USE WITH RUBBER-WORKING CALENDERS. FRED A. SCHWARTZ, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,916. 4 Claims. (Cl. 18—2.)



1. In automatically adjustable knives supporting apparatus for use with calenders that are adapted to calender rubber compounds, the combination of a hollow cylinder or sleeve that is adapted to encompass a length of shafting, the said length of shafting being extensive therefrom, and supported in horizontal position by means of suitable bearings that receive the extending ends, the said bearings being secured to the vertical frame or side standards of the said calender, and so positioned as to aline the upper horizontal surface of the said hollow cylinder or sleeve with the horizontal line of contact of the curved surfaces of the two lower positioned of three calendering cylinders that are positioned on the same vertical plane.

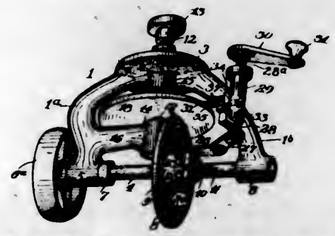
1,381,243. ELECTRIC COFFEE AND PEANUT ROASTER. MARK T. SEYMOUR, Stowe, N. Y. Filed June 5, 1920. Serial No. 386,788. 6 Claims. (Cl. 219—19.)



1. An electric roaster for coffee and similar articles comprising a stationary cylinder having a cylindrical non-combustible lining therefor, a second cylindrical lining of non-combustible cement around the interior of said cylinder and lining, an electrical cylindrical heating element embedded in said non-combustible cement around the interior of said cylinder to heat the same, and a roasting cage for coffee and similar articles rotatably mounted without said non-combustible cement lining of said stationary cylinder.

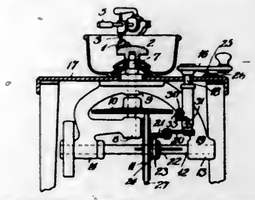
1,381,244. METAL CULVERT. LOUIS R. SHALLENBERGER, Pueblo, Colo. Filed Jan. 26, 1920. Serial No. 354,078. 5 Claims. (Cl. 137—75.)

5. The combination of a metal culvert having a cylindrical end-portion and a metal reinforcement fastened upon said portion, consisting of two bands respectively positioned at the edge of said portion and at a distance from said edge, and integrally connected by a web of reduced thickness with which they have a common bearing surface.



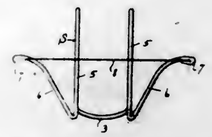
1,381,245. LENS-GRINDING MACHINE. LEON G. SIMPSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1918. Serial No. 264,848. 7 Claims. (Cl. 51—124.)

1. In a lens grinding machine, the combination of a grinding shell, a lens carrier coöperating therewith, a bracket adjustable concentrically with the axis of the grinding shell, and an overhanging arm adapted to carry the lens carriers and supported by said bracket.



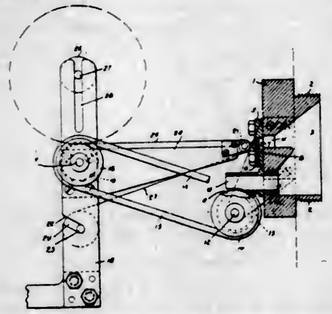
1,381,246. LENS-GRINDING MACHINE. LEON G. SIMPSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 1, 1919. Serial No. 274,515. 2 Claims. (Cl. 51—166.)

1. A supporting frame and power transmission device for a grinding machine comprising a flange at the top thereof for supporting the entire frame, a pair of oppositely disposed arms inclined outwardly and downwardly from said supporting flange, horizontal bearing bosses in the ends of said arms, a driving shaft journaled in said bearing bosses, a driving wheel fixed to said shaft between said bearing bosses, a vertical bearing boss supported from one of said arms above the horizontal shaft, a vertical shaft above said horizontal shaft journaled in the sup-



porting flange and the vertical bearing boss, a driven wheel fixed to said vertical shaft between said flange and vertical bearing boss and adapted to coöperate with said driving wheel, one of said wheels being slidably fixed to its shaft, and means supported by one of said arms for adjusting said slidable wheel to vary the speed of the vertical shaft.

1,381,247. LENS-GRINDING MACHINE. LEON G. SIMPSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 1, 1919. Serial No. 274,516. 5 Claims. (Cl. 51—109.)

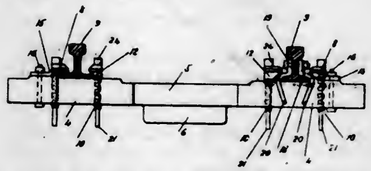


2. In a grinding machine, the combination of a work carrier, a tool coöperating therewith, a spindle on which the tool is carried, a wheel on the spindle, a countershaft, a wheel on the countershaft coöperating with said wheel to rotate the spindle, a shaft having an arm for moving the wheel on the countershaft to vary the speed of rotation of the spindle, and a brake member on said shaft for stopping the spindle.

1,381,248. SCRAPER. EDWARD R. STEVENS, Worcester, Mass. Filed May 5, 1920. Serial No. 379,035. 1 Claim. (Cl. 220—90.)

As an article of manufacture a scraper comprising a length of material bent adjacent its intermediate portion to provide spaced parallel arms, each of said arms having its intermediate portion extended back upon the arm in parallel relation thereto to provide a hook through the cooperation of the intermediate portion of said length, the end portion of the arm being extended outwardly and upwardly from the last mentioned portion of the arm, the end portion of each arm being disposed in divergent relation to each other, and means for connecting the extremity of said ends to each other.

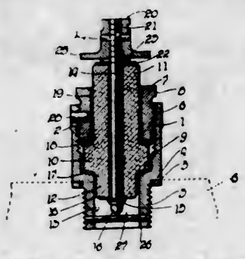
1,381,249. AUTOMATIC TAKE-UP ATTACHMENT. WILLIAM E. STEWART, Providence, R. I., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Sept. 22, 1920. Serial No. 411,905. 17 Claims. (Cl. 18—12.)



1. In combination, means for die forming a plastic material, and automatic means actuated by part of the extruded material for removing the remainder of said material as formed at a speed proportionate to its speed of issuance from the die opening.

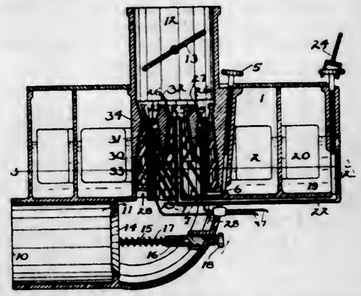
1,381,250. POLISHING COMPOUND. HILDA SWANSON, Denver, Colo. Filed May 17, 1919. Serial No. 297,938. 4 Claims. (Cl. 87—5.)

2. A polishing cream formed of water, commercial naphtha soap, precipitated chalk, alkali bitartrate and bicarbonate of soda.



1,381,251. RAILWAY-TIE. LUKE W. SWEENEY, Terre Haute, Ind. Filed Sept. 4, 1920. Serial No. 408,192. 2 Claims. (Cl. 238—30.)

1. The combination, with a railroad tie provided with means for anchoring it to the ground to prevent it from sliding thereon, of rails supported by the tie, fish-plates secured to the rails and provided with stop lugs on their end portions which project downwardly on each side of the tie and limit the longitudinal sliding movements of the rails, the said lugs being spaced apart from the sides of the tie to permit the rails and fish-plates to slide longitudinally, and fastening devices which prevent the said fish-plates and rails from sliding laterally.



1,381,252. SPARK-PLUG. HERBERT THOMAS, Chicago, Ill., assignor to Eclipse Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 6, 1919. Serial No. 328,742. 1 Claim. (Cl. 123—169.)

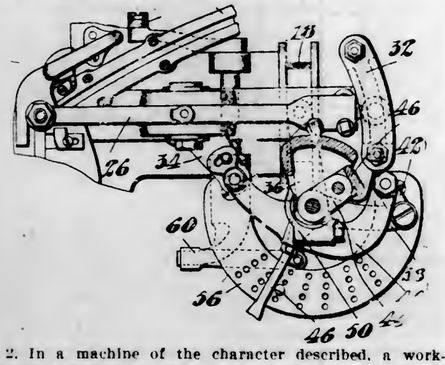
In combination, a metallic shell having its lower end threaded to screw into the cylinder head or other similar part of the engine and having an internal shoulder, the interior surface being threaded above said shoulder, a body of insulation having an enlarged portion engaging said shoulder, a wrapping of insulating material about the body of insulation above the enlarged portion, a gland surrounding said wrapping of insulating material and threaded into the upper part of the shell engaging the enlarged part of the insulation and holding the same against the shell in the shoulder with a gas tight fit, a hole being drilled through the shell and through the gland just short of the wrapping, and a pin pressed into the hole and flush with the outer surface of the shell to hold the gland against loosening in the shell, whereby the gas tight fit between the body of insulation and the shell is

preserved and the proper setting of the electrodes is maintained.

1,381,253. KEROSENE-CARBURETER. HIRAM S. THOMASSON, Minneapolis, Minn. Filed Apr. 26, 1917. Serial No. 164,803. 6 Claims. (Cl. 261—18.)

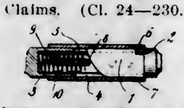
1. In a carbureter the combination of a thin cylindrical shell having multiple helical fins on the inner wall thereof, a second thin cylindrical shell concentric with said first shell and forming with said first shell a nozzle having an annular opening, an outer casing concentrical with said cylindrical shells but spaced therefrom and having helical fins on the inner surface of opposite pitch to the fins of said inner cylindrical shell, and an air passageway inside and outside of the walls forming said nozzle.

1,381,254. SUPPORTER AND PROTECTOR. EDWARD J. THORP, New York, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Jan. 20, 1920. Serial No. 352,668. 1 Claim. (Cl. 128—160.)



In combination with a supporter having an elastic waist-band, leg straps and jock strap sections of the same material as the waist band, a piece of non-elastic fabric stitched at its lower and side edges to the jock strap section, its upper edge being free and forming a pocket therewith, a pocket flap of non-elastic fabric stitched to the waist-band directly above the sections forming the pocket, means to engage the pocket flap detachably with the pocket and an auxiliary metallic jock-strap of similar outline to the jock strap section and pocket carried removably within the pocket.

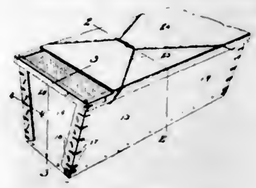
1,381,255. SPRING. ABRAHAM TISMAN, New York, N. Y. Filed Jan. 28, 1920. Serial No. 354,555. 4 Claims. (Cl. 267—45.)



3. A spring construction of the class described comprising two spring sections, one of said spring sections being composed of a plurality of leaf members of different lengths and the other section being mounted on top of the first named section and composed of a plurality of leaf members of different lengths, the end portions of said last named section being provided with two upwardly directed spring loop members which form a central downwardly directed U-shaped portion adapted to bear upon the top of the first named spring section and the free end portions of said last named spring section being adapted to bear on the first named spring section.

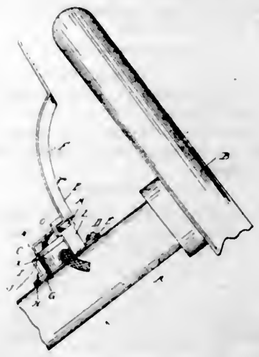
1,381,256. SPACING MECHANISM. LAURENCE E. TORHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 23, 1918. Serial No. 251,109. 9 Claims. (Cl. 218—15.)

2. In a machine of the character described, a work-engaging feeding member, and means for imparting a feeding movement to said member comprising a power operated lever, a crank for oscillating the feeding member, a connecting link between the power operated lever and the crank, a floating fulcrum for an intermediate point in said connecting link, and means for altering the path of said floating fulcrum so as to vary the extent of feeding motion transmitted by said link.



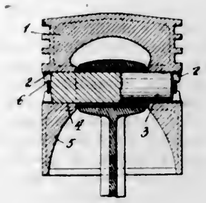
1,381,257. SEPARABLE FASTENER. ARNOLD H. TRAMER, Elizabeth, N. J., assignor of one-half to John Baur, New York, N. Y. Filed Dec. 31, 1920. Serial No. 434,178. 5 Claims. (Cl. 24—230.)

3. A separable fastener comprising a blade-like entering member having a notch in one edge, a tubular receiving member having a longitudinal entrance slot and having a part for engaging the notch of the entering member, a retractable guard-sleeve slidably mounted on the receiving member and a spring contained in the receiving member and acting on the sleeve to normally hold it in its extended position so as to cover the entrance slot.



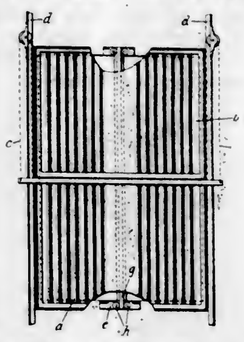
1,381,258. SHIPPING-BOX. GAINES M. WALKER, St. Louis, Mo. Filed June 28, 1920. Serial No. 392,219. 9 Claims. (Cl. 217—122.)

1. A shipping box having side and end walls, the end portions of the side walls being bent against the outer faces of the end walls, means for securing the bent end portions of the side walls to said end walls, and ductile



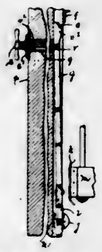
metal strips for securing the bent end portions of the side walls to the body portions of said side walls.

1,381,259. PUSH-BUTTON-OPERATING DEVICE FOR AUTOMOBILE STEERING-WHEELS. CHARLES W. WALTERS, Detroit, Mich. Filed July 14, 1919. Serial No. 310,845. 2 Claims. (Cl. 74—39.)



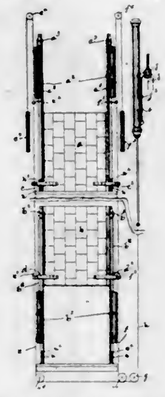
1. The combination with a steering wheel and a non-rotating stem therefor, of a push button mounted on the stem, a member positioned between the push button casing and the stem and provided with oppositely disposed projections, one of which has a pivot slot and the other of which has a guide slot, and a lever formed at one end to interlock with the pivot slot and arranged to play in the guide slot, the push button normally maintaining the lever at the outer limit of its throw and the outer extremity of the lever forming a hand hold in close proximity to the hand rim of the wheel.

1,381,260. PISTON-PIN LOCK. RALPH O. WATSON, Jersey City, N. J. Filed May 20, 1919. Serial No. 298,522. 6 Claims. (Cl. 74—108.)



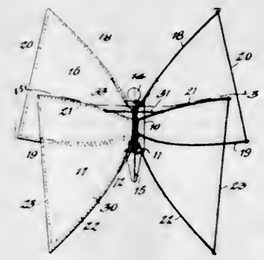
1. A piston structure, comprising in combination with a piston having a transverse opening and a piston pin in said opening, a retaining ring passing about the piston opposite the ends of the pin and having its outer surface located inwardly from the outer piston surface, and positive means holding the retaining ring in position away from contact with the cylinder wall.

1,381,261. ELEVATOR-DOOR. BENJAMIN WEXLER, Brooklyn, N. Y., assignor to The Peelle Company, a Corporation of New York. Filed Aug. 24, 1917. Serial No. 187,953. 7 Claims. (Cl. 189—46.)



1. An elevator door embodying therein a vertically slidable door section comprising a metal frame having a metal sheathing within same, a fitting secured to the elevator shaft below the sill of the door opening, anti-friction rollers mounted and spaced apart in said fitting, a T-bar extending vertically between the horizontal bars of the frame of said door section, the flanges of said T-bar having a free running fit between said rollers, means projecting beyond said rollers between the flanges of said T-bar and the door, and supports carried by said fitting above said rollers, adapted to engage the top frame of said door section and sustain a load upon said door section when it is in the fully open position.

1,381,262. LOCKING MECHANISM FOR ELEVATOR-DOORS. BENJAMIN WEXLER, Brooklyn, N. Y., assignor to The Peelle Company, a Corporation of New York. Filed Oct. 31, 1918. Serial No. 260,485. 6 Claims. (Cl. 187—59.)

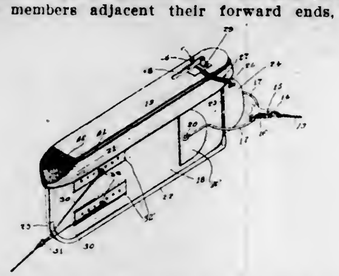


1. A locking mechanism for elevator doors, consisting of the combination with a plurality of door sections movable in opposite directions, the lower of which sections has a laterally extending hanger bar thereon, and a flexible connection between said hanger bar and the upper of said sections, of an oscillatory lever pivoted within an elevator shaft, adjacent the side of the door, means having a normal tendency to thrust said lever toward said hanger bar, coöperating means operative upon said lever and carried by an elevator car, whereby said lever may be withdrawn from its operative relation to said hanger bar, or permitted to assume its operative relation thereto, means operative upon said lever, and accessible from the floor side of the door, whereby said lever may be withdrawn from its operative relation to said hanger bar, and actuating means coöperating with said last named means.

1,381,263. LOCKING MECHANISM FOR AUTOMATIC ELEVATOR-DOORS. BENJAMIN WEXLER, Brooklyn, N. Y., assignor to The Peelle Company, a Corporation of New York. Filed Nov. 2, 1918. Serial No. 260,888. 4 Claims. (Cl. 187—59.)

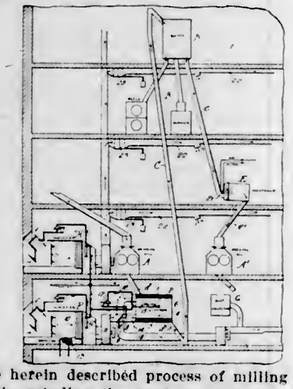
1. A locking mechanism for automatic elevator doors embodying therein in combination with a sequence of upwardly sliding door panels, each having laterally extending projections adjacent the bottom thereof, weights adapted to normally raise each of said panels, and means for automatically closing said doors, including therein strips upon opposite sides of said doors, blocks thereon adapted to engage the top of the projections on each of said doors, and a motor controllable from within a car, adapted to exert a downward pull upon said strips of supplemental locking means adjacent the sill of the door opening closed by each of said panels, coöperating means forming a part of said supplemental locking means respectively, and carried by an elevator car, whereby any of said supplemental locking mechanisms is released when the car is at the door opening adjacent thereto, and means whereby each of said supplemental locking mechanisms is operative at all other times.

1,381,264. KITE. URQUHART WILCOX, Buffalo, N. Y. Filed Aug. 15, 1919. Serial No. 317,646. 9 Claims. (Cl. 244—23.)



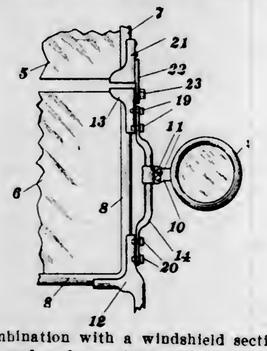
1. A kite comprising a body composed of two pivotally connected sections, and upper and lower sets of wings carried by said body, one of said sets of wings partially overlapping the other set of wings.

1,381,265. TRAWLING APPARATUS. JOHN J. ANDERSON, San Francisco, Calif. Filed Feb. 12, 1920. Serial No. 358,194. 5 Claims. (Cl. 43—9.)



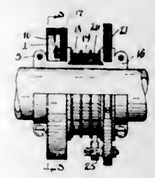
1. A trawling apparatus comprising in combination with a drawing member, a net, a buoyant trawling board or member connected with the same adjacent to its opposite ends of sufficient buoyancy to rise to the surface on the

net arriving at a point of rest, a line extended from the drawing member and for connection with said trawling boards or members adjacent their forward ends, and



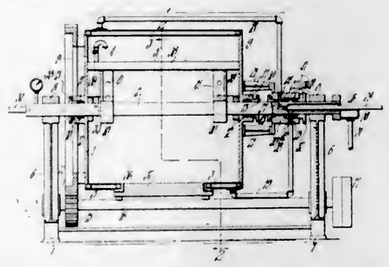
means for adjusting longitudinally of the boards or members the point of connection of said line with said boards or members to vary their path of travel through the water when drawn by said drawing member.

1,381,266. FLOUR-MILLING PROCESS. CHARLES WEBSTER ANDREWS, Buffalo, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Aug. 28, 1916. Serial No. 117,154. 5 Claims. (Cl. 83—42.)



1. The herein described process of milling flour, which consists in grinding the stock, cooling the ground stock by subjecting the same to the action of humidified air having a temperature lower than the temperature of the room, and regulating the volume of the humidified air under the control of the temperature of the stock to cool the stock to a predetermined temperature.

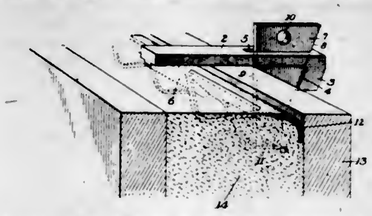
1,381,267. WINDSHIELD-SPOTLIGHT SUPPORT. LUCIEN J. ANTOINE, Council Bluffs, Iowa. Filed Jan. 24, 1921. Serial No. 439,580. 2 Claims. (Cl. 248—20.)



1. In combination with a windshield section composed of a glass, and a frame fitting about the edges of the glass, corner brackets secured to said windshield section, a bracket having an intermediate offset portion of substantially rounded and elongated construction lying approximately parallel with the vertical side member of the windshield frame section, said bracket provided with flattened ends secured against said corner braces, bolts engaging through said flattened ends and threaded in the corner braces, and a spot-light having a clamp adjustably secured on the intermediate portion of said bracket.

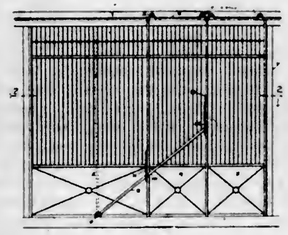
1,381,268. SIGNAL DEVICE FOR AUTOMOBILES. GINO BARDI, Cleveland, Ohio. Filed Jan. 10, 1918. Serial No. 211,280. 2 Claims. (Cl. 175—355.)

1. In a device of the character described, a propeller shaft or like part of a vehicle; a split sleeve clamped on said shaft so as to rotate therewith; a disk of insulating material and a plurality of contact rings non-rotatably mounted on said sleeve; a centrifugally actuated switch carried by said disk adapted to variously connect said rings; a second disk rotatably mounted on said sleeve; and brushes carried thereby arranged to contact with said rings, respectively, said brushes forming part of the circuit connections between said rings and an indicating means.



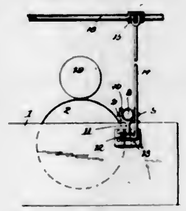
1,381,269. REFINING APPARATUS. GEORGE A. BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Original application filed Jan. 20, 1919, Serial No. 272,096. Divided and this application filed June 2, 1919. Serial No. 301,215. 5 Claims. (Cl. 257—100.)

2. An apparatus of the character indicated, comprising a stationary axial support, a container rotatably mounted upon said support and inclosing the same, a scraper for the interior surface of said container stationarily mounted upon said support in position to contact said surface, means for rotating said container, and means for maintaining a partial vacuum in said container.



1,381,270. CLAMPING DEVICE. EDWARD L. BENEDICT, Pittsburgh, Pa., assignor to National Steel Fabric Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 3, 1920. Serial No. 386,253. 3 Claims. (Cl. 94—39.)

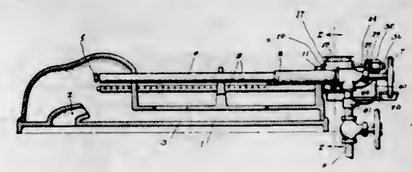
1. A clamping device of the character described, comprising a clamp bar having a heel member at one end, a slot therethrough adjacent to the heel member, a finger projecting obliquely inward from the opposite end portion of said bar and toward said heel member, and a wedge



adapted to be inserted in said slot, substantially as described.

1,381,271. SLIDING-DOOR LOCK. HARRY BENSON, Alameda, Calif. Filed Dec. 24, 1919. Serial No. 347,203. 10 Claims. (Cl. 292—2.)

1. The combination with a door frame and a door therein, of means for locking the door against opening in partly closed and fully closed positions respectively, means for releasing said locking means, and means for preventing release of said locking means while the door is locked in partly closed position.

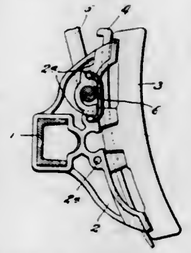


1,381,272. PAPER-MAKING MACHINE. CHARLES S. BIRD, East Walpole, Mass. Filed Jan. 10, 1919. Serial No. 270,515. 7 Claims. (Cl. 92—50.)

1. In a paper-making machine, the combination of a foraminous surface; means for moving the same; a spray pipe provided with a plurality of orifices located adjacent said surface and adapted to eject a cleansing fluid directly against the same, means for imparting endwise movement to said pipe; and means for constantly supplying water to the pipe.

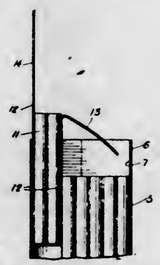
1,381,273. BURNER ATTACHMENT. GEORGE N. BLANCHARD, San Francisco, Calif., assignor to Colmar Burner Co., Inc., San Francisco, Calif., a Corporation of California. Filed Apr. 21, 1920. Serial No. 375,440. 14 Claims. (Cl. 158—81.)

1. An apparatus for the described purpose, the same comrising an elongated tubular torch provided in its side wall with a line of burner perforations, a shell positioned adjacent to one end of the burner, a pipe coiled within the shell and connecting at one end with the interior of the torch at its rear end, a valve controlled chamber with which the opposite end of said pipe connects, a thermostat



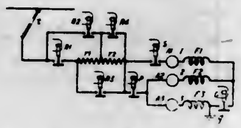
extended into said shell and adapted for operating the valve, a fuel feed pipe communicating with said chamber, and a burner associated with said shell.

1,381,274. COMPOSITION FOR PAINT. FRANK L. BUCHANAN, Oakland, Calif. Filed Mar. 20, 1920. Serial No. 367,457. 3 Claims. (Cl. 134—51.)



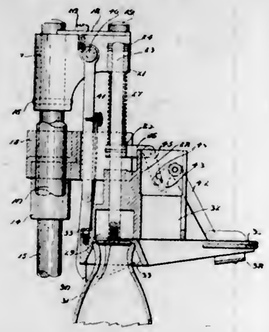
1. A paint composition comprising the following ingredients: a varnish, an oil, a thinner, specular hematite, limestone, granite, silica, iron pyrites, and talc.

1,381,275. BRAKE-BEAM-HANGER-LOCKING KEY. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1919. Serial No. 302,242. 3 Claims. (Cl. 188—211.)



1. A brake head provided with two recesses adapted to receive the brake hanger, openings on each side of said recesses adapted to receive a brake hanger lock and a brake hanger lock adapted to fit in said openings to close either of said brake hanger recesses.

1,381,276. CIGARETTE-PACKAGE. ALFRED B. CADMUS, New York, N. Y. Filed Jan. 3, 1920. Serial No. 349,280. 4 Claims. (Cl. 206—56.)



1. The combination with a cigarette container, of a flexible strip independent of the material of said container and adapted to be passed around a number of cigarettes in the container with one end portion of said strip projecting from the container when in its wrapped and sealed condition, whereby a pull on the protruding end of said strip will break the seal of said package and project the cigarettes through the opened end of the container.

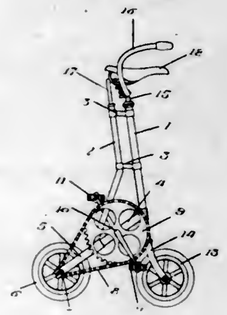
1,381,277. CONTROL SYSTEM. ANDREW H. CANDEE, Pittsburgh, and HARVEY H. JOHNSTON, Edgewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1916. Serial No. 113,481. 5 Claims. (Cl. 172—179.)

2. In a system of control, the combination with a supply circuit and three motors initially connected in series-circuit relation thereto, of two switches for effecting a transition of said motors from series to parallel-circuit relation with substantially no decrease in the torque supplied by said motors.

1,381,278. BOTTLE-CAPPING AND WIRE-REMOVING MACHINE. ROLLAND J. CANTON, Lynn, Mass. Filed Feb. 19, 1920. Serial No. 350,967. 6 Claims. (Cl. 226—92.)

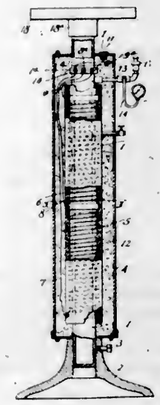
1. In a machine of the class described, the combination of bottle capping means, and means for removing a wire cup holding ring from the bottle simultaneously with the operation of the bottle capping means.

1,381,279. PIPE-HOLDING BAND. CHARLES N. CARLSON, Duluth, Minn. Filed Sept. 22, 1919. Serial No. 325,323. 2 Claims. (Cl. 285—186.)



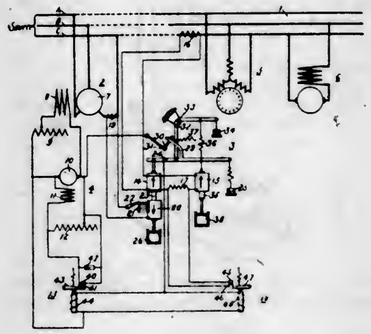
1. The combination with a pipe-holding band of the character described having inwardly protruding pegs thereupon, of a series of holes in said band equal in number to the pegs therein and spaced the same distance apart as the pegs, for the purpose described.

1,381,280. MANUFACTURE OF NAPHTHOLS. LEO F. CHEBOTAREF, Wappingers Falls, N. Y., assignor, by mesne assignments, to National Aniline & Chemical Company, Inc., a Corporation of New York. Filed Nov. 23, 1916. Serial No. 132,953. 6 Claims. (Cl. 23—24.)



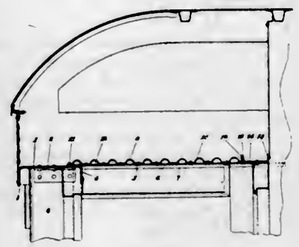
1. The process of making basic sodium naphtholate which consists in mixing fifteen parts of sodium salt of naphthalene-beta-sulfonic acid with eleven parts of caustic soda fusing at a temperature between 280 and 350° C., and removing the upper layer formed on prolonged heating.

1,381,281. BICYCLE. CHARLES HASKELL CLARK, New York, N. Y. Filed Dec. 4, 1919. Serial No. 342,379. 5 Claims. (Cl. 208—93.)



1. A bicycle comprising a permanent form rigid frame, two road wheels mounted therein, a shaft extending through said frame means for driving said shaft, a drive wheel mounted on said shaft, and means interposed between said drive wheel and one of said road wheels to drive the latter, the said shaft being located at the normal and usual distance from a horizontal plane touching the lowermost points of the road wheels, the axis of each road wheel being located at a point not substantially exceeding one half of the distance between said shaft and the nearest point on said plane, and the distance between the said shaft and the nearest point on said plane being substantially two-thirds of the distance between the axes of said road wheels.

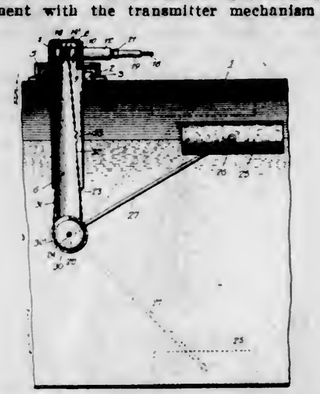
1,381,282. HEATING APPARATUS. WARREN F. CLARK, Cleveland, Ohio, assignor to The Steam-Electric Products Company, a Corporation of Ohio. Filed Apr. 24, 1919. Serial No. 292,519. 5 Claims. (Cl. 219—38.)



1. A device of the character described comprising a hollow cylindrical container, the cross-sectional area of which is small compared with its length, one end of such container being open and a coil of electric resistance wire wound upon the outside of such container and in contact therewith a pipe connecting with such container and a pressure responsive controlling device associated with such pipe.

1,381,283. ELECTRICAL REGULATING SYSTEM. ALMON W. COPLEY, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1918. Serial No. 211,730. 6 Claims. (Cl. 172—246.)

1. The combination with a source of alternating-current energy, a distribution circuit and a synchronous condenser interposed between said source and said circuit, of regulating means for automatically maintaining a substantially constant power factor at said source and controlled jointly by the current conditions of said synchronous condenser and said distribution circuit.

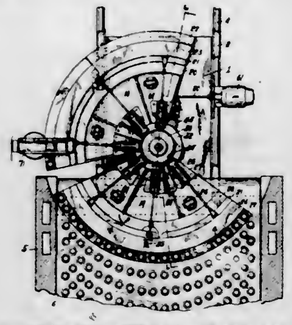


1,381,284. PASSENGER-CAR CONSTRUCTION. CHARLES S. COTTON, Crafton, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 23, 1920. Serial No. 376,020. 12 Claims. (Cl. 105—402.)

1. In a passenger car, side framing, a roof structure connected with said framing, and a horizontally disposed corrugated plate below said roof structure extending between and secured to said side framing.

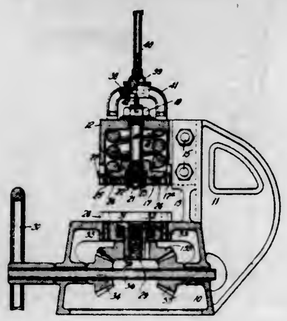
1,381,285. LIQUID-LEVEL INDICATOR. CLAUDE E. COX, Detroit, Mich. Filed Mar. 24, 1919. Serial No. 284,668. 13 Claims. (Cl. 23—82.)

1. In an indicator of the character described, the combination of a panel-board assembly including a gage casing having an opening, a pointer, a flexible transmitter shaft connected to said pointer and of length to extend to a gasolene tank, and having a slip-coupler member on its remote end, a tank float assembly having a transmission part provided with a complemental slip coupler member, to receive the shaft-carried coupler, and a casing for the flexible shaft connecting the float and panel board assemblies, whereby the transmitter shaft may be slipped into the shaft casing through the gage casing and into engagement with the transmitter mechanism after the



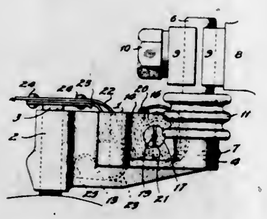
panel board and float assemblies and shaft casing have been placed in position.

1,381,286. COVERED METAL ROLL. JOHN J. CUNNINGHAM, Manchester, N. H. Filed July 8, 1920. Serial No. 394,765. 2 Claims. (Cl. 19—35.)



1. The combination of a metal roll, a covering layer for the roll periphery, and a wire binder encircling the covering layer and fastened under tension at its ends and at a point or points intermediate of its ends to the roll whereby the covering layer is securely held against the roll periphery and lifting or creeping of the covering layer is prevented.

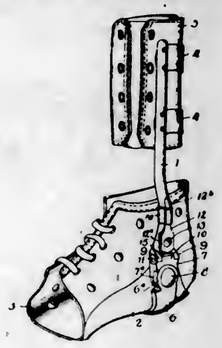
1,381,287. ARTICLE-DELIVERY MECHANISM. FRED W. DANBERG, Toledo, Ohio. Filed Dec. 22, 1919. Serial No. 346,737. 65 Claims. (Cl. 193—1.)



65. The combination with a leer having an opening in its receiving end, of an apparatus embodying a truck mounted for movements toward and away from the receiving end of the leer, a pair of article carrying members mounted on said truck for relative revoluble movements in a common plane about a common axis and having a portion of its movements into the leer through said opening, means carried by the truck for driving each member at one speed during a predetermined article receiving portion of its revolution and then at a greater speed to and a predetermined distance from article delivery position in the leer, and means operable to discharge articles from each member when in delivery position within the leer, said apparatus being movable into and out of operative relation to the leer.

1,381,288. MACHINE FOR TESTING THE HARDNESS OF MATERIALS. DONALD C. DAVIS, Buffalo, N. Y. Filed Mar. 4, 1918. Serial No. 220,166. 12 Claims. (Cl. 265—12.)

1. In a hardness testing machine, the combination of a rigid frame, a measuring element mounted on said frame and comprising a movable testing member, a spring member for resisting movement of said testing member, and a support for said members, a movable platen, and mechanism mounted on said frame independently of said measuring element support for moving said platen to press a sample against said testing member and straining said spring, said measuring element being stationarily but detachably mounted on the frame and removable as a unit therefrom.

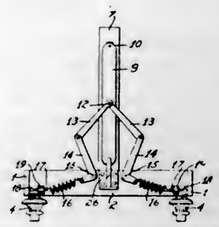


1,381,289. SPRING-TENSION MEANS FOR BRUSH-HOLDERS. JOHN S. DEAN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,882. 5 Claims. (Cl. 171—324.)

1. A shaft mounting comprising a bearing element having a recess therein, a shaft mounted on said bearing and provided with a plurality of apertures arranged in different planes, the apertures disposed in one plane being staggered with respect to those of the other, and means disposed in said bearing recess for engagement with the apertures in said shaft for maintaining the same in adjusted position.

1,381,290. ORTHOPEDIC APPLIANCE. RICHARD A. DIADUL, Jr., Chicago, Ill. Filed Sept. 30, 1920. Serial No. 413,702. 9 Claims. (Cl. 128—80.)

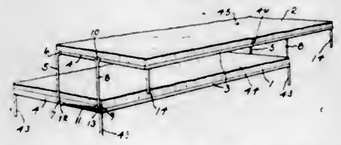
1. In an orthopedic appliance or the like, the combination of two hinged together members, a locking member pivotally mounted on one of said hinged members, and adapted to be moved into and out of locking engagement



with the other hinged member, and means acting to frictionally retain said locking member in locked position.

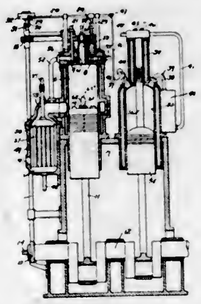
1,381,291. FIREARM. CHARLES B. DYGERT, Ilion, N. Y., assignor, by mesne assignments, to Remington Arms Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 10, 1920. Serial No. 350,561. 5 Claims. (Cl. 42—3.)

1. In a firearm, the combination with a frame and a barrel, of a slide supported for reciprocating movements forwardly and rearwardly on the frame, said frame and barrel each having near the rearward end of the barrel interlock portions provided transversely with alined cross-bar seats, a barrel-and-frame uniting cross-bar disposed in said alined seats, and a slide-actuating spring bearing against said slide and against said barrel, the parts being so fitted that the reaction of said spring is supported entirely by said cross-bar, whereby it is frictionally held in place in said cross-bar seats.



1,381,292. COUCH-BED. JOHN FREEMAN, New York, N. Y., assignor to Save-A-Room Furniture Manufacturing Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 14, 1919. Serial No. 297,056. 6 Claims. (Cl. 5—50.)

1. In a couch bed, a base, a reversible body adapted to be seated on the base with either side uppermost, double-



ended supporting members carried by the body at its respective ends to form moving fulcrums and vertically-movable pivot connections between the base and the body, and springs assisting in the elevation of the vertically-movable pivot connections during the movement of the fulcrums in one direction and opposing the fall of the vertically-movable pivot connections during the movement of the fulcrums in the other direction as the body is turned for reversing.

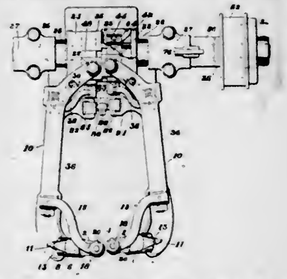
1,381,293. CONVERTIBLE FURNITURE. JOHN FREEMAN, New York, N. Y., assignor to Save-A-Room Furniture Manufacturing Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 17, 1920. Serial No. 374,591. 7 Claims. (Cl. 5—50.)

1. In convertible furniture, a base section, a collapsible section adapted to be superimposed upon and opened out in juxtaposition to and in substantially the same plane with said base section, and pairs of bell crank levers connected to pivotal points on respective ends of said base and collapsible sections to guide said collapsible section, relative to said base section, in movements of parallel translation when the position of said collapsible section is changed, and a spring connected to said bell crank levers to assist the raising movement and to retard the falling movement during the change of position.

1,381,294. INTERNAL-COMBUSTION ENGINE. LOUIS O. FRENCH, Milwaukee, Wis. Filed July 14, 1919. Serial No. 310,841. 22 Claims. (Cl. 123—32.)

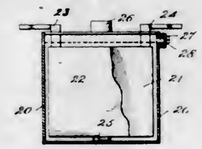
1. In an internal combustion engine, the combination of a working cylinder, means for supplying compressed air to said cylinder during a part of the working stroke, a chamber in communication with said cylinder, means for supplying fuel to said chamber, means for preventing the pressure of the contents of the cylinder rising above that of the entering air but permitting some air to pass into said chamber, and means for expelling the products of combustion from said cylinder.

1,381,295. PROCESS FOR THE MANUFACTURE OF METAL PYROPHOSPHATE CASEIN COMPOUNDS COLLOIDALLY SOLUBLE IN DILUTE ALKALINE SOLUTIONS. ALBERT FREY, Basel, Switzerland, assignor to The Hoffmann-La Roche Chemical Works, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,465. 2 Claims. (Cl. 23—14.)



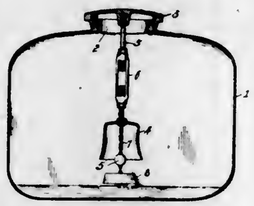
1. As a new article of manufacture the metal pyrophosphate casein compounds colloidally soluble in dilute alkaline solutions, which are entirely soluble in alkali; the solutions of this compound in sodium bicarbonate and diluted solutions of sodium carbonate are stable.

1,381,296. SHOW-CARDING PEN. HARVEY R. FULLER, Kirksville, Mo. Filed May 23, 1919. Serial No. 299,321. 2 Claims. (Cl. 120—111.)



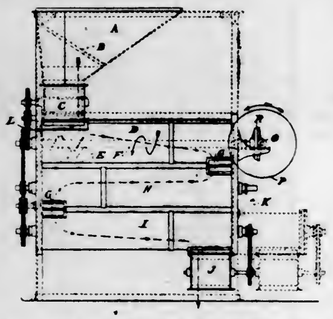
1. A pen of the class described having a reservoir comprising a front wall and a rear wall united at their lower edges by a perforated fold constituting a marking edge, the said front wall of the reservoir being provided with an opening spaced above the said marking edge and having an extension beside one wall to constitute means for attracting fluid from the reservoir by capillary attraction, the rear wall of the reservoir opposite said opening being rearwardly bulged.

1,381,297. MACHINE FOR OPERATING ON SHOE-SOLES. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 20, 1919. Serial No. 298,394. 21 Claims. (Cl. 12—33.)



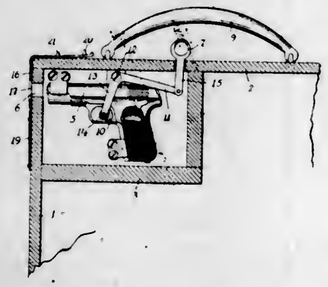
1. A machine for operating on the marginal portions of shoe soles having, in combination, two sets of pressing devices for engaging and pressing together the marginal portion of an outsole and a sole portion of a shoe attached to and projecting beyond the upper arranged to act simultaneously and progressively on opposite sides of the shoe as the shoe is fed past said devices.

1,381,298. ELECTRIC BATTERY. EDWIN R. GILL, Yonkers, N. Y. Filed Nov. 26, 1919. Serial No. 340,960. 23 Claims. (Cl. 204—29.)



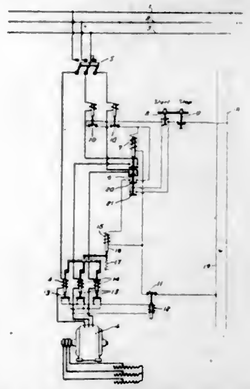
1. In an electric battery cell, a pair of active electrodes and a closed container therefor having a filling opening in one side thereof and an overflow opening near the top of another side thereof.

1,381,299. AUDIBLE LOW-LIQUID-LEVEL ALARM FOR TANKS. WILLIAM GRAH, Waterville, Ohio. Filed May 6, 1920. Serial No. 379,232. 4 Claims. (Cl. 116—110.)



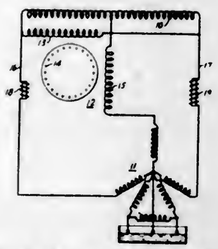
1. In a motor vehicle, a liquid containing tank, an audible alarm device associated therewith and including a bell with a swinging clapper, and a float suspended from the clapper for swinging movements therewith and adapted to coact with the clapper to prevent the sounding of an alarm except when the liquid is at or below a predetermined low level in the tank.

1,381,300. STERILIZING CEREALS, NUTS, SEEDS, AND THE LIKE. JAMES WILLIAM CLAUDE HAMILTON and EDWARD WILLIAM QUIRK, Liverpool, England. Filed Aug. 6, 1918. Serial No. 248,574. 3 Claims. (Cl. 99—9.)



3. The process of sterilizing seeds, nuts and the like, so as to eliminate the weevils, which consists in passing the seeds through a long space in which they are thoroughly stirred and inverted, and which is filled with weak formaldehyde gases, then passing the seeds through a stronger formaldehyde mixture, while similarly stirred and inverted, and lastly passing them through a strong mixture of formaldehyde sufficient to kill the weevils.

1,381,301. MEANS OF DEFENSE. OSCAR V. HARGRAVE, Malden, Mass. Filed Aug. 23, 1920. Serial No. 405,505. 2 Claims. (Cl. 190—41.)

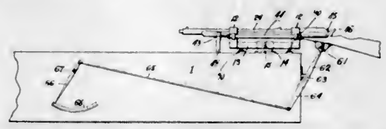


1. A suit case having a handle and a hole through one end of it, a box fixed within said suit case adjacent said hole, a pistol fastened within said box aiming toward said hole, a bell crank lever pivotally supported within said box and having a projection engaging the trigger of said pistol, and an operating member outside of the suit case beneath said handle connected with said lever for firing said pistol.

1,381,302. ELECTRICAL SYSTEM. ALBERT L. HARVEY and GEORGE W. HUEY, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 8, 1917. Serial No. 153,391. 13 Claims. (Cl. 175—294.)

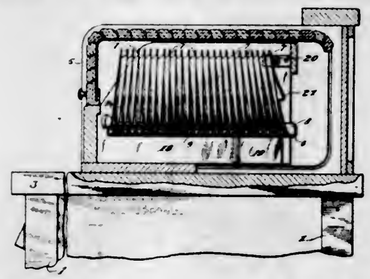
1. In an electrical system, the combination with an electric circuit, of a controlling switch therefor, a relay having an actuating coil in said circuit and adapted to close to cause said switch to open under predetermined conditions, and means independent of said circuit for maintaining said relay open when said controlling switch is open.

1,381,303. PHASE-CONVERTING SYSTEM. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1917. Serial No. 178,549. 9 Claims. (Cl. 172—238.)



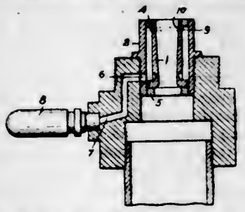
2. The method of improving the balance of the output electromotive forces of a phase-converter system wherein three-phase currents are derived from a single-phase source by a rotary phase-converter, one phase being derived directly from said source and being in phase therewith, which comprises producing unequal reactive drops in the two load phases which are out of phase with said source, the reactive drop in the phase immediately leading said source in phase exceeding that in the phase immediately following said source in phase.

1,381,304. APPARATUS FOR AIMING FIREARMS. RASMUS PEDERSEN HESTEHAVE, Hilleroed, near Copenhagen, Denmark, assignor to Oscar Ericsson, Copenhagen, Denmark. Filed Oct. 25, 1919. Serial No. 333,289. 1 Claim. (Cl. 124—15.5.)



An apparatus of the character described comprising in combination a longitudinal casing, firearms aiming means

mounted on the same at one end thereof, and adapted to support a gun, a target device supported at the other end of said casing, means for operating said target device from the said firearms aiming means, striking means adapted to be operated by the said gun, a marker, means within said casing for operating the said marker by the said striking means to indicate the aim of the said

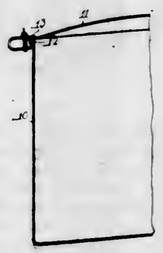


gun, means mounted on the side of said casing and adapted to coöperate with the trigger of the gun whereby the movements of the trigger may be observed when the gun is fired, supporting means for the said casing pivoting to the same at the one end thereof, other supporting means for said casing at the other end thereof and mechanism in said other supporting means for operating the said casing vertically and horizontally.

1,381,305. FILING APPLIANCE. HARRY JOSEPH HICK, Alliance, Ohio, assignor to The McCaskey Register Company, (Incorporated in 1914,) Alliance, Ohio, a Corporation of Ohio. Filed Aug. 27, 1917. Serial No. 188,409. 9 Claims. (Cl. 45—2.)

7. A filing appliance including a normally horizontal frame, a plurality of normally upright holders pivoted on the frame in rectangular arrangement, springs acting to rotate the holders rearwardly, an abutment for the rear end holder resisting the action of the springs, means permitting the frame to tilt on a transverse axis slightly forward of its median line whereby the holders rotate into rearwardly inclined echelon arrangement with reference to the frame, and a stop on the rear end holder for automatically engaging the abutment and holding the frame and holders in tilted echelon arrangement.

1,381,306. BLAST-NOZZLE. JOHN M. HOPWOOD, Dormont, and THOMAS A. PEEBLES, Pittsburgh, Pa., assignors to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1919. Serial No. 291,478. 6 Claims. (Cl. 299—107.)

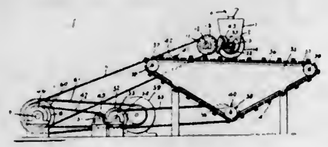


1. A fluid nozzle provided with a port for the escape of fluid from the nozzle in combination with a signal connected to said port, a movable member normally closing said port and adapted to be shifted to open said port by the fluid passing through the nozzle, and means for holding the member in normal position and adapted to be rendered ineffective by the cutting action of the fluid flowing through the nozzle.

1,381,307. INTERFOLDED PAPER PACKAGE AND PROCESS OF MANUFACTURING SAME. DAVID W. HUDSON, Green Bay, Wis. Filed Oct. 5, 1920. Serial No. 414,924. 2 Claims. (Cl. 206—57.)

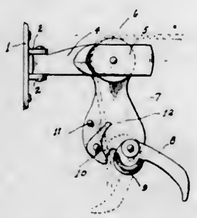
1. The process of manufacturing packages of interfolded paper sheets, consisting in uniformly slitting paper strips along transverse lines to nearly sever the strip, while leaving narrow connecting tongues along one margin of each strip integrally connecting the sheets, and subsequently arranging the sheets in the respective series in break joint relation and folding the sheets of one series in one direction and those of the other series in the opposite direction, with each sheet embracing near its folding line the partially severed ends and connecting tongue of two sheets in the other series.

1,381,308. CLAMP. JOSEPH F. HUSA, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 409,940. 3 Claims. (Cl. 292—258.)



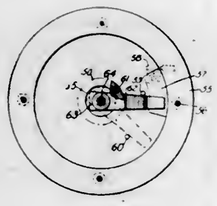
1. A clamp comprising a resilient U-shaped bar having an inwardly extending tooth formed at one of its ends and having its other end extended beyond the toothed end, and a screw mounted in the extended end portion of said bar.

1,381,309. CLOSURE FOR GRAVES. CHARLES J. JANSKY, Two Rivers, Wis. Filed Dec. 21, 1920. Serial No. 432,257. 3 Claims. (Cl. 27—30.)



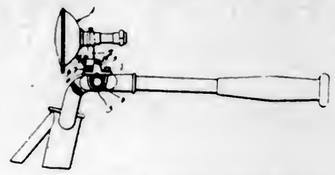
1. A closure for graves comprising a frame through which the coffin may be lowered, a curtain mounted at each end of the frame, means for drawing the curtains together to form a closure and means for retracting the curtains to uncover the grave.

1,381,310. CORE-MOLDING MACHINE. MICHAEL JANZUCK, Kokomo, Ind. Filed Oct. 4, 1920. Serial No. 414,535. 6 Claims. (Cl. 22—11.)



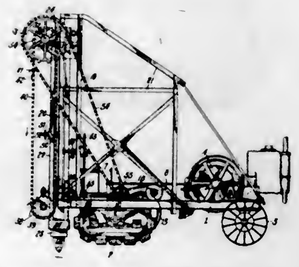
1. In a core molding device, a hopper adapted to contain products for forming cores, a mold connected with said hopper, means for forcing the contents of the hopper through the mold for forming a core, a rotatable off-bearing member for receiving the core from the mold, means for severing the core, a receptacle for receiving the cores, and means for rotating the oil-bearing member for depositing the core on the receiving member.

1,381,311. CLOTHESLINE-FASTENER. ALEXANDER JOHNSON and WILLIAM R. ANDERSON, Batavia, Ill. Filed Dec. 6, 1920. Serial No. 428,532. 1 Claim. (Cl. (24—134.)



A clothes line holder comprising a bracket consisting of a base plate having vertically spaced ears projecting therefrom, a carrier pivoted at one end between said ears for movement in a horizontal plane and provided at its free end with a bearing arm spaced from its main portion and forming a reëntrant angle therewith, a guide pulley mounted in the space between the main portion of the carrier and the bearing arm, a hanger depending from the carrier, and line-clamping means on the hanger below the guide pulley.

1,381,312. CONTROL APPARATUS. HOWARD H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1916. Serial No. 136,031. 5 Claims. (Cl. 200—11.)

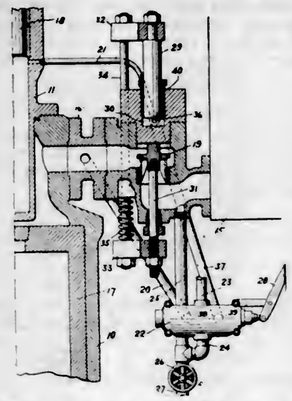


5. The combination with a control drum, of an insulating end-cap for said drum, a contact plate carried by said end-cap, and a control finger resiliently mounted upon the drum end surface to engage said contact plate under predetermined conditions.

1,381,313. MOUNTING FOR SPOTLIGHTS. WALLER L. KAUFMANN, Santa Ana, Calif. Filed July 26, 1920. Serial No. 399,133. 3 Claims. (Cl. 240—7.)

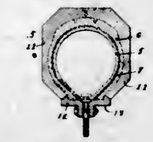
1. A mounting for spotlights comprising a horizontal base, means to secure the base to a support, an arm horizontally pivoted on the base to swing vertically and normally extended laterally and forwardly, a spotlight vertically journaled in the arm to swing horizontally, means frictionally clamping the spotlight on the arm in adjusted position, and means frictionally clamping the arm on the base in adjusted position, the arm being reversible to extend laterally and rearwardly and the base being extended rearwardly to limit the upward tilting of the spotlight when the arm is in reversed position.

1,381,314. CONCRETE-BREAKING MACHINE. LEO A. KRUPP, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed Apr. 19, 1920. Serial No. 374,814. 6 Claims. (Cl. 37—50.)



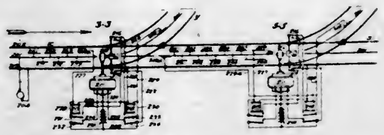
1. In a machine of the class described, a portable frame having a tower at one end, a carriage carried for horizontal adjustment by the tower and forming a vertical guide, a weight guided for movement by the carriage, an elevating chain associated with the carriage for movement therewith and having a length extending longitudinally of the carriage, said chain having a hook, means movably carried by the weight and adapted to be engaged by the chain hook to cause an elevation of the weight by the chain, and means automatically operable to release the hook engaging means from the hook to permit a dropping of the weight when elevated a predetermined height.

1,381,315. QUICK-RETURN SLACK-WATER SYSTEM. HENRI PIERRE LAURENT LAUSSUCQ, Camden, N. J., assignor to Heulings Lippincott and Alfred J. Major, as receivers of Camden Iron Works, Camden, N. J., a Corporation of New Jersey. Filed Sept. 23, 1918. Serial No. 255,308. 5 Claims. (Cl. 138—17.)



1. In a quick return slack water system, a main cylinder, a pull-back cylinder, a pilot cylinder, rams therein, a gravity filling tank, a passage connection between the gravity tank and main cylinder, accumulator pressure connections for the main cylinder, a check valve in the said passage, permitting free flow from the gravity tank to the main cylinder, a lifting rod for the check valve, operatively connected with the pilot ram, accumulator pressure connections to the pull-back cylinder and pilot cylinder and a control valve regulating the accumulator

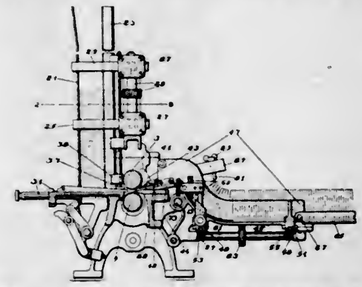
connections for the main cylinder, pull-back and pilot cylinders and adapted to exhaust the main cylinder through



the valve when pressure is applied to the pull-back and pilot cylinders.

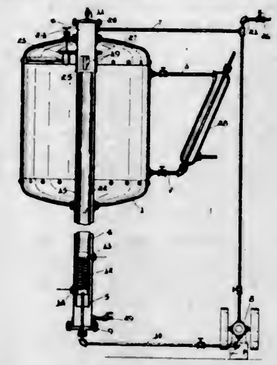
1,381,316. APPARATUS FOR MANUFACTURING PNEUMATIC-TIRE CASINGS. WILLIAM G. LERCH, Akron, Ohio, assignor to The India Tire & Rubber Company, Mogadore, Ohio, a Corporation of Ohio. Filed Oct. 23, 1920. Serial No. 419,178. 7 Claims. (Cl. 18—45.)

1. A protective sheath of the class described, comprising a plurality of sections of sheet metal adapted when placed in overlapping end to end abutment to form an annulus, each of said sections being arched laterally and longitudinally to conform to the interior surface of a pneumatic tire casing.



1,381,317. AUTOMATIC CARRIER. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Mar. 13, 1919. Serial No. 282,412. 82 Claims. (Cl. 104—88.)

1. In a railway system, a track having responsive means, cars running on said track, a device carried on said cars having a plurality of selective members, means on said track at intervals for operating said selective members separately and coöperatively whereby said device operates said responsive means.

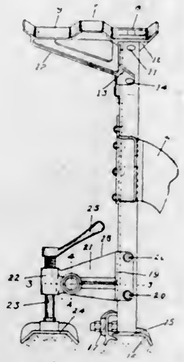


1,381,318. STACKING MECHANISM. THOMAS LUND, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 15, 1917. Serial No. 142,474. 21 Claims. (Cl. 271—87.)

4. A machine of the class described, having, in combination, means for operating successively upon a series of blanks, a chute, means for delivering the blanks one by one into said chute, and yielding means extending

through the walls of the chute into engagement with the edges of said blanks for forcing them along in said chute.

1,381,319. PROCESS AND APPARATUS FOR HYDROGENATING OILS. ARCHIBALD J. MACDOUGALL, Toronto, Ontario, Canada, assignor to National Electro Products, Limited, Toronto, Canada. Filed May 22, 1919. Serial No. 299,034. 6 Claims. (Cl. 87—12.)

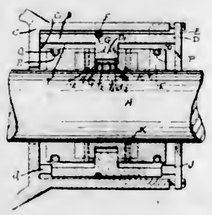


1. A process of hydrogenating oils which consists in circulating the oil mixed with a catalyst in upwardly and downwardly extending channels forming a circulating system, by introducing hydrogen into the lower part of the upflow side of the circulatory system, maintaining a suitable temperature and pressure during the reaction, regularly and automatically withdrawing small quantities of hydrogenated oil from the circulating system into the upper part of a storage reservoir and simultaneously introducing similar quantities of raw oil and catalyst into the circulating system from the same reservoir.

1,381,320. SWITCH. JOSEPH N. MAHONEY, Wilkinsburg, and GEORGE L. CHRISTMAN, Swissvale, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,391. 10 Claims. (Cl. 200—166.)

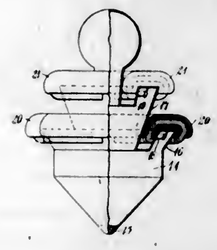
8. In a switch, the combination with relatively movable contact members, of means for biasing said members together in the closed position of the switch, and for rendering said biasing means ineffective during the operation of the switch.

1,381,321. DOUBLE-TIRE CARRIER AND LOCK. GURDON C. MATHER, Detroit, Mich. Filed Apr. 24, 1920. Serial No. 376,219. 4 Claims. (Cl. 224—29.)



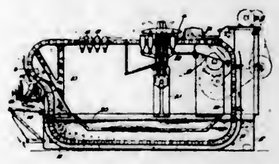
1. The combination with a base provided with double seated arms for engagement with a pair of mounted tire rims adapted to coöperate with an arm extending from the opposite side of said base and having a seat for engagement with one rim applied to the other arms, of a bracket extending from the latter arm, a longitudinally grooved stem screw threaded in the outer end portion of said bracket and provided with a clamp for engagement of another rim applied to the other arms, a spring-projected plunger longitudinally movable in the bracket and normally engaging the slot in the stem and preventing retraction of the stem when in locked position, and a lock in the bracket adapted to withhold the plunger from engagement with the stem.

1,381,322. ELECTRIC HEATER. WILLIAM MAYALL, Toronto, Ontario, Canada. Filed Nov. 1, 1919. Serial No. 334,997. 6 Claims. (Cl. 219—38.)



1. A tubular electric heater casing formed of an integral sheet of metal bent to tubular form and having a longitudinal fold therein forming an inwardly extending pocket open at its outer side and adapted to contain a heating element, the longitudinal edges of the sheet and the edges of the ends of the pocket being suitably secured together.

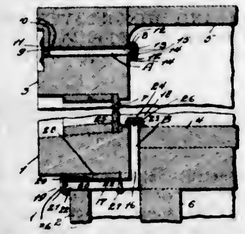
1,381,323. METALLIC WIPER. JOHN MELLOR, Jersey City, N. J. Filed Jan. 22, 1917. Serial No. 143,851. 5 Claims. (Cl. 286—27.)



1. In a metallic wiper, the combination with a rod and stuffing box, of a casing arranged in fixed position within said stuffing box and surrounding but out of contact with the rod, said casing having an inward projection on its inner annular surface, and a ring within said casing extending between said projection and the rod and having its inner surface contacting with the rod and having on its outer surface a groove, the walls of which have a sliding contact with the walls of said projection.

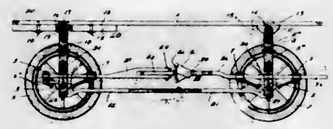
1,381,324. INVERTED RECTIFIER. FRIEDRICH W. MEYER, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 20, 1914. Serial No. 846,365. 10 Claims. (Cl. 175—363.)

1. A device for converting direct current into pulsating current comprising means producing a direct-current arc, means for causing said arc to revolve about an axis, and a plurality of electrodes arranged to be engaged in succession by one end of said arc.



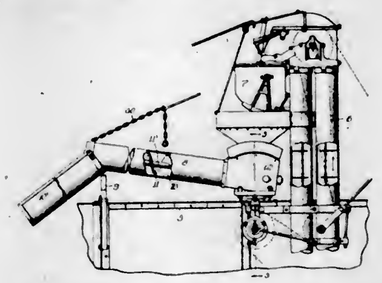
1,381,325. SOAKING AND WASHING MACHINE. GEORGE J. MEYER, Milwaukee, Wis., assignor to Geo. J. Meyer Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1918. Serial No. 250,598. 2 Claims. (Cl. 141—7.)

1. A bottle cleaning machine comprising a soaking tank, a conveyer for conducting bottles through said tank and returning above the tank with bottles in an inverted position, bottle washing and rinsing mechanism operating on the bottles on the return travel of the conveyer, said conveyer having a reverse bend at its descending end by which the bottles are discharged therefrom by gravity, means beneath the reverse bend of the conveyer and at the same end of the machine for feeding the bottles to the conveyer for their passage through said soaking tank, and means for guiding the conveyer.



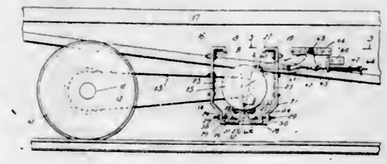
1,381,326. VENTILATOR FOR SHOW-WINDOWS. SAM MEYER, St. Louis, Mo. Filed Oct. 22, 1918. Serial No. 259,215. 3 Claims. (Cl. 98—31.)

3. The combination with a show window including a pane of glass and a frame therefor mounted in a wall, of an injector ventilator comprising a right-angled shell open at its ends adapted to be permanently mounted in the wall and located below and adjacent to and along the inner side of the sill of the window frame for directing the air inwardly and upwardly through said injector ventilator and along the glass of said window, an ejector ventilator comprising a straight rectangular shell open at its ends and adapted to be permanently mounted in the upper rail of said window frame in substantial vertical alinement with the injector ventilator, and means for controlling the passage of air through said injector and



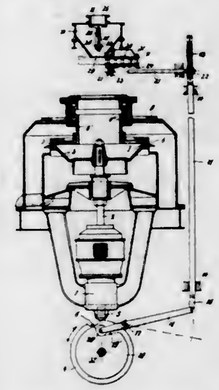
ejector ventilators, comprising a pair of independent slides fitted to the open ends of said ventilators and adapted to be independently adjusted to afford openings in the respective ventilators of the same or different areas and at the same or different positions in the respective ventilators.

1,381,327. TRAILER OR WAGON. FRANK S. W. MILLER, Syracuse, N. Y. Filed Apr. 17, 1920. Serial No. 374,529. 4 Claims. (Cl. 280—99.)



1. In a wagon, the combination of a body, a running gear comprising front and rear axles having means associated therewith on which the wheels are mounted, bolsters interposed between the axles and the body including upper and lower sections, the lower section of each bolster being pivotally connected to the upper section on an axis extending transversely of the body, and a reach connecting the axles, the reach including sections connected respectively to the axles, the sections being pivotally connected together on a horizontal transverse axis, substantially as and for the purpose described.

1,381,328. CONVEYER. PATRICK W. MORRISSEY, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed July 19, 1919. Serial No. 311,994. 5 Claims. (Cl. 193—16.)

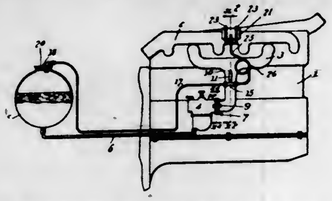


1. In a conveyer, a vertical shaft having a head thereon, a plate within which said head is loosely fitted, said head and plate forming a universal joint, a gear-wheel connected to said plate, and means for rotating said shaft to actuate said gear-wheel.

1,381,329. GENERATOR SUSPENSION. THOMAS L. MOUNT, Philadelphia, Pa. Filed June 19, 1918. Serial No. 240,823. 6 Claims. (Cl. 105—106.)

1. A dynamo suspension comprising in combination, depending members attached to the bottom of a car, pivot members attached to the base of the depending members, a dynamo above and connected to the pivot members, a belt for driving the dynamo from the car axle, a spring, and a connection between the dynamo and the spring arranged to cause an increased effect to be exerted on the dynamo to overcome the lessened effect of its weight upon the tension of the belt as the dynamo swings toward the car axle and to exert a decreased effect when the dynamo swings away from the car axle and its weight becomes effective in producing belt tension, whereby the tension in the belt may be maintained substantially constant with changes in position of the dynamo with respect to the car axle.

1,381,330. CENTRIFUGE. FRITZ PECHSTEIN, Wilmersdorf-Berlin, Germany, assignor to C. A. Fesca & Sohn, Berlin-Lichtenberg, Germany, a Firm. Filed Dec. 18, 1919. Serial No. 345,664. 5 Claims. (Cl. 233—21.)

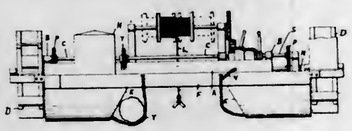


1. In a centrifuge, the combination of a centrifugal drum with a funnel above the latter, a slide controlling the inlet of such funnel, a slide controlling the outlet thereof, means for operating these slides so as to cover the outlet while uncovering the inlet, and vice versa, and means for automatically discharging the contents of the said drum, substantially as set forth.

1,381,331. FUEL-FEED SYSTEM. CHARLES POHL, Los Angeles, Calif., assignor to John O. King, Los Angeles, Calif. Filed Sept. 8, 1919. Serial No. 322,327. 9 Claims. (Cl. 123—119.)

1. A system of supplying a combustible mixture to an internal combustion engine, which includes the fuel supply tank, the main carbureter, the connecting fuel supply conduit and the intake manifold of the engine, a control valve communicating with the intake manifold, means cooperating with a heat radiating area of the engine to produce a supply of heated air, a conduit connecting said

means to the control valve and having an intermediate cooling element, and a second conduit connected to the



fuel supply tank above the liquid level and to the control valve for entraining fuel vapor to said valve.

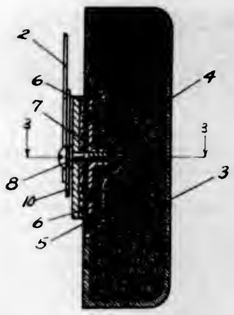
1,381,332. SELF-FILLING FOUNTAIN-PEN. PAUL H. QUALMANN, Milwaukee, Wis. Filed June 1, 1920. Serial No. 385,445. 7 Claims. (Cl. 120—46.)

6. A self filling fountain pen comprising a cylindrical body portion, a collapsible ink tube mounted therein, an elongated U-shaped spring member having its arms initially bowed inwardly and positioned within said cylindrical body and upon opposite sides of said tube, plates mounted between said arms and said tube and carried by said arms, a cap secured upon the upper end of said cylindrical body and provided with a bayonet slot, a plunger mounted within said cap and having a pin adapted to travel within said bayonet slot, thereby temporarily locking said plunger in one position, said plunger being adapted to bear upon the yoke portion of said elongated U-shaped spring member and cause the approach of an intermediate portion of said spring arms, thereby causing said plates to collapse said ink tube.

1,381,333. APPARATUS FOR RAISING SUNKEN LOGS. ROY A. RANGER, Charlevoix, Mich. Filed Mar. 13, 1920. Serial No. 365,418. 4 Claims. (Cl. 114—49.)

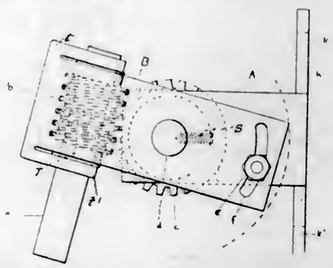
1. In combination with a pair of lighter members, means for detachably uniting the same, a base timber having an operating shaft rotatably supported thereon, adapted for detachable connection with the lighters, a second shaft rotatably supported in parallel relation to said operating shaft, a power plant carried on one of the lighters, and disconnectible power-transmitting means whereby said shafts may be operatively connected with said power plant.

1,381,334. KNIFE-SHARPENER. JACOB RANZ, St. Louis, Mo. Filed Jan. 26, 1920. Serial No. 354,148. 1 Claim. (Cl. 76—84.)



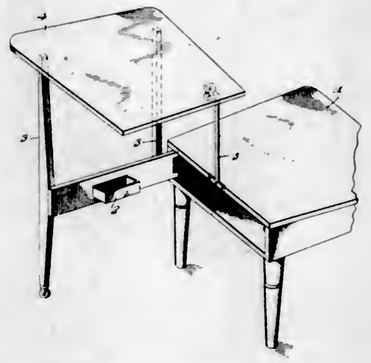
A knife sharpener comprising an elongated cylindrical body of metal, the surface of which is provided with a groove, the surface of said groove at one side being disposed substantially at right angles to the axis of the body of the implement to form a substantially right angled cutting edge, and the opposite side of said groove being curved upwardly to meet the surface of the body of the tool and form a rounded shoulder.

1,381,335. GATE AND HINGE-LATCH THEREFOR. CYRUS REED, Lebanon, Pa. Filed Nov. 20, 1920. Serial No. 425,491. 11 Claims. (Cl. 16—49.)



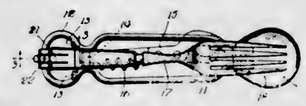
2. In a hinge construction, a support, a closure, hinge members carried by the closure, upper and lower hinge latches mounted on the support, each hinge latch comprising a hinge member supporting means, hinge member retaining arms mounted on the supporting means to retain the hinge member detachably and hingedly in place, means connecting the arms of the upper hinge latch with the arms of the lower hinge latch, whereby the arms of the upper and lower hinge latch may be operated together.

1,381,336. TRUSS. LOUIS REHTHALER, Battle Creek, Mich., assignor to Battle Creek Appliance Company, Ltd., Battle Creek, Mich. Filed Jan. 21, 1919. Serial 272,297. 1 Claim. (Cl. 128—117.)



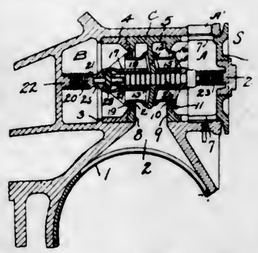
A truss pad consisting of a body portion of soft cellular rubber having an integral thing, flexible skin-like continuous covering, and an integral portion of solid rubber at the rear of substantial thickness with an attachment plate embedded therein.

1,381,337. WORM-GEARING. HENRY A. RIPPE, Salt Lake City, Utah. Filed Feb. 1, 1921. Serial No. 441,654. 4 Claims. (Cl. 74—36.)



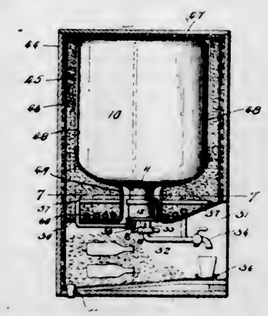
1. In an awning fixture, the combination of a supporting bracket; a winding shaft journaled therein; a worm wheel fast to said shaft; a frame mounted to swing about the axis of said shaft; means for clamping said frame to said bracket in different angular adjustments; a worm rotatably mounted in said frame and meshing with said worm wheel; and a connection for rotating said worm.

1,381,338. COMBINATION-CHAIR. YUBIE WILLIAM ROGERS, St. Louis, Mo. Filed Mar. 24, 1919, Serial No. 284,828. Renewed May 2, 1921. Serial No. 466,221. 1 Claim. (Cl. 155—43.)



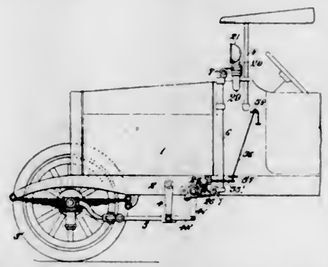
A combination chair comprising a seat, having a door leading into an inclosure beneath said seat, supports secured to said door, a back pivotally secured to said supports and suitable means for supporting said back when in a table top position, for the purpose described.

1,381,339. COMBINATION UTENSIL. FRED ROSEN, Chicago, Ill. Filed Nov. 21, 1918. Serial No. 263,469. 4 Claims. (Cl. 30—22.)



1. In a device of the class described, the combination of a handle formed from a metal rod folded into two side members substantially parallel with each other and each bent near the mid-portion of the folded rod to form a loop, a spoon bowl secured to the ends of the folded rod, and a reinforcing bar extending between the side members of the handle at the inner sides of said loops.

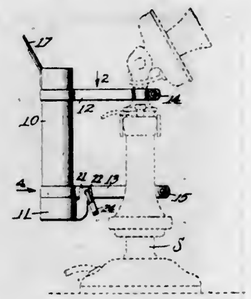
1,381,340. STEAM-ENGINE VALVE. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed Nov. 17, 1919. Serial No. 338,478. 1 Claim. (Cl. 121—185.)



A puppet valve construction for steam locomotives including in combination with the steam chest, a valve cage consisting of a substantially inverted U-shaped member having intake and exhaust ports in the opposite wings thereof and also having a single intermediate wall provided with a right angularly disposed valve stem guide sleeve, a spring pressed valve having a tubular stem portion fitting over the exterior of the guide sleeve, a push rod arranged within the said guide sleeve and engaging with the said valve at one end while the opposite end projects beyond the opposite end of the guide sleeve, another spring pressed valve having a stem portion provided with an opening and also adapted to engage with the exterior of the sleeve guide at one side of the intermediate wall of the valve cage, and an operating rod adapted to move between the stem of the last mentioned valve and the push rod in the said sleeve.

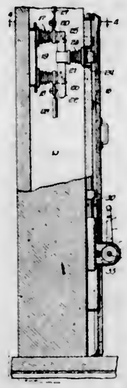
1,381,341. BEVERAGE SHIPPING AND DISPENSING RECEPTACLE. DAVID O. ROYSTER, St. Louis, Mo. Filed Sept. 25, 1917. Serial No. 193,077. 8 Claims. (Cl. 225—40.)

1. In a beverage shipping and dispensing receptacle, a housing, a partition therein, which partition divides the space within the housing into upper and lower compartments, the same being connected by an opening, a wall arranged within the upper compartment to form a container chamber and an ice chamber, a container located in the container chamber and provided with a tubular extension which projects downward between the opening in the upper and lower chambers of the housing, means normally closing the mouth of the tubular neck, a tube leading from said closing means downwardly into the lower chamber within the housing, a valve near said tube, an air tube extending through the closing means, a portion of which tube is arranged in the lower portion of the ice chamber, and a valve in said air tube.



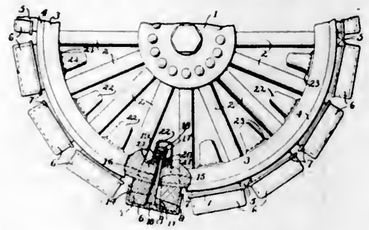
1,381,342. DIRIGIBLE SPOTLIGHT FOR MOTOR-VEHICLES. CHARLES S. SAKANASHI, San Mateo, Calif. Filed Dec. 13, 1920. Serial No. 430,229. 2 Claims. (Cl. 240—62.)

2. In combination with the steering mechanism of a motor vehicle, a dirigible lamp structure carried by the vehicle, a pair of flexible members extending from said lamp structure, a tubular guide through which said mem-



bers extend and within which the same operate, said members being disposed angularly from opposite ends of said tube, rollers at the opposite ends of said tube and over which said connections operate, means for normally forcing the centers of axial rotation of the rollers at opposite ends of the tube from each other to maintain said flexible members under tension, a clutch plate adjacent to the lower end of the tube and to opposite points on which said flexible members are secured, a sleeve mounting the plate, a clutch hub on said sleeve, a lever extended therefrom and connected with the vehicle steering gear, means for normally maintaining said clutch hub and plate in engaged relation, and means for releasing the clutch plate and hub to permit the manual operation of the lamp independently of the direction of steering of the vehicle.

1,381,343. TELEPHONE ATTACHMENT. LLOYD J. SAMPSON, Worcester, Mass. Filed July 14, 1919. Serial No. 310,659. 2 Claims. (Cl. 206—1.)

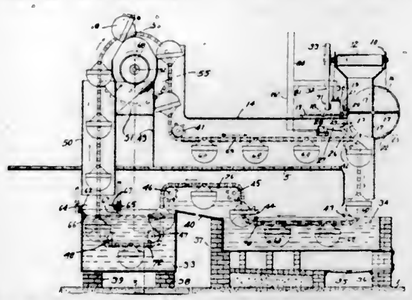


1. A telephone attachment having, in combination, a tubular coin receptacle, means to clamp said receptacle on a transmitter support of the desk type, said receptacle being entirely supported thereby and movable therewith and being spaced above the base of said transmitter support, a downwardly removable detachable closure for the lower end of said receptacle, means effective to prevent relative axial movement of said receptacle and closure when in operative position, and a lock effective to prevent relative angular movement of said parts.

1,381,344. DISCONNECTING-SWITCH. MAURICE M. SAMUELS and FERDINAND N. BECHOFF, New York, N. Y. Filed June 13, 1919. Serial No. 304,027. 4 Claims. (Cl. 200—48.)

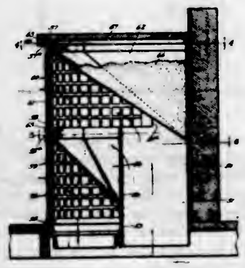
1. In a disconnecting switch the combination of a pair of insulators, a contact clip supported by each insulator, a pair of switch blades located one upon either side of said contact clips, contact blocks extending between and secured to said blades for engaging said contact clips in the closed position of the switch, an insulator supporting said switch blades, a member supporting said last named insulator, rods secured to said member and located substantially parallel with said switch blades and mounted for longitudinal movement, and devices for moving said rods longitudinally to open or close said switch as desired.

1,381,345. PROTECTIVE COVERING FOR RUBBER TIRES. HENRY C. SANKEY, St. Louis, Mo. Filed Sept. 20, 1920. Serial No. 411,468. 1 Claim. (Cl. 152—4.)



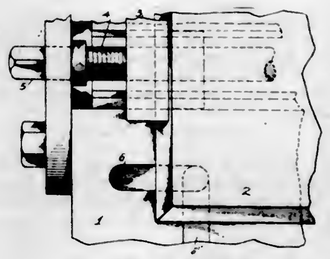
The combination with a wheel-felly, a metallic rim on said felly, rubber-blocks seated on said metallic rim, there being registering flaring passages in said rubber-blocks, felly and rim; of hollow protective metal caps seated on the treads of said rubber-blocks and having sockets located in alinement with said registering passages of said felly, rim and rubber-blocks; a long bolt having a rounded head at its outer end seated in the socket of each of said caps, and the body of said bolt extending through the said registering flaring passages and projecting a distance beyond the inner surface of said felly; a nut on the inner end of said bolt; a socket-bearing secured to the inner surface of said felly; a cup-shaped washer on said socket-bearing; a spring mounted on said bolt in the space between said cup-shaped washer and said nut; and a cover secured at its inner end to the said socket-bearing and inclosing the inner end of said bolt and all of the parts that are located on the inner portion of the latter.

1,381,346. SILICON CARBID AND METHOD OF MAKING SAME. HENRY ERIC SCHABACKER, Thoroid, Ontario, Canada, assignor to The Exolon Company, Boston, Mass., a Corporation of Massachusetts. Filed May 25, 1920. Serial No. 384,239. 7 Claims. (Cl. 204—62.)



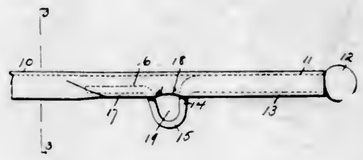
1. That step in the process of making a silicon carbid consisting in combining sand and pitch coke.

1,381,347. PROCESSING-MACHINE FOR FRUITS AND VEGETABLES. WILLIAM F. SCHALLER, San Francisco, Calif. Filed Mar. 13, 1920. Serial No. 365,386. 9 Claims. (Cl. 146—14.)



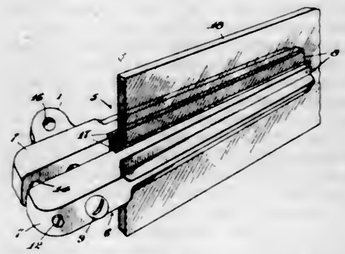
1. A fruit processing machine comprising the combination of a pair of liquid receptacles, a drain apron extending from one liquid receptacle to the other and a series of fruit holding baskets mounted to travel into one liquid receptacle, out of the same and into the other liquid receptacle, and to thereupon discharge their contents.

1,381,348. COMBINED HOT-AIR AND COLD-AIR REGISTER. ALBERT G. SCHERER, Chicago, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 23, 1918, Serial No. 259,357. Patent No. 1,329,802, dated Feb. 3, 1920. Divided and this application filed May 19, 1919. Serial No. 298,040½. 8 Claims. (Cl. 98—54.)



4. A register comprising a box-like structure the rear wall and portions of the side-walls whereof are each formed of two plates spaced apart to provide an intermediate air-space, a reticulated plate forming the front wall and remaining portions of said side-walls, a vertical plate connecting the outer portions of the double side-walls, a pyramidal deflector extending from said partition to said reticulated plate intermediate the top and bottom thereof, and a pyramidal deflector extending from the double rear wall to the top of said reticulated plate.

1,381,349. PRINTING-PLATE STARTER. LOUIS A. SCHMIDT, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Oct. 11, 1919. Serial No. 330,085. 3 Claims. (Cl. 101—378.)

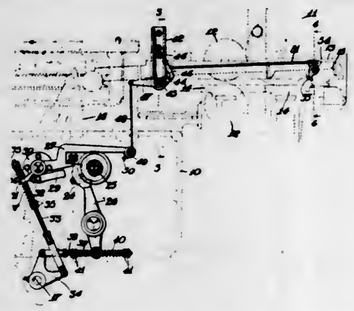


1. A plate carrying member having a plate supporting surface of greater dimensions than the plate supported thereby, and a recess or groove formed in the surface and extending outwardly beyond the edge of the plate when in position and inwardly under the edge of the plate, said groove or recess being proportioned to permit a tool to be inserted from beyond the edge of the plate in under the edge of the plate, the bottom of the groove or recess toward its inner end being formed to provide a fulcrum point for the tool.

1,381,350. UMBRELLA-RIB. PETER H. SEERY, Newark, N. J. Filed Oct. 28, 1919. Serial No. 333,891. 2 Claims. (Cl. 135—36.)

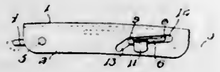
2. In an umbrella rib, a one-piece stem formed with a head on its outer end against which the end of the rib abuts, the stem being reduced in diameter at its inner end, the stem being formed into an open loop with the outer end of the loop situated at the juncture of the reduced portion with the main part of the stem, the reduced part beyond the loop being offset so that its outer edge is in line with the outer edge of the main part of the stem.

1,381,351. CLAMP. ROLLA C. SHAW and FLOYD C. SKADAN, Los Angeles, Calif.; said Skadan assignor to said Shaw. Filed Jan. 14, 1920. Serial No. 351,505. 1 Claim. (Cl. 144—297.)



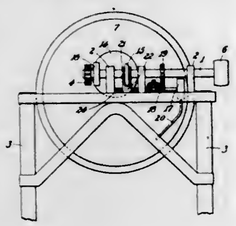
A clamp comprising a pair of jaw members each of which is formed with a block-like body portion having an elongated extension projecting in continuation of said body portion; a set screw threaded through the body portion of one of said jaw members to project into a recess on the inner face of the other jaw member, to act as an adjustable fulcrum, a tightening screw disposed intermediate of said set screw and the outer ends of said extension and passing loosely through the body portion carrying the set screw and threaded into the other body portion, said tightening screw having a head arranged to bear on the outer face of the jaw member through which it passes to engage the latter, and yieldable strips secured to the inner face of the extensions of said jaw members.

1,381,352. WORK-FEED-TRIPPING MEANS. WILLIS S. SHERMAN, Milwaukee, Wis. Filed Oct. 24, 1917. Serial No. 198,310. 15 Claims. (Cl. 192—116.)



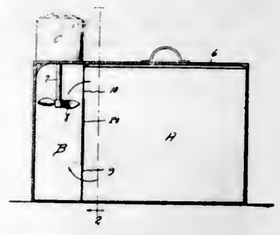
9. In a work feeding means having a definite cycle of operation, a clutch for connecting the driving parts with the driven parts thereof, a means for operating the

clutch, and a pair of triggers for controlling the operating means and adapted to be engaged and moved jointly



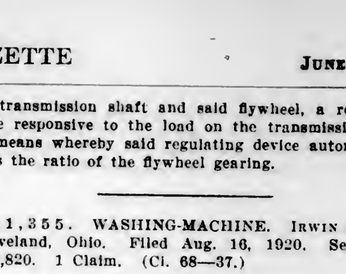
by the work in order to operate the clutch to start the work feeding means.

1,381,353. BELT-BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed July 15, 1920. Serial No. 396,541. 4 Claims. (Cl. 24—194.)



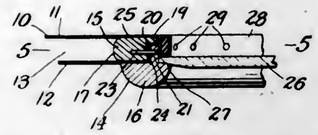
1. A belt buckle comprising a frame having a clamping surface, a clamping member having a slot through which the belt end is passed in order to pass between said clamping member and the clamping surface, and means for supporting said clamping member for movement over said clamping surface to cause a portion of the clamping member on one side of the slot to move toward and from the clamping surface of the frame, and for holding a portion of the clamping member on the other side of the slot close to the surface when the member is shifted to carry the clamping portion thereof away from the clamping surface so as to prevent the belt end being passed under the clamping member without being passed through the slot in the clamping member.

1,381,354. REGULATING AND CONTROLLING THE TRANSMISSION OF POWER. PAUL SHISHKOFF, Richmond, England. Filed July 2, 1920. Serial No. 393,685. 7 Claims. (Cl. 74—6.)



1. Mechanism for controlling and regulating the transmission of power comprising in combination a motor, a transmission shaft driven thereby, a free-wheel clutch interposed between said motor and said transmission shaft, a geared flywheel serving to accumulate and discharge energy, a variable ratio gear interposed between said transmission shaft and said flywheel, a regulating device responsive to the load on the transmission shaft and means whereby said regulating device automatically varies the ratio of the flywheel gearing.

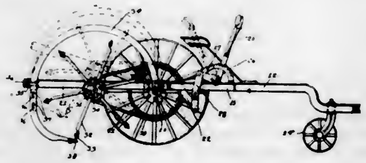
1,381,355. WASHING-MACHINE. IRWIN SIEBERT, Cleveland, Ohio. Filed Aug. 16, 1920. Serial No. 403,820. 1 Claim. (Cl. 68—37.)



A washing machine comprising a single casing, a single partition wall set in the case and extending across the same, and dividing the same into two compartments one of which is adapted to receive clothes, said partition having upper and lower screened openings between the compartments, and a propeller working in the other compartment and adapted to cause continuous circulation of water in one direction through the two compartments.

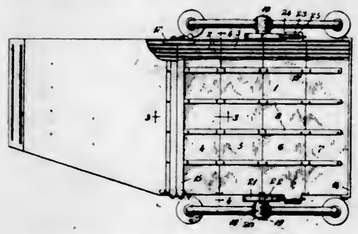
1,381,356. TERMINAL FOR ELECTROLYTIC CONDENSERS. JOSEPH SLEPIAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1919. Serial No. 270,124. 9 Claims. (Cl. 175—317.)

4. In a condenser, rectifier, lightning arrester or the like, the combination with a container, an electrolyte therein and an electrode terminal projecting from the electrolyte, of means for establishing substantially zero potential between the terminal and the adjacent portion of the electrolyte.



1,381,357. WINDOW-FRAME FOR AUTOMOBILE-HOODS AND THE LIKE. JOSEPH SOSS, New York, N. Y. Filed Nov. 24, 1919. Serial No. 340,283. 3 Claims. (Cl. 296—145.)

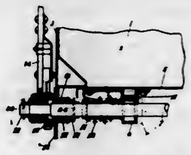
1. A window frame for use in connection with hoods, curtains or the like composed of separate members, said



frame consisting of inner and outer parts, the outer part being provided at intervals with a plurality of inwardly projecting ears adapted to operate in recesses in the inner part, the separate members of the hood being mounted between the separate parts of the frame, means passed transversely through said ears and said hood and into the inner part for securing the separate parts of the frame together and for securing the separate members of the hood therebetween, a transparent panel adapted to be mounted in the frame, and a flexible strip secured to the inner part of the frame at spaced intervals by attaching devices which pass through the separate members of the hood, said strip serving to secure the transparent panel and the separate members of the hood in said frame against displacement.

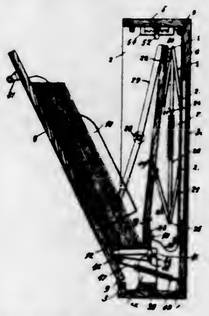
1,381,358. WEED-CUTTER. JOHN M. SPARKS, Washtucna, Wash. Filed Dec. 4, 1920. Serial No. 428,299. 4 Claims. (Cl. 55—85.)

2. In a weed cutter, a wheel-supported shaft, a main frame having its rear end secured to said shaft, an auxiliary frame pivotally mounted upon said main frame and embodying a cross bar extending beneath said main frame, a transverse shaft mounted upon said main frame, means for adjustably positioning said shaft, arms carried by said shaft, a link connection between said arms and said cross bar whereby said cross bar is vertically positioned by the adjustment of said shaft.



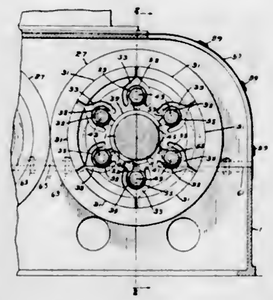
1,381,359. MATRIX-RECEPTACLE. ASHTON G. STEVENSON, Chicago, Ill. Filed Apr. 27, 1920. Serial No. 377,129. 10 Claims. (Cl. 211—42.)

3. In a device of the character described, a receptacle comprising a plurality of blocks, means for securing the blocks together, each block comprising a plurality of sections, means for securing said sections together, the corresponding inner faces of said sections having channels therein forming ways for matrices, and means for normally preventing matrices from falling through one end of said receptacle.



1,381,360. WASHER AND SHAFT. SWAN R. STROM, Chicago, Ill., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 24, 1919. Serial No. 278,972. 7 Claims. (Cl. 105—286.)

7. In a dump car, a discharge door operating mechanism, a shaft forming part of said mechanism, said shaft having an opening formed therein, a washer mounted on said shaft adapted to engage portions of said car, said washer having a plurality of transverse openings formed therein spaced apart longitudinally, and each adapted



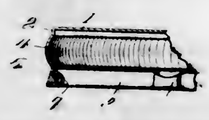
to register with the opening in said shaft for longitudinal adjustment of said washer and shaft relative to each other.

1,381,361. FILING-CABINET. CASPAR STUDER, Winterthur, Switzerland. Filed Feb. 26, 1920. Serial No. 361,566. 4 Claims. (Cl. 45—2.)

1. In a filing cabinet for unperforated letters, drawings and the like, including a forwardly tiltable door serving as receptacle for the filed objects, the feature that the file contents are acted on by a pressure plate composed of at least two hingedly inter-connected leaves or sections, said pressure plate being supported below by a floor plate hingedly connected in front to said tiltable door, the upper section of said pressure plate on opening of the door being withheld from further contact with the file contents and its lower section held pressed against the contents and toward said hinged floor plate by the intermediary of a spring influenced link and drawrod-mechanism.

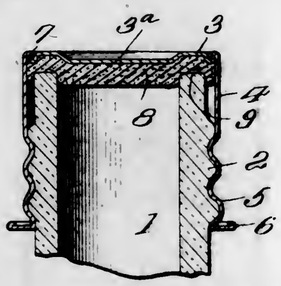
1,381,362. CRUSHING-ROLL MACHINE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Feb. 13, 1917, Serial No. 148,407. Divided and this application filed June 30, 1919. Serial No. 307,547. 9 Claims. (Cl. 287—52.)

1. The combination of a shaft, an annular member, an expansible member interposed between said shaft and an-



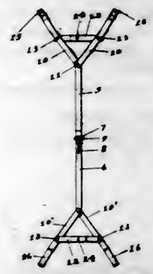
nular member and comprising sections having spaces between them, and reversely bent flexible webs connecting said sections to allow expansion of said sections into secure gripping relation with said shaft and annular member.

1,381,363. COVER FOR JARS. THOMAS LUCIEN TALIAFERRO, Chicago, Ill., assignor to Phoenix-Hermetic Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 19, 1918. Serial No. 263,149. 6 Claims. (Cl. 215—38.)



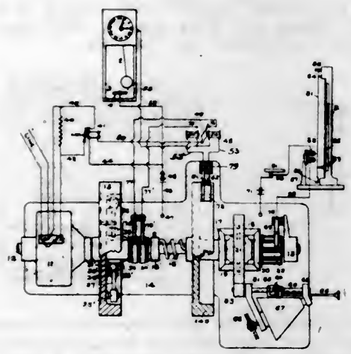
1. A metal jar cover comprising a top section and a depending flange, said flange having inset portions at a distance above the lower edge of the flange for forming a relatively broad gripping contact with the jar walls throughout a greater portion of its circular extent, said inset portions being spaced sufficiently to permit the metal in each portion to bend or reshape itself independently of the other portions, so that the gripping surface of the cover may conform to irregularities in the surface or contour of the jar.

1,381,364. JAR-CLOSURE. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed July 8, 1920. Serial No. 394,633. 4 Claims. (Cl. 215—44.)



4. A jar closure comprising a top portion having a depending flange, said flange being rolled inwardly and flattened to strengthen the lower edge of the flange, said flange within the limits of the strengthened inturned edge being horizontally indented to provide spaced holding lugs, with the metal forming the portion of the lug adapted to hold the closure on the jar extending in a direction substantially parallel with the flange.

1,381,365. BOTTLE-CAP AND METHOD OF SEALING BOTTLES. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed July 8, 1920. Serial No. 394,634. 3 Claims. (Cl. 215—43.)

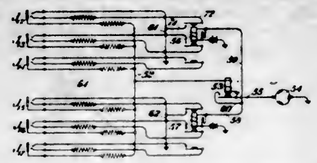


1. A bottle cap consisting of a top portion and a depending flange, a plastic gasket located in said cap adjacent said top portion and adapted to soften by heat at a relatively low temperature whereby said gasket may be reshaped through a bending of the metal of the cap, said cap being so constructed whereby the same may be reshaped so as to force the gasket when softened into more intimate sealing contact with the bottle and the cap after said cap is placed on the bottle.

1,381,366. TIRE-CARRIER. HAROLD V. TEETER, Kalamazoo, Mich. Filed Sept. 22, 1919. Serial No. 325,463. 3 Claims. (Cl. 224—29.)

3. In a tire carrier, the combination of a hanger bar, and pairs of arms pivotally mounted on said bar the arms of each pair being connected by collapsible stretchers so that they may be supported in an extended relation or collapsed side by side, said pairs of arms terminating in pairs of oppositely facing hooks, the hooks of one pair of arms being engageable over a tire and the other constituting rests for another tire.

1,381,367. SYNCHROROTOR. EDWARD G. THOMAS, Springfield, Ill. Filed June 12, 1916, Serial No. 103,208. Renewed Aug. 28, 1918. Serial No. 251,837. 17 Claims. (Cl. 58—25.)

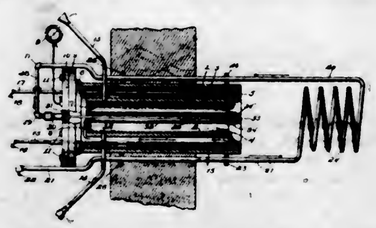


1. In a synchrorotor the combination of a rotatively supported member, a spring of which one end is fastened to said member, and means for causing rotation of the other end of said spring at one or the other of two predetermined speeds, and mechanism for periodically selecting one or the other speed of rotation.

1,381,368. BUSY BACK CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 1, 1919. Serial No. 286,660. 8 Claims. (Cl. 179—50.)

4. A busy back circuit including a plurality of jacks, conductors associated with the ring contacts of said jacks,

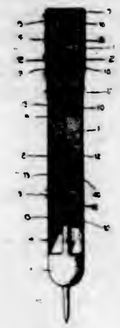
means responsive upon the association of a trunk circuit with one of said jacks for applying ground to all of said



ring conductors, and means individual to said ring conductors for disconnecting said ground.

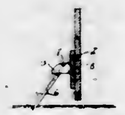
1,381,369. STOVE-TOP. WILLIAM PATRICK TRAINOR, Bristol, Va. Filed Oct. 7, 1920. Serial No. 415,281. 1 Claim. (Cl. 126—211.)

The combination with a stove top having an elongated rectangular opening over the fire-box, surrounded by ledges, a rectangular flat faced plate fitted in the opening and provided between its upper and lower faces with a continuous supporting rib resting on said ledges and permitting said plate to be removed and reversed, said plate being also provided with a central circular hole, the wall of which is of V-shaped cross-section to provide inwardly beveled seats for the usual lid.



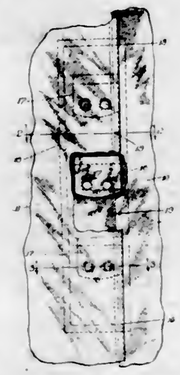
1,381,370. BURNER FOR PETROLEUM OR SIMILAR FUELS. JOSÉ VELASQUES, Cárdenas, Cuba. Filed Sept. 23, 1919. Serial No. 325,621. 1 Claim. (Cl. 158—73.)

A burner for petroleum or similar fuels, comprising an outer cylinder for arrangement through the wall of the furnace and closed at the outer end of the furnace, an inner cylinder in said outer cylinder, connected at its inner end to the outer cylinder and having a closed outer end within the outer cylinder, inlet tubes for air at different points of the periphery of the inner cylinder and near its outer closed end, petroleum supplying means arranged at the space between the cylinders, a tube arranged longitudinally in the inner cylinder and opening through the closed outer end thereof, said tube having at its inner end a nozzle and a tip in said nozzle provided with jet openings, and a tube arranged in the first named tube and discharging through the tip, and steam superheating means included in the last named tube.



1,381,371. RAILWAY SIGNAL-FUSEE. FREDERIC L. WANKLYN, Montreal, Quebec, Canada. Filed Sept. 1, 1920. Serial No. 407,558. 5 Claims. (Cl. 102—24.)

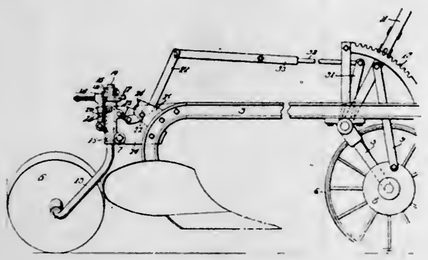
4. A railway signal fusee consisting of a tubular container divided longitudinally throughout its length into two chambers and having one end closed, a light producing element within one of said chambers and completely filling the same, a series of smoke producing elements located within the other of said chambers and uniformly spaced apart throughout the length of the same, a non-inflammable substance filling each of the spaces between the smoke producing elements, an ignition device effecting



communication between each of said smoke producing elements and the light producing element whereby the smoke producing elements are ignited as the light producing element burns, and a cap protecting one end of said fusee.

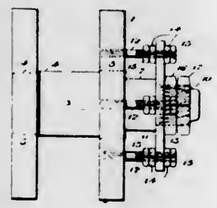
1,381,372. DOOR-CATCH. EDWIN F. WANOUS, Minneapolis, Minn. Filed Aug. 19, 1920. Serial No. 404,615. 3 Claims. (Cl. 292—338.)

1. A door catch comprising a bracket and a catch pin swiveled thereon, said bracket having an outstanding lug with a seat in which the free end portion of said pin is adapted to rest to hold the same out of action.



1,381,373. VENTILATED GARMENT. ABRAHAM WATERMAN, Chicago, Ill., assignor of one-half to David Waterman, Chicago, Ill. Filed May 19, 1920. Serial No. 382,624. 5 Claims. (Cl. 2—65.)

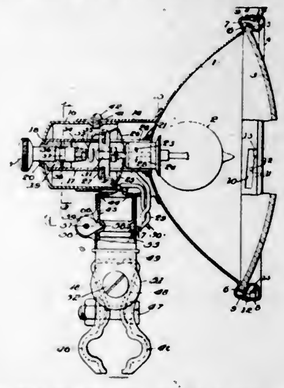
1. A ventilated garment seam comprising in combination, a pair of adjacent water-proof garment pieces, an apertured otherwise-water-proof fabric section secured around its margin to the back faces of said pieces, and a flexible water-proof unperforated valve covering said



aperture and secured along a portion only of its margin to the front of said section, whereby the movements of the wearer of the garment intermittently effect the opening of said aperture.

1,381,374. WHEEL-ADJUSTING MECHANISM FOR AGRICULTURAL IMPLEMENTS. LEWIS E. WATERMAN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed June 9, 1919. Serial No. 302,662. 8 Claims. (Cl. 97—36.)

1. In a plow, the combination of a plow frame, supporting wheels therefor including a rear furrow wheel, power operated mechanism for raising the front end of the frame, adjusting means for varying the working depth of the plow body and consequently the height to which the frame is raised by said power operated means, a connection between the power operated means and the rear furrow wheel for raising the rear end of the frame, and means for limiting the frame-elevating movement of the rear furrow wheel, said connection including means permitting the forward end of the frame to be elevated after the rear end had been stopped by said limiting means.

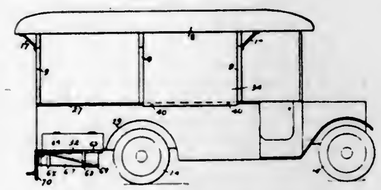


1,381,375. ENGINE-CROSSHEAD. GEORGE F. WEIR, Elkhart, Ind. Filed July 19, 1920. Serial No. 397,358. 2 Claims. (Cl. 74—84.)

1. The combination with a crosshead, of a crosshead pin having an extension at one end, the outer end of which is screw-threaded forming a shoulder between the main portion of the extension and the screw-thread, studs projecting from the cross-head, a pressure collar having orifices to receive the threaded end of the extension and the several studs, nuts threaded on the studs on both sides of the pressure collar, and a nut on the threaded end of the extension outside the pressure collar for applying endwise pressure to the crosshead pin and for locking the latter in place.

1,381,376. VEHICLE-LAMP. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 5, 1919. Serial No. 342,586. 4 Claims. (Cl. 240—44.)

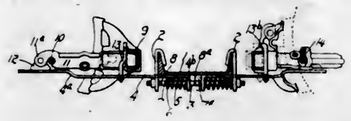
1. A searchlight comprising in combination, a reflector having a central lamp aperture; a substantially parallel-sided tubular stem extending rigidly from the rear side of the reflector encompassing the lamp aperture and exteriorly exposed for attachment to a support; a cap closing the rear end of said stem and telescoping therewith for sliding adjustment therealong, and provided with means for securing it at any point within the



range of said adjustment, and a socket tube of substantially less diameter than the cap, co-axial therewith, affording annular interspace of substantial width between it and the cap throughout its length, and engaged with the head of the cap for axial adjustment with respect to the reflector by the telescoping adjustment of the cap and neck.

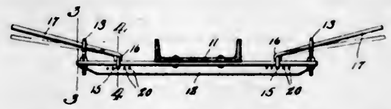
1,381,377. AUTOMOBILE-BUMPER. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 15, 1920. Serial No. 424,031. 13 Claims. (Cl. 293—55.)

5. In combination with a bumper bar and supporting arms therefor with laterally separated clamps on said bar by which it is secured to the arms, a plurality of supplemental impact members extending obliquely across the bar with their end portions projecting above and below it to form a frame or grid of greater height than the bar itself, said frame including laterally extending terminal members secured by the said clamps for supporting the frame in proper relation to the bar.



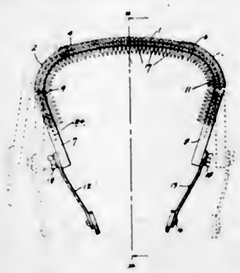
1,381,378. VEHICLE-BODY. GEORGE W. WILKINS, Glendale, Calif. Filed Apr. 1, 1920. Serial No. 370,486. 4 Claims. (Cl. 296—24.)

1. A vehicle body comprising a bed, posts extending upwardly therefrom at each side, boxes at opposite sides of the bed and projecting outwardly from said posts, a top extension plate extending over the posts and projecting outwardly therefrom, a top member extending upwardly from the outer edge of the top plate and over the vehicle



to form pockets in the top member over the top plates, the space between the top plates and over the bed of the vehicle body being unobstructed from the floor of the bed to the top member, and storage compartments provided in said pockets in the top member.

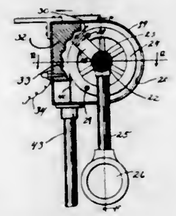
1,381,379. ADJUSTABLE SUPPORT FOR BRAKE-BEAMS. CHARLES HAINES WILLIAMS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,228. 10 Claims. (Cl. 188—213.)



1. The combination of a brake beam support movable longitudinally of its major axis and retracting means cooperating therewith.

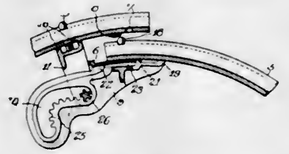
1,381,380. ADJUSTABLE THIRD OR FOURTH POINT SUPPORT FOR BRAKE-BEAMS. CHARLES HAINES WILLIAMS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 27, 1920. Serial No. 384,592. 3 Claims. (Cl. 188—213.)

1. The combination of a truck spring plank, a safety bar member secured thereto, an inclined third or fourth point supporting track for brake beams hinged at the end of said safety bar, and means coöperating with said safety bar and the supporting track for adjusting the vertical height and angle of inclination of the latter.



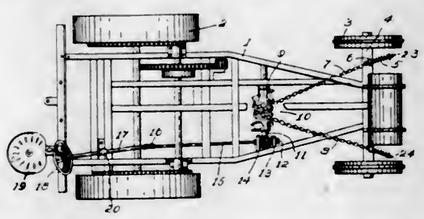
1,381,381. HAIR-CUTTING GAGE. CHARLES O. WILLIAMS, Vallejo, Calif. Filed Nov. 1, 1920. Serial No. 420,854. 3 Claims. (Cl. 132—45.)

3. A hair cutting gage comprising a crown piece, corner pieces hinged thereto, side pieces hinged to said corner pieces, comb teeth provided at one end with pins adapted to extend through said pieces, and a spring member extending between said pins and through said pieces and adapted to normally contract the side pieces to converging positions.



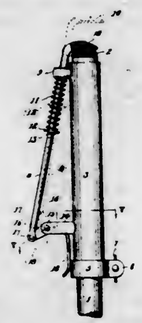
1,381,382. MOTOR-CAR SIGNAL. ELGY WIMP, Chicago, Ill. Filed Mar. 2, 1917. Serial No. 152,057. 2 Claims. (Cl. 177—329.)

1. In a signal device of the class described, a casing rectangular on one side and semi-circular on the other having a quadrantal slot in the semi-circular portion, a signal arm pivotally mounted in said casing projecting through said slot, an illuminating means in the end of said arm, a wheel rigidly secured to said arm, an operating tension member secured to the periphery of said wheel for turning the wheel and thereby swinging the arm, a



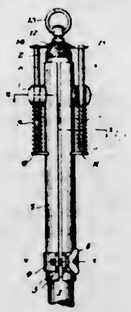
counterweight connected with said arm at an angle of about 135°, a quadrantal contact arranged within and attached to the rectangular portion of the casing, and a contact brush adapted to engage the quadrantal contact when said arm is swung upwardly and thereby produce illumination of the illuminating means.

1,381,383. TIRE-RIM CONTRACTOR. VICTOR WINQUIST, Rockford, Ill., assignor, by mesne assignments, of two-thirds to Burd High Compression Ring Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 4, 1917. Serial No. 189,640. 8 Claims. (Cl. 157—1.)



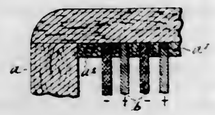
1. A tire-rim contractor comprising a pair of members adapted to be engaged respectively with the opposed ends of a split tire-rim, a rotatable pinion carried by one of said members, and a rack on the other member coöperable with said pinion and shaped so that upon rotation of the latter a relative movement between said members will be effected first radially of the rim and then circumferentially thereof to dispose the rim ends in overlapped position.

1,381,384. STEERING-GEAR FOR TRACTORS. LOUIS W. WITRY, Waterloo, Iowa, assignor to Waterloo Gasoline Engine Company, Waterloo, Iowa. Filed July 23, 1917. Serial No. 182,294. 2 Claims. (Cl. 280—97.)



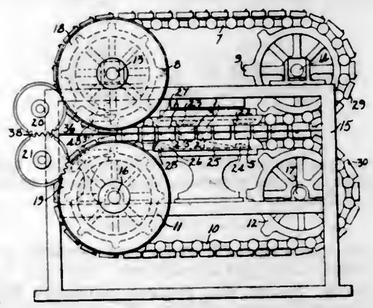
1. The combination with the pivoted steering axle of a vehicle, of a winding-drum having a channeled worm-thread thereon, securing means on the middle part of said drum, said thread gradually widening in pitch from its middle toward its ends, also increasing in diameter from its middle toward its ends, and steering chains or cables connected between opposite ends of said axle and said securing means so as to wind oppositely on said drum in the channel of said thread.

1,381,385. CUE-TIP CLAMP. STEFAN WOJCIK, Detroit, Mich., assignor of one-half to Jacob Lewandowski, Detroit, Mich. Filed Nov. 30, 1920. Serial No. 427,433. 2 Claims. (Cl. 46—10.)



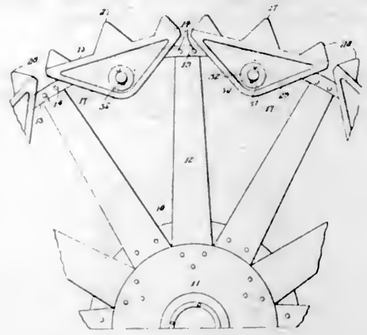
1. A cue tip clamp comprising a tubular clamping body, a clamping screw therefor, a tensioned rod carried by said tubular clamp, a disk head carried by the outer end of said rod overlying said clamp, an angle lever pivotally supported adjacent the inner end of the clamp having one end pivotally connected to the inner end of said tensioned rod with the other end providing a finger piece for shifting said rod.

1,381,386. CUE-TIP CLAMP. STEFAN WOJCIK, Detroit, Mich., assignor of one-half to Jacob Lewandowski, Detroit, Mich. Filed Nov. 30, 1920. Serial No. 427,434. 2 Claims. (Cl. 46—10.)



1. A cue tip clamp of the type described comprising a tubular clamping body, a clamp screw carried by the inner end thereof, opposite apertured lugs carried by the tubular clamping body adjacent the outer end, tensioned rods slidably mounted in the apertured lugs, and a cue tip pressing plate carried by the outer ends of said rods.

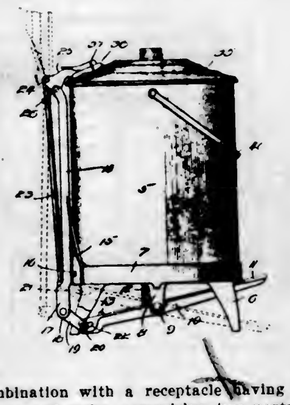
1,381,387. PROCESS OF MANUFACTURING BATTERY-PLATES. KENNETH WRIGHT, Flint, Mich., assignor of one-half to Ruben H. Williams, Flint, Mich. Filed July 10, 1920. Serial No. 395,261. 6 Claims. (Cl. 204—29.)



1. The method of forming battery plates which consists in using at the negative pole in a forming tank a series of pasted plates connected together and at the positive pole a series of dummy lead blanks connected together, passing an electric current therethrough for such time as is necessary to form such negative plates.

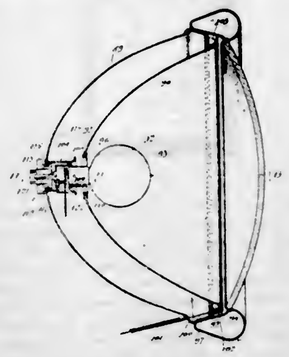
1,381,388. MACHINE AND METHOD FOR MAKING SHINGLES. HENRY WULFF, St. Paul, Minn., assignor to Silas M. Ford, St. Paul, Minn. Filed July 29, 1918. Serial No. 247,339. 8 Claims. (Cl. 93—1.)

1. In a machine for making shingles, the combination with two coöperating traveling means, of a die carried by one of said traveling means for forming upwardly portions of a shingle strip, and a die carried by the other of said traveling means for again forming the material formed by said first named die.



1,381,389. TRACTOR-WHEEL AND LUG. OTTO E. ZAHN, Schleisingerville, Wis., assignor to Julius E. Kiefer, Milwaukee, Wis. Filed Nov. 30, 1920. Serial No. 427,398. 6 Claims. (Cl. 305—13.)

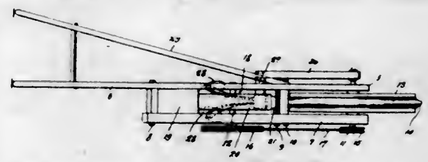
1. A traction member comprising a saddle having journal projections adjacent the corners thereof, tread plates for each pair of projections and journaling connections between each plate and the adjacent projections of the saddle.



1,381,390. RECEPTACLE. LOTHAR R. ZIFFEREN, Lancaster, Pa. Filed Feb. 19, 1920. Serial No. 359,820. 4 Claims. (Cl. 220—36.)

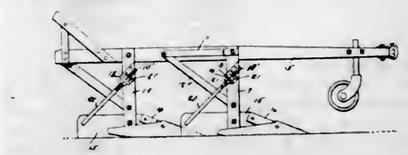
1. In combination with a receptacle having a cover and lifting means therefor, comprising two parts one being movable relative to the other, the one being formed with companion arms carrying between them a flat spring, and the other part being formed with companion walls between which the first part may be received, and means swingingly connected to the latter part adapted to be moved into position over the former part, and including a cam device adapted to bear on the spring for holding the two parts firmly together, substantially as described.

2. The combination with a receptacle having a cover and lifting means therefor, comprising two parts on one of which is a flat spring, the other part being formed with spaced walls adapted to receive between them the first part, and means swingingly connected to the second part adapted to be moved into position over the first part and including a cam device for engaging with the spring thereon, substantially as described.



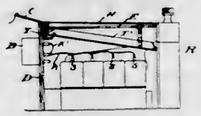
1,381,391. LIGHTING DEVICE FOR MOTOR-VEHICLES. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1916. Serial No. 133,610. 2 Claims. (Cl. 240—41.)

1. A lighting device comprising a bowl-shaped casing, a bowl-shaped reflector mounted in said casing, said bowl-shaped reflector member having an axial opening therein, said casing being provided with means in alinement with said opening for supporting a lamp in said reflector and being provided with means for tiltably supporting said reflector in said casing, and means operable from the outside of said casing for adjusting the lamp to properly position it in said reflector.



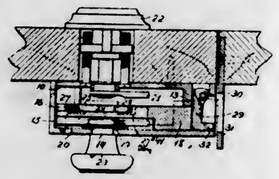
2. A lighting device comprising a bowl-shaped casing, the bowl-shaped reflector mounted in said casing, said reflector having an axial opening therein, said casing being provided with means in alinement with said axial opening for supporting a lamp in said reflector, and a pair of arms extending from said supporting means along opposite sides of said reflector on which arms said reflector is tiltably mounted.

1,381,392. FERTILIZER-DISTRIBUTER. CLAIBOURN BEVILL, Bushnell, Fla. Filed Mar. 13, 1919. Serial No. 282,354. 1 Claim. (Cl. 111—78.)



A fertilizer distributer including parallel spaced beams fixedly connected, said beams being straight and one of them extended beyond the other to constitute a handle, a handle connected to the forward portion of said extended beam and diverging rearwardly therefrom, a ground wheel journaled between the forward ends of the beams, a housing fixedly secured between said beams and back of the wheel, a discharge spout extending downwardly from the housing and back of the wheel, a disk mounted for rotation within the housing, pulleys revoluble with the disk and wheel respectively, means for transmitting motion from one pulley to the other, said disk having feed pockets in its periphery, a rearwardly extending bar mounted to swing about the axis of rotation of the wheel and located outside of the space between the beams, a laterally extending member at the rear end of said bar and projecting back of the wheel, and covering means carried by said member.

1,381,393. CULTIVATOR. CLAIBOURN BEVILL, Bushnell, Fla. Filed May 17, 1919. Serial No. 297,919. 1 Claim. (Cl. 97—10.)

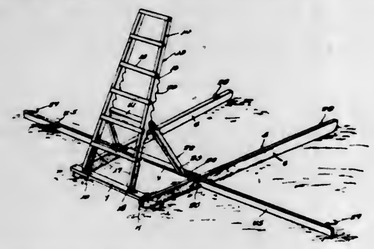


In a cultivator, a plow beam, standards depending from the plow beam, a plow pivotally supported on the lower end of each of the standards, a foot forming a part of each plow and having an opening therein, an adjusting rod associated with each plow, each adjusting rod having a right angled end passing through the opening of the foot associated therewith, each right angled end having an offset portion to lock the rods within the openings, and means for adjusting one end of the rod to cause a relative movement of the plow.

1,381,394. DEVICE FOR PROTECTING THE IGNITION SYSTEM OF AUTOMOBILES. JAMES HENRY BLOODGOOD, Portsmouth, Va. Filed Sept 13, 1919. Serial No. 323,523. 2 Claims. (Cl. 180—69.)

1. A device of the character described comprising, a trough having its vertical walls formed with recesses, a second trough arranged at right angles with respect to the first trough with one end resting on the first trough and extending through one of the recesses, lugs formed on the trough engaging end of the second trough at opposite sides of the other of said recesses, and a bracket secured to the second trough and adapted to be connected to a rest rod which extends between the lugs and through the corresponding recess.

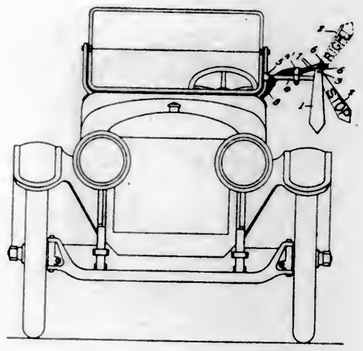
1,381,395. LOCK. ALFRED C. O. BOCK, Brooklyn, N. Y., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 3, 1920. Serial No. 408,008. 6 Claims. (Cl. 70—46.)



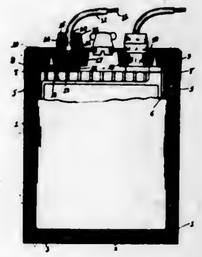
1. In a lock, the combination of a keeper, a lock casing, a hook shaped bolt normally retained within the lock casing and adapted when projected to interlock with the keeper, and a positively actuated main bolt adapted to force said hook shaped bolt to locking position and enter the keeper and perform the function of an ordinary sliding bolt and also back up and reinforce the hook shaped bolt.

1,381,396. PILOT-DIRECTING INSTRUMENT AND BOMB-DROPPING SIGHT FOR AIRCRAFT. ARTHUR H. BOETTCHER, Chicago, Ill. Filed Nov. 18, 1918. Serial No. 263,102. 13 Claims. (Cl. 177—351.)

1. In combination, a drift bar adapted to be set in the direction of actual flight of the aircraft over the earth, a sighting member mounted for movement in azimuth, and means operated by said sighting member for indicating the relative position of said drift bar and said sighting member.



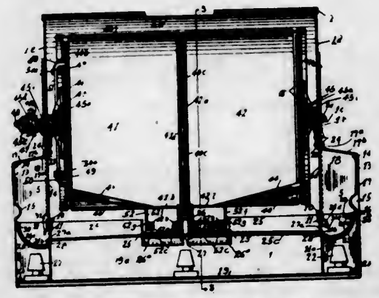
1,381,397. ORCHARD-LADDER. LARKIN BRILES, Lake City, Calif. Filed Oct. 21, 1919, Serial No. 332,158. Renewed Jan. 6, 1921. Serial No. 435,533. 6 Claims. (Cl. 228—64.)



4. An orchard ladder including a base, a ladder mounted on the base, and bracing arms vertically hinged to the base and adapted to be swung outwardly of the same for providing an additional bearing surface.

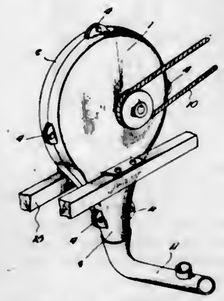
1,381,398. TRAFFIC-SIGNAL. LINZY BROOKS, Rainier, Oreg. Filed Feb. 28, 1920. Serial No. 361,976. 1 Claim. (Cl. 116—53.)

An automobile signal comprising a signal box, a relatively long arm having its outer end connected to the box, clamping means on the other end of the arm for engaging the windshield frame, a bracket on said arm, signal arms in the box, actuating means located adjacent the driver's seat, flexible members leading from the actuating means to the signal arms and tubes for said means having their outer ends supported by said bracket.



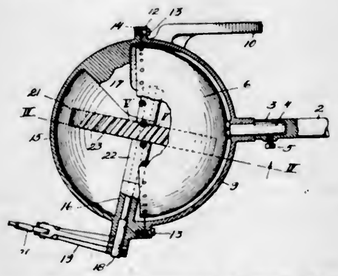
1,381,399. CONTAINING-BOX FOR ELECTRIC BATTERIES. WILLIAM C. BROOKS, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Sept. 14, 1916. Serial No. 120,018. 3 Claims. (Cl. 217—52.)

1. A battery cell box having one or more sides thereof formed of relatively adjustable sections, the lower sections being rigidly secured together to form the box proper, and the upper section or sections being adjustable inwardly relatively to the lower section or sections and comprising inwardly projecting means adapted to engage the upper outside of a cell in said box, and means for adjusting such upper section or sections and projecting means inwardly to clamp a cell in said box.



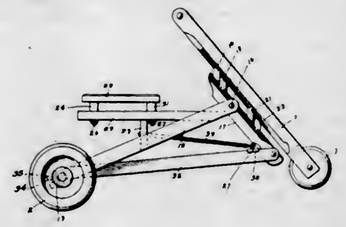
1,381,400. STOCK WATERING AND FEEDING MACHINE. HENRY BURRMANN, Davenport, Iowa. Filed Sept. 2, 1919. Serial No. 321,156. 6 Claims. (Cl. 119—73.)

6. In a stock watering and feeding machine having a rotatable container mounted in a box case, a supply pan secured in such box-base under such container, supply channel means connectedly suspended between such supply pan and the outer wall of a trough housing provided in the wall of a box-base; double divisional walls arranged parallel with its end walls within the container dividing the same into compartments, other divisional walls arranged right-angularly disposed to such end walls within a compartment, dividing such compartment into sub-compartments; air chambers between the walls of separate compartments; a bilge opening in each compartment, an opening in each sub-compartment, each opening opening into a bilge arranged to discharge into a supply pan arranged beneath the container, a supply channel attached between a supply pan and the outer wall



of a trough housing, its outer end conforming to a trough; a removable trough loosely secured within the outward end of a supply channel adjacent to the outer wall of the trough housing of the box base, all for the purposes specified.

1,381,401. BLOWER. FRED L. CANTWELL, San Bernardino, Calif. Filed June 1, 1920. Serial No. 385,656. 1 Claim. (Cl. 230—11.)



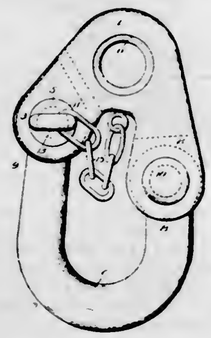
A blower comprising similar mating casing members secured together, one of said members being provided with a bearing therethrough and the other of said members being provided with an arched bearing bar in alinement with the said bearing and having inlet openings at opposite sides of said bar, a fan shaft journaled in the said bearing and the said bar, a fan secured upon said shaft between the casing members, and a driving pulley on one end of the said shaft.

1,381,402. AUTOMOBILE STEERING-GEAR. FRED M. COPP, Kansas City, Mo. Filed Sept. 10, 1920. Serial No. 409,417. 5 Claims. (Cl. 74—79.)

2. A steering gear, comprising a shaft, an internal tooth gear wheel thereon, a second shaft, a wheel thereon provided at diametrically opposite points with two sets of external reversely-pitched worm teeth meshing with the said gear wheel, a crank arm on the said worm wheel shaft, and a steering wheel connected to turn the first-named shaft.

1,381,403. TOY VEHICLE. EDWIN G. COX, Oakland, Calif. Filed Aug. 20, 1919. Serial No. 318,725. 5 Claims. (Cl. 208—38.)

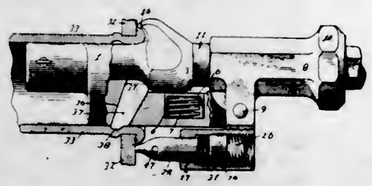
1. In a device of the character described, the combination of a frame, a seat mounted thereon, a link pivoted thereto, a steering post flexibly connected to said link, a wheel carried by said steering post, a handle carried at the upper end of said steering post, a crank carried by the rear of said frame, and a pitman pivoted to said crank and pivotally connected to the lower end of said link.



1,381,404. AUXILIARY SUBDUING-REFLECTOR FOR HEADLIGHTS. ERNEST E. CURRIER, Ipswich, Mass. Filed Oct. 14, 1919. Serial No. 330,557. 1 Claim. (Cl. 240—48.6.)

In a headlight, the combination with a reflector, and a lamp disposed in front of the reflector, of a colored screen consisting of a segmental plate arranged between the lower portion of the lamp and the lower portion of the reflector, the side edges of the screen being below the axis of the lamp and of the reflector and the front end of the screen being in advance of the lamp and below the axis of the same, the side edges of the screen converging rearwardly and the screen terminating at its rear end in an upturned eye adapted to engage around the stem of the lamp whereby to support the screen, the screen conforming generally to the curvature of the reflector whereby throughout its area it will be spaced from the reflector.

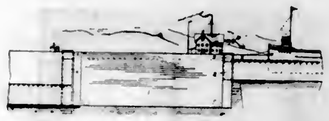
1,381,405. SHACKLE-HOOK. FORREST T. DUNHAM, Hoquiam, Wash. Filed Jan. 5, 1920. Serial No. 349,471. 1 Claim. (Cl. 24—241.)



In a hook of the class described, a deep substantially U-shaped shackle member having a rounded smooth sur-

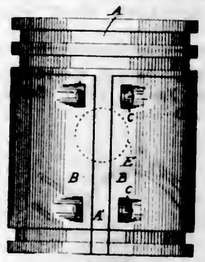
face with the side faces of its terminals flattened and merging gradually without shoulders at their bases into the body of said member with their free ends apertured, one arm being shorter than the other, a substantially V-shaped keeper member having a rounded smooth surface and one arm longer than the other, the terminals of said arms being bifurcated edgewise to receive the flattened ends of said shackle member and having apertures registering with the apertures in said flattened ends to receive respectively a pintle and a locking pin, the apex of said keeper being rounded to form a smooth elongated nose for forcing its way through obstructing objects without

engaging them and provided with a line receiving eye, the long arm of the keeper being pivotally connected with the short arm of the shackle and the short arm of the keeper detachably engaged with the long arm of the shackle, the so connected shackle and keeper members forming an elongated substantially ovate member provided with an elongated longitudinally extending central opening to receive the draft and load engaging elements whereby pull exerted on said member will be at dametrically opposite points in a direct line with the greatest strength thereof, and the draft and load engaging elements held out of contact with each other.



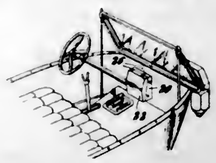
1,381,406. TURNING AND BEADING TOOL. WILLIAM A. FINDLEY, San Francisco, Calif. Filed July 1, 1920. Serial No. 394,354. 11 Claims. (Cl. 153—79.)

1. The combination with a tool of the character described comprising a slidable and rotative hammer having a plurality of shoulders thereon, adapted to successively bevel, expand and bead the end of a tube into a boiler head or the like, of means actuated by said hammer for expanding said tube adjacent the inner surface of said boiler head.



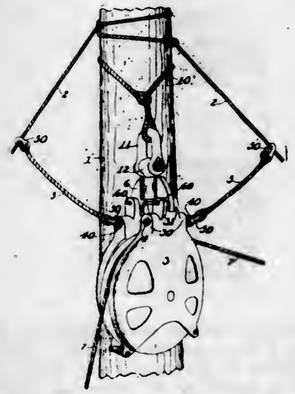
1,381,407. NAVIGABLE VESSEL-LOCK. CORNELIUS O. FLYNN, Duluth, Minn. Filed Mar. 18, 1921. Serial No. 453,305. 4 Claims. (Cl. 61—8.)

2. The herein described method of freeing a navigable lock of floating obstructions in the water above the lock, of first raising the water within the lock to substantially the same level as the water above the lock, then opening the upper portions of the upper gates to permit the obstruction floating into the lock over the lower portions of the upper gates, then opening the upper por-



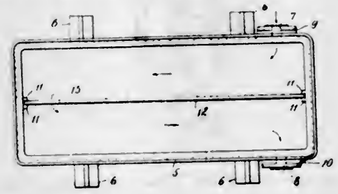
tions of the lower gates and permitting the obstruction to float over the lower portions of the lower gates of the lock, thus getting rid of the obstruction without emptying the lock.

1,381,408. PISTON FOR INTERNAL-COMBUSTION ENGINES. GEORGE S. FOWLER, Joplin, Mo. Filed June 27, 1919. Serial No. 307,102. 1 Claim. (Cl. 74—108.)



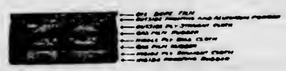
A piston comprising a cylindrical portion forming a piston head, a web projecting therefrom and extending throughout the length of the piston, the width of the web being substantially equal to the diameter of said cylindrical portion, said web being of substantially uniform thickness throughout, a pair of substantially semi-cylindrical members arranged on each side of said web and forming the body portion of the piston, said web and said semi-cylindrical members being provided with registering openings, and bolts arranged in said openings to retain said semi-cylindrical members in position.

1,381,409. AUTOMOBILE-SWITCH. JOHN A. FREEZE, Sayreville, N. J., assignor of one-half to Morris Rumper, New York, N. Y. Filed Aug. 1, 1917. Serial No. 183,854. 3 Claims. (Cl. 200—43.)



1. An automobile switch of the character described comprising a casing, a plate hinged within said casing, a plurality of electric switch controlling disks, a stem fixedly supporting each disk, sleeved within each other and mounted through the hinged plate rotatably, a ratchet plate mounted upon each stem, means for adjustably locking the ratchet plates to the respective disks and switch engaging arms carried by the ratchet plates.

1,381,410. HIGH-LEAD BLOCK. GERALD FRINK, Seattle, Wash. Filed June 21, 1920. Serial No. 390,516. 10 Claims. (Cl. 254—195.)



1. A pulley block having means for the normal suspension thereof and separate means independent thereof adapted for securing emergency supporting members thereto.

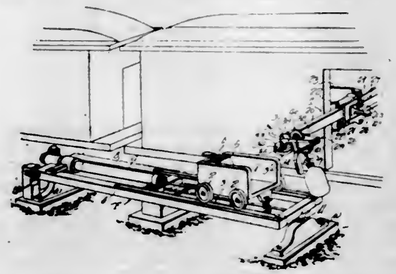
1,381,411. CONCENTRATING-PAN. EDWARD H. FROMM, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Nov. 9, 1918. Serial No. 261,785. 1 Claim. (Cl. 127—9.)

A concentrating vessel comprising a relatively shallow pan of cast iron which in practical use is subjected to such changes in temperature as produce considerable expansion and contraction of the material of the pan, a pair of guide lugs integrally cast on each of the inner walls of two opposite sides of the pan, and a baffle positioned in the pan so as to provide a tortuous path for the flow of liquor through the pan, said baffle being loosely and removably held in position within the pan by said pairs of guide lugs thereby permitting expansion and contraction of the pan independently of the baffle; substantially as described.

1,381,412. FABRIC FOR AIRSHIPS AND PROCESS OF MAKING SAME. HENRY A. GARDNER, Washington, D. C. Filed Jan. 6, 1920. Serial No. 349,836. 24 Claims. (Cl. 91—68.)

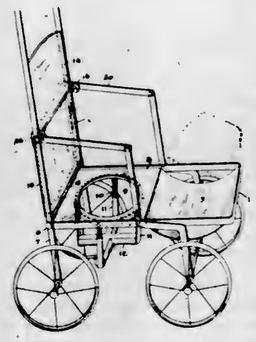
1. A fabric of the class described comprising a basic material of cloth proofed with rubber and a film of elastic impervious oil on said rubber.

14. The process of making airship fabric which consists in coating a basic material proofed with rubber with film of oil of the class which dries by polymerisation.



1,381,413. FABRIC FOR AIRSHIPS AND PROCESS OF MAKING SAME. HENRY A. GARDNER, Washington, D. C. Filed Jan. 6, 1920. Serial No. 349,837. 22 Claims. (Cl. 91—68.)

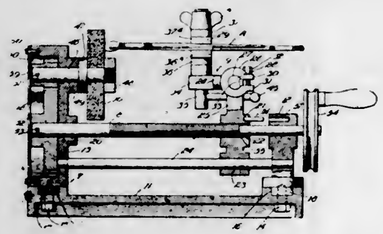
1. A fabric of the class described comprising a cloth base treated with a suitable fireproofing compound and a film containing an oil of the class which dries by polymerization.



11. The process of making fabric of the class described which consists in treating a cloth base with a fireproofing solution, delivering said base through a series of rolls to remove excess solution, and coating said cloth base with a dope containing an oil of the class which dries by polymerization.

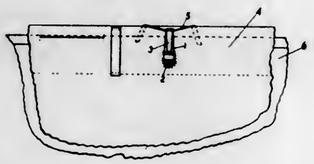
1,381,414. RAILWAY MAIL-DELIVERING APPARATUS. OTTO M. GILBERTSON, La Crosse, Wis. Filed Apr. 23, 1920. Serial No. 376,116. 5 Claims. (Cl. 258—16.)

1. A delivery unit for railway mail apparatus comprising an arm carried by a railway car and having a horizontal rearward extension pivoted on its uoter end, means on said extension for normally holding a mail bag suspended therefrom, means for automatically releasing said holding means when the destination of the mail bag has been reached, and means for holding said extension against pivotal movement but for permitting it to be swung to a reversed position and locked.



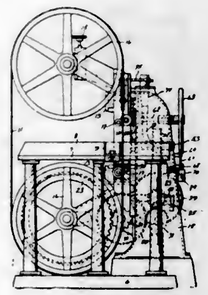
1,381,415. COMBINED BABY CARRIAGE AND WALKER. ELLA I. GUDELJ, San Francisco, Calif. Filed Dec. 6, 1919. Serial No. 342,879. 1 Claim. (Cl. 155—24.)

A combined baby carriage and walker comprising a frame supported on wheels and having a hole therein of



sufficient size to receive a baby, means suspended from said frame for suspending a baby from the margin of said hole, with the feet of the baby in position to contact with the ground and the head and shoulders of the baby above said frame, a seat hinged to the frame so as to swing from a horizontal position covering said hole and providing a seat, to a position uncovering said hole so that access to the said means is provided and a seat back hingedly connected to the frame and adapted for supporting the seat in its raised position.

1,381,416. SCISSORS-GRINDING MACHINE. STEPHEN O. HEINDL, Chicago, Ill., assignor of one-half to Ernest Zeitz, Chicago, Ill. Filed Oct. 19, 1920. Serial No. 417,977. 14 Claims. (Cl. 51—91.)

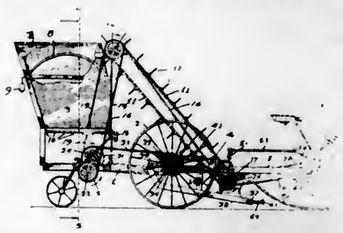


1. A grinding machine comprising, in combination, a frame having a pair of spaced supports, a drive shaft journaled at its opposite ends in said supports, a second shaft journaled in one of said supports and positioned parallel to said drive shaft, a plurality of gears housed within the last mentioned support and operatively connecting said shafts, a grinding wheel fixed on said second shaft, a feed block mounted on said drive shaft having screw threaded engagement therewith, a work holder carried by said feed block and moved thereby in parallel relation to the axis of said grinding wheel, said work holder being adapted for manually swinging the work to effect pressure thereof upon the grinding wheel, and means for operating the drive shaft.

1,381,417. GARMENT-FASTENER. FRANK C. HOFFMAN, Alameda, Calif. Filed July 9, 1918. Serial No. 244,084. 1 Claim. (Cl. 24—226.)

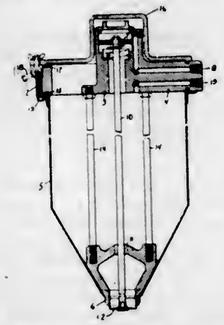
The combined garment supporter, suspender button and belt retainer, in combination with a pair of trousers, comprising an elongated strip of metal having its side edges tapering toward one end thereof to a point, the larger end of the strip having a plurality of openings therein through which the strip is vertically secured to the outer face of the upper edge of the trousers, said strip being bent upon itself at a medial portion, whereby the smaller end portion thereof is projected toward the other end of the strip and at an angle to the remainder of the strip, the bent portion of the strip being abrupt thereby forming a definitely defined wedge-shaped slot in which a loop of the nether garment may engage and also the edge of a supporting belt, said smaller end portion terminating in a straight smooth point to pierce the button hole of a suspender.

1,381,418. BAND-SAW MACHINE. GEORGE C. HUNTER, New Haven, Conn. Filed Apr. 7, 1920. Serial No. 371,836. 9 Claims. (Cl. 29—68.)



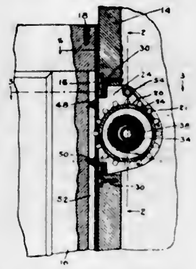
1. In a band saw machine, the combination of a reciprocating frame, a band saw and its wheels carried by the frame, and means to drive one of said wheels, including a sliding shaft carried by the frame and geared to the wheel and means to drive said shaft and permit the slide thereof.

1,381,419. SACK-LINING MACHINE. ANITA G. HYAMS and FRANCIS A. HYAMS, San Rafael, Calif. Filed Apr. 20, 1920. Serial No. 375,416. 6 Claims. (Cl. 226—18.)



1. A machine for lining sacks comprising a suitable frame, a pair of sack supports carried thereby, supports for a second sack at a distance from the first supports and a pair of reciprocating arms adapted to push the second sack into the first sack.

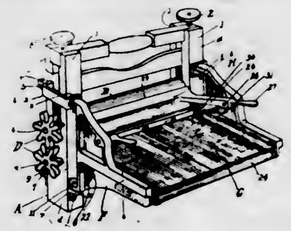
1,381,420. HAY-BUNCHING MACHINE. EUGENE E. JUCHTZER, San Francisco, Calif. Filed Jan. 30, 1918. Serial No. 214,555. 7 Claims. (Cl. 56—347.)



1. A hay bunching machine comprising a hopper; means for conveying hay from the ground to the hopper; a partition dividing said hopper into two substantially equal compartments; retaining means operatively mounted adjacent the bottoms of said hopper compartments for retaining hay therein, and adapted to release said hay when a predetermined amount has been deposited in said compartments.

1,381,421. MEANS FOR DEPOSITING DOUGH. ERNEST E. LINDSEY, San Francisco, Calif. Filed Oct. 25, 1920. Serial No. 419,321. 2 Claims. (Cl. 107—28.)

2. In a dough depositing machine having means for expressing dough through a die, a cut-off valve, which in conjunction with the said die, may regulate the deposition of the dough, a valve stem whereby the valve may be operated by the operating means, said operating means being at a distance above said valve and consisting of a compressed air engine in which the piston is attached to the valve stem and is moved downward by air pressure and upward by the recoil of a spring, control being had by regulation of the air supplied to said compressed air engine.

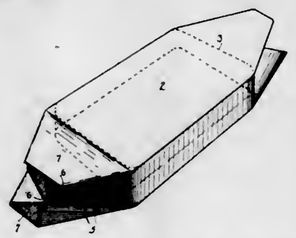


1,381,422. WINDOW-SASH HOLDER. WILLIAM MANDEL, Minneapolis, Minn. Filed Aug. 21, 1920. Serial No. 405,007. 1 Claim. (Cl. 16—150.)

A window sash holder comprising a perforated flexible metal strip adapted to be fastened to the side of a window sash, a housing adapted to be mounted in the window frame adjacent the sash, a fixed axle within said housing, a roller having an annular flange rotatably supported on said axle, a coiled spring secured at its inner end to said axle and secured at its outer end to said roller, teeth on said roller adapted to engage in the perforations of said strip, ears on said housing, rollers supported by said ears arranged to hold said strip in engagement with said teeth, a rod rotatably mounted in said housing, a perforated plate secured to said rod, and a handle on said rod whereby said plate may be caused to engage or disengage said teeth at will.

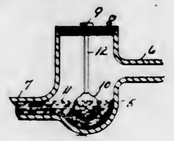
1,381,423. SAFETY DEVICE FOR CLOTHES-WRINGERS. NATHANIEL MINTZ and CHARLES C. HIERS, St. Paul, Minn. Filed Aug. 7, 1920. Serial No. 401,938. 6 Claims. (Cl. 68—32.)

1. In a device of the class described, the combination with a clothes wringer frame and parallel horizontally disposed wringer rolls contactingly mounted one above the other thereon, of a frame extending outwardly from the side of the wringer frame, an upwardly swingable finger shield in front of said rolls, a table in front of said shield the forward edge thereof parallel with said rolls and normally spaced therefrom and from said shield, said table being mounted to slide on said extending frame



under said shield to raise it and toward a point midway between said rolls to bring said forward edge to a position adjacent the point of contact between said rolls for the purpose set forth.

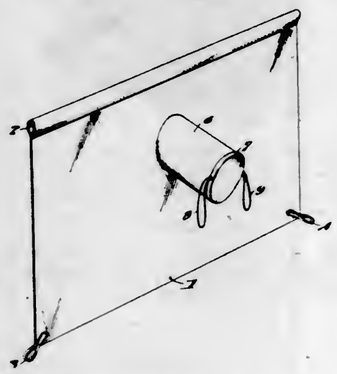
1,381,424. KEY-GUARD. HANS J. NIELSEN, San Francisco, Calif. Filed Jan. 21, 1920. Serial No. 353,065. 2 Claims. (Cl. 116—114.)



1. A key guard including a plate, a key suspended from said plate, and means outstanding from both sides of said plate, whereby a bulky guard is formed.

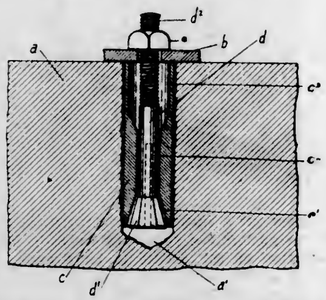
1,381,425. WRAPPER. F BERT OLDHAM, Auburn, Me. Filed Sept. 18, 1916. Serial No. 120,663. 4 Claims. (Cl. 229—87.)

1. A wrapper for a substantially flat article consisting of a tube having infolded tucks automatically expansible by the insertion of the article to be wrapped to form finger guiding grooves in the overhanging portions of the wrapper at both ends of the article to be wrapped.



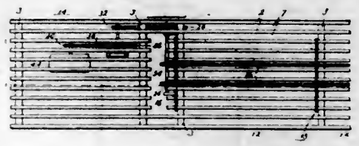
1,381,426. FREEZE-EXPANSION-ABSORBING DEVICE. MANNIE B. PARKER, Oklahoma, Okla. Filed Oct. 6, 1919. Serial No. 328,812. 1 Claim. (Cl. 137—72.)

In a device of the kind described, the combination with a containing trap, of an internally located and suspended



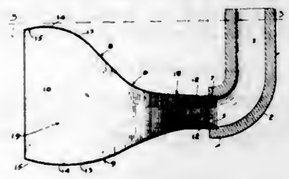
flexible member for displacing the upper part of the fluid contained, and means for holding the flexible member in depending suspension and spaced from the bottom of the trap.

1,381,427. CANVAS CHECK-DAM. BENJAMIN H. PATRICK, Boise, Idaho. Filed Oct. 22, 1920. Serial No. 418,718. 1 Claim. (Cl. 61—29.)



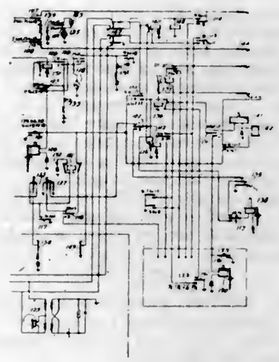
A check dam comprising a rectangular body sheet of fabric having an open loop for reception of a supporting pole and provided with a spillway opening midway between its ends beneath the open loop at the top edge, stake loops provided on the lower corners of said body sheet, a spillway tube of fabric material secured in a spillway opening of the body sheet and having a casing formed at its outer end, and drawstrings run through said casing to be pulled in to constrict the discharge opening of the spillway tube.

1,381,428. FOUNDATION-BOLT. ROBERT S. PEELLE, Hollis, N. Y., assignor to The Peelle Company, a Corporation of New York. Filed Jan. 30, 1919. Serial No. 273,984. 1 Claim. (Cl. 85—2.4.)



A foundation bolt embodying therein a sleeve adapted to be seated in a drill hole, the bore of said sleeve at one end thereof being in the form of a truncated polyhedron with its base toward the end of the sleeve, at the other end thereof being cylindrical and enlarged, and the central portion connecting said end portions being cylindrical, and said sleeve adjacent said portion formed as a polyhedron being slotted, a screw bolt having a loose bearing in said central cylindrical portion of the bore of said sleeve, whereby said bolt may be moved radially of said sleeve, said bolt having a wedge shaped head in the form of a truncated polyhedron conforming in contour with the portion of said sleeve adjacent said slots, and a screw-threaded end projecting beyond the end of said sleeve, and a nut coöperating with said screw-threaded end.

1,381,429. MATTRESS-CONVEYER. JOHN A. PETERSON and HENRY PETERSON, Kansas City, Mo. Filed Apr. 15, 1919. Serial No. 290,149. 4 Claims. (Cl. 193—8.)



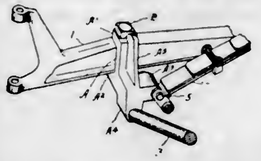
1. In a machine of the character described, a horizontal table having mattress receiving and delivery ends and a transverse opening between said delivery end and the adjacent portion of the table and of less width than said table, endless cables paralleling the top of the table and descending at said transverse opening, means for operating said cables, and means carried by said cables adapted to move the mattresses from the receiving end to the delivery end of the table and descend through the transverse opening.

1,381,430. AMPLIFIER FOR PHONOGRAPHS AND THE LIKE. EDWARD PHIPPS, San Francisco, Calif. Filed Feb. 25, 1920. Serial No. 361,185. 2 Claims. (Cl. 181—27.)

2. A phonograph amplifier comprising a plurality of walls of relatively thin resonating material, each of said walls being formed as an ogee curve whereby said walls are maintained under stress.

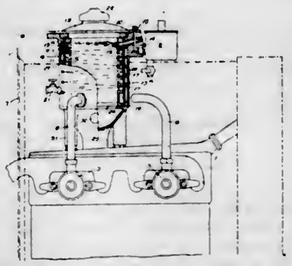
1,381,431. MACHINE-SWITCHING TELEPHONE SYSTEM. LIPA POLINKOWSKY, Hyde Park, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1918. Serial No. 251,603. 12 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a calling line, a called line, means for establishing a connection between said lines, means for rendering the called line busy during such connection, a second calling line, an operator's position, a second operator's position, means at said first



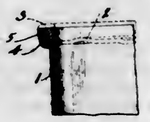
position for extending the second calling line to said second position, a series of automatic switches, means for operating said switches to extend the second calling line to said called line, means for notifying the operator at said second position of the busy condition of the called line, and means under the control of said first operator for releasing said first connection.

1,381,432. REAR-AXLE SPRING-BAR CONNECTION DEVICE. ROBERT M. ROOF, Anderson, Ind., assignor to Laurel Motors Corporation, Anderson, Ind. Filed June 3, 1920. Serial No. 386,385. 5 Claims. (Cl. 267—54.)



3. A spring-bar connection device, consisting of a divided block the half sections of which are adapted to be clamped on the axle shaft, means to draw the half sections of said block toward each other and to secure same at tenacious engagement with the axle shaft housing, a support bar secured to the lower portion of the block and radius rod, and a shackle clevis carried loosely on said support bar.

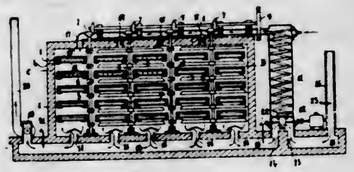
1,381,433. FRONT-SPRING-BAR CONNECTION DEVICE. ROBERT M. ROOF, Anderson, Ind., assignor to Laurel Motors Corporation, Anderson, Ind. Filed June 3, 1920. Serial No. 386,386. 2 Claims. (Cl. 267—54.)



2. A spring-bar connection device, consisting of a block having upper and lower perforated ears to engage the top and bottom faces of the axle shaft, and a horizontal transverse lug at its lower side to be engaged by the motor-car spring, and a lug to be engaged by the motor car frame reach rod, and a connector bolt to pass through the ears and through the axle shaft, substantially as described.

1,381,434. LIQUID-FUEL INTERNAL-COMBUSTION ENGINE. PERCY OCTAVIUS ROWLANDS, Liverpool, England. Filed July 2, 1918. Serial No. 243,088. 5 Claims. (Cl. 123—122.)

1. In apparatus of the character described, an inner shell adapted for the reception of solid fuel and provided upon its periphery with a spiral groove having its outer side open, a second shell receiving the inner shell and closing the open side of the spiral groove, air inlet means for the spiral groove, and means to cause the air heated within the spiral groove to contact with a liquid fuel to be vaporized.

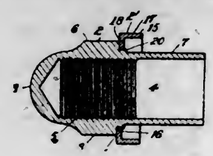


1,381,435. RECEPTACLE AND THE ART OF ITS RECOVERY. JAMES M. RUDE, Covington, Ky., assignor to Can Conservation Company, Louisville, Ky., a Corporation of Delaware. Filed Mar. 4, 1918. Serial No. 220,217. 8 Claims. (Cl. 113—116.)

1. In the art of recovering cans, cutting away that portion of an injured can cover which extends across the edge of the end of the can body for detaching the main portion of the cover and allowing that portion of the can cover extending outside of the body of the can and beyond the portion cut away to remain in engagement with the can.

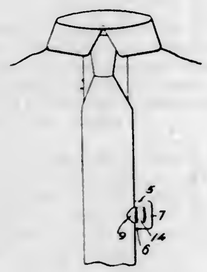
6. As a new article of manufacture, a can body comprising a hollow cylinder of sheet material having an open end bordered exteriorly at its margin with an annulus soldered to the body of the can and formed of part of the material of an old cover remaining after removal of the old cover from the can body by severing the material of said old cover substantially along and coincident with the circular line of the marginal bead of the old cover, the said can body being smooth and free of all obstructions interiorly about its open end.

1,381,436. DRYING APPARATUS. EMILE SAVY, Paris, France. Filed Feb. 28, 1919. Serial No. 279,724. 5 Claims. (Cl. 34—39.)



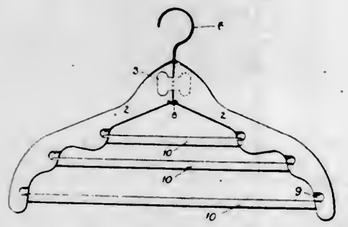
1. In an apparatus of the general class described, a series of spaced pairs of permeable members, each pair of members receiving between them the substances to be treated and confining such substances against material displacement, a series of fans arranged one in each space between adjacent pairs to induce a circulation through said members and the substances confined thereby, and means for simultaneously removing the substance to be treated positioned between any of said pairs of permeable members and inserting other material in place thereof.

1,381,437. HUB-NUT AND METHOD OF MAKING THE SAME. OSCAR A. SMITH, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 28, 1920. Serial No. 361,955. 29 Claims. (Cl. 10—86.)



1. A two-part nut comprising a body member and a flange member assembled and rigidly interlocked there-

with by forcing a portion of the metal of one member beyond the normal face thereof into and also against the

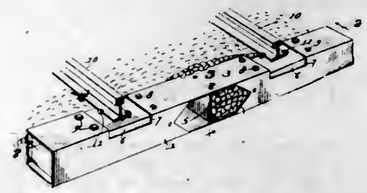


face of the other member thereby to prevent movement of the same in a plurality of directions.

1,381,438. CLIP OR CLASP. WILLIAM H. STEVENS, New York, N. Y. Original application filed Sept. 26, 1918, Serial No. 255,783. Divided and this application filed Nov. 10, 1919. Serial No. 337,067. 2 Claims. (Cl. 24—259.)

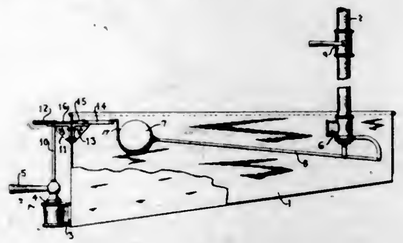
1. A clasp comprising a blank having a rectangularly shaped tongue stamped therefrom the free end of the tongue being of tapering formation, said tongue being bent adjacent its root, the tapering end of the tongue and the adjacent inner edge of the blank being toothed to enter a fabric gripped therebetween.

1,381,439. GARMENT-HANGER. ABRAHAM TANNENBAUM, Brooklyn, N. Y. Filed Jan. 8, 1921. Serial No. 435,805. 1 Claim. (Cl. 211—13.)



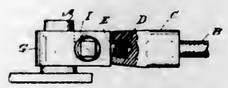
A garment hanger comprising a pair of duplicate members, each of said members having projecting from one side of its end a tongue provided with an enlarged end, each of said members further having a recess at the end on the side opposite the tongue and shaped to receive the tongue of the remaining member, each of said members further having a series of L-shaped slots formed in its inner face and opening laterally through one side, the slots in one member being alined with corresponding slots in the other member, and suspending members adapted to slip through the laterally opening portions of the slots and seat in the bottom thereof whereby to be held against accidental displacements.

1,381,440. PROCESS OF BLEACHING VEGETABLE FIBERS. GEORGE G. TAYLOR, Holyoke, Mass., assignor to American Writing Paper Company, Holyoke, Mass., a Corporation of New Jersey. Filed Dec. 18, 1920. Serial No. 431,794. 1 Claim. (Cl. 8—2.)



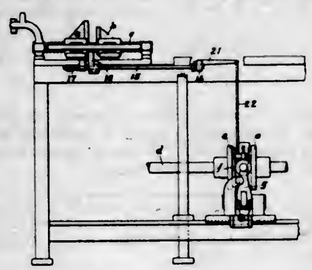
Process of bleaching vegetable fibers, comprising subjecting the fiber to a hypochlorite in presence of free boric acid, the latter in less than the equimolecular proportion to the hypochlorite.

1,381,441. RAILROAD-TIE. GRANT H. TOMB, Slate Run, Pa., assignor of one-half to Jacob G. Tomb, Slate Run, Pa. Filed Mar. 9, 1921. Serial No. 451,006. 2 Claims. (Cl. 238—78.)



1. A railway tie, comprising a tie body constructed of relatively heavy malleable sheet metal, said body having a central opening provided with upper and lower pliable walls, said body having end pockets with rail supporting fiber blocks therein, the upper parts of the tie being cut away to expose the blocks, whereby the rails may engage therewith.

1,381,442. ICE-CREAM FREEZER. EMERY THOMPSON, New Rochelle, N. Y. Filed Feb. 27, 1920. Serial No. 361,897. 5 Claims. (Cl. 221—112.)



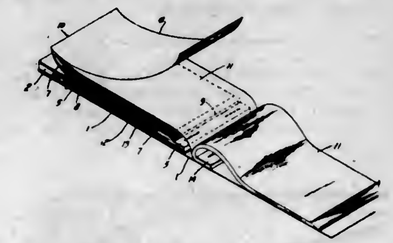
1. The combination of a reservoir, an inlet valve, a float controlling said valve, an outlet turn-valve having a handle, a coaxial rock-shaft extending upward from said turn-valve, and float supporting and releasing means connected with the upper part of said shaft.

1,381,443. CONNECTOR FOR BATTERIES. WILLIAM WOESSNER, St. Louis, Mo. Filed Jan. 26, 1920. Serial No. 353,996. 4 Claims. (Cl. 173—259.)

4. An electrical connector comprising a clamping ring having a body portion with a recess interiorly threaded, a cable tip having a screw-threaded stub at one end and soldered to a cable at the other end, and an interposed piece having a socket end with interior threads adapted to match said stub of the cable tip and having at the opposite end a screw-threaded stub adapted to match said recess,—the threaded portions on the interposed piece being of different diameters, substantially as described.

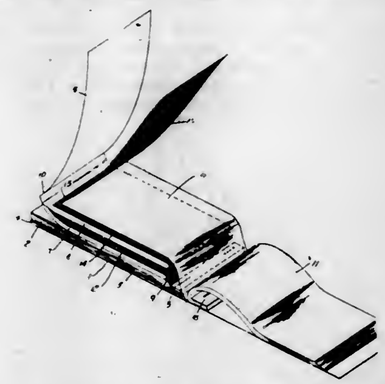
1,381,444. NARROWING SAFETY-STOP FOR FULL-FASHIONED KNITTING-MACHINES. MELCHIOR ZWICKY, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1920. Serial No. 411,362. 3 Claims. (Cl. 66—30.)

1. In a full fashioned knitting machine having narrowing nuts, a laterally shiftable cam shaft, and a shifting lever normally movable into operative relation to said cam shaft; a pattern-released locking device for said lever and a supplemental automatically operated safety lock therefor.



1,381,445. ILLUMINATING-BODY. AXEL G. BERGMAN, New York, N. Y., assignor to Ordnance Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 12, 1919. Serial No. 310,464. 14 Claims. (Cl. 102—20.)

1. A projectile adapted to be discharged from a gun, and having therein a "star" mass or body, and means for igniting said star mass or body while in flight, said means comprising an igniting body embedded in said star mass or body, and having a face adapted to be exposed to an igniting flame, and means for restricting the flow of gases out of the cavity produced by the progressive burning of said igniting body, whereby the rarefication behind said mass produced by the rapid flight thereof is prevented from affecting the combustion of said igniting body to an extent that will interfere with its action in igniting said star mass.



1,381,446. MANIFOLDING-SALESBOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed July 7, 1920. Serial No. 394,503. 4 Claims. (Cl. 282—24.)

1. A manifolding book comprising, in combination, a series of sets of leaves for manifold copies, each set including an original leaf, a duplicate leaf and a triplicate leaf attached together at one end, one of the leaves of each set being attached to the stub portion, a quadruplicate leaf adapted to lie between two of said first

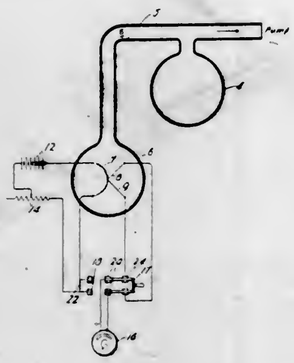
mentioned leaves, and transfer material disposed to transfer impressions from the original to the other leaves of a set, including a double faced transfer leaf between said quadruplicate leaf and the next underlying manifold leaf.

1,381,447. MANIFOLDING-SALESBOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed July 7, 1920. Serial No. 394,504. 11 Claims. (Cl. 282—24.)

1. A manifolding book comprising, in combination, a series of sets of leaves for manifold copies, each set including an original leaf, a duplicate leaf, and a triplicate leaf attached together at one end, one of the leaves of each set being attached to the stub portion, a quadruplicate leaf adapted to lie between two of said first mentioned leaves, and transfer material disposed to transfer impressions from the original to the other leaves of a set including a leaf of transfer material adapted to lie between said quadruplicate leaf and the manifold leaf thereabove.

1,381,448. FIREARM. JOHN M. BROWNING, Ogden, Utah. Original application filed Apr. 27, 1920, Serial No. 376,922. Divided and this application filed July 28, 1920. Serial No. 399,545. 7 Claims. (Cl. 42—17.)

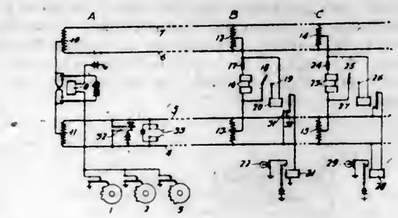
1. A fire arm comprising a frame, a breech-block, a magazine having means to guide the cartridge toward the



barrel, a trigger plate, a pusher on the breech-block, and means on the trigger plate for operating the rear end of the pusher to tip down the back end and thus cause the front end of the pusher to tip up and engage the cartridge which has just emerged from the magazine and push it into the path of the breech-block.

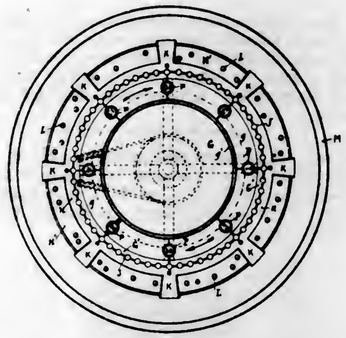
1,381,449. TOY REPEATING-RIFLE. SILAS B. BROWN, Cincinnati, Ohio, assignor to The Edwards Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 13, 1919. Serial No. 330,238. 10 Claims. (Cl. 42—57.)

1. In a toy repeating rifle comprising a stock member having a recess in one side of its free end, a barrel formed of sheet metal secured upon the fore end of said stock and having an open under side for communication with said recess, a unitary ammunition tape feeding and exploding mechanism mounted in said stock recess, and a closure for said recess.



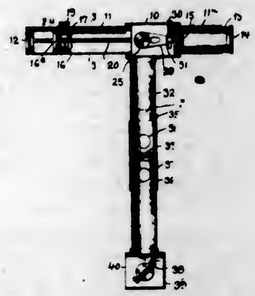
1,381,450. APPARATUS FOR MEASURING GAS-PRESSURES. JOSEPH T. BUTTERFIELD, Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1917. Serial No. 180,686. 8 Claims. (Cl. 73—31.)

1. The method of determining gas pressures within a vessel which comprises producing heat at a substantially constant rate at a point in said gas, diverting a portion of said heat, and measuring the diverted portion in terms which permit of the deduction therefrom of the pressure.



1,381,451. SWITCHING SYSTEM. LESLIE E. COON, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,446. 5 Claims. (Cl. 177—353.)

3. In a switching system, a phantom circuit, a selecting station and a plurality of selectively operable switching devices associated therewith, means at the selecting station to transmit current impulses over the phantom circuit to advance any of the switching devices into a predetermined position, means controlled by each switching device to prepare a circuit including the physical conductors comprising a side circuit of the phantom circuit when the associated device reaches its predetermined position, the relation of such conductors in the prepared circuit differing for each device signaling means controlled by each



such prepared circuit, a second source of current, and means at the selecting station to associate such second source of current with the prepared circuit to operate the signaling means controlled thereby.

1,381,452. GAME APPARATUS. THOMAS E. COOPER, Erie, Pa. Filed July 2, 1920. Serial No. 393,698. 6 Claims. (Cl. 46—57.)

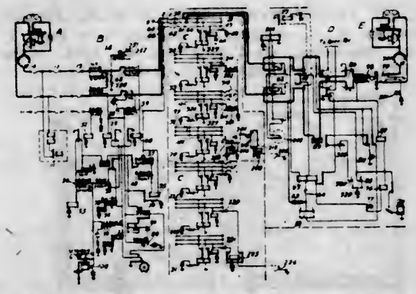
1. In a game apparatus, a stationary ring, a central revoluble member, a manually operated member, equally spaced means on said ring and revoluble member adapted to be co-engaged by said manually operated member to stop the revolution of said revoluble member, substantially as described.

1,381,453. RANGE-FINDER. HENRY A. COURMETTES, New York, and ABRAHAM B. COX, Cherry Valley, N. Y. Filed July 13, 1917. Serial No. 180,332. 3 Claims. (Cl. 88—2.4.)

1. A range finder comprising a mirror, two similar objective lenses at equal focal distances from said mirror,

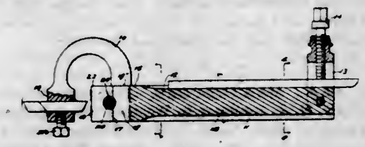
said mirror being half transparent and half reflecting and arranged to reflect part of the image produced by one objective lens, and to occlude the same part of the image produced by the other objective lens, means for deflecting the position of the image produced by one of the lenses so that the visible portions of the two images may be brought into alinement, and means for magnifying the visible portions of the said images.

1,381,454. GUARD-RAIL CHAIR. WILLIE L. DAUGHTRY, Orlando, Fla. Filed Nov. 17, 1920. Serial No. 424,709. 1 Claim. (Cl. 238—20.)



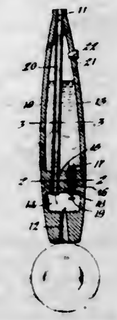
In a guard rail chair of the type described, a base-member having a stop-shoulder for the base of the track-rail, and an upstanding lug spaced off from said stop-shoulder and having an undercut recess receiving a lateral edge of the base of the guard-rail, said upstanding lug also having a slot in its inner wall above the undercut recess, said slot tapering longitudinally toward one end, a clamp having arms at its ends adapted to extend laterally of said upstanding lug and retain said clamp against longitudinal displacement, and a key adapted to be received by the slot of said upstanding lug and tapering longitudinally to coöperate with the corresponding taper of said slot for wedging the key against said clamp and said clamp against the guard rail.

1,381,455. TREATMENT OF RUBBER LATEX. SAMUEL CLELAND DAVIDSON, Belfast, Ireland. Filed Feb. 24, 1920. Serial No. 360,833. 4 Claims. (Cl. 18—50.)



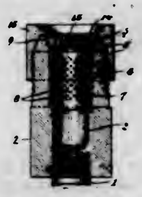
1. In the coagulation treatment of rubber latex which, while still in perfectly fresh condition after being tapped, has been preservatively treated with an alkalized phenol or phenoloid, the employment of a coagulating fluid, consisting of an acidified aqueous solution of a soluble salt of magnesium for effecting the coagulative separation of the raw rubber therefrom.

1,381,456. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. GERALD DEAKIN, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1919. Serial No. 289,197. 12 Claims. (Cl. 179—27.)



1. In a telephone exchange system, subscribers' lines, trunk lines, an automatic switch for selecting any of said lines, means for placing a given electrical condition on said subscribers' lines, means for placing a different electrical condition on the trunk lines, means responsive to said electrical conditions for controlling the operation of said automatic switch, and means for automatically changing the condition on said trunks to correspond to the electrical condition on said subscribers' lines to render said trunks of the same identity as the subscribers' lines.

1,381,457. TOOL-HOLDER. MAURICE H. DERRINGER, Philadelphia, Pa. Filed May 1, 1920. Serial No. 378,257. 3 Claims. (Cl. 29—98.)

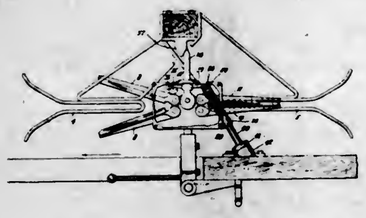


1. A tool holder comprising a shank, slotted in a plane parallel with the longitudinal axis of said shank, and having a socket passing through said shank, at right angles to the longitudinal axis of the shank and to the rear of and in communication with said slot, a gooseneck fitted to said socket, said gooseneck forming a tool support and a bolt passing through said shank in advance of said socket for clamping the gooseneck with respect to said shank.

1,381,458. BUBBLE-PIPE. JOHN E. DORRIS, Buffalo, N. Y. Filed June 15, 1920. Serial No. 389,250. 4 Claims. (Cl. 46—31.)

1. A soap bubble pipe comprising a main reservoir for soapy water, a supplemental chamber disposed in substantial alinement with said main reservoir and having an outlet passage, a diaphragm separating said reservoir from said supplemental chamber and having a passage therein connecting the latter and said reservoir, a gravity valve controlling said passage, and an air tube extending through said reservoir and communicating with said supplemental chamber.

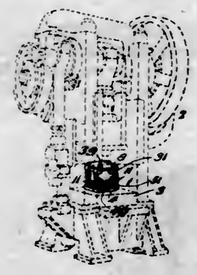
1,381,459. LIQUID-FUEL BURNER. DANIEL E. ERICKSON, Mamaroneck, N. Y., assignor to Todd Shipyards Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,505. 2 Claims. (Cl. 299—120.)



1. The combination in a liquid fuel atomizer of a nozzle comprising an integral body portion having an end recess

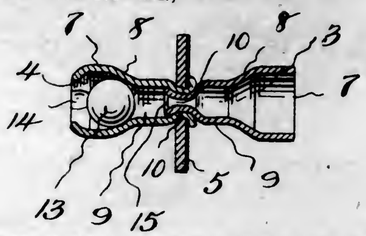
and a bore of two, succeeding diametrical dimensions, whereof the forward dimension exceeds the rearward dimension, a perforated cylinder having one open end and a closure plate at its other end, said plate co-acting with the nozzle end to comprise a chamber for the reception of fuel prior to its emission, said plate centeringly engaging in the aforesaid recess, and said cylinder at its open end engaging the rearward or smaller bore-portion of the body portion of the nozzle, whereby an annular chamber for fuel passage is comprised between the perforated cylinder and larger bore-portion, close to the fuel reception chamber, and means of communication between said annular chamber and fuel reception chamber.

1,381,460. MAGNET-CORE. JONATHAN W. HARRIS, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,692. 3 Claims. (Cl. 175—21.)



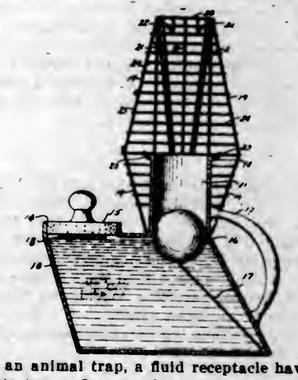
2. The method of making magnet cores which consists in reducing electrolytic magnetic material to the form of particles, annealing said particles, flattening said particles, coating said particles with insulating material, and submitting a mass of said particles to pressure sufficient to compress the mass into a self-sustaining solid.

1,381,461. RAILWAY MAIL-TRANSFER DEVICE. CARL HARTMANN, Mount Vernon, N. Y., assignor of one-half to John H. Faust, Mount Vernon, N. Y. Filed Jan. 6, 1920. Serial No. 349,667. 14 Claims. (Cl. 258—16.)



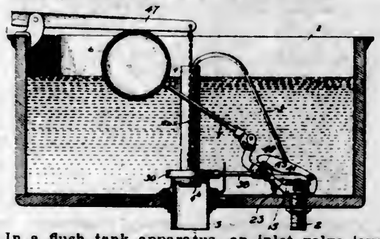
1. In a parcel transfer device, in combination, a pair of parcel-supporting jaws pivotally mounted to open and close, a separate pair of parcel-supporting jaws pivotally mounted adjacent said first mentioned jaws to open and close, and a trip lever having separate operative connections with the members of each pair.

1,381,462. APPARATUS FOR MANUFACTURING WASHERS. MARTIN K. HENCH, Camden, N. J., assignor of one-half to Leon G. Buckwalter, Merchantville, N. J. Filed Dec. 31, 1919. Serial No. 348,546. 19 Claims. (Cl. 164—32.)



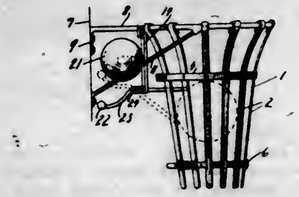
1. A portable apparatus for making washers and adapted to be placed in a press, comprising a fixed punch, a movable punch, a head in which said movable punch is mounted, a die carried by said head, an upper and a lower stripper carried by said head, and means to effect the relative movement between said fixed punch and the movable punch and die.

1,381,463. CHECK-VALVE. RAYMOND M. HOTCHKISS, New Haven, Conn., assignor of one-third to Peter S. Matthews and one-third to J. W. Fawcett, New Haven, Conn. Filed Nov. 28, 1919. Serial No. 341,089. 12 Claims. (Cl. 251—121.)



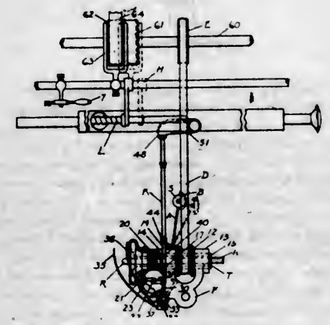
7. A valve casing comprising a tubular body of drawn sheet material having a reduced neck, a collar at one end of said reduced neck and a valve confined within the enlarged portion at the other end of said body.

1,381,464. ANIMAL-TRAP. FREDERIC HULSMANN, Pelham, N. Y. Filed Oct. 9, 1920. Serial No. 415,866. 8 Claims. (Cl. 43—66.)



2. In an animal trap, a fluid receptacle having an opening in its top, a float to close said opening when the receptacle is filled with fluid, and a vertically arranged runway above the float, said runway being provided with means by which the animal may climb to the upper entrance of the runway, and with prongs to prevent the retreat of the animal from the runway.

1,381,465. FLUSH-TANK. WILLIAM RALPH HURSEY, Asheville, N. C., assignor of one-fourth to Basil H. Oates, Tuscaloosa, Ala. Filed Sept. 24, 1919. Serial No. 326,017. 13 Claims. (Cl. 4—5.)



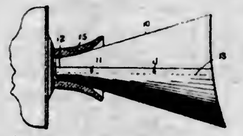
2. In a flush tank apparatus, an inlet valve lever, an outlet valve lever, a latch controlling the latter, and a float lever having a part adapted to engage either said inlet valve lever or latch.

1,381,466. BASKET-BALL GOAL-INDICATOR. RICHARD JACKSON, Jr., San Francisco, Calif., assignor of one-third to Allyn R. Reese and one-third to James W. Douglas, Denver, Colo. Filed Feb. 1, 1921. Serial No. 441,581. 6 Claims. (Cl. 116—67.)

1. In a basket ball basket comprising a solid ring and a flexible basket depending therefrom, a goal indicator comprising a frame secured to said ring, a bell supported in said frame and a lever pivoted in said frame, one end of said lever extending into the basket, the other end adapted to strike the bell.

1,381,467. STOP-MOTION FOR COMBS. CHARLES E. JEWETT, North Andover, and FRED FITZGERALD, Lawrence, Mass. Filed Feb. 2, 1920. Serial No. 355,541. 4 Claims. (Cl. 192—116.)

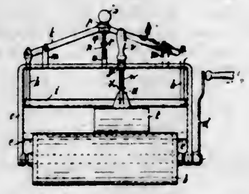
4. In a comb having stopping means, trigger mechanism to hold such stopping means out of action, a belt, and a connecting rod attached to the trigger mechanism, the combination of a nose fixed to said connecting rod, a rocker arm having a finger adapted to engage said nose, and a contact member carried by the free end of the rocker arm in position to rest against said belt.



1,381,468. COMPOSITION OF EDIBLE FATS. JOHN HARRIS JONES, Boundbrook, N. J. Filed Dec. 26, 1917. Serial No. 208,805. 5 Claims. (Cl. 99—11.)

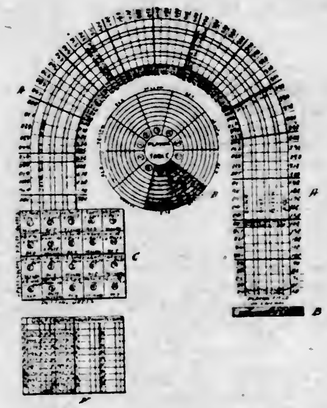
4. As an article of manufacture, animal fats and edible oils churned to congeal and admixed with an edible vegetable material having the flavor of butter.

1,381,469. PROCESS OF TREATING OILS AND FATS. JOHN HARRIS JONES, Boundbrook, N. J. Filed Dec. 26, 1917. Serial No. 208,806. 4 Claims. (Cl. 99—11.)



4. The process of producing a composition of fat matter which consists in churning fats and oils with an impregnated starch having the flavor of butter produced by lactic fermentation, said admixture being made at a temperature lower than the temperature of the fat having the highest melting point.

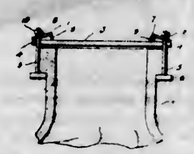
1,381,470. TELEPHONE-MUFFLER. MARY E. KELLEHER, Rutland, Vt. Filed Oct. 26, 1920. Serial No. 419,633. 1 Claim. (Cl. 179—188.)



A telephone muffler comprising a hollow generally cone-shaped body formed of springy material and in a single piece, said body being of constant diameter in its middle portion, having its smaller end provided with overlapping meeting parts to render it readily adjustable, and its larger end also provided with overlapping parts, said larger end being shaped to fit against the face and around the mouth of the user.

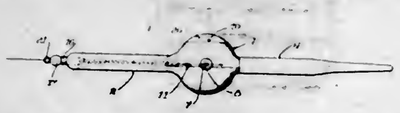
1,381,471. MACHINE FOR GLOSSING LINEN AND THE LIKE. JAKOB KELLER, Zurich, Switzerland. Filed May 20, 1920. Serial No. 382,896. 5 Claims. (Cl. 68—9.)

1. A glossing machine comprising a frame, a rod slidably disposed in the frame, a screw spindle on said frame, operating connection between said spindle and rod, a glossing body adjustably and detachably mounted on said rod, and frame engaging means carried by said glossing body for operative positioning thereof.



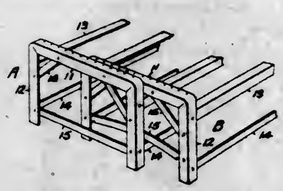
1,381,472. GAME. HERMON H. KINSMAN and WILLIAM M. GAYLOR, New York, N. Y. Filed Oct. 9, 1919. Serial No. 329,483. Renewed Aug. 20, 1920. Serial No. 404,958. 2 Claims. (Cl. 46—21.)

1. In a game of the character set forth, a playing field subdivided into spaces which are consecutively numbered, a putting green consisting of a rectangular field subdivided into spaces which are separated by a divisional line, the spaces upon opposite sides of the divisional line being



correspondingly designated and bearing corresponding indicating matter and numbers, one set of spaces being further designated by the plus sign and the other set of spaces being designated by the minus sign.

1,381,473. JAR-CLOSURE. A C KNAPP, Kewanee, Ill. Filed Jan. 17, 1920, Serial No. 352,047. Renewed Oct. 23, 1920. Serial No. 419,072. 3 Claims. (Cl. 215—88.)



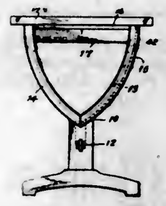
1. A jar closure including the neck of a jar having a flange, a cover resting on said neck, elements engaging the shoulder and passing through the cover, and locking elements carried by said elements and adapted to be turned against the cover.

1,381,474. PHOTO-ELECTRIC CELL, METHOD OF AND MEANS FOR MAKING THE SAME. JAKOB KUNZ, Urbana, Ill., assignor to Board of Trustees of The University of Illinois, Urbana, Ill., a Corporation of Illinois. Filed Aug. 24, 1918. Serial No. 251,345. 18 Claims. (Cl. 250—34.)

12. In a cell of the class described, a closed chamber of substantially spherical form having an interior coating of light sensitive alkili metal except for a small portion forming a window, and a flat screen electrode lying at the center of the chamber and at substantially right angles to the light rays admitted through the window whereby a substantially uniform field is formed between the coating and the screen.

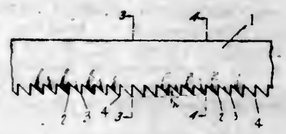
1,381,475. COUCH-BED CONSTRUCTION. ARTHUR F. KUNZE, Montreal, Quebec, Canada. Filed June 29, 1917. Serial No. 177,642. 4 Claims. (Cl. 5—46.)

1. In couch bed construction, a pair of telescopically arranged parts, and a brace on each part, said braces being disposed transversely of one another and arranged and formed for engagement at both limits of telescopic movement to lock the parts.



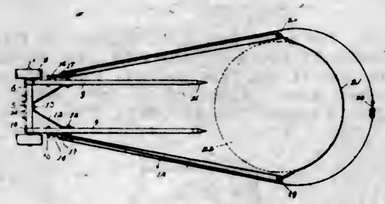
1,381,476. DETACHABLE BASKET-CARRIER. JOHN P. H. LANE, Harriman, Tenn. Filed Sept. 20, 1920. Serial No. 411,390. 2 Claims. (Cl. 217—125.)

1. A basket carrier of the character described, comprising a pair of transverse carrying members, spaced apart, having vertical side portions, extending upwardly, crimped foot rests at each lower corner of the transverse carrying members, hook barbs, slightly projecting from the outer surface, at the upper ends of the said transverse carrying members, adapted to engage the basket rim, in a clinging manner; side binding straps, adapted to pivotally engage the transverse carrying members, immediately below the



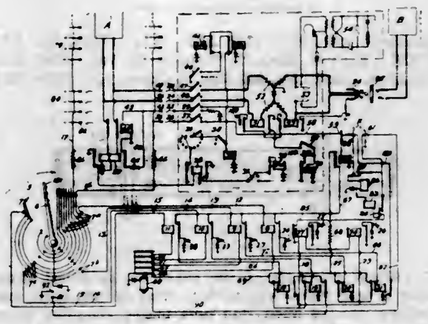
outer basket rim, wire carrier handles, adapted to engage each other and means for pivotally binding the transverse carrying members, the side binding straps, and the carrier handles together, substantially as shown and described.

1,381,477. DRAFTING-TABLE. VAINO LAURI, Seattle, Wash. Filed Dec. 6, 1920. Serial No. 428,572. 3 Claims. (Cl. 45—100.)



1. A drafting table comprising bifurcated side supports, a bar adapted to retain said side supports in spaced apart relation, a bifurcated bracket centrally mounted on said bar, a shelf mounted on the upper ends of said supports, a top pivotally mounted on said supports having transverse apertures disposed at both ends thereof, rollers rotatively mounted in said top below and adjacent to said apertures, segmental members disposed in angular grooves within said rollers, springs connecting said rollers and segmental members adapted to hold said segmental members against one wall and away from the opposite wall of said angular grooves, locking pawls pivotally mounted on said top arranged to engage notches in said segmental members, means for retaining said pawl in and out of engagement with said notches, toothed sectors pivotally secured to said top adapted to slidably move within hollow members of said side supports, and means for securing said top and sectors in a raised position.

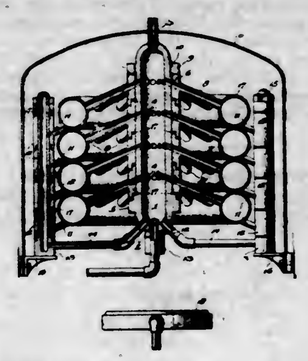
1,381,478. HACKSAW-BLADE. AUSTIN M. LAWRENCE, Montague, Msss. Filed Nov. 12, 1920. Serial No. 423,567. 1 Claim. (Cl. 143—133.)



A hack saw blade comprising portions having corrugations extending laterally of the blade parallel to the depth of the blade and of a depth greater than that of a tooth, teeth formed on the portions of said blade farthest offset having cutting edges perpendicular to the depth of the blade, and teeth formed on the portions of said blade intermediate of the corrugated portions, said latter teeth extending beyond the offset teeth as the latter are fore-shortened by the corrugating.

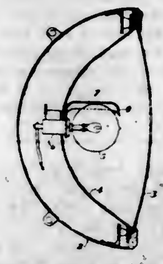
1,381,479. HAY-TRUCK. ARTHUR LEGBAND, Scribner, Nebr. Filed June 3, 1920. Serial No. 386,291. 2 Claims. (Cl. 214—1.)

1. In a truck, a rear section and a forward section, said rear section having a pair of lifting prongs, means for forcing the lifting prongs through a stack, said forward section including a body portion, depending hook members carried by the body portion, clevises having connection with the prongs, and said hook members adapted to engage within the clevises for lifting the lifting prongs and supporting the same in spaced relation with the ground surface over which the truck is adapted to move.



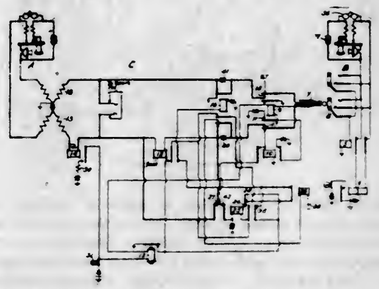
1,381,480. TELEPHONE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1917. Serial No. 149,223. 7 Claims. (Cl. 179—27.)

1. In a telephone system comprising a plurality of lines extending to a central office, means for impressing upon each line a characteristic number of electrical impulses for its identification, an extension circuit for said lines, a group of relays associated with said extension circuit, means for causing the successive impulses impressed upon an extended line to selectively effect the operation of any one of said relays independently of the action of any other relay of said group, and signals associated with said relays and arranged to be displayed under the control thereof.



1,381,481. STEAM-GENERATOR. THOMAS J. MCDONALD, Blue Ridge, Ga. Filed July 19, 1920. Serial No. 397,216. 5 Claims. (Cl. 122—321.)

1. A steam generator comprising a central header or chamber having a water inlet, a steam outlet, and a plurality of series of ports in its side wall, a plurality of superposed units each including a sleeve, fitted about the central header, and an outer tubular member surrounding said sleeve and connected thereto by a series of radiating conduits, each sleeve having ports communicating with one of the series of ports in the side of the central header,



and means for conducting water from each tubular member to the central header.

1,381,482. SHADE FOR HEADLIGHTS. NEAL MCMILLAN, Ogden, Utah. Filed Nov. 10, 1920. Serial No. 422,980. 1 Claim. (Cl. 240—48.6.)

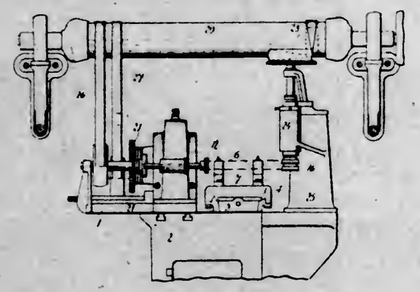
A shade for an automobile headlight, comprising a concavo-convex body furnished at its rear end with an integral straight flange extending from the concaved side thereof, the flange having an opening and also having an integral collar on the inner side thereof surrounding the opening and furnished with a tapped hole, a screw in threaded engagement with the tapped hole, the opening and the collar being intended to receive the body shell of an incandescent lamp which is engageable by said screw to positively prevent the shade from turning.

1,381,483. TELEPHONE-EXCHANGE SYSTEM. HARRY W. MACDOUGALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1917. Serial No. 193,108. 12 Claims. (Cl. 179—58.)

8. In a telephone exchange system, in combination a telephone line, a link circuit having a talking conductor,

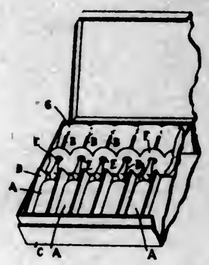
a relay in the link circuit energised upon connections thereof with a telephone line, a source of ringing current, a ringing relay when energised connecting the source of ringing current to the telephone line, a talking circuit relay, an energizing circuit therefor including a normally closed contact of the ringing relay completed upon the energization of the first relay when the telephone line is closed whereby the talking circuit relay is energised for disabling the initial energizing circuit of the ringing relay.

1,381,484. TOW-HOOK FOR STEAM-TUGS. THIES NAGEL, Hamburg, Germany. Filed Oct. 14, 1920. Serial No. 417,067. 2 Claims. (Cl. 114—217.)



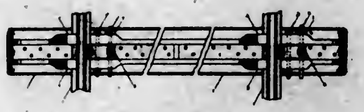
1. In a tow-hook for steam-tugs, in combination, a casing, a hook holder slidably arranged in the front end of said casing and having toothlike notches at its rear end, pawls engaging in said notches and located to swing outward for a liberation of said hook holder, a sleeve engaging over the free ends of said pawls, a link of adjustable length pivoted to said sleeve, an abutment-lever pivotally connected with the other end of said link and located to be operated upon the tow-hook being lifted at the event of a too high inclination of the steam-tug, and a hook on said hook holder to slip upon operation of said abutment-lever, substantially as and for the purpose set forth.

1,381,485. METHOD FOR THE REMOVAL OF VARNISH, LACQUER, ENAMEL, PAINT, AND SIMILAR COATINGS FROM ANY OBJECTS OR MATERIALS. GERALD H. MAINS, Detroit, Mich. Filed Dec. 6, 1920. Serial No. 428,666. 1 Claim. (Cl. 87—5.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



A method of removing varnish from varnished surfaces, consisting in applying to the varnish a coating of furfural and subsequently removing the loosened varnish.

1,381,486. MACHINE FOR FINISHING TURBINE-BLADES AND SIMILAR ARTICLES. WILLIAM HAMILTON MARTIN, Flushing, Netherlands. Filed Apr. 23, 1919. Serial No. 292,008. 8 Claim. (Cl. 29—33.)

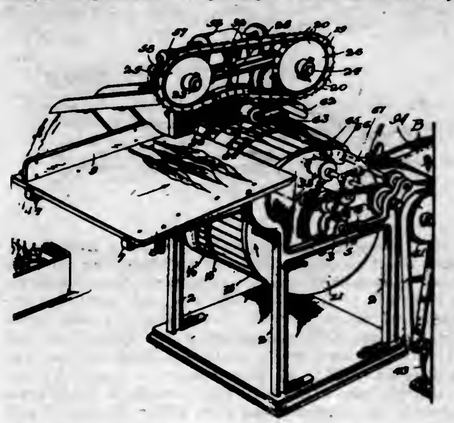


1. A machine for converting a length of turbine blade section bar into a complete blade, comprising a bed, a table reciprocating thereon, a blade holder adjustably mounted upon such table, the said holder being arranged so that the blade travels parallel to itself, rotary cutting means the position of which is fixed relatively to the bed and in relation to which the blade length is initially adjusted in order to be operated upon thereby at one end, and rotary cutting means adjustable in directions parallel to and transversely of the reciprocating table in order to operate upon the opposite end of the initially adjusted blade whatever its length.

1,381,487. PACKAGE FOR CONTAINERS OF PHARMACEUTICAL PRODUCTS AND THE LIKE. SANTIAGO PAGÉS MARUNY and JUAN BAUTISTA PAGÉS MARUNY, Barcelona, Spain. Filed Aug. 6, 1920. Serial No. 401,704. 4 Claims. (Cl. 206—63.2.)

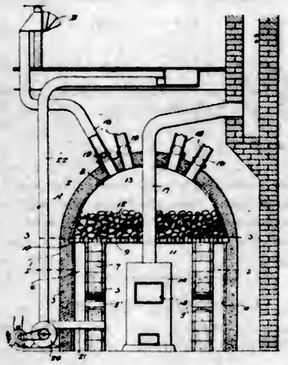
1. A package for containers of pharmaceutical products and the like, including means for indicating the removal of and preventing substitution for a container, originally packed, comprising a band having openings through which portions of the containers extend secured in the package, and means to prevent removal of a container other than by breaking a portion of said band.

1,381,488. RAILWAY-TIE AND RAIL-LOCKING DEVICE. SAMUEL MORANO, Wendell, W. Va. Filed Jan. 15, 1920. Serial No. 351,554. 1 Claim. (Cl. 238—62.)



A railway cross tie of the character described, comprising a base plate, longitudinal ribs, spaced apart and extending upward upon said base plate; clamping members forming the upper portion of the longitudinal, vertical ribs, adapted to receive and rigidly clamp the inner and outer sides of the base flanges of the track rails respectively; locking clamps, pivotally mounted between the longitudinal ribs, adapted to engage the inner and outer sides respectively of the base flanges of the track rails; a wedge-shaped locking key, extending transversely through the vertical ribs of said tie, and adapted to engage the lower portion of the locking clamp, and adapted to apply binding pressure on the track rail flange; a safety key, adapted to engage the locking key and securely bind it within the vertical ribs, all substantially as described, shown, and for the purposes specified.

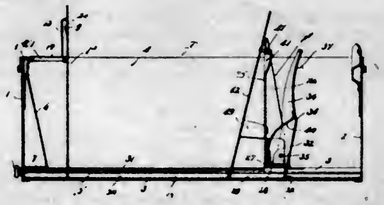
1,381,489. TOBACCO-LEAF STEMMING, STRAIGHTENING, AND BOOKING MACHINE. JOHN O. MORRIS, Washington, D. C. Filed Mar. 30, 1921. Serial No. 456,841. 54 Claims. (Cl. 131—57.)



1. In tobacco stemming machine, coöperating stripping means, one of which comprises a drum constituting a leaf carrier successively positioning individual leaves in stripping position, and stem grapping means engaging and drawing each leaf stem as the leaves arrive at the stripping position.

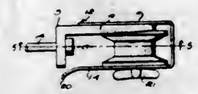
52. In a tobacco stemming machine, stripping means, stem gripping means in combination therewith, leaf straightening means comprising mechanism releasably

holding the butt end of the leaf and including a pair of members engaging the apex end of the leaf and drawing it away from the butt end, and leaf booking means.



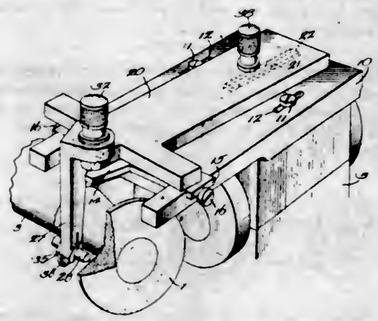
1,381,490. HEATING SYSTEM. THOMAS M. OFFUTT, Connersville, Ind., assignor of one-fifth to Erwin H. Cushing, Connersville, Ind. Filed Oct. 9, 1920. Serial No. 415,904. 2 Claims. (Cl. 126—99.)

1. The herein described system comprising a housing including a body and a top, a lining of heat non-conducting material on the interior wall of said housing, an interior wall spaced from the body of the housing and forming a chamber between itself and said body, a grate separating the body of the housing from the top and resting upon the said interior wall, a layer of heat retaining material on said grate, a pipe connecting the interior of the top with the room to be heated, means within the space formed by the interior wall for changing the temperature of the air therein and means for introducing air into said space.



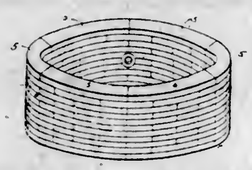
1,381,491. FILING CABINET OR TRAY. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Nov. 17, 1919. Serial No. 338,587. 11 Claims. (Cl. 129—16.)

1. A cabinet or filing tray having therein a follower comprising a vertically disposed member adapted to be moved longitudinally along the tray, means for locking said member in any of its adjusted positions, a guard plate connected in swinging relation to the upper end of said member, in such manner as to permit the lower portion of said plate to be moved toward and away from said member.



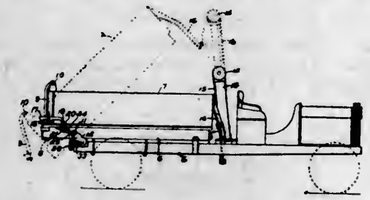
8. A cabinet or filing tray having therein a follower comprising a vertically disposed flanged member adapted to be moved longitudinally along the tray, a rack member disposed in the bottom of said tray, a guiding member secured to the lower edge of said flanged member and slidable within said rack member, and a pawl carried by said flanged member and coöperating with said rack for locking said flanged member in any of its adjusted positions.

1,381,492. GUIDE FOR WINDING-MACHINES. JOHN A. OLSON, Paterson, N. J. Filed Aug. 24, 1920. Serial No. 405,578. 5 Claims. (Cl. 242—157.)



2. A guide for winding machines comprising a tension wire, a bracket swiveled on the end of said tension wire, a substantially U-shaped plate having one arm secured to said bracket and its opposite arm arranged parallel to said bracket and spaced therefrom, said bracket and plate being provided with alined openings, said bracket being further provided with a depression in one face thereof, concentric with the opening therein, a shaft arranged in said openings, and a roller rotatably mounted on said shaft having a portion of one end thereof arranged in said depression.

1,381,493. TOOL-DRESSING DEVICE. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1919. Serial No. 283,748. 10 Claims. (Cl. 125—11.)

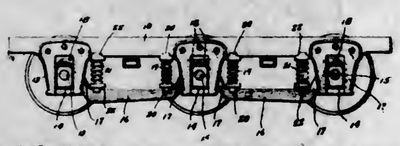


5. A tool dressing device having a table, a templet attached to the table, a slide movable upon the table, a guide pin attached to the slide for following the templet, a dressing tool, and an arm carrying the dressing tool, said arm being mounted upon the slide and being angularly adjustable about an axis perpendicular to the plane of the table.

1,381,494. DRUM. CHARLES G. OLSEN, Portland, Oreg. Filed Nov. 7, 1918. Serial No. 261,501. 4 Claims. (Cl. 84—411.)

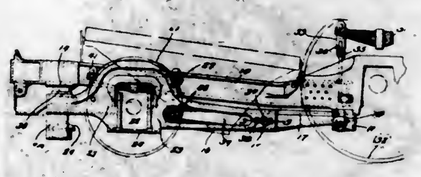
2. A drum shell comprising a plurality of endless courses united side to side to form a composite unitary structure, each course being formed from a plurality of sections united end to end.

1,381,495. UNLOADING APPARATUS. HENRY PEARSON, Brightwood, Mass., assignor, by mesne assignments, to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 1, 1918. Serial No. 237,683. 10 Claims. (Cl. 298—23.)



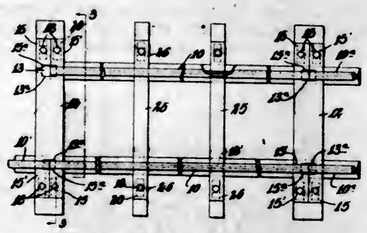
1. In a load-discharging apparatus, the combination of a dumping receptacle having a discharge opening, a gate normally closing said opening, and means including a normally unyielding spring and consequent upon movement of said receptacle to close said gate.

1,381,496. BOOSTER-MOTOR TRAILER-TRUCK. HARRY M. PFLAGER, St. Louis, Mo. Filed Sept. 10, 1919. Serial No. 322,861. 10 Claims. (Cl. 105—133.)



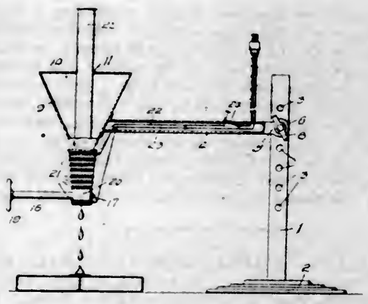
1. A radially movable trailer truck frame for locomotives, and a bearing on said truck frame for a booster motor support.

1,381,497. SIX-WHEEL CAR-TRUCK. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Feb. 5, 1920. Serial No. 356,545. 14 Claims. (Cl. 105—195.)



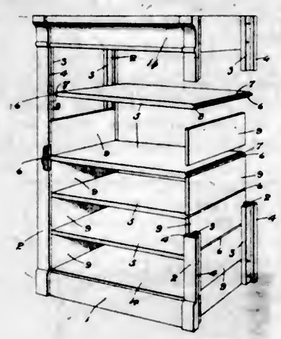
1. A flexible support for railway car trucks comprising substantially rigid equalizing members supported upon the journal boxes associated with the truck, and a pair of springs interposed between each equalizing member and the truck frame, one spring of each pair being located between the centers of said equalizing members and the ends thereof, said springs having different load carrying capacities.

1,381,498. LOCOMOTIVE TRAILER-TRUCK. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 6, 1920. Serial No. 414,981. 8 Claims. (Cl. 105—174.)



1. A locomotive trailer truck including a truck frame and a wheel carrying axle, means for supporting the truck frame upon said axle, which supporting means is located in front and to the rear of said axle, that portion of the supporting means in front of the axle including equalizers that are fulcrumed on the trailer truck frame and which forms part of the main equalizing system, and said trailer truck frame being adapted to receive its load at a point near its forward end in front of the fulcrum points of the equalizers and at points to the rear of said axle.

1,381,499. RAILROAD-TRACK CONSTRUCTION. JOSEPH Y. PISCEK, Gallup, N. Mex. Filed Jan. 6, 1921. Serial No. 435,374. 5 Claims. (Cl. 238—46.)



1. In combination, track rails having laterally projecting ribs at their ends, ties on which the rail ends rest, and blocks secured on said ties and having members projecting over the feet of the rails on opposite sides of the said ribs.

1,381,500. ELECTRIC WAX-HEATER. RUSSELL F. READER, East St. Louis, Ill. Filed Sept. 15, 1919. Serial No. 323,814. 3 Claims. (Cl. 219—43.)

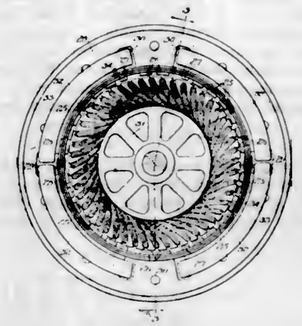
1. An electric wax heater comprising a base, an upright carried by the base, a wax receiving receptacle, a supporting arm fixed at one end to said receptacle, means for adjustably connecting the opposite end of said supporting arm to said upright, an electric heater surrounding the lower end of said wax receiving receptacle, a valve for controlling the flow of heated wax from the receptacle, and a switch for opening and closing the electric circuit to the heater.

1,381,501. SHELVING CONSTRUCTION. MORRIS REIGERSBERG, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 17, 1920. Serial No. 410,852. 7 Claims. (Cl. 45—78.)

1. A shelving construction comprising a base and top and four pilasters connecting the base and top at the corners thereof, each of said pilasters comprising an inwardly extending portion from which a laterally extending portion projects inwardly, a plurality of horizontally spaced shelves located between the base and top, each shelf at each end being formed with a tongue extending the width thereof and centrally located between the upper end lower sides of the shelf, the projection of each tongue from a shelf being substantially equal to the projection of said laterally extending portion from the pilaster, and spacers located between adjacent shelves and against the inwardly extending portions of the pilasters and bearing against the tongues of the shelves above and below said spacers to interlock therewith, substantially as described.

1,381,502. HOOP. ROBERT REINHARD and JOHN C. SCHMITT, Chicago, Ill. Filed Sept. 11, 1920. Serial No. 409,733. 1 Claim. (Cl. 217—93.)

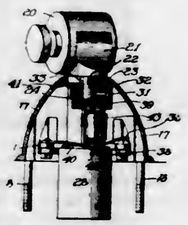
A hoop of the character described, composed of sheet metal, with portions of the metal partially severed in a triangulated manner so as to provide a plurality of outwardly bent prongs arranged in pairs, with the apices of the prongs of each pair initially disposed in opposite directions, the prongs being bent at an intermediate point so as to have the free ends disposed toward the openings formed by said partially severed metal to constitute gripping portions.



1,381,503. PROCESS OF PRODUCING PHTHALEINS. ALFRED L. RISPLER, St. Louis, Mo., assignor to Monsanto Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed May 10, 1920. Serial No. 380,412. 7 Claims. (Cl. 23—24.)

1. A process for producing phthaleins, characterized by condensing phthalic anhydrid with a phenol in the presence of an anhydrous aromatic sulfonic acid, whereby the sulfonic acid acts as a condensing as well as a dehydrating agent.

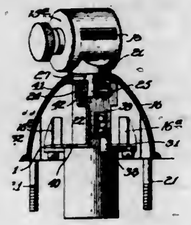
1,381,504. TREATING ROSIN. FRANCIS M. ROGERS and CLAUDE P. MCNEIL, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Aug. 31, 1920. Serial No. 407,227. 3 Claims. (Cl. 203—4.)



1. The process of treating rosin to increase its grease-setting properties which comprises digesting it at a temperature sufficiently high to convert the abietic acid content of the rosin into grease-setting form and which is below the distillation temperature of its abietic acid content corresponding to the pressure of digestion.

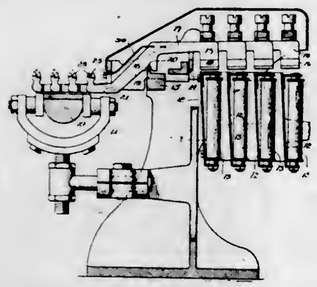
1,381,505. DYNAMO-ELECTRIC MACHINE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Aug. 8, 1917. Serial No. 185,009. 6 Claims. (Cl. 172—120.)

3. In a motor, a stator having a plurality of pole-teeth of unequal angular width and a stationary squirrel-cage embraced thereby through which said pole teeth pass.



1,381,506. PHONOGRAPH CONTROL DEVICE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Dec. 3, 1919. Serial No. 342,249. 8 Claims. (Cl. 192—116.)

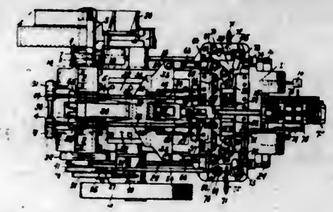
1. In combination with a record support, a pivotally mounted reproducer arm coöperating therewith and means for rotating said support, a conduit section connected with the reproducer arm in axial alinement with its pivotal center and movable with said arm, a movable slide, en-



gaging means mounted upon said conduit section and capable of engaging said slide only as the tone-arm approaches the limit of its movement in either direction, and means for starting and stopping the rotation of the support by the movement of said slide.

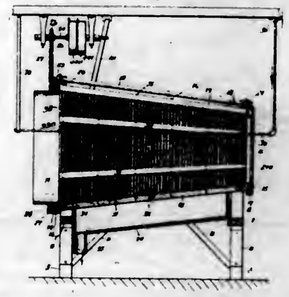
1,381,507. PHONOGRAPH CONTROL DEVICE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Dec. 3, 1919. Serial No. 342,250. 5 Claims. (Cl. 192—116.)

1. In a phonograph, in combination, a rotatable record support, a movable reproducer arm, a conduit section movable therewith, a slide, engaging means carried by the movable conduit section capable of engaging the slide only as the reproducer arm approaches the limits of its movement, a brake capable of engaging the record support, and a brake actuating member engaged by the slide in its movement to disengage the brake from the support.



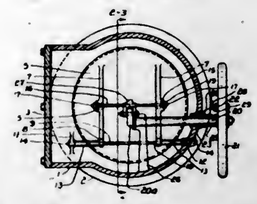
1,381,508. FINGERING DEVICE FOR SELF-PLAYING STRINGED INSTRUMENTS. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Nov. 8, 1920. Serial No. 422,459. 2 Claims. (Cl. 84—11.)

1. A fingering device for self-playing stringed instruments of the viol-class, said device being provided with a tapering string-engaging notch, the members forming the sides thereof being transversely offset with respect to each other and overlapping at the bottom of the notch.



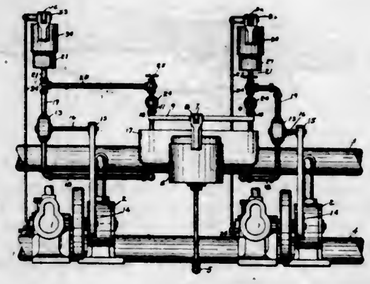
1,381,509. BOLT-HEADING MACHINE. FREDRICK J. SCHWIMMER, Toledo, Ohio, assignor to Howard Iron Works, Buffalo, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,268. 27 Claims. (Cl. 10—16.)

1. In a machine of the class described, a set of work clamping members, a set of work shearing members, means operable to impart movements to the members of said sets to cause the clamping members to clamp the stock when the shearing members are in retracted position, and vice versa, and means automatically operable to permit an



initial work releasing movement of the clamping members when the operating means is at a predetermined point in its movement.

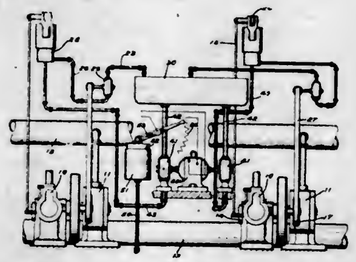
1,381,510. VEGETABLE-WASHER. OGDEN S. SELLS, Buffalo, N. Y., assignor to Peerless Husker Company, Buffalo, N. Y., a Copartnership. Filed Aug. 13, 1919. Serial No. 317,137. 7 Claims. (Cl. 146—14.)



1. A vegetable washer comprising a rotatable conical screen, and a longitudinal cutter arranged within the screen adjacent to the inner surface thereof and adapted to sever particles caught thereon.

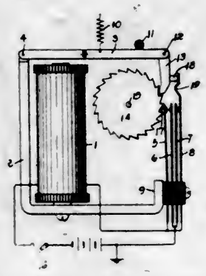
1,381,511. VALVE. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed June 16, 1917. Serial No. 175,199. 14 Claims. (Cl. 251—10.)

7. In a quick opening valve comprising a casing having a valve seat therein, a disk valve having two parallel transverse ribs on its back, two other ribs on the back of the valve disk and perpendicular thereto, a spring bar mounted in the casing and passing through the perpendicular ribs, a second spring bar mounted in the transverse ribs and parallel to the first spring bar, a valve stem extending through the casing substantially parallel to the valve disk the inner end thereof extending at right angles to the main part of the stem, a link connecting the inner end of the valve stem to the second spring bar, the link and inner end of the valve stem constituting in effect a toggle so arranged that their middle joint is past center when closing of the valve to its seat is completed.



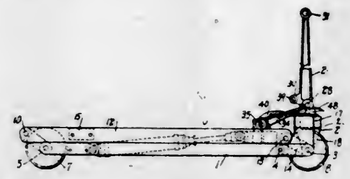
1,381,512. SPEED-GOVERNING MECHANISM FOR PRIME MOVERS. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 1, 1917. Serial No. 194,165. 19 Claims. (Cl. 103—95.)

1. A regulating device for a plurality of prime movers comprising in, combination, pressure operated means actuated by each separate prime mover for insuring a predetermined speed thereof, and other pressure operated means coöperating with said first named means for insuring a uniform speed of operation of all the prime movers.



19. A speed regulating device for pumps, blowers, or the like, comprising, in combination, a plurality of pumps, blowers, or the like, having a common delivery main; a prime mover for driving each pump; and speed controlling means associated with the prime movers; said means comprising; a pressure actuated governor associated with each prime mover; pump mechanism driven from an independent power source and tending to maintain constant the pressure actuating each governor; a pump, associated with each prime mover, and variably actuated thereby, said last named pumps each tending to vary the pressure actuating its associated governor in accordance with variations in the speed of operation of its associated prime mover; and mechanism responsive to pressure conditions in the delivery main, tending to vary the pressure actuating all of the governors, said pressure responsive means tending to vary the actuating pressures in unison and in accordance with varying pressures within the delivery main; the two pump mechanisms and the pressure responsive mechanism when acting in coöperative relation controlling the speed of operation of each prime mover individually, the speed of operation of all the prime movers together, and the possible maximum and minimum speed of operation of all said prime movers.

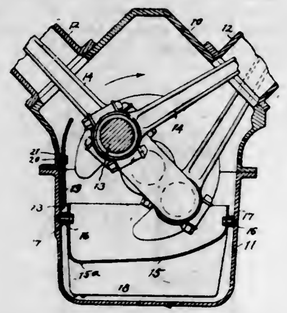
1,381,513. SPEED REGULATION. HARRY F. SMITH, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 8, 1920. Serial No. 364,213. 10 Claims. (Cl. 103—95.)



1. A speed regulating mechanism for a plurality of pqrime movers; comprising in combination governing means for each prime mover, said means being actuated by the prime mover with which it is associated; and a coöperating governing means for each prime mover, all such coöperating means being actuated by an independent and common power source; the sets of governing means being adapted when operating in coöperative relation to control the speed of each prime mover individually and of all the prime movers in unison.

1,381,514. ELECTROMAGNETIC STEP-BY-STEP MECHANISM. CHARLES P. SOPER, Maplewood, N. J., and JOHN A. HALL, Bayside, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,123. 3 Claims. (Cl. 172—126.)

1. In an electromagnetic step-by-step mechanism, a ratchet member, means for stepping said ratchet member forward, an electromagnetic means for operating said stepping means, mechanical means actuated when said electromagnetic means is rendered inoperative to restore said stepping means to normal position, means for holding said ratchet member after it has been stepped forward, means actuated by said stepping means in dropping into engagement with a ratchet tooth to actuate said electromagnetic operating means, and means actuated by said holding means in dropping into engagement with a ratchet tooth to render inoperative said electromagnetic means.



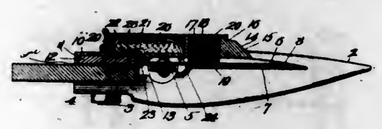
1,381,515. LIFTING-TRUCK. WILLIAM STUEBING, Jr., Cincinnati, Ohio, assignor to The Stuebing Truck Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 16, 1916. Serial No. 126,014. 7 Claims. (Cl. 254—10.)

3. In a lifting truck, the combination with a wheeled base frame and an elevating frame and a pivoted steering handle, of means for connecting said elevating frame to said handle to elevate said elevating frame, comprising a manually operable member connected to one of said parts and tending to move out of connected relation to the other, into a position where it will not interfere with the movement of said handle when used for steering, in combination with treadle and locking means, the treadle means moving said member into position for effecting a connection with said other part and said locking means positively locking the elevating frame to the base frame to prevent descent, before the manually operable member and the other connecting part are disconnected; said

treadle means also being capable of releasing said elevating frame from its locked position that the same may descend, said treadle and locking means being independent of the handle.

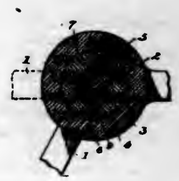
1,381,516. INTERNAL-COMBUSTION ENGINE. WILLIAM R. STRICKLAND, Cleveland, Ohio, assignor to The Peerless Motor Car Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1918. Serial No. 254,271. 5 Claims. (Cl. 184—6.)

1. In combination with an internal combustion engine having a rotating crank-shaft and a crank-case, of a shield in the form of a pan between the crank-shaft and the bottom of the crank-case, said pan being closed on all four sides and extending along but spaced from the walls of the crank-case, and said pan having at substantially the lowest part thereof one or more drain openings so that any oil caught in the pan will drain therefrom.



1,381,517. PENCIL. JULIUS SWANBERG, Chicago, Ill., assignor to Fabart Instrument Company, a Corporation of Illinois. Filed Nov. 10, 1919. Serial No. 336,852. 8 Claims. (Cl. 120—18.)

1. A pencil of the class described comprising a casing, parallel longitudinal walls forming pockets in the casing, and a lead-feeding mechanism resiliently engaging the casing and slidable between the walls.

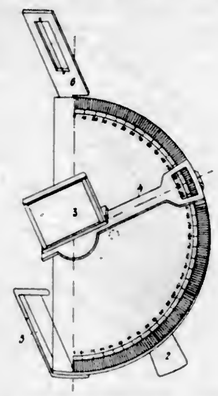


8. In a pencil, a tip, a tubular guide integral with said tip and extending into the interior of the pencil, slits in the inner end of said guide forming tongues, said tongues being bent toward each other and the concave surfaces of the inner ends of said tongues being beveled to form a funnel shaped opening.

1,381,518. SICKLE-BEARING FOR MOWERS. JOHN L. TANDY, Tulsa, Okla. Filed July 21, 1919. Serial No. 312,240. 9 Claims. (Cl. 56—304.)

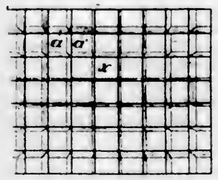
1. A sickle bearing secured to the finger bar of a mower and overlying the cutting mechanism thereof and provided with an inverted pocket, and a hard bearing plate fitting removably in said pocket to receive on its front edge the backward thrust of sickle sections of the cutting mechanism of the mower.

1,381,519. CHAIN. SAMUEL V. TENCH, Wilkes-Barre, Pa. Filed Oct. 25, 1920. Serial No. 419,368. 19 Claims. (Cl. 59—78.)



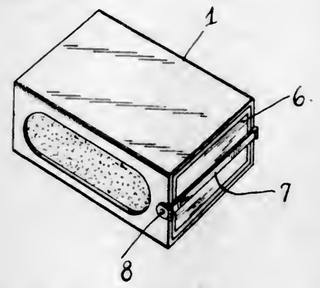
1. In a chain, the combination with links, each comprising a shank having a cross-head at one end thereof; of a knuckle at the opposite end of each shank; the knuckle having a bearing apefture therein, and formed with a longitudinally extending radial slot and a circumferential slot extending part way around the knuckle from the longitudinal slot, both slots adapted to communicate with the bearing; a bushing rotatably mounted in the bearing, the bushing being chambered longitudinally to form a seat for the cross-head of the adjacent link, which chambered portion is adapted to substantially register with the longitudinal slot in the knuckle, the bushing having a circumferential slot communicating with the chambered portion and adapted to substantially register with the circumferential slot of the knuckle; the shank of the next adjacent link being insertible laterally into the registering circumferential slots to bring the cross-head in line with the registered longitudinal slot of the head and the chambered portion of the bushing; and then being shiftable endwise to draw the cross-head through the longitudinal slot and seat it in the chambered portion of the bushing.

1,381,520. INSTRUMENT FOR MEASURING ANGLES. MARTIN AUGUST TÖNNESSEN, Bergen, Norway. Filed Oct. 31, 1918. Serial No. 260,525. 1 Claim. (Cl. 88—2.4.)



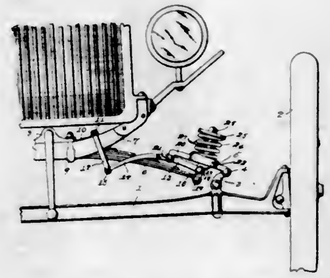
In an instrument for measuring angles, the combination of a member provided with a semi-circular scale, each half of which is divided into graduations corresponding in number to the degrees in a semi-circle, the zero points of the scale lying on diametrically opposite points, a mirror pivotally mounted at the center of curvature of the scale, devices mounted on the member and provided with sighting lines lying perpendicular to the member at zero points

of the scale and extending above the mirror so that they may be sighted upon one of two points, the angle between



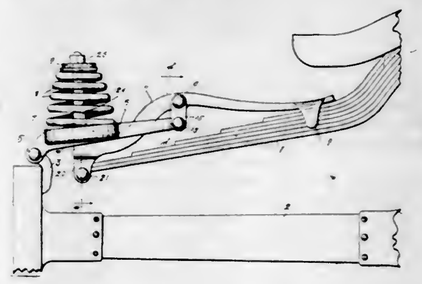
which is to be measured, and means associated with the mirror for indicating on the scale the actual angle which is to be measured.

1,381,521. CELL-DIAPHRAGM FOR X-RAY APPARATUS. SINCLAIR TOUSEY, Westhampton Beach, N. Y. Filed Apr. 23, 1919. Serial No. 292,136. 4 Claims. (Cl. 250—84.)



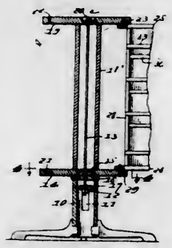
2. A cell diaphragm comprising two sets of strips crossing each other and inclined to the plane of the diaphragm to different degrees in respect to each other, said crossing strips each slitted to interlock, substantially as described.

1,381,522. MATCH-BOX HOLDER. FRANCIS VAN SENUS, Moline, Ill. Filed May 22, 1920. Serial No. 383,425. 1 Claim. (Cl. 206—33.)



A match box holder comprising a casing having its ends open and one end having an inwardly extending flange, an end plate engaging said flange for closing the opening, a smaller plate having right angular flanges thereon for engaging the first plate, a spring connecting the two plates together, a latch bar hinged at one end to said box and fastening means for connecting the other end of the bar to the other side of the box with the bar extending across the open end of the holder for holding the match box therein.

1,381,523. SPRING SUSPENSION. GEORGE F. VOIGHT, San Francisco, Calif., assignor to Walter S. Burgess, Oak Park, Ill. Filed Mar. 3, 1919. Serial No. 280,214. 25 Claims. (Cl. 267—28.)

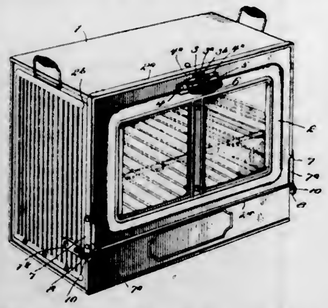


1. In combination, a rigid primary lever having a pivotal support for its outer end, a secondary lever having a relatively movable support for its inner end, a pivotal connection between the inner end of the primary lever and an intermediate part of the secondary lever, a resilient connection between other portions of said levers, and a shackle connection between the secondary lever and one end of the vehicle's leaf spring.

1,381,524. SHOCK-ABSORBER. GEORGE F. VOIGHT, San Francisco, Calif., assignor to Walter S. Burgess, Oak Park, Ill. Filed Apr. 28, 1919. Serial No. 293,119. 25 Claims. (Cl. 267—19.)

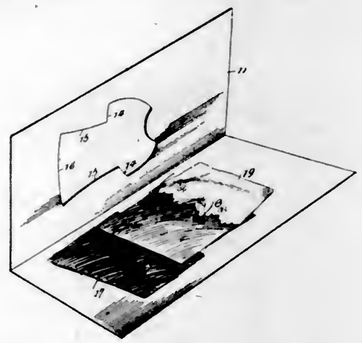
23. The combination with a vehicle having an axle and a leaf spring disposed above the axle and extending in a general direction therewith, of a secondary lever having an outer bifurcated end attached to the outer end of said leaf spring for supporting it and its inner end seated upon said leaf spring a distance inwardly from its outer end and supported thereby, means carried by said inner end of the lever engageable with the sides of said spring for preventing undue lateral movement of said end relatively to the spring, a primary lever having an intermediate section overhanging said outer end of the leaf spring and supporting upon its upper side a compression spring, a pivotal connection between the outer end of said primary lever and said axle at a distance outwardly from said outer end of the leaf spring, the inner end of said primary lever being disposed between an intermediate portion of said secondary lever and said leaf spring, a shackle connection between said inner end and said portion, and a connection between the outer end of said secondary lever and said compression spring for resiliently supporting it.

1,381,525. PHONOGRAPH-RECORD CABINET. WARREN M. WAGONER and JOSEPH W. VARNER, Piedmont, W. Va. Filed Feb. 9, 1921. Serial No. 443,620. 1 Claim. (Cl. 211—20.)



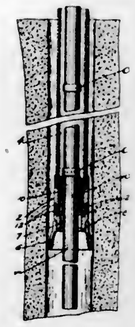
In a phonograph record cabinet, a hollow base having slots, a plate therein having wings projecting into the slots, a head supported above the base, a sleeve extending upwardly from the head, a head on the sleeve, a rod having a shoulder bearing against the upper head, the said rod projecting through the sleeve and through the lower head and through the plate, a nut threaded on the lower end of the rod, wings comprising rectangular frames, the upper and lower members of which project inwardly beyond the wings, means for oscillatably mounting the wings on the heads, vertical and horizontal partitions in the rectangular frame of the wings forming record receiving recesses on the two faces of the wings, and means extending over the recesses and anchored to the rectangular frame for guarding the said recesses.

1,381,526. FOOD PRODUCT. JOHN F. WATERS, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,385. 2 Claims. (Cl. 99—11.)



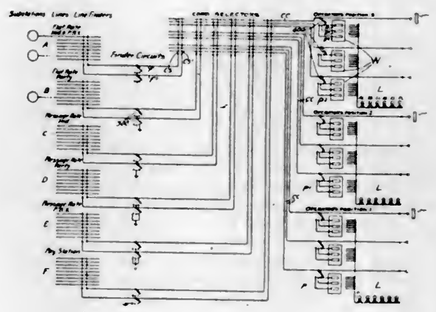
2. A food roll of substantially uniform thickness consisting of a series of substantially whole trimmed tenderloins placed lengthwise of one another in alternating relation, strips of fat, and means for tying the tenderloins together into a compact roll.

1,381,527. OVEN. FRED E. WHITE, Gardner, Mass., assignor to Central Oil and Gas Stove Company, Gardner, Mass., a Corporation of Maine. Filed Jan. 30, 1920. Serial No. 355,036. 2 Claims. (Cl. 126—190.)



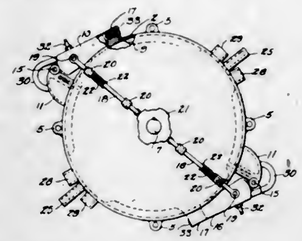
1. A sheet metal oven having an open front and an oven door closing said front and hinged at its lower edge, said door having an inwardly turned marginal flange on its side and top edges overlapping the oven walls when closed and having an outwardly turned flange at its lower edge.

1,381,528. DOLL-MODEL. MAYME WHITE, Indianapolis, Ind. Filed July 8, 1919. Serial No. 309,372. 1 Claim. (Cl. 46—40.)



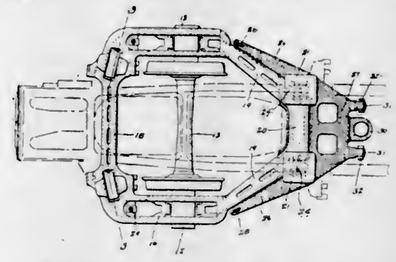
As a new article of manufacture a toy comprising a card folded transversely along its center to provide a front member and a solid back member, said front member having an upper opening including curved side walls defining the outer edges of sleeves and connecting at their upper ends with an arcuate upper wall defining the neck of a dress, the lower short walls of said opening being directed toward one another to define the lower edges of the sleeves, said front member having a lower opening including converging upwardly directed side walls connecting with the inner ends of the short lower walls of the upper opening and defining the side edges of a skirt, said lower opening including a curved lower wall connecting the lower ends of the side walls of said lower opening and defining the lower edge of a skirt, said front member having outlined on its outer face the head and neck of a child above the upper arcuate wall of the upper opening, said front member having outlined on its outer face and extended downwardly and outwardly in opposite directions from the short lower walls of the upper opening the lower portions of the arms and the hands of a child, said front member having outlined on its outer face and extended downwardly from the lower curved wall of the lower opening the lower portions of the legs and the clothed feet of the child, whereby the figure of the child will appear to be fully clothed when sections of material are placed on the solid back member opposite the communicating upper and lower openings of said front member and said front member folded into parallel position with said back member.

1,381,529. OVERSHOT FISHING-TOOL. GEORGE WHITMER, Brea, Calif. Filed Jan. 2, 1920. Serial No. 349,077. 1 Claim. (Cl. 290—90.)



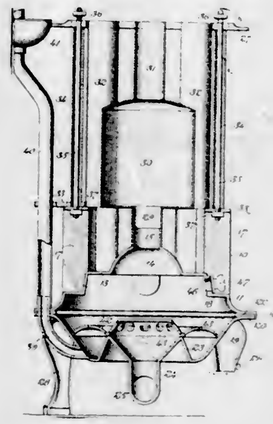
A fishing tool for wells comprising a device adapted to be suspended in a well, said device having an interior convergent surface, bars of spring material mounted flat against said convergent surface at one end and secured thereto so that the free ends incline toward one another and are free to spring outwardly, the attaching means for said bars including bolts received through openings in said suspended device and threaded into said bars.

1,381,530. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1919. Serial No. 297,448. 19 Claims. (Cl. 179—27.)



1. The combination with telephone lines and an operator's position, of groups of finder circuits for extending said telephone lines to said position, distinctive controlling means associated with each group of finder circuits, and indicating mechanism at said operator's position selectively responsive to said distinctive controlling means of the various groups of finder circuits.

1,381,531. ROTARY ENGINE. MASON A. WIMBERLEY, Oxnard, Calif. Filed Mar. 16, 1920. Serial No. 366,343. 9 Claims. (Cl. 123—15.)

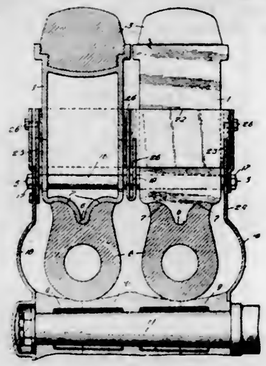


1. A rotary internal combustion engine comprising a casing and an inner member, said parts relatively rotative to each other; the inner member having a plurality of recesses in its circumference; sliding elements yieldingly mounted in the casing and movable into and out of the pockets of the inner member upon relative rotation of the casing and said member; a compression chamber on one side of certain of said sliding elements; an oscillating combustion chamber communicating with each compression chamber; whereby upon relative rotation of the casing and said member fuel charges are successively compressed and delivered into the combustion chambers; means whereby the latter are moved inwardly into the recesses in the inner member whereupon the fuel charges in said combustion chambers are ignited and there being inlet and exhaust ports formed through the wall of the casing on opposite sides of certain of said sliding elements.

1,381,532. TRAILER-TRUCK FOR LOCOMOTIVES. WILLIAM E. WOODARD, Forest Hills, N. Y., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 21, 1920. Serial No. 405,062. 23 Claims. (Cl. 105—82.)

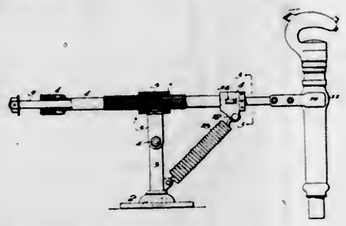
14. In a locomotive trailer truck, a wishbone shaped equalizing member, the legs of which span a part of said trailer truck.

1,381,533. PORTABLE WATER-HEATER. ALEXANDER ZEBROWSKI, Stamford, Conn. Filed Oct. 2, 1920. Serial No. 414,344. 3 Claims. (Cl. 126—360.)



1. A heater of the character described comprising an annular housing including inner and outer relatively spaced concentric walls, the space between said walls being closed at one end and open at the other, a casting closing the open end of said housing, a partition across the inner wall of said housing, means for supplying fuel and air to said base, combustion means connected with said partition, and radiating means connected with said housing.

1,381,534. MULTIPLE-TREAD WHEEL. EDWARD A. BANSCHBACH, Chicago, Ill. Filed Dec. 18, 1918. Serial No. 267,257. 17 Claims. (Cl. 152—31.)

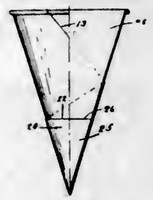


17. A wheel comprising a hub having side plates thereon and spaced apart to form a circumferential channel about said hub, partition plates interposed between said side plates and spaced outwardly from said hub to leave a continuous chamber between the inner edges of said partition plates and said hub, said partition plates being arranged to divide the outer portion of said channel into a plurality of circumferential rows of radially extending cells, the cells of each row being staggered with relation to the cells of the next adjacent row, radially movable tread members in said cells, and resilient members sup-

ported by said hub within said chamber and arranged to bear against the inner ends of said radially movable tread

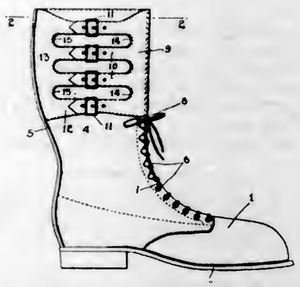
members, there being one resilient member for each circumferential row of cells and common to all of the tread members of said row.

1,381,535. SUPPORT FOR PNEUMATIC HAMMERS. NICHOLAS BASSO, Victoria, British Columbia, Canada. Filed Apr. 20, 1920. Serial No. 375,308. 2 Claims. (Cl. 78—46.)



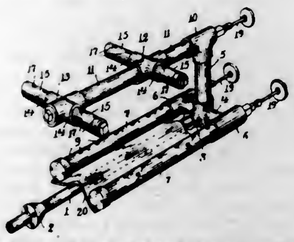
1. A holder for pneumatic hammers comprising a sleeve, a tubular member passing through said sleeve and having a threaded portion, nuts on said threaded portion to engage the ends of said sleeve for positioning said tubular member, a radius rod endwise adjustable within said tubular member, a standard to which said sleeve is pivotally connected and a spring connecting said standard with said tubular member to hold the operative end of the hammer in contact with the work.

1,381,536. PAPER-CUP HOLDER. GEORGE J. BOHLMAN, Medford, Mass., assignor to American Water Supply Company of New England, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1918. Serial No. 224,735. 2 Claims. (Cl. 65—61.)



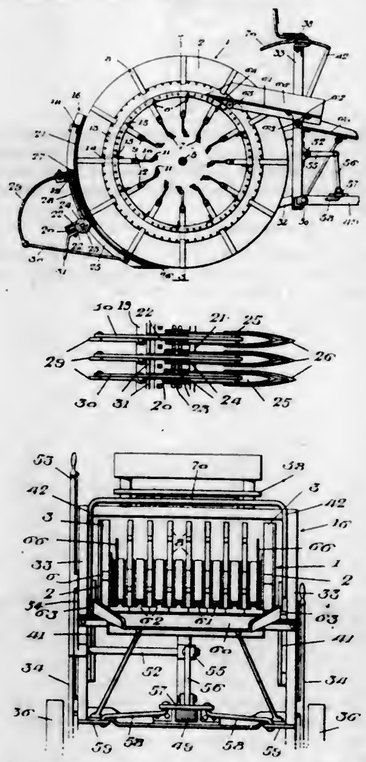
1. A cup-holder comprising a flaring top portion and a frusto conical element contained therein adapted to receive a cup and a supporting element having a top piece with a center hole, said top portion and conical element and top piece together forming a closed compartment around the cup receiving portion of the holder.

1,381,537. PAPER DRINKING-CUP. GEORGE J. BOHLMAN, Medford, Mass., assignor to American Water Supply Company of New England, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1918. Serial No. 224,737. 2 Claims. (Cl. 229—3.1.)



1. As an article of manufacture, a drinking cup composed of paper which is tub-sized and wet calendered, rendering it partially water-proof and providing a glossy surface on one side only, and arranging the paper so that the glossy surface is at the interior of the cup.

1,381,538. BOOT. PASQUALE BONELLI, Port Richmond, N. Y. Filed Aug. 14, 1920. Serial No. 403,497. 1 Claim. (Cl. 36—50.)

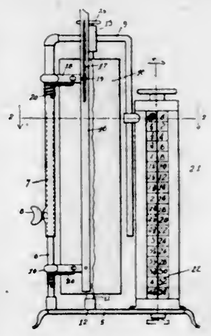


A high top boot having a divided upper whose lower portion is provided with lacing to bring together its parts with a snug fit, and whose top portion has at one side a strip of reinforcng material secured thereto and extending from the back seam of the upper, said top portion at its other side being extended in the form of a flap to compromise a front covering above the lacing, said strip having extending, integral, spaced straps, sewn part-way of their length to the upper, and said flap having integral, spaced straps opposed to the straps extending from said strip, with mutually engaging means.

1,381,539. GAS-BURNER. OPHELIA O. CALEFF, Boston, Mass. Filed Nov. 5, 1920. Serial No. 422,017. 6 Claims. (Cl. 158—105.)

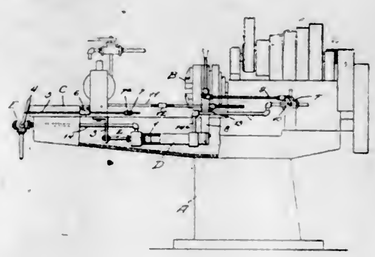
1. A gas burner for stoves and ranges, comprising burner tubes designed to be located at the bottom of the fire pot, a vertical pipe section rising therefrom, a horizontal feeder section connected with the upper end of said vertical section, two cross-sections communicating with and supported by said horizontal section to come immediately beneath the two stove covers, and means for supplying said tubes and sections with burning gas, said cross-sections having burner openings along their upper surfaces.

1,381,540. STONE-PICKING MACHINE. DON P. CARR, Homer, Mich. Filed Aug. 6, 1919. Serial No. 315,662. 10 Claims. (Cl. 55—17.)



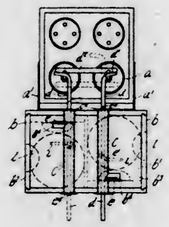
1. A gathering machine embodying a cylinder to roll over the ground and having fingers for raising objects, yieldable deflecting teeth extending downwardly and forwardly under the cylinder to drag over the ground and deflect the objects upwardly, and rearwardly extending stripping fingers bearing on top of the cylinder between the fingers thereof for removing the objects from the cylinder.

4. A gathering machine embodying a cylinder to roll over the ground having outwardly extending fingers, a concave in rear of the cylinder for retaining objects thereon while being elevated, curved deflecting teeth extending behind the concave and downwardly and forwardly under the cylinder, guides for said teeth in rear of the concave, expansion springs behind the concave yieldably moving the teeth downward, leaf springs extending rearwardly and downwardly from the concave, and links connecting the leaf springs and teeth to push the lower portions of the teeth forwardly.



6. A gathering machine embodying a cylinder to roll over the ground having a peripheral portion provided with annular grooves, fingers extending outwardly from between said grooves, stripping fingers pivoted to the frame extending into said grooves for stripping the objects from the cylinder, and rollers pivoted to the stripping fingers and working in said grooves.

1,381,541. COMBINATION COMPUTING AND PAPER-ROLL MACHINE. CALVIN F. CHRISTOPHER, Asheville, N. C. Filed June 17, 1919. Serial No. 304,750. 1 Claim. (Cl. 211—32.)

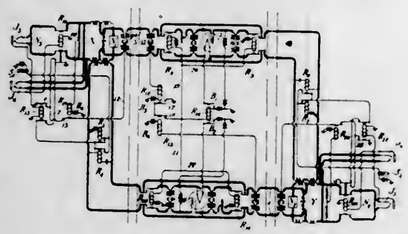


In a paper roll holder a base, a vertical rod mounted thereon, an L shaped rod operatively connected with the first mentioned rod and capable of a vertical adjustment, a bearing mounted thereon to receive one end of a shaft, a second bearing on the base for receiving the opposite end of the shaft, a cutter bar having a longitudinal slot, a pair of spring actuated supporting arms, one of which is loosely mounted on the rod and has its outer end fixed to the lower end of the cutter bar while the other supporting arm is supported above the first mentioned supporting arm, and a set screw carried by the latter arm and extending within the slot in the cutter bar to permit the same to be adjusted longitudinally.

1,381,542. MACHINE FOR THREADING BOLTS AND PIPES. SAMUEL B. CLAY, St. Louis, Mo., assignor of one-half to Edward R. Fish, Webster Groves, Mo. Filed Feb. 2, 1920. Serial No. 355,703. 11 Claims. (Cl. 10—89.)

11. A threading machine, comprising a threading mechanism, a carriage for supporting the article to be threaded, a cylinder provided with a piston that is connected to said carriage, a manually-operable valve for admitting a medium under pressure to one end of said cylinder so as to cause the carriage to move toward the threading mechanism, means for automatically moving said valve into such a position that said piston will be ineffective after the article on the carriage has been engaged by said threading mechanism, a second valve for admitting a medium under pressure to the opposite end of said cylinder, and means actuated by the carriage to cause said second valve to open automatically at the completion of the threading operation, thus causing the carriage to return to its starting position, and to close automatically when said carriage reaches its starting position.

1,381,543. MECHANISM FOR AUTOMATICALLY OPERATING APPARATUS AT A PREDETERMINED TIME. MAX COLEMAN, Melbourne, Victoria, Australia. Filed Sept. 21, 1920. Serial No. 411,796. 2 Claims. (Cl. 161—1.)

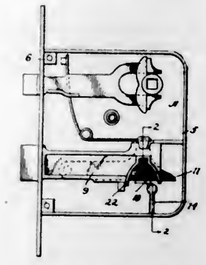


1. In mechanism for automatically operating apparatus at a predetermined time, a slotted cylinder, a trigger-rod disposed within the cylinder and having a lateral projection engaging the slot of the cylinder, and a spring for actuating said rod longitudinally, the slot in the cylinder having a configuration to coact with the lateral projection of said rod, to turn the rod on its axis as it moves longitudinally.

1,381,544. PISTON-RING. HARRY J. CRINER, Moline, Ill., assignor of one-half to James M. Robinson and one-half to John W. Bybee, Moline, Ill. Filed June 12, 1920. Serial No. 388,547. 7 Claims. (Cl. 74—109.)

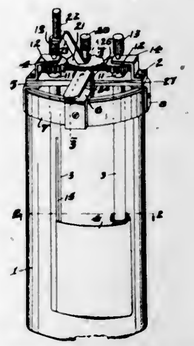
1. A piston ring comprising two circumferentially-extending portions arranged side by side, each of said portions being provided with a circumferentially-extending groove in its outer face, with the groove in each of said portions opening at the side of such portion and there communicating with the groove in the other portion.

1,381,545. REPEATER-CONTROLLING SYSTEM FOR FOUR-WIRE TELEPHONE-CIRCUITS. CHARLES S. DEMAREST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 16, 1919. Serial No. 324,155. 5 Claims. (Cl. 179—170.)



1. In a signaling system, the combination of a four-wire transmission circuit comprising two two-wire side circuits electrically related by means of transformers, a repeater element adapted to be connected with each side circuit, switching means to effect such connection and means for controlling said switching means comprising a relay controlled by the flow of current over a circuit simplexed upon the two-wire terminals of the four-wire circuit and the associated cord circuit whereby said switching means may be prevented from connecting said repeater elements with the side circuits of the four-wire circuits.

1,381,546. FILLING-BOTTLE FOR FOUNTAIN-PENS. WILHELM GEORG HUBERT DZIAMBOR, Hamburg, Germany, assignor to the Firm Simplo Fullfeder Gesellschaft Voss, Lausen & Dziambor Fabrik fur Fullfederhalter und Goldfedern, Hamburg, Germany. Filed Dec. 31, 1919. Serial No. 348,629. 3 Claims. (Cl. 215—73.)

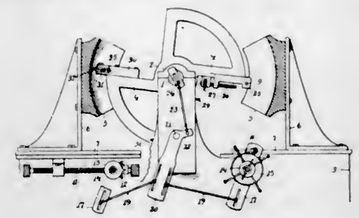


1. Filling bottle for fountain pens, comprising an outlet neck, a jet pipe, screwed into the outlet neck and a narrow tube so attached to the jet pipe, as to extend into the bottle, the tube having its free end bent to the shape of a hook.

1,381,547. COMBINED KEY AND BOLT LOCK. GEORGE C. ENSMINGER, Cutler, Calif. Filed Sept. 7, 1920. Serial No. 408,622. 6 Claims. (Cl. 70—14.)

1. The combination with a lock including a bolt having a key sweep therein, of an attachment therefor including a removable pin adapted to be placed in said key sweep and in the path of the bolt.

1,381,548. FILM-DEVELOPER. OTTO F. HALMER, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,542. 4 Claims. (Cl. 95—93.)

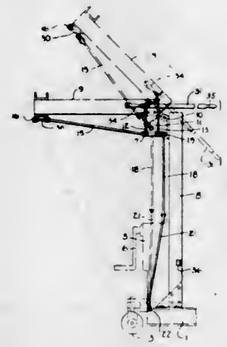


1. A film developer comprising a receptacle for the developing medium, and rotatable supporting rods extending within said receptacle in spaced relation, said supporting rods being tubular and slotted upwardly from their lower ends and adapted to receive the respective ends of a film so that the film may be wound from one of the supports to the other.

1,381,549. PEN RETAINER AND RELEASER FOR PENHOLDERS. HENRY E. HALSETH, Virginia, Minn. Filed Dec. 15, 1920. Serial No. 430,867. 3 Claims. (Cl. 120—101.)

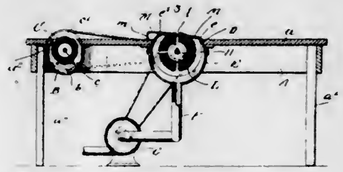
1. A pen retainer and releaser including a strand of wire folded upon itself and then bent into a substantially U-shape, one leg of the U embracing the inner face of the pen and the opposite leg embracing the inner wall of the pen holder, said latter leg being extended and bent at right angles so as to lie beyond the outer periphery of the penholder to serve as an abutment for removing the device from the penholder.

1,381,550. CIRCULAR PLANER. THOMAS L. HARKINS, Boston, Mass. Filed Mar. 1, 1920. Serial No. 362,226. 5 Claims. (Cl. 90—24.)



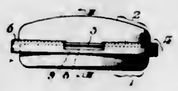
1. A means for cutting a groove partially circular in cross section, comprising a driven shaft, a radial arm rigid with said shaft, a rotatable member carried at the end of said arm, means for giving it a step-by-step rotation, and a cutting tool held by said member, the axis of rotation of said member being tangential to the latter's circle of rotation about said shaft.

1,381,551. SPRINKLER-HEAD FOR AUTOMATIC SPRINKLING DEVICES. JAMES HARTLEY, Philadelphia, Pa. Filed July 13, 1920. Serial No. 395,847. 1 Claim. (Cl. 169—39.)



A sprinkler head comprising a frame providing a coupling for connection with a water supply pipe, a valve seat on the frame, a wheel shaped fusible link disposed in the frame, said link consisting of a plurality of link elements and a spring interposed therebetween with said link elements normally held against relative disengagement, a valve on one of the link elements and normally seated on the valve seat, a stem on the other link element, a screw on the frame and adapted to engage the stem of the link to normally hold the valve in engagement with its seat and a spider cap mounted in the frame and held therein in superposition to said valve seat.

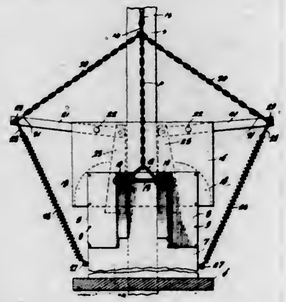
1,381,552. PORTABLE ELEVATOR. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry and Machine Company, a Corporation of New Jersey. Filed Dec. 7, 1920. Serial No. 428,901. 8 Claims. (Cl. 187—9.)



1. In a movable elevator, the combination of an upright section, a section hinged thereto, locking means to lock the sections together, said locking means also serving to raise and lower the upper section.

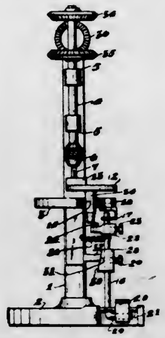
1,381,553. CLEANING-MACHINE. ALONZO L. HILDRETH and ALEXANDER M. MCLENDON, Savannah, Ga. Filed Apr. 19, 1920. Serial No. 374,981. 2 Claims. (Cl. 15—8.)

1. A cloth cleaning machine, comprising a table having an opening in its top, a rotary brush extending upwardly through said opening, a casing for the brush secured to the under side of the table, bridge wires extending upwardly and rearwardly from their front ends across the opening for supporting the cloth while being cleaned above the plane of the table, and exhaust mechanism connected with the lower portion of the casing below the brush for drawing air through the cloth and the bridge wires while supported by said wires and while being acted on by the brush.



1,381,554. OPENING MEANS FOR BOXES. GEORGE N. HINGSTON, Philadelphia, Pa. Filed Nov. 8, 1920. Serial No. 422,537. 1 Claim. (Cl. 220—43.)

A container comprising a body with an external shoulder, and a lid for said body having a lateral extension



outward above said shoulder and affording a hold at its own lower side for opening the container, said extension being apertured to afford access to the upper side of the shoulder on the body and permit the lid to be lifted off the body by a squeezing action of the fingers.

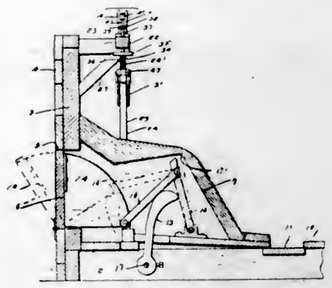
1,381,555. SAFETY-CATCH. FRANK HODSON, Nokomis, Ill. Filed June 20, 1919. Serial No. 305,482. 1 Claim. (Cl. 187—88.)

In combination with a guide having an elevator car movable therealong and means for raising and lowering the car, a safety device including a supporting web secured to the car and extending across the inner face of the guide, a cover plate extending across the outer face of the guide, cam blocks on opposite sides of the guide and secured between said web and cover plate, wedges disposed between the cam blocks and sides of the guide, a lever pivotally connected to the upper end of each wedge and pivoted between said web and plate, means connecting said levers to said raising and lowering means for normally maintaining said wedges inoperative and spring means connected to said levers and said car for moving the wedges into binding engagement with said guides.

1,381,556. AUTOMATIC TAPPING DEVICE. FRANK HOERNER, Los Angeles, Calif. Filed June 24, 1920. Serial No. 391,422. 8 Claims. (Cl. 10—137.)

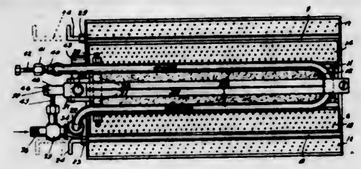
8. A tapping device comprising a tapping spindle, a work support, an actuating rod engaging said work support for moving the latter toward said spindle, means for automatically disengaging said rod from said support at a predetermined point to cause movement of said support away from said spindle, spaced driving means upon said spindle, and a driving member operatively connectible with either of said driving means for causing reverse rotation of said spindle, said spindle being arranged to be longitudinally shifted with said work support to make said respective driving connections.

1,381,557. CREAM-SAMPLER. JAMES ALLEN HOLCOMB, San Francisco, Calif. Filed Dec. 22, 1919. Serial No. 346,570. 11 Claims. (Cl. 137—18.)



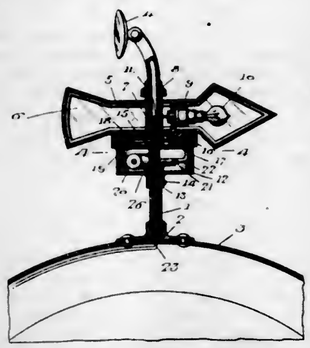
1. The combination with a cream sampler including a cream collecting trough, of an electric heating unit removably associated with the sampler.

1,381,558. UTILIZATION OF CATALYST MASSES. WILLIAM HOSKINS, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,504. 6 Claims. (Cl. 252.)



1. The method of separating a catalyst-mass derived from oil hydrogenation processes into its constituents which comprises mixing the mass with solvent acid at a temperature sufficiently high to liquefy the fat present and filtering the mixture, thereby separating out the carrier.

1,381,559. FEED-DOOR FOR STALLS. EDMOND HOULE, Danvers, Mass. Original application filed Jan. 16, 1920, Serial No. 351,893. Divided and this application filed June 29, 1920. Serial No. 392,642. 2 Claims. (Cl. 119—27.)



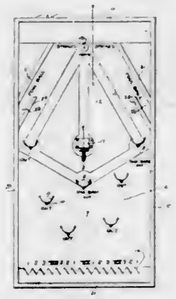
1. A device of the character set forth comprising a frame, a front wall carried by said frame and having a doorway, a hinged door closing said doorway, partitions carried by said frame and front wall to form a plurality of stalls having feeding spaces, segmental plates secured to the door, arms pivotally mounted in said partitions, links connecting said arms to the segmental plates and cam shaped elements adapted to engage the links and segmental plates for opening the door and holding said door in an open position.

1,381,560. HYDROCARBON-BURNER. PETER B. JOHNSON, Seattle, Wash. Filed June 12, 1920. Serial No. 388,661. 6 Claims. (Cl. 158—65.)

1. An oil burner comprising a relatively long rectangular base, end walls projecting upwardly from said base, side walls projecting upwardly from said base, said base extending outwardly beyond said side walls, a priming pan extending lengthwise between said two end walls centrally of said burner, a horizontal perforated burner plate disposed on each side of said priming pan said burner plates and said priming pan constituting the top wall of said burner, angularly disposed perforated side burner plates extending from the edges of said base to said side walls and forming fuel chambers of triangular cross sectional shape, the said side walls having openings for the admission of fuel to said chambers, doors for said openings, means extending to the exterior of the burner for opening and closing said doors, a tubular conduit projecting into the interior of said burner and a vaporizing coil disposed above the burner body and having a downwardly projecting end provided with a gas outlet perforation for directing a jet of fuel gas into said tubular conduit.

1,381,561. SIGNAL DEVICE OR INDICATOR. SAMUEL SYLVESTER JOHNSON and MARK E. JOHNSON, Harrisburg, Pa. Filed Aug. 21, 1919. Serial No. 318,959. 1 Claim. (Cl. 177—327.)

A signal device comprising a post, a signal member having a sleeve mounted for rotation on said post between the ends thereof, a cup-shaped casing having its bottom secured on said post under the signal member, a turntable over said casing supporting the signal member and having an apron surrounding the casing, means for supporting said turntable for free rotation above said casing, a ring on the post engaging over the upper end of said sleeve to hold the signal member and turntable down and to prevent moisture and dirt from entering said sleeve, and actuating means within said casing connected to said turntable for turning it.

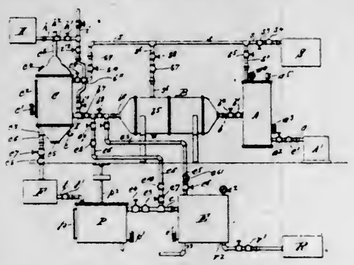


1,381,562. PUMP. OCEOLA JONES, Houston, Tex. Filed Aug. 26, 1919. Serial No. 320,031. 2 Claims. (Cl. 103—67.)

1. In a pump, a valve mechanism, including a tubular valve casing, a cylindrical valve rotatable therein, and provided with a stem, a member fixed to said stem and provided with a projecting pin, a pair of disk like intermeshing rack members, one of which is loosely mounted on said

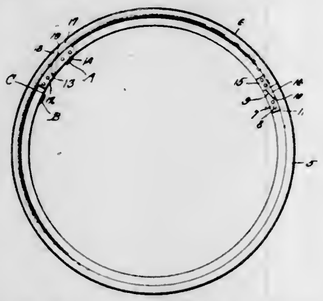
stem, and provided with an arcuate slot through which said pin projects, and a yieldable member whose respective ends are eccentrically attached to said respective rack members.

1,381,563. GAME. HERMAN KAUFMAN, New Haven, Conn. Filed Mar. 22, 1920. Serial No. 367,614. 1 Claim. (Cl. 46—61.)



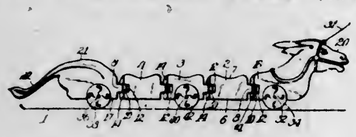
A game apparatus comprising a field formed at its upper end with a space extending transversely across the field, the bottom of the space being below the surface of the field, a horizontally arranged rotatably mounted disk in the center of the field adjacent to the edge of the said depressed space, a pocket on each side of the field, a series of cages independently and loosely pivotally mounted on pins arranged upon the field and means for impelling a ball.

1,381,564. EDIBLE FATTY PRODUCT FROM FIXED OILS AND FATS AND PROCESS OF MANUFACTURING SAME. EMANUEL KLEIN, New York, N. Y. Filed Nov. 5, 1918. Serial No. 261,220. 13 Claims. (Cl. 87—12.)



1. The fatty product derived from fixed fatty oils and fats consisting of varieties of fat or oily matter non-rancid and rid of free fatty acids as indicated by the herein specified reaction with hemoglobin and guaiac, having a

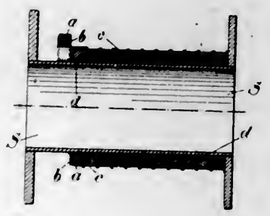
specific gravity 0.900 to 0.952 at 15° C., or 0.852 at 79° C., a neutralization 172 to 219, a permanent reading 21



yellow and 1–4 in Levibond's tintometer to nearly water color when analyzed and tested.

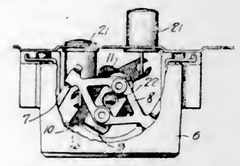
1,381,565. AUTOMOBILE-RIM. GEORGE M. KLINELINE, Harrisburg, Pa. Filed May 7, 1920. Serial No. 379,589. 3 Claims. (Cl. 301—31.)

2. In a rim for automobile wheels, a plurality of sections, plates on the sides of the sections at the ends thereof, and means for causing interlocking engagement of the contiguous plates of the said sections.



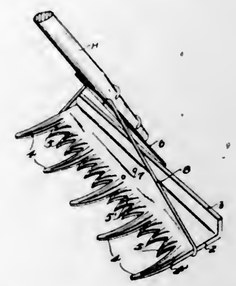
1,381,566. FIGURE WHEELED TOY. JULIUS W. KNIPP, Indianapolis, Ind., assignor to William F. Bockhoff, Richmond, Ind. Substitute for application Serial No. 339,968, filed Nov. 22, 1919. This application filed Mar. 26, 1921. Serial No. 456,005. 4 Claims. (Cl. 46—45.)

1. A figure wheeled toy comprising a plurality of body sections hingedly connected directly one to another, an intermediate one of the sections only being provided centrally with a pair of wheels, a head section hingedly connected directly to one of the end ones of the body sections and provided adjacent to its connected portion with a pair of wheels, and a tail section hingedly connected directly to the remaining one of the end sections and provided adjacent to its connected portion with a pair of wheels.



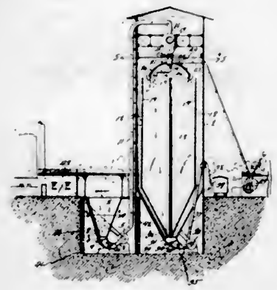
1,381,567. METHOD OF MANUFACTURING ELECTRIC COILS. ERNST WOLFGANG KÜTTNER, Berlin, Germany. Filed June 30, 1917. Serial No. 178,049. 3 Claims. (Cl. 175—340.)

1. The method of manufacturing electric coils consisting in providing a metallic conducting wire, providing and placing absorbent material between the individual turns of conducting wire, providing a liquid which is adapted to form an insulating chemical compound of the metal on the wire, introducing this liquid into the absorbent ma-



terial and into the spaces between the wire and the absorbent material, providing a fluid which will render the absorbent material incombustible, and impregnating the absorbent material with such liquid incombustible material.

1,381,568. ELECTRIC SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Mfg. Co., Plainville, Conn., a Corporation of Connecticut. Filed Dec. 11, 1920. Serial No. 429,908. 8 Claims. (Cl. 200—72.)

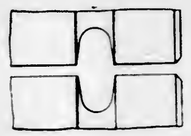


1. In an electic switch, a supporting frame having oppositely disposed bearing lugs, a U-shaped carrier having semi-annular bearing projections engaging said lugs, and means for operating said carrier with a snap action.

1,381,569. LAWN-WEEDER. WILLIAM LINHOFF, Pasadena, Calif. Filed Mar. 16, 1920. Serial No. 366,354. 4 Claims. (Cl. 55—10.)

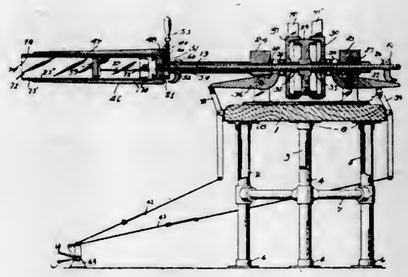
4. In a lawn weeder, a body formed of sheet metal bent so that it is substantially L-shaped in cross section and with its horizontal leg substantially wider than its vertical leg, a series of integrally formed pointed prongs projecting outwardly from the outer edge of the horizontal leg of said L-shaped body, said prongs being spaced apart, and a plurality of relatively short, downwardly curved pointed members projecting outwardly from the edge of the relatively wide leg of the L-shaped body between the prongs thereon, the side edges of which pointed members are beveled to form cutting edges.

1,381,570. GRAIN-ELEVATOR. HERBERT K. LININGER, Kansas City, Mo. Filed Jan. 27, 1920. Serial No. 354,501. 1 Claim. (Cl. 130—17.)



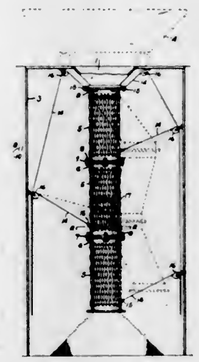
A grain cleaning device comprising a discharge pipe substantially vertically disposed and pivotally mounted in a bearing, said discharge pipe being provided with a horizontally disposed portion terminating in a downwardly extending discharge end, a casing surrounding the vertical portion of the discharge pipe thereby forming an annular chamber, outwardly and downwardly extending pipes carried by said casing and having their ends positioned so that the discharge end of the pivoted discharge pipe may be positioned adjacent their ends, means for creating a suction in the outwardly and downwardly extending pipes, the pivotal mounting of the discharge pipe permitting the end of the same to be positioned adjacent the end of either outwardly and downwardly extending pipe.

1,381,571. FOUNTAIN-PEN. FRANK H. LENNARDS, Evanston, Ill. Filed Sept. 29, 1919. Serial No. 327,298. 11 Claims. (Cl. 120—50.)



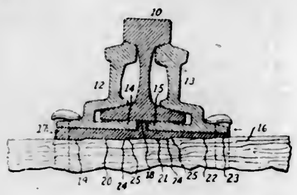
11. A fountain pen of the character described comprising an ink feeding means made of flexible material whereby said feeding means is adapted to accommodate itself to a pen point of any construction, said means comprising a member having a groove extending along one of its sides substantially through the entire length thereof, a cover member positioned over said groove, and provided with an ink feeding opening at the end of said groove.

1,381,572. PROCESS OF ROLLING ROUND METAL BARS TO ELIMINATE LAPS, SEAMS, AND SCALE. THOMAS LLEWELYN, Jr., Pittsburgh, Pa. Filed Feb. 11, 1919. Serial No. 276,265. 3 Claims. (Cl. 80—63.)



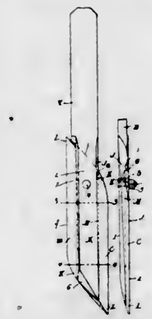
3. The method of forming round bars consisting in rolling a billet into rectangular cross sectional shape, then rolling the product into oval cross sectional shape, then rolling the product into rectangular cross sectional shape, then rolling the product flat, then rolling the product into oval cross sectional shape of less area than the first oval shape, then flattening the product, then rolling the product into oval cross sectional shape of less area than the second oval shape and finally rolling the product into circular cross sectional shape.

1,381,573. UPHOLSTERING-MACHINE. EMIL J. LONG, San Francisco, Calif., assignor to Continental Furniture Manufacturing Company, a Corporation of California. Filed May 5, 1919. Serial No. 294,651. 6 Claims. (Cl. 226—44.)



1. An upholstering machine comprising an open ended extensible receptacle having overlapped hinged top members and overlapping bottom members, means to hold said receptacle closed, a pusher bar therein, and means to move the extensible receptacle so that the pusher bar therein will push material out of the receptacle and into a container placed over the receptacle.

1,381,574. FLEXIBLE CONVEYER. FREDERICK LUDLAM, Taunton, Mass. Filed Apr. 1, 1918. Serial No. 225,864. 3 Claims. (Cl. 193—41.)



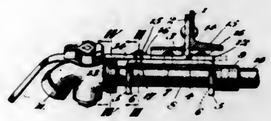
1. A flexible chute section comprising an end member, a plurality of chains secured to the same to form a chute wall, the links in the same circumferential row of links so arranged around the chute that an upright plane wholly within the material of the link will, in one case, intercept a radial plane from the center of the chute through the center of a link at substantially a right angle; and in the case of a contiguous link such a plane would intercept a radial plane at other than a right angle.

1,381,575. TIE-PLATE. JOHN LUNDIE, New York, N. Y., and GEORGE W. WHITEMAN, Philadelphia, Pa. Filed Feb. 21, 1921. Serial No. 446,834. 12 Claims. (Cl. 238—298.)

12. The combination of a tie-plate having an inclined upper surface, rail-joint bars resting upon said plate, and means located between the bars for transmitting the lateral thrust of the bars to the tie-plate.

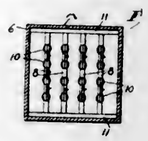
1,381,576. REVERSIBLE COLTER. ALEXANDER MCCACHEN, Dunbarton, Ontario, Canada. Filed Apr. 10, 1920. Serial No. 372,775. 2 Claims. (Cl. 97—6.)

2. In combination a reversible colter comprising a blade having two oppositely-disposed cutting edges dove-tailed for its whole length in one side thereof, each of the said edges being rounded to a point, the points lying diagonally to each other, and a shank formed to fit said dove-tailed groove and adapted to be removably coupled to said blade.



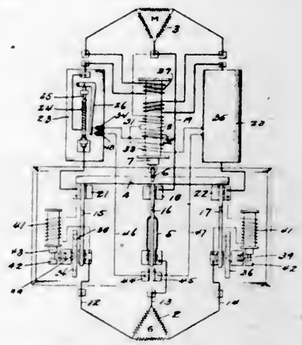
1,381,577. ANGLE-COCK HOLDER. LOUIS G. MILLER, Westmont borough, Pa. Filed Mar. 14, 1921. Serial No. 452,078. 3 Claims. (Cl. 248—31.)

1. The combination with a train pipe and angle cock thereon, of a holder for same secured to the car body and provided with a locking bolt and a spring adapted to slide endwise, whereby the locking bolt contacts with the angle cock while the end of the spring is adapted to abut against a portion of the holder to lock the bolt in operative position.



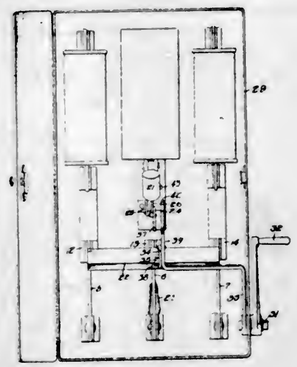
1,381,578. HOLDER FOR ANGLE-COCKS. LOUIS G. MILLER, Westmont borough, Pa. Filed Mar. 14, 1921. Serial No. 452,079. 5 Claims. (Cl. 248—31.)

3. A holder for angle cocks comprising an angle member one leg of which is secured to a car end sill, the other leg being formed with a channel portion in which is seated a locking bar adapted to slide endwise therein and means for locking same in operative position, a



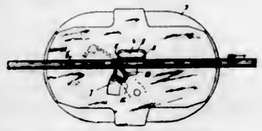
trough-shaped member secured to said angle member having end flanges projecting downwardly therefrom and provided with perforations adapted to receive a train pipe.

1,381,579. ELECTRIC AIR-HEATER. RAYMOND H. MINNS, Bedford Hills, N. Y. Filed Aug. 23, 1918. Serial No. 251,191. 5 Claims. (Cl. 219—38.)



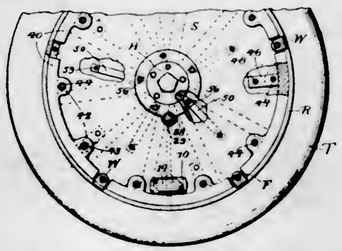
1. An electric air heating device of the class described, comprising a body part composed of combustible, non-conducting material, said body part being open at the top and bottom and provided with an air heating chamber therein, a plurality of supports mounted transversely of the top and bottom portions of said body part, said supports being composed of combustible, non-conducting material, a plurality of wire coils mounted in said chamber, and means connected with said supports for supporting said coils in said chamber.

1,381,580. ELECTRIC CONTROL SYSTEM. BENJAMIN M. MOOERS, San Francisco, and LAWRENCE E. WARNER, Berkeley, Calif., assignors to Motor Protector Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed June 9, 1917. Serial No. 173,752. 13 Claims. (Cl. 175—294.)



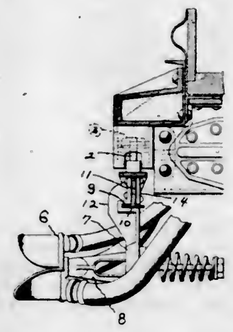
2. A protective device for an electric circuit containing electric apparatus, comprising means including an electric heating element, and controlled by an increase in temperature of the heating element by current flow to a predetermined temperature to open the circuit and prevent the closing of the circuit until the temperature of the heating element falls below a predetermined temperature.

1,381,581. ELECTRIC-CIRCUIT-PROTECTING APPARATUS. BENJAMIN M. MOOERS, San Francisco, and LAWRENCE E. WARNER, Berkeley, Calif., assignors to Motor Protector Mfg. Co., San Francisco, Calif., a Corporation of California. Filed Mar. 1, 1918. Serial No. 219,748. 7 Claims. (Cl. 175—294.)



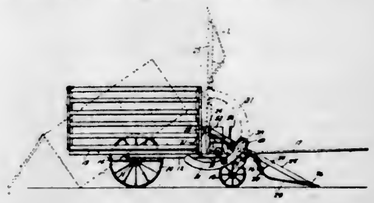
6. A protective device for an electric circuit, comprising an electromagnet arranged in said circuit, a switch in said circuit, an armature associated with said electromagnet and adapted when released from said electromagnet to fall and release said switch, and means for simultaneously raising said armature and closing said switch.

1,381,582. BOX FOR CASH-CARRIERS. JOSEPH F. MORRIS, Derby, Conn. Filed Mar. 18, 1921. Serial No. 453,433. 2 Claims. (Cl. 186—33.)



1. The combination with a box for cash-carriers provided with a post and a latch, of a sleeve surrounding one of said parts and free to turn thereon.

1,381,583. WHEEL-PROTECTOR. ARTHUR MULL, Chicago, Ill. Filed Sept. 14, 1920. Serial No. 410,115. 4 Claims. (Cl. 301—37.)



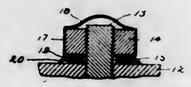
1. In a wheel protector, the combination with plates for application to the outside and inside of a wheel and notched in their edges to admit the rim-fastening devices; of jaws overlying the edges of the plates and spaced at their ends to admit said devices, and through bolts passing through the jaws and the plates and between the spokes of the wheel.

1,381,584. AUTOMATIC TRAIN-PIPE-CONNECTOR SUPPORT. WALTER P. MURPHY, Chicago, Ill. Filed Aug. 14, 1917. Serial No. 186,135. 4 Claims. (Cl. 285—24.)

1. In a device of the character specified, the combination with a swingingly mounted carry iron, of a train pipe coupler suspended from said iron whereby the said coupler is maintained in the center line of a car to insure its proper operation.

1,381,585. PORTABLE LOADER. DE WITT NELSON, Minneapolis, Minn., assignor of one-third to P. J. Lyons, Minneapolis, Minn., and one-third to John F. Robinson, Steele, N. D. Filed May 20, 1919. Serial No. 298,486. 12 Claims. (Cl. 214—78.)

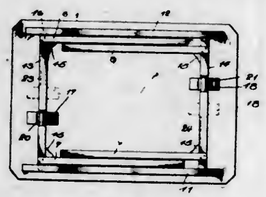
1. In a portable loader, the combination with a frame having wheeled ground supports and a receptacle supported upon said frame, of a loading fork, normally extending below and forward of said receptacle and having arms pivoted axially transverse to said frame, a motor shaft mounted upon said frame, a normally stationary starting shaft for said motor shaft mounted concentric to said shaft, transmitting means for rotating said starting shaft from said wheeled ground supports, a clutch included in said transmitting means, manually operated means for engaging the clutch to rotate the starting shaft and the motor shaft, automatically operated means for disengaging the clutch when said motor is operating, a clutch connected to said motor and means coöperating with said motor, said clutch and said fork arms for periodically raising and lowering said fork.



1,381,586. INSECTICIDE AND FUMIGATION PROCESS. JOSEPH D. NEULS, Los Angeles, Calif., assignor, by mesne assignments, to The Pacific R. & H. Chemical Corporation, Los Angeles, Calif., a Corporation of California. Filed Apr. 15, 1918. Serial No. 228,742. 4 Claims. (Cl. 167—6.)

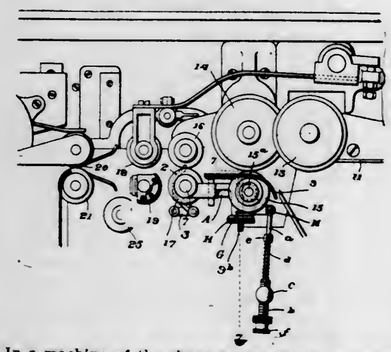
1. A material for destroying insects or other pests, comprising a mixture of an agent, such as hydrocyanic acid gas, which has the property of deoxidizing the body fluid of the insect, and an agent, such as mustard oil, which has the property of stimulating activity in the body segments of the insect, or of irritating the body issue of the insect.

3. The method of treating trees to destroy insects thereon, which consists in subjecting the tree to hydro-



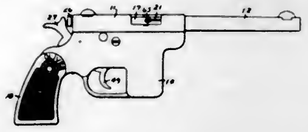
cyanic acid gas mixed with another gas which has the property of irritating the body tissue of the insects or of stimulating activity in the body segments of the insects.

1,381,587. BOLT-NUT. WARREN NOBLE, Providence, R. I., assignor to N. C. L. Engineering Corporation, Providence, R. I., a Corporation of New York. Filed July 17, 1919. Serial No. 311,457. 7 Claims. (Cl. 85—35.)



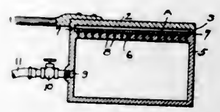
1. A nut provided with a casing of sheet material including a body portion covering the perimeter of the nut, a head portion covering the outer end face of the nut, a contracted portion engaging the margin of the inner end face of the nut, and a base portion formed to surround a locking member.

1,381,588. FOLDING TABLE. HARRY G. NORWOOD, Baltimore, Md., assignor to William Fuid, Baltimore, Md. Filed Jan. 11, 1921. Serial No. 436,453. 1 Claim. (Cl. 45—11.)



A folding table comprising, in combination, a top, downwardly projecting spaced members secured to said top and having sockets therein, a squared shaft having rounded ends journaled in said sockets, a rounded portion on each shaft, and a locking member having a squared recess adapted to slide upon said shaft said member fitting against the lower surface of the table top whereby it may be slipped into register with the rounded portion to release the shaft and into engagement with the squared portion to lock the shaft against rotation in either one of two positions.

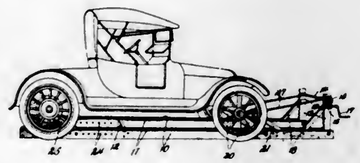
1,381,589. FEED MECHANISM FOR MACHINES FOR MARKING MAIL, &c. JACOB W. OGDEN, Stamford, Conn., assignor, by mesne assignments, to Universal Stamping Machine Company, Stamford, Conn., a Corporation of Delaware. Filed Oct. 10, 1918. Serial No. 257,604. 6 Claims. (Cl. 271—36.)



3. In a machine of the character specified, the combination of a feed roller, an adjacent pair of feed rollers, a swingable support pivoted on the shaft of one of the pair of feed rollers and extending opposite the first feed roller, said support having a vertical bearing for the spindle of a separator roller and a transverse bore; a separator roller having its spindle journaled in said bearing, an adjustable guide plate having a pin engaging the said bore, and means for adjusting said support and yieldingly holding the same in adjusted position.

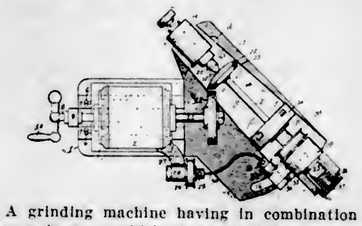
1,381,590. AUTOMATIC PISTOL. STACY OLIVER, Chicopee Falls, Mass. Filed Sept. 13, 1917. Serial No. 191,220. 5 Claims. (Cl. 42—3.)

1. In an automatic pistol, the combination, of a frame, a bolt for movement longitudinally in the frame, a spring for advancing said bolt, a firing pin movable longitudinally in said bolt, a hammer for impact against said firing pin, a spring connected to the hammer for urging the latter into contact with the firing pin, a trigger for operating said hammer, a downwardly facing shoulder formed upon the hammer, and a lever pivotally carried by said trigger and adapted to engage said shoulder to relieve the firing pin of pressure of said hammer, said bolt provided with an undercut way terminating in a shoulder, a stop member carried in said way for engagement against said shoulder to limit forward movement of the bolt.



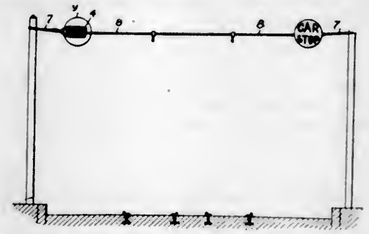
1,381,591. METHOD AND APPARATUS FOR MAKING PLATE-GLASS. WILLIAM H. POWELL, Elmer, N. J. Filed Dec. 12, 1919. Serial No. 344,365. 11 Claims. (Cl. 49—3.)

1. The method of making plate glass that comprises casting a plate of glass, inverting the cast plate, and heating the top of said inverted plate and thereby imparting a smooth surface thereto.



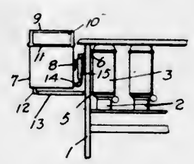
6. As a new article of manufacture, a plate of glass having a heat-polished beveled edge.

1,381,592. AUTOMOBILE-HOIST. MATT PRICE, Salina, Kans. Filed Dec. 16, 1920. Serial No. 431,113. 5 Claims. (Cl. 254—89.)



1. In a hoist, a base, a pair of pivotally mounted supporting members swingable independently of each other in planes longitudinal of the base, a second pair of swingable independent supporting members mounted on the base, and means at one base end whereby an automobile may be pulled toward that end after either or both axles are brought into engagement with the corresponding pairs of supporting members.

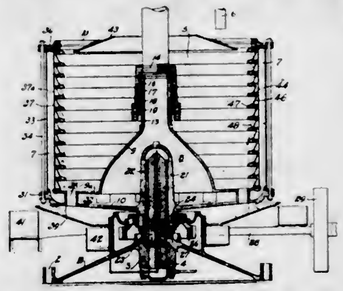
1,381,593. GRINDING-MACHINE. JOHN O. ROLLINS, Fresno, Calif. Filed May 13, 1920. Serial No. 381,054. 4 Claims. (Cl. 51—106.)



1. A grinding machine having in combination a work holder, a base on which the work holder is mounted, a grinding wheel, means for driving the same, a movable base on which the grinding wheel is mounted, a flexible drive established from the means for driving the grinding wheel to the work holder, means for effecting a lateral and longitudinal adjustment of the grinding wheel through its movable base, and means for effecting an adjustment of the work holder relative to the grinding wheel.

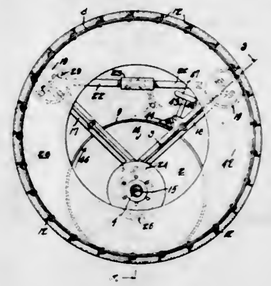
1,381,594. STRAIN-INSULATOR SIGN. CHRISTIAN P. SAUERESIEN, West View, Pa. Filed May 28, 1919. Serial No. 300,383. 1 Claim. (Cl. 40—128.)

An article of manufacture comprising a block of insulating material adapted to serve as an insulating connection for wire terminals and provided with integral letter bearing flanges of substantially larger dimensions than the thickness of said block and spaced from said block.



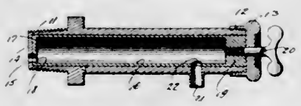
1,381,595. WATER-HEATING DEVICE FOR OIL-STOVES. ALEXANDER LOUIS SCHAEFER, Bolton, Ontario, Canada. Filed May 3, 1920. Serial No. 378,566. 1 Claim. (Cl. 126—54.)

In a water heating device for oil stoves, the combination with the stove body provided with the usual burners, of a water reservoir rigidly connected to the body, a chimney for the burner having a hollow wall forming a water space, and flexible inlet and outlet pipes connecting the interior of the hollow chimney to the water reservoir and adapted to permit of the free vertical movement of the chimney independently of the reservoir.



1,381,596. APPARATUS FOR SEPARATING MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. CHARLES SCHIFFERLE, Marysville, Calif. Filed Mar. 14, 1918. Serial No. 222,347. 12 Claims. (Cl. 233—15.)

1. In an apparatus of the character described, a rotatable drum comprising a chamber having a cylindrical lateral upright wall, a filter cloth disposed upon said wall, annular rings disposed upon said filter cloth to form riffles on said wall, means for feeding material to be

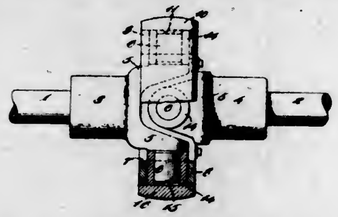


treated against the upper portion of said wall to move downwardly thereon and means for supplying fluid under pressure against said filter cloth.

1,381,597. VEHICLE-WHEEL. CHARLES J. SCHIFFERLE and LEO SCHIFFERLE, Berkeley, Calif. Filed Nov. 29, 1918. Serial No. 264,693. 15 Claims. (Cl. 180—10.)

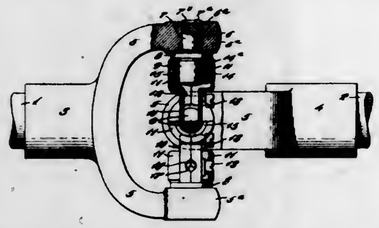
3. A wheel structure comprising a load-bearing wheel, a rigid circular track disposed about said wheel, means for revolving said wheel, and means engaging said wheel whereby the torque of the wheel-turning means tends to cause rotation of said track about the rotational axis of said wheel.

1,381,598. SPIGOT. AUGUST C. STOLL, Ann Arbor, Mich. Filed Feb. 17, 1920. Serial No. 359,390. 3 Claims. (Cl. 251—9.)



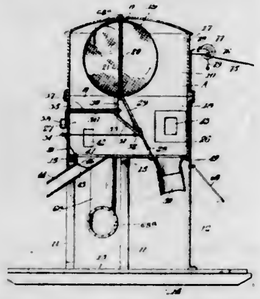
1. A spigot including a casing having an inlet and an outlet, a turning plug in the casing and having an inlet and an outlet for simultaneous register with the inlet and outlet of the casing, and means between the turning plug and the casing for rotating the turning plug to yieldably hold the turning plug in such position that the inlets and outlets remain out of register.

1,381,599. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Peters Machine and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 23, 1919. Serial No. 306,079. 4 Claims. (Cl. 64—102.)



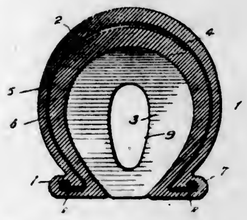
1. In a universal joint, the combination of a pair of shaft sections each provided with trunnions, an inner

member having journal openings extending therethrough for said trunnions and provided with a chamber for lubricant having an outlet extending outwardly therefrom, and an outer member secured to the inner member and serving to close the outer ends of said journal open-



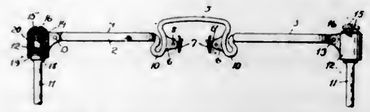
ings, there being a groove for lubricant provided between the outer surface of the inner member and the inner surface of the outer member with which said outlet communicates and serving to conduct lubricant to the journals of the inner ring member.

1,381,600. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Peters Machine and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 23, 1919. Serial No. 306,080. 7 Claims. (Cl. 64—102.)



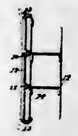
1. In a universal joint, the combination of a pair of yokes, the arms whereof are provided each with a bore, a trunnion having a pin or stud mounted in each bore, the outer end of each pin being recessed and pressed outwardly to form a flush rivet connection with its arm, and a connecting member having journals adapted to receive said trunnions.

1,381,601. VACUUM GRAIN-CLEANER. CHARLES ARGYLE TORRENCE, Regina, Saskatchewan, Canada. Filed May 13, 1918. Serial No. 234,215. 9 Claims. (Cl. 130—17.)



1. In a machine of the class described, a casing, vacuum chambers in the lower part of the casing, a conduit operatively connected to one of the chambers, automatically actuated valves in the conduit, a fan operatively connected to the casing, and a revoluble screen in the casing above the said chambers, the said screen being formed with a cylindrical wall and flat end walls.

1,381,602. AUTOMOBILE-TIRE. IRA TRAUTMAN, New York, N. Y. Filed Jan. 6, 1920. Serial No. 349,678. 2 Claims. (Cl. 152—1.)

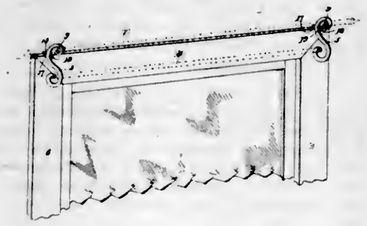


1. An automobile tire comprising a shoe with heels, a tread, canvas reinforcing the tread, a metal ring curved in cross section reinforcing said canvas and tread and radially disposed and perforated cushions integral with the shoe and supporting the tread and ring, whereby the shoe is resilient and supported at all times without the use of a pneumatic tube.

1,381,603. SPECTACLE-FRAME. WILLIAM M. UPDEGRAVE and ALEXANDER S. RYESKY, Johnstown, Pa. Filed Aug. 23, 1919. Serial No. 319,395. 4 Claims. (Cl. 88—41.)

1. A reversible spectacle frame having a horizontal bridge, and adjustable nose rests, and temples provided each with a pivotal connection with said frame and capable of rotatable movement about its axis through an arc of 180 degrees in reversal, said connection being adapted to lock the temple in normal position and in adjusted position and being releasable prior to adjustment.

1,381,604. ENGINE-RADIATOR. CLINTON DE WITT WAGNER, Cedar Rapids, Iowa. Filed Apr. 7, 1919. Serial No. 288,071. 9 Claims. (Cl. 257—130.)

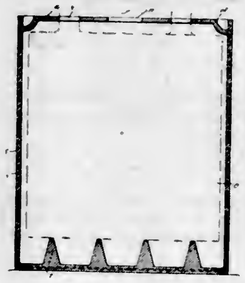


1. A radiator tube having wide, narrowly separated and practically parallel walls, and elastic means embracing the edges of the tube, and tending to collapse the tube intermediate its edges.

1,381,605. PROCESS OF EXTRACTING SOLUBLE ALBUMEN FROM WHEY. ALBERT C. WEIMAR, Grove City, Pa. Filed Mar. 18, 1920. Serial No. 366,937. 2 Claims. (Cl. 99—11.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

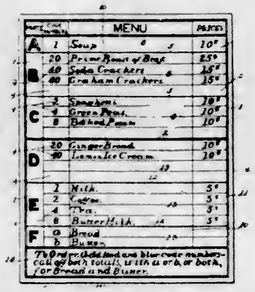
1. A process of extracting soluble albumen from whey, consisting in neutralizing the acid content of whey, concentrating the whey at a temperature below the precipitating point of the albumen contained therein to a degree at which the greater part of the lactose content of the whey crystallizes, separating the said crystallized lactose from the whey, dialyzing the whey to remove the milk salts and some of the lactose, and finally, removing the remaining water by drying at a temperature below the precipitating point of the albumen, the resulting powder containing the albumen, a small amount of milk sugar, and some of the salts of the milk.

1,381,606. CURTAIN AND SHADE BRACKET. ONUFRE WERESIUK, New Castle, Pa. Filed Jan. 7, 1921. Serial No. 435,666. 4 Claims. (Cl. 156—24.)



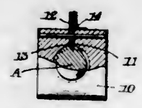
3. A curtain pole and shade roller supporting bracket comprising a body member of substantially S-shape in side elevation formed with an upstanding extension on its upper extreme end portion providing a curtain pole confining member and having its lower extreme end portion formed to receive and support the pintle of a shade roller, means to secure said body with its rear edge contacting the front face of a window frame, the free end portions of the body being terminated so as to support the shade roller and curtain pole in different vertical planes with the curtain pole farther from the window frame, said securing means including a hook having a depending pointed inner end and pivotally mounted uopn the rear upper portion of the body for vertical swinging movement, said hook being slidable transversely of the body, means to slidably adjust said hook, the slidable and pivotal mounting of the hook including a transverse pin carried by the body, and the hook being provided with a longitudinal elongated slot through which said pin extends.

1,381,607. DISPLAY-RACK. EDWARD B. WESTON, Dayton, Ohio, assignor to The Weston Paper & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 12, 1918. Serial No. 253,673. 2 Claims. (Cl. 211—14.)



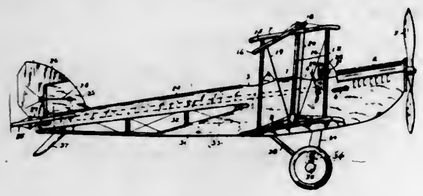
1. A display rack comprising side standards of upright bars and cross pieces, with removable shelves supported by said cross pieces, and tie rods connecting the cross pieces, with clamping nuts for the tie rods bearing on the cross pieces to brace the side standards, a vertical cross board at the upper part of the rack between the side standards, the ends of the shelves and the cross pieces being gained to receive the shelves between the cross pieces to resist the strain of the clamping nuts, and the vertical cross board and the shelves each provided with a longitudinal groove to receive its respective tie rod to resist bending strains.

1,381,608. BATTERY-JAR. OSCAR WITTMANN, Lincoln, Nebr. Filed Apr. 13, 1920. Serial No. 373,656. 8 Claims. (Cl. 204—29.)



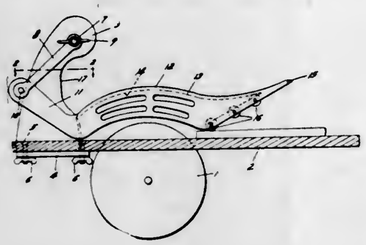
1. A battery jar, including side walls and a floor portion, ridges extending upwardly from said floor portion and within said jar, and a cover applied to said jar, said cover, side walls, and ridge portions being constructed of a resilient material.

1,381,609. ADVANCE-ORDER DEVICE. DIONYSIE WORONZOFF, New York, N. Y. Filed Sept. 29, 1920. Serial No. 413,545. 6 Claims. (Cl. 283—60.)



1. In an advance order device, the combination with a menu having articles of food shown thereon and code indicia designating said respective foods, of checks bearing codes comprising the sums of certain of the code indicia on the menu for the purpose specified.

1,381,610. NUT-LOCK. WILLIAM FLETCHER WORTMAN, Salisbury, New Brunswick, Canada. Filed Nov. 8, 1920. Serial No. 422,620. 1 Claim. (Cl. 151—24.)

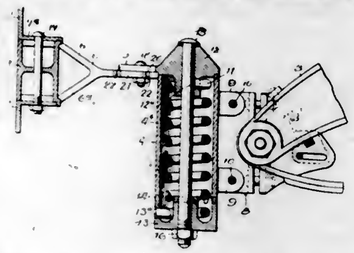


A locking nut comprising a nut having a radial slot extending partially of the depth thereof, a locking member pivotally mounted in the slot and having an inner cutting edge, and an angle shaped spring secured to the outer end of the locking member, as and for the purpose specified.

1,381,611. AEROPLANE. JOHN ZURUK-ZURINSKY, McKeesport, Pa. Filed Feb. 19, 1920. Serial No. 359,895. 7 Claims. (Cl. 244—29.)

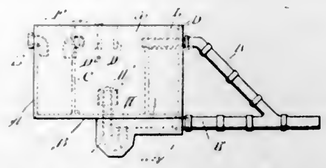
1. An aeroplane comprising a fuselage having the lower part of the rear thereof formed with an enlarged triangular shaped opening.

1,381,612. SAW-GUARD. GEORGE A. ANDERSON, Ensley, Ala. Filed Oct. 24, 1919. Serial No. 333,844. 6 Claims. (Cl. 143—159.)



1. In combination, a standard mounted to project above the saw table in line with the saw, a swinging link pivoted to the top of the standard, and a freely floating saw-guard having a rearwardly projecting arm pivotally connected only at its rear end to the free end of said link, said guard being closed in overhead and said standard having its front edge cut away to permit the rear end of the guard to follow freely the rearward swing of its supporting link without binding against the standard, substantially as described.

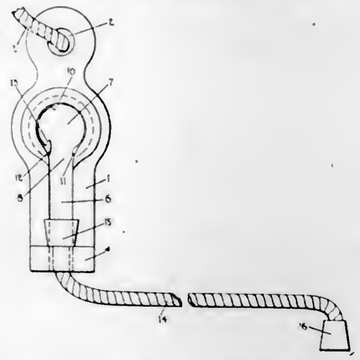
1,381,613. GRAPE-JUICE SYRUP AND PROCESS OF TREATING THE SAME. SAM AVIS, Chicago, Ill., assignor of three-fourths to Abraham Y. Ameer, Chicago, Ill., and Joseph Yonan and Jeremiah N. Baboo, Gary, Ind. Filed Sept. 18, 1919. Serial No. 324,289. 2 Claims. (Cl. 99—11.)



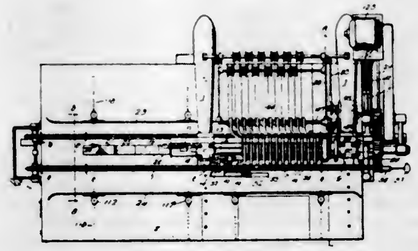
1. The process of treating grape juice for the neutralizing and removal of the active ferment thereof and permitting it to retain its sweet and saccharine qualities for an indefinite period which consists in first adding a predetermined quantity of whiting to the juice, thoroughly agitating the mixture of juice and whiting into intimate contact with the active ferment contained in the juice, permitting the mixture to settle, decanting off the juice so as to leave the ferment and whiting as a sediment and finally submitting the juice to a concentrating operation for producing a grape juice syrup.

1,381,614. AUTOMOBILE-BUMPER. LEROY BAUMGARTL, Chicago, Ill. Filed Mar. 7, 1921. Serial No. 450,271. 10 Claims. (Cl. 293—55.)

1. In a bumper, the combination of an impact member, and supporting members therefor adapted for attachment to the frame of a vehicle, and comprising arms adapted to swing about one end thereof, links connecting the free ends of said arms with said impact member, and yieldable members operatively connected with said arms and acting to resist the swinging movement of said arms under the force of impact against said impact member.

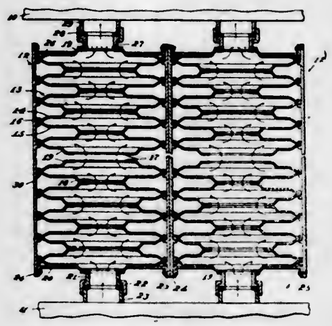


1,381,615. SEPTIC TANK. FRANK F. BEEBY, Chicago, Ill., assignor, by direct and mesne assignments, of one-half to Cement-Gun Construction Company, Chicago, Ill., a Corporation of Illinois, and one-half to Cement Products Company, Wilmington, N. C., a Corporation of North Carolina. Filed Nov. 12, 1919. Serial No. 337,516. 11 Claims. (Cl. 210—6.)



1. A closed septic tank for the disposal of sewage, comprising an outer chamber, and an inner chamber inclosed therein, a sewage inlet into said outer chamber, a connection between the two chambers, an outlet from the inner chamber, and means for forcing the sewage to travel entirely about the outer chamber before entering the inner chamber.

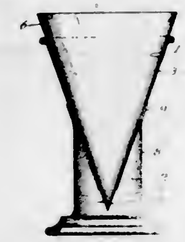
1,381,616. CHOKER-LINE ATTACHMENT. JULIUS C. CLAUSEN and JOHN BUCKLEY, Buckley Bay, British Columbia, Canada. Filed Jan. 27, 1921. Serial No. 440,541. 6 Claims. (Cl. 24—115.)



4. In a device of the character described, a choker line having a knob on one end, a plate adapted for attachment to a hauling line, said plate being provided with an aperture of greater diameter than said knob and a slot extending from the aperture of less width than the knob and wider than the line diameter, and means for closing the entrance to said slot.

1,381,617. MULTIPLE-HEAD STAPLING-MACHINE. EDWARD CRAIG, St. Joseph, Mich. Filed Apr. 30, 1917. Serial No. 165,542. 38 Claims. (Cl. 1—11.)

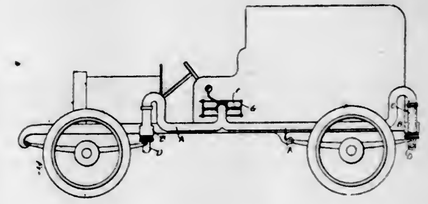
1. In a stapling machine, mechanism for inserting fasteners, intermittently operated means to feed the work forward into position below said mechanism to receive a fastener driving operation thereon and devices to thereafter shift the work sidewise into position to receive another operation of said mechanism thereon while said means are stationary, and before the work is again moved forward by said means, whereby the work travels straight ahead and then sidewise and then forward again while passing through the machine.



1,381,618. RADIATOR. HORACE A. CURETON, Los Angeles, Calif. Filed Feb. 19, 1918. Serial No. 218,086. 3 Claims. (Cl. 257—125.)

1. In a radiator, a series of hollow sheet metal units each of which comprises top and bottom plates secured together at their edges and each of said plates having an opening, spacing flanges surrounding said openings extending outwardly from the plates and forming raised portions adapted to seat on the raised portions of adjacent units, said units being soldered together at their raised portions, plates extending over the upper and lower units, walls secured to said plates extending alongside the units, and shoulders on said walls extending under the opposed edges of said units holding same in spaced relation to each other.

1,381,619. SANITARY CUP. DAVID F. CURTIN, Chicago, Ill. Filed May 29, 1916. Serial No. 100,555. 1 Claim. (Cl. 65—61.)

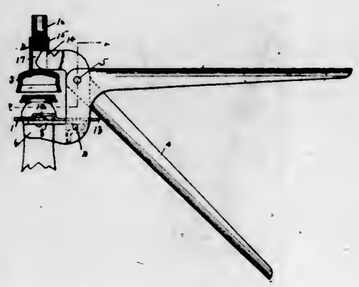


A device of the kind described, comprising a base, a tubular column rigidly attached thereto, the upper peripheral portion of said column being flared upwardly and outwardly to provide a beveled seat, and a socket member

in the form of an imperforate frusto-cone positioned upon and secured to said seat at a point approximately mid-way between the ends of said frusto-cone.

1,381,620. [WITHDRAWN.]

1,381,621. MEANS FOR ABSORBING THE REACTIONS OF THE SUSPENSION IN MOTOR-CARS AND ENGINES OF ALL KINDS. FRANCISCO DE URRUELA, Madrid, Spain. Filed Jan. 24, 1920. Serial No. 353,908. 10 Claims. (Cl. 267—65.)

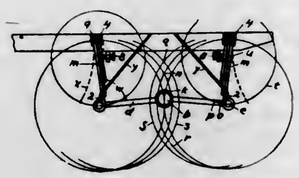


9. In a vehicle, the combination of a chassis; wheels for said vehicle; and means interposed between the chassis and said wheels and comprising for each wheel a metallic chamber of relatively great capacity having a cylinder at one end, a piston working in said cylinder and connected with the wheel, a compressible fluid contained in said chamber and said cylinder against which the piston is adapted to operate in supporting the chassis, the compressible fluid absorbing shocks and vibrations transmitted from said wheel said metallic chambers for each wheel extending to a central point, and a flexible tube located at said central point and connected with each of said metallic chambers said flexible tube being adapted to expand upon a predetermined compression of said fluid contained in said chamber whereby violent shocks are absorbed, and means for variably controlling said flexible member to compensate for varying conditions.

1,381,622. BOTTLE-CAPPING TOOL. JOHN K. E. DIFFENDERFFER, Baltimore, Md. Filed May 4, 1920. Serial No. 378,886. 2 Claims. (Cl. 226—84.)

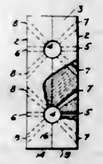
1. A bottle capping tool comprising a handle having one end bent to form a segment shaped opening, jaws pivoted to said segment shaped end of said handle, a spring adapted to hold the said jaws in the open or closed

position, a bearing secured to said handle in vertical alinement with said jaws, a sealing head mounted in said



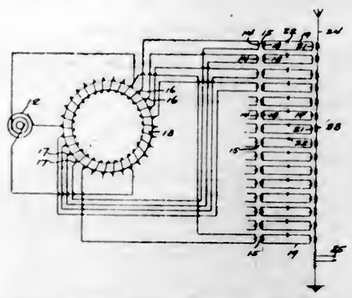
bearing above said jaws, and a handle pivoted to said first named handle and adapted to operate the said sealing head.

1,381,623. SPRING SUSPENSION FOR VEHICLES. THOMAS I. DUFFY, Chicago, Ill., assignor to Walter S. Burgess, Chicago, Ill. Filed Mar. 14, 1919. Serial No. 282,564. 13 Claims. (Cl. 267—29.)



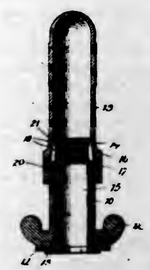
5. Spring suspension for vehicles comprising, in combination, an axle assembly, a main spring, a two armed lever hinged to the axle assembly and movably supported at its inner end by a vehicle part subject to rebound, with the arms thereof overlapping and disposed in planes at the sides of the axis of the main spring, spring seats on and intermediate the ends of said lever and spaced across the axis of the main spring, coiled springs on said seats and connections between said coiled springs and the end of the main spring.

1,381,624. SPRING SUSPENSION. ETHELBERT FAVARY, New York, N. Y. Filed June 22, 1915. Serial No. 35,516. 12 Claims. (Cl. 267—9.)



1. In a vehicle, a spring suspension supporting the load and comprising a substantially horizontal suspension member inflexible under longitudinal tension and connected to one part to be cushioned and a substantially vertical spring structure having one end connected to the suspension member and having the other end connected to the other part to be cushioned, the other end of the suspension member being supported from the frame.

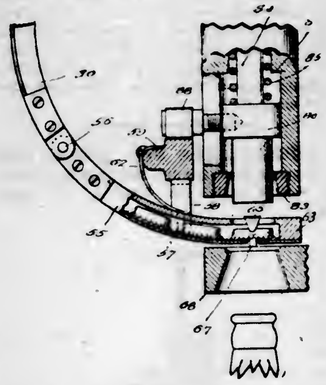
1,381,625. FURNACE-BRICK. CLIFTON R. FINCH, New York, N. Y. Filed Nov. 18, 1919. Serial No. 338,903. 8 Claims. (Cl. 72—15.5.)



1. A brick for a furnace having a longitudinally extending chamber opening through the opposite ends of the brick, and ducts in the brick extending transversely with respect to the chamber and running from a plurality of points in the length of the chamber to the opposite lateral faces of the brick, said ducts connecting the chamber to the outside of the brick both through the middle and adjacent to the opposite longitudinal edges of said faces.

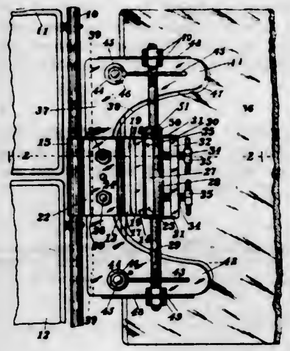
1,381,626. PROCESS OF AND APPARATUS FOR PRODUCING RADIOFREQUENCY-CURRENT. LEONARD F. FULLER, San Francisco, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 19, 1918. Serial No. 212,609. 12 Claims. (Cl. 250—36.)

7. An apparatus for producing radio frequency current, comprising a source of multi-phase alternating current in which each phase has short high potential impulses separated by relatively long time intervals, means for separately transforming each phase, and an output circuit associated with said transforming means.



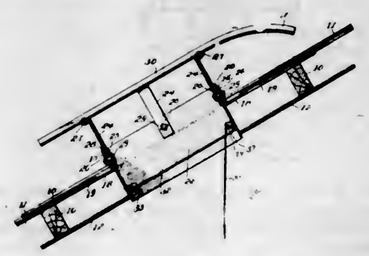
1,381,627. DUST-COVER FOR TIRE-VALVES. GORDON EUGENE GARRETT, Salt Lake City, Utah. Filed Aug. 2, 1920. Serial No. 400,730. 7 Claims. (Cl. 152—12.)

1. The combination with a threaded valve stem, of a nut threaded on said stem; a releasable clamp carried by



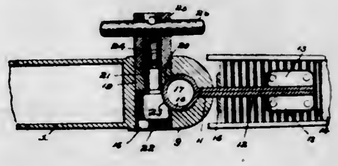
said nut, serving when set to lock said nut against rotation on said stem; and a removable dust cap serving to set or release said clamp by the application and removal of the dust cap.

1,381,628. BOTTLE-CROWNER. JOHN J. GAYNOR, Indianapolis, Ind., assignor to Meier-Gaynor Manufacturing Co., Indianapolis, Ind., a Corporation of Indiana. Filed July 5, 1919. Serial No. 308,807. 15 Claims. (Cl. 226—88.1.)



1. In a crowner, the combination of a crown chute having a movable discharge end, crowning mechanism movable past said chute, said crowning mechanism being provided with crown-supporting means arranged to remove a crown from said chute as it passes thereby, and means on said chute for coöperating with a crown on said crown-supporting means if the latter bears a crown as it approaches said chute for moving the discharge end of the chute out of position to have a crown removed from it by said crown-supporting means.

1,381,629. WINDSHIELD ATTACHMENT. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr. Filed Oct. 16, 1920. Serial No. 417,366. 2 Claims. (Cl. 296—84.)



1. In a wing attachment for windshields, a clamp adapted for adjustable mounting upon a windshield frame and having an outwardly projecting arm with a forwardly opening socket in the outer end of the arm and extending vertically therein, a wing body, a vertically disposed rod spaced from and carried by the body and adapted to be moved laterally into and out of said socket, a clamping yoke slidably mounted on said rod adapted for adjustment from end to end thereof and being of slightly greater length than the socket whereby to engage across the opposite ends of the socket, and clamping screws carried by said yoke intermediate the ends of the same and adapted to be turned up against the closed side of said socket for binding the rod therein in various vertical adjusted and turned positions, whereby to support said wing body at different angles and heights upon the body of the windshield.

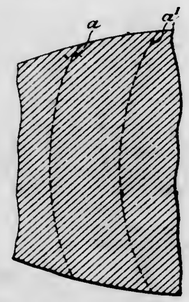
1,381,630. VENTILATOR. CHAUNCEY M. GOODRICH, U. S. Army. Filed Nov. 13, 1918. Serial No. 262,386. 4 Claims. (Cl. 98—4.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. A knock-down structure comprising a base member having a plurality of clefts to produce flanges bent substantially at right angles to the body of the base member, a casing formed of a strip of material bent to shape to engage in the opening formed by bending the flanges and against the flanges, a plurality of standards each engaging the flanges and the portion of the casing in contact therewith, a cover supported by the outer terminals of the standards in spaced relation to the casing, and a closure for said casing adapted to be movably coupled thereto.

1,381,631. SHOULDER-REST FOR GUNS. SAMUEL G. GREEN, U. S. Army. Filed Apr. 30, 1919. Serial No. 293,786. 6 Claims. (Cl. 42—72.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

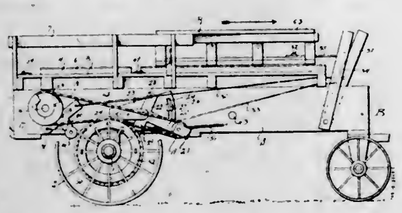
1. A shoulder-rest comprising a member attachable to a gun, a tubular slide extending through said member and carrying a shoulder-rest-piece, and means passing through said member for frictionally locking said slide in adjusted position.

1,381,632. CLOTH-STRETCHING APPARATUS. THEODORE J. HAAS, East Northport, and PAUL BLUMER, Brooklyn, N. Y., assignors of one-fourth to said Theodore J. Haas, one-fourth to said Paul Blumer, and one-fourth to Carl Haas and one-fourth to William Haas, New York, N. Y. Filed Nov. 10, 1919. Serial No. 336,916. 30 Claims. (Cl. 26—16.)



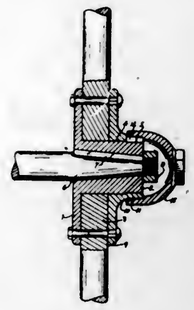
8. The combination with stretching-rolls to grip the leading end of a tube of jersey cloth, of a basket or form over which the tube is drawn by said rolls for laterally expanding the tube, a retarding device to coöperate with said rolls to stretch the tube longitudinally, said laterally expanding form being arranged between said retarding device and said rolls, and said retarding device comprising two members between which the tube is

clamped or held with sufficient firmness to enable the rolls to stretch the tube, while permitting the tube to advance slowly under the pull of the rolls, said form



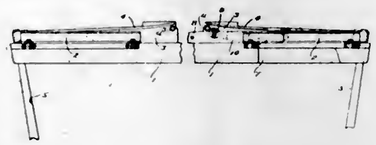
being an inverted cone, and said retarding device being detachable and constructed to slip up over the bottom of said cone, and springs to sustain said retarding device upon said cone.

1,381,633. ARMOR-PIERCING PROJECTILE. ROBERT ABBOTT HADFIELD, Westminster, ALEXANDER GEORGE MCKENZIE JACK, Sheffield, and ISAAC BERNARD MILNE, Totley, England. Filed Oct. 4, 1918. Serial No. 256,890. 9 Claims. (Cl. 148—21.)



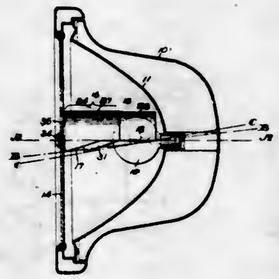
1. The process of hardening an armor piercing projectile made of nickel chromium steel which consists in heating the projectile all over to a hardening temperature of the order of about 800 to 860° C., then dipping it point downward to base in water and allowing it to remain there until properly hardened and then removing it from the water.

1,381,634. WAGON-RACK. LEWIS H. HALVERSON, Miller, Iowa. Filed Apr. 24, 1920. Serial No. 376,319. 4 Claims. (Cl. 214—81.5.)



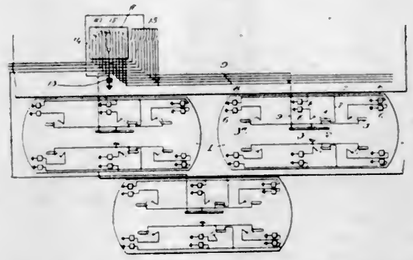
1. A rack of the class described comprising two relatively movable sections, a shaft operatively connected with one of the sections whereby rotation of the shaft in one direction imparts movement to said section in one direction, a rotatable drive member, a swinging arm supported in proximity to the drive member, a pulley carried by the arm, an endless chain operatively engaged with the shaft and with the pulley, means for swinging the arm toward the drive member, said arm when moved toward the drive member causing a stretch of the chain to engage the drive member, automatically operated means for moving the arm away from the drive member, a second arm supported for swinging movement, means connecting the first named arm and the second named arm whereby the same have unitary movement in the same direction, and means carried by the second named arm for contact with the stretch of the chain engaging the drive member when the first named arm is moved in a direction away from the drive member.

1,381,635. HUB-FLANGE FOR MOTOR-VEHICLES. JOSEPH LEROY HANNEGAN, Los Angeles, Calif. Filed Oct. 4, 1919. Serial No. 328,584. 1 Claim. (Cl. 301—84.)



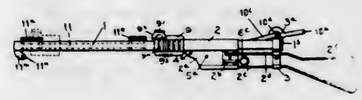
A hub flange for vehicle wheels comprising in combination with an inner flange, a hub extending from the inner flange, spokes fitting the inner flange around the hub, of an outer flange fitting against the outer faces of the spokes and secured to the inner flange by fastening devices passing through the spokes, an externally screw-threaded tapered nipple formed integral with the outer flange and extending therefrom closely upon the hub, radial longitudinal slots in said nipple extending inwardly from its outer end, and an internally taper threaded cap adapted to screw tightly upon the nipple to contract it to grip the hub.

1,381,636. BOBBIN-SMASH PREVENTER FOR WEFT-REPLENISHING LOOMS. THOMAS HAWORTH, Fall River, Mass. Filed May 17, 1920. Serial No. 381,956. 2 Claims. (Cl. 139—28.)



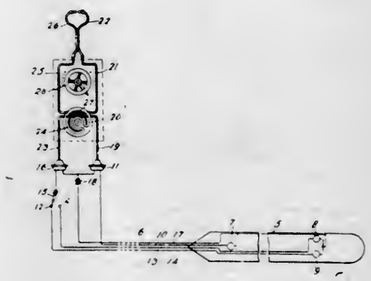
1. A bobbin-smash preventer for bobbin-changing weft-replenishing looms, comprising a shuttle-lock combined with the shuttle-box at the replenishing or magazine side of a loom and adapted to engage a filling carrier head standing up above the top of the inwardly-moving shuttle, located at such a distance inward beyond the lay-beam opening through which filling-carriers ejected by the replenishing operations descend that the intermediate portion of lay-beam beneath the shuttle will prevent the filling-carrier engaged with the lock from being swung downward through the bottom of the shuttle in consequence of such engagement, and operating to arrest the shuttle before it has passed into the shed in the warp-threads.

1,381,637. ILLUMINATING APPARATUS. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Oct. 23, 1917. Serial No. 198,044. 12 Claims. (Cl. 240—48.6.)



1. A lamp for vehicles comprising, in combination, a light-source, a light-concentrating reflector open at the front for the passage of both reflected and unreflected rays, light-intercepting means having a portion above the axis of said reflector and between said light-source and the upper portion of the reflecting surface of said reflector, and having another portion in front of said light-source and above and below said axis to obstruct the passage of forwardly emitted, unreflected rays above said axis and a part of those below said axis, said means having its bottom and front an opening to permit the passage of forwardly and downwardly directed unreflected rays as a diffused light onto the roadway and to permit the passage of direct rays from said light-source onto the lower portion of said reflecting surface to be concentrated and emitted through the front of said reflector as a beam, a means to support said light intercepting means forward of light source and independently of said light source, said light intercepting means being separated from said light source and said reflector above the axis of the latter by a space permitting the upward escape of heat from said light source.

1,381,638. MULTIPLE-UNIT DOOR-CONTROL ARRANGEMENT FOR CARS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Sept. 30, 1919. Serial No. 327,576. 12 Claims. (Cl. 105—341.)

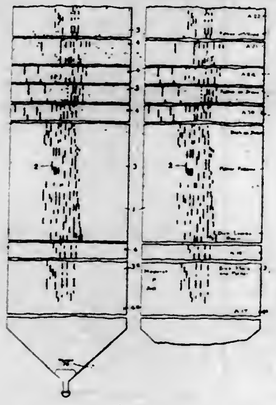


1. The combination with a car and a fixed station without said car, of means carried by the car for controlling the door movements on opposite sides of said car, means located on the station for controlling said means, and means for positively determining the side of the car on which the door movements may take place.

1,381,639. TOY GUN AND PROJECTILE. FRANK ILESS, Freeport, Ill. Filed Feb. 26, 1921. Serial No. 448,027. 13 Claims. (Cl. 124—12.)

1. In a toy gun, a barrel having a longitudinal slot; a spring actuated ejector therein; a catch adapted to lock said ejector when the spring is compressed; devices for releasing the catch; a slide mounted upon the barrel and a movable member connected with the slide and adapted to be projected into the slot and engage the ejector and then compress the spring as the slide is moved inwardly until the ejector is locked by the catch.

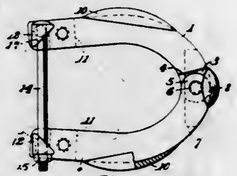
1,381,640. DETECTING UNDERWATER VIBRATIONS. JOSEPH WARREN HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,492. 11 Claims. (Cl. 181—0.5.)



1. The method of determining the direction of a source of under-water sound which consists in towing through the water a group of three detectors spaced fixed distances apart in the form of a narrow V, obtaining a binaural balance between the detector mounted at the point of the V and one of the other detectors and then comparing said first detector with the other of said detectors.

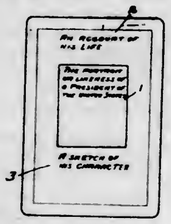
6. In apparatus for determining the direction of underwater vibrations, the combination with a towing vessel of a device to be towed, a plurality of detectors mounted on said device in the form of a narrow V and spaced fixed distances apart, means for obtaining a binaural balance between a pair of detectors, and means for comparing one of said pair of detectors with a third detector.

1,381,641. MUSIC-ROLL FOR PIANO-PLAYERS AND METHOD OF PRODUCING SAME. ALICE SMYTHE JAY, Brooklyn, N. Y. Continuation of application Serial No. 90,698, filed Apr. 12, 1916. This application filed Aug. 23, 1920. Serial No. 405,255. 8 Claims. (Cl. 84—164.)



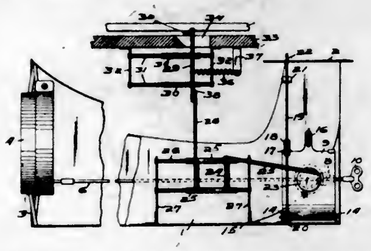
1. The method of producing music rolls for the purpose mentioned which consists in playing suitable music

while viewing the reproduction of the picture, thereby recording the music on a sheet by the usual method; and



simultaneously indicating on the music roll indicia for positioning cues, substantially as described.

1,381,642. HORSESHOE. MATHEW JICHA, Bridgeport, Ohio. Filed Apr. 8, 1920. Serial No. 372,138. 4 Claims. (Cl. 168—19.)

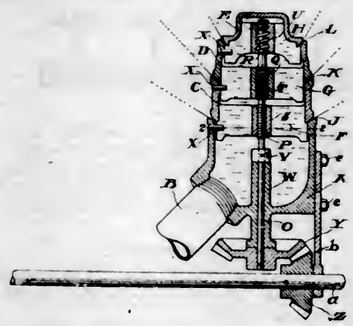


1. A horseshoe comprising two body sections pivotally connected at their front ends, a toe-calk formed on the under side of the pivoted end of one section and having an end portion underlying the bottom face of an adjacent portion of the other section, a toe guard extending upward from said toe-calk past the pivoted ends of said sections, side guards carried by said body sections in opposing relation, said side guards and toe guard being upwardly and inwardly inclined and having their inner faces curved to correspond approximately with the contour of a hoof embraced thereby, and adjustable means for securing the rear ends of said sections in fixed relation.

1,381,643. GAME OF CARDS. JOHN WILLIAM JOURDAN, Las Cruces, N. Mex. Filed Sept. 20, 1919. Serial No. 325,276. 1 Claim. (Cl. 46—25.)

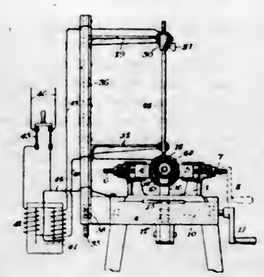
A game comprising a pack of cards made up of a number of pairs, each pair consisting of a primary card having thereon the portrait of a President of the United States, an account of his life, and a sketch of his character, and a secondary card having thereon the name of the corresponding Vice President, the name of an important address or paper delivered by the President, an account of an historical event related to the President, and the initials of the President; the indicia on each pair of cards to distinctly relate to the President and his Vice President in such manner as to identify one card with the other.

1,381,644. TIME-CONTROLLED PHONOGRAPH. JAMES KANAKARIS, Toledo, Ohio. Filed Nov. 20, 1920. Serial No. 425,322. 4 Claims. (Cl. 161—23.)



1. In combination with a phonograph having a release lever and an alarm clock having a time controlled mechanism for releasing the alarm, a spring, a shaft for supporting the spring and connected to a turn table, mechanism interconnecting the spring and the alarm mechanism of the clock for releasing the spring upon the operation of the time controlled mechanism, and a slidable frame operated by the spring and interconnecting the spring and the lever of the turn table.

1,381,645. CEMENTING WELLS. PHILO B. KINNEAR, Salt Creek, Wyo., assignor of one-half to David W. Lewis, Salt Creek, Wyo. Filed Jan. 4, 1921. Serial No. 435,043. 8 Claims. (Cl. 166—1.)

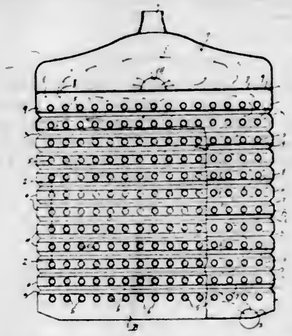


1. The method of cementing wells and the like, which comprises forming an annular space adjacent the walls of the well hole; forming an annular chamber within said annular space; introducing fluid into said chamber; closing the annular chamber from the atmosphere; pumping cement to the bottom of said chamber; pumping a measured quantity of fluid on top of the cement; placing a separating member on said measured quantity of water, means being located in the lower portion of said annular chamber for stopping said separating member; and pumping fluid into the annular chamber until the separating member reaches the stopping means.

1,381,646. SPRAY-HEAD. JOHN F. KIRGAN, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 13, 1920. Serial No. 409,912. 4 Claims. (Cl. 299—144.)

1. A spray head for spraying liquids, comprising a tubular body having an inlet, a plurality of separate and independent spray head sections arranged one over the other on said body forming discharge openings, means for simultaneously moving said sections different amounts longitudinally relatively to the body to adjust said discharge openings, and operative connections between adjacent sections for preventing relative rotation of said sections.

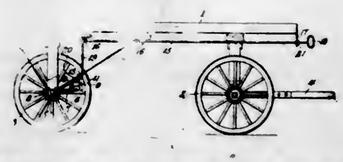
1,381,647. PROCESS OF AND APPARATUS FOR ELECTRIC-ARC WELDING. ROY C. KNOLL, Milwaukee, Wis. Filed Apr. 17, 1920. Serial No. 374,630. 10 Claims. (Cl. 219—8.)



1. The process of electric arc welding which consists in heating on one side the juxtaposed parts to be welded by an electric current of comparatively low voltage and high amperage and fusing the heated parts together by an arc drawn from an electrode presented to the opposite side of the work with a current of higher voltage.

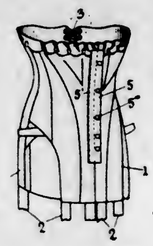
1,381,648. INK. HERMAN KRUSE, Jersey City, and WILLIAM C. KRUSE, Union, N. J. Filed Sept. 3, 1919. Serial No. 321,325. 4 Claims. (Cl. 134—31.)

1. An improved ink comprising an alumina black base, glycerin and Turkey red oil.



1,381,649. RADIATOR. JOHN T. LAMM and FRED K. HUFFMAN, Julesburg, Colo. Filed Feb. 7, 1920. Serial No. 357,045. 2 Claims. (Cl. 257—131.)

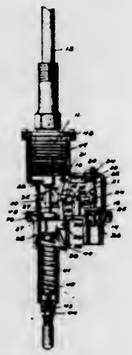
2. A radiator of the class described comprising a hollow casing having induction and eduction openings at the top and bottom thereof, a plurality of vertically spaced plates arranged within the casing and dividing the same into superimposed compartments, an end portion of each of the plates being provided with an opening affording communication with the compartment immediately therebelow,



the walls of the casing being provided with inwardly extending corrugations, certain of said corrugations serving as supports for the plates, and air tubes extending through the casing at points between adjacent corrugations.

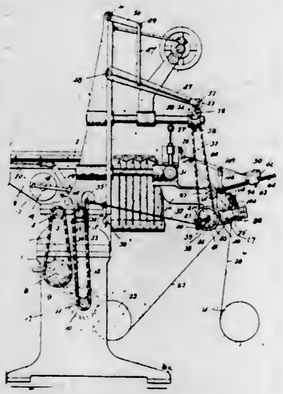
1,381,650. BAGGAGE-TRUCK HOLDER. CHARLES O. LARSON, De Kalb, Ill. Filed May 15, 1919. Serial No. 297,387. 4 Claims. (Cl. 188—31.)

1. A holding means for baggage trucks comprising a lock bar movable between and from between the spokes of one of the truck wheels, a support for the lock bar, means for connecting the support to the rear axle of the truck, and a crank rod connected to the lock bar for moving the same longitudinally, said crank rod extending to the front of the truck and there provided with means whereby it may be rocked on its longitudinal axis to project the lock bar between the spokes of the wheel and withdraw it therefrom, the entire holding means maintaining itself in any position whether locking or unlocking with no tendency to move from said position.



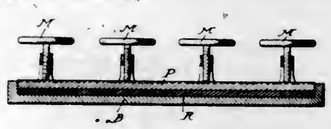
1,381,651. CORSET AND THE LIKE AND FASTENING SYSTEM THEREFOR. AUGUSTE JEAN LECOUTRE, Worcester, Mass., assignor to Royal Worcester Corset Co., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 28, 1918. Serial No. 225,221. 3 Claims. (Cl. 2—74.)

2. A fastener for corsets and the like including an eye member, a stud for engagement in said eye member, and



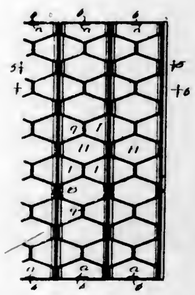
a snap fastener socket adapted to snap over the head of the stud and to grip the stud after the stud has been engaged with the eye member, said fastening means reducing the play between stud and eye member in a direction longitudinal of the stud, and said socket extending beyond the outer end of said stud.

1,381,652. THERMOSTATIC GAS-VALVE CONTROL. LUTHER D. LOVEKIN, Philadelphia, Pa., assignor to The Lovekin Water Heater Company, Philadelphia, Pa., a Firm composed of Margaret J. Fowler, J. Scott Fowler, and Phillip D. Fowler. Filed May 22, 1917. Serial No. 170,155. 4 Claims. (Cl. 236—48.)



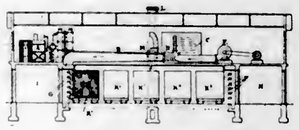
2. In an automatic gas regulator, a thermostatic element, a rod rigidly connected to and longitudinally adjustable with respect to said element, a retarding spring in line with the said rod, a compression adjustment for said spring and a snap-action valve-operating mechanism including a lever free from engagement with said retarding spring and carried by said rod, said mechanism being adjustable as to range and critical temperature by the adjustment of the rod and the spring.

1,381,653. TEXTILE-MACHINE. CHARLES M. MARS, Dorchester, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed July 10, 1916. Serial No. 108,407. 59 Claims. (Cl. 139—94.)



1. Textile mechanism comprising in combination, drawing-in mechanism, means for supporting a plurality of groups of warp threads, and automatic traversing means combined with compensating means for a portion only of the support for said groups of warp threads.

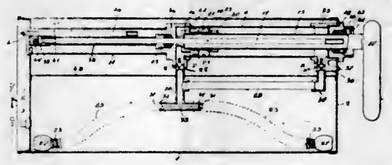
1,381,654. PROCESS OF RECLAIMING RUBBER. EMIL MUSCHEWSKE and WILLIAM W. WOOD, Los Angeles, Calif. Filed Dec. 13, 1920. Serial No. 430,291. 8 Claims. (Cl. 18—52.)



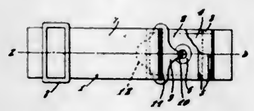
8. A process of reclaiming rubber, including first finely dividing old rubber stock then molding it under heavy pressure and subjecting it to heat during molding, then allowing it to stand in the air until cool, then again subjecting it to a temperature of approximately 300° F. for about sixty minutes.

1,381,655. RADIATOR-CORE. FRED M. OPITZ, Racine, Wis. Filed Nov. 10, 1919. Serial No. 336,934. 6 Claims. (Cl. 257—130.)

1. In combination, a pair of gutter members having flat joining margins lying in contact to form a tube, a pair of filler strips corrugated into a regular pattern, the corrugations of each strip being indented to embed said gutter members, the front and back edges of the filler strips extending in front and back of the joining margins and lying in contact, said joining margins and said extensions of the corrugations being joined by solder, the joints between the margins of the gutters and between the extensions of the corrugations lying in the same plane.



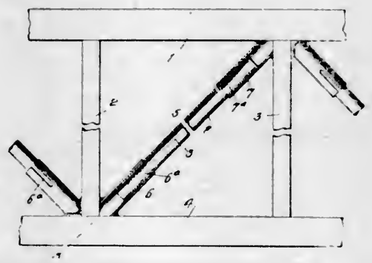
1,381,656. TREATMENT OF WOOD FOR SEASONING IT. MARIUS-PAUL OTTO, Paris, France. Filed May 22, 1919. Serial No. 299,061. 1 Claim. (Cl. 99—12.)



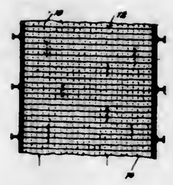
The herein described process of seasoning wood by the combined action of heat and of ozone, which consists in submitting the wood successively to hot air acting alone, to ozonized air acting alone, and to a mixture of hot air and of ozonized air acting together, and moving the wood during each of these three successive actions in a direction opposite that in which the gaseous current flows.

1,381,657. FIRE-EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y. Filed June 28, 1916. Serial No. 106,322. 12 Claims. (Cl. 299—98.)

6. In a syringe, the combination with a reservoir having an outlet, of a piston chamber; a piston to reciprocate in said chamber; a compression chamber connected to the reservoir outlet; a tube reciprocable with the piston to connect the piston chamber with the compression chamber; a rod to reciprocate the piston and tube; a tube in the compression chamber fixed at one end to the piston chamber and the other end extending adjacent the reservoir outlet in which the reciprocable tube engages, said tube having lateral ports to connect it with the compression chamber; a spring influenced valve carried at the free end of said tube to close the end of the reciprocable tube when the piston is in its innermost position; and coöperating locking means carried by the piston rod and reservoir to maintain the piston in its innermost position with the end of the reciprocable tube closed by the valve, substantially as and for the purpose specified.

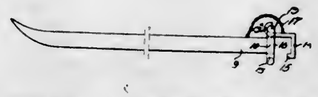


1,381,658. GARTER. HOLMES E. PENN, Madison, N. C., assignor to Penn Bros. Suspender Company, Inc. Filed Nov. 24, 1919. Serial No. 340,208. 2 Claims. (Cl. 241—5.)



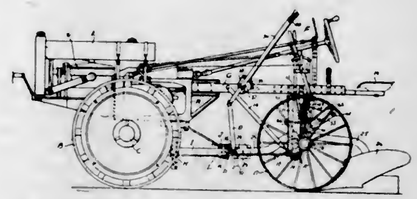
1. A garter comprising a band one end of which is fashioned into a loop, the end of the outer wall of the loop being turned in; a stiffener within the loop and having one end received between the outer wall of the loop and the turned in end thereof; means for uniting the outer wall of the loop, the inner wall thereof, and said turned in end; a tubular eyelet engaged with the stiffener and with the outer wall of the loop and shielded by the inner wall of the loop; and a hook on the other end of the band, the hook being engaged in the eyelet.

1,381,659. TENSIONED FRAME. JOHN W. RAPP, Flushing, and JOSEPH VANORIO, Brooklyn, N. Y.; said Vanorio assignor to said Rapp. Filed Dec. 28, 1917. Serial No. 209,355. 4 Claims. (Cl. 244—31.)



1. A tensioned frame embodying a suitable frame; a tension element under tension therein and having a telescoped joint formed between adjacent parts, one of which parts has been linearly expanded by heat and permanently secured to the other part of said element in such expanded condition to provide tension in said element.

1,381,660. METHOD OF REMOVING SOLIDS SUSPENDED IN MOVING GASES. ROSS BUXTON RATHBUN, Salt Lake City, Utah. Filed Oct. 31, 1918. Serial No. 260,464. 10 Claims. (Cl. 183—114.)



1. In the art of removing solids from gaseous bodies, the process which consists in passing all particles of a body of gas along substantially parallel lines and through a series of electro-static fields disposed in the direction of flow of the gas so that all of the gas will be compelled to pass through more than one field and equally treated, each of said fields characterized by having lines of force which extend in the general direction of flow of the gases and in which the lines of force converge to increase the potential gradient and thus increase the zone of ionization.

1,381,661. CAR-HOPPER-RELEASING DEVICE. PAUL E. REIDER, Philadelphia, Pa. Filed Oct. 28, 1920. Serial No. 420,178. 3 Claims. (Cl. 81—69.)
